The New Don Pedro concept is new. It evolved out of many years of experience, knowledge, growth, the Federal Government's interest in flood control, etc. In fact the knowledge gained through the 39-year hydrologic period 1923–1961 is indispensable to the construction of New Don Pedro.[38] While the Districts, following the completion of the existing Don Pedro in 1923, appear to have given thought to a larger project to further firm up their irrigation and power supply, the contemplated construction of New Don Pedro project did not begin to take great strides until 1940 when the Districts and San Francisco decided to find, through cooperative effort, the most satisfactory solution to their future water needs. That decision was followed by agreements made in 1949 obligating the Federal Government and San Francisco to make substantial contributions to the first cost of New Don Pedro.

Coordinated Efforts of the Districts and San Francisco to Develop the Resources of the Tuolumne River

The Districts initially opposed the Raker Act but withdrew their opposition when that legislation recognized and protected *inter alia*, the prior water rights of the Districts. Insofar as the use of the Tuolumne River is concerned, that Act made it necessary and proper for the Districts and San Francisco to live together in a common sense way. In the years that followed passage of that statute it became increasingly apparent that a dovetailing of the activities of the Districts and San Francisco would maximize the quantity of water each will be able to appropriate. Thus in 1940 the Districts and San Francisco agreed to coordinate their efforts to develop the water resources of the Tuolumne River, such agreement being implemented by further agreements executed in 1949 under which (1) San Francisco agreed to pay for the use of 570,000 acre feet of exchange storage space, and (2) the Federal Government agreed to pay $14,200,000 for 340,000 acre feet of flood control storage.

Prior to 1949 the Districts and San Francisco became aware of the fact that the Corps of Engineers, in planning for comprehensive flood control in the San Joaquin Basin, had included a reservoir at the Jacksonville site on the Tuolumne River with a capacity of about 320,000 acre feet. Inasmuch as this site would interfere with, if not defeat, their plan for New Don Pedro a request was made by the State Engineer of California, the Districts and San Francisco that in lieu of Jacksonville the Corps consider a financial contribution to the first cost of New Don Pedro, or other suitable Tuolumne basin reservoirs, covering a portion of the construction costs to the extent justified by the flood control to be provided. The Chief of Engineers found that flood control would be thus provided as effectively as at Jacksonville and recommended the plan to Congress which approved an allocation of funds therefor in 1944. This was implemented in 1949 by what is referred to as the "Federal Contract" executed by the Corps, the Districts and San Francisco. This contract, among other things, provided that the Federal Government would pay to the Districts and San Francisco a then estimated $12,000,000 for flood control in New Don Pedro which, according to the agreement, was to be completed on or before December 1, 1959, with a reservoir capacity of not less than 1,200,000 acre feet, with flood control to be furnished therein of not less than 340,000 acre feet. The agreement further provided for (1) the immediate operation of the existing Don Pedro reservoir and San Francisco's Hetch-Hetchy and Lake Eleanor reservoirs for flood control until New Don Pedro is constructed; (2) construction by San Francisco of the Cherry Valley reservoir on or before December 1, 1951 (it being actually completed in 1956) and its correlation with flood control until New Don Pedro is completed; and (3) that—

---

[38] Counsel for the Districts state in their brief that "Exhaustive operation studies were conducted with the use of computers in order to determine the anticipated inflow to the New Don Pedro reservoir in the future, utilizing all the hydrologic records available * * *. The 39-year hydrologic period 1923–1961 was then selected because this contained years of extremely high as well as of extremely low flow and permitted the studies to assume a full reservoir at the start of the period containing 1,690,000 acre feet which is the maximum permissible storage in January for flood control purposes * * * . The actual anticipated inflow was determined after deducting for evaporation losses in upstream reservoirs as well as for diversions by San Francisco in the amounts of 210 mgd, 295 mgd, and 400 mgd, respectively."

> * * * none of the money paid by the Federal Government under the terms of this agreement shall be expended for purposes other than new work on Cherry Valley or New Don Pedro or other new reservoirs.

The Federal Contract was incorporated as evidence in this proceeding. However, the agreement referred to as having been entered into between the Districts and San Francisco was not made a part of the record. The record is therefore deficient in this respect.

The Federal Contract contemplated that New Don Pedro and San Francisco's Cherry Valley project would be constructed under appropriate authorizations, it being provided in Article 4 that the program and conditions of the contract and the completion dates of the projects set forth therein were subject on the part of the Districts and San Francisco "to such action as may be required by law." The Districts' application for a license for New Don Pedro is involved in this proceeding. San Francisco, however, constructed the Cherry Valley project without a license, it apparently proceeding on the belief that construction and operation of this project had been authorized by the Raker Act.

As hereinabove pointed out (*supra*, pp. 539, 540), the Federal Government has already paid $4,600,000 to the Districts and $4,400,000 to San Francisco of the presently estimated total of $14,200,000 which the Federal Government will pay for storage space.[37] The $4,600,000 paid to the Districts was transferred by them to San Francisco and appears to have been applied, along with the $4,400,000 received by San Francisco, to the cost of the Cherry Valley project completed in 1956. In explanation of the transfer of the $4,600,000 by the Districts to San Francisco, a witness for the Districts testified that the Districts—

> * * * got relief of 25,000 acre feet of water per month emptying into the Don Pedro Reservoir.
>
> **Presiding Examiner**: Could they have released the water in any other direction?

---

[37] The Federal Government's initial payment was, by the terms of the contract, paid as work on the Cherry Valley project progressed, with the balance to be paid as work on New Don Pedro progresses.

The WITNESS: Well, they could release it as they saw fit. They could peak with the plant and hold the water, but they released the 25,000 acre feet per month during the irrigation season.

PRESIDING EXAMINER: Oh, it is the timing of the releases you were interested in?

The WITNESS: Yes.

PRESIDING EXAMINER: And it is to insure the timing that you paid the money to them?

The WITNESS: Yes.

* * * * * * *

Q. From which reservoirs was this water released?

A. From Lake Lloyd [Cherry Valley].

It appears that the agreement entered into by the Districts and San Francisco—which was not made a part of the record—provides that the balance of $5,200,000 out of the total estimated Federal Government payment of $14,200,000 is to be received by San Francisco and might be utilized by it in meeting its portion of the cost of New Don Pedro.[30] The provisions of that contract are not binding upon the Commission for regulatory purposes and the treatment to be accorded the Federal Government's contribution, insofar as the portion properly allocable to New Don Pedro is concerned, is a matter which it may be necessary for the Commission to fully explore at a subsequent time.

As previously pointed out, the estimated cost of New Don Pedro is $92,415,850, of which it is contemplated the Districts will pay $49,234,060 and San Francisco will pay $43,181,790. Bond issues have been authorized in the total amount of $52,500,000 for the Districts ($34,000,000 for Turlock and $18,500,000 for Modesto) and San Francisco has obtained authorization to issue bonds in the total amount of $115,000,000, of which approximately $45,000,000 is earmarked for the San Francisco cost of New Don Pedro. The full amount of these bonds, which appear to provide adequate leeway for any contingencies, need not be issued unless required by the costs actually incurred. In this regard the fact should not be overlooked that the cost of the project to the Districts and San Francisco will not be $92,415,850 (assuming the actual cost equals the presently estimated cost) but will be that amount less the portion of the Federal Government's contribution of $14,200,000 (estimated) properly allocable to New Don Pedro.

San Francisco's Recent Construction Activities

The House Committee Report which accompanied the bill that later became the Raker Act recites that the power potential of the Tuolumne River was estimated to be 115,000 horsepower in its ultimate development—equal to 85,790 kw, it apparently being assumed that only the San Francisco system authorized by the Raker Act would develop power on the stream (the existing Don Pedro project not being constructed until ten years after the passage of the Raker Act).

Section 5 of the Raker Act required that construction of the Hetch Hetchy system should "be prosecuted diligently, and no cessation of such construction shall continue for a period of three consecutive years" unless prevented by act of God or unforeseen circumstances, or difficulties beyond the control of San Francisco. In other words, San Francisco was to construct and place its system in operation with all possible expedition, with no delay except such as might be incident to the work itself.

---

[30] Under Article 11 of the 1949 contract entered into between the Districts and San Francisco, the payments to be made by the Government during the construction of New Don Pedro will be made "in a manner to be prescribed in a supplemental agreement."

The combined capacity of the Intake power plant (3,600 kw) completed in 1918 and the Moccasin power plant (70,000 kw) completed in 1925 (the first two power plants completed by San Francisco) is 73,600 kw, and is within 12,190 kw of the total of 85,790 kw Congress thought San Francisco's system would ultimately develop. The maximum of 85,790 kw is to be contrasted with the total of 276,100 kw of capacity San Francisco will have upon completion of its Canyon power plant (see *supra*, p. 545).

In 1956, or 43 years after the passage of the Raker Act, San Francisco completed the Cherry Valley Dam pursuant to its 1949 agreement with the Districts and the Corps of Engineers, and thereafter completed its Cherry power plant and placed it in operation in 1960. This plant utilizes the water from Lakes Lloyd (created by the Cherry dam) and Eleanor. This plant alone has a capacity of 135,000 kw—far in excess of what the Raker Act contemplated. And as pointed out, San Francisco now has the Canyon power plant (with a capacity of 67,500 kw) under construction. Furthermore, the height of San Francisco's O'Shaughnessy dam (completed in 1923) was raised in the 1935-1938 period from 206,000 acre feet to 340,000 acre feet, with the storage capacity being further increased to a total of 360,000 acre feet in 1949.

In passing it is also pertinent to point out that while the Raker Act (Sections 9 (a) and (d) makes specific reference to the "Hetch Hetchy Dam" and the "Lake Eleanor Dam" and to the "Hetch Hetchy and Lake Eleanor sites", no similar reference is made therein to the Cherry Valley dam completed in 1956. In this connection, the Examiner observes that Staff counsel states in his brief that the Raker Act authorized "construction of Hetch Hetchy and Lake Eleanor Dams."

The House Report which accompanied the bill that became the Raker Act refers to the acreage and capacity of three proposed reservoirs, namely, "Hetch Hetchy", "Lake Eleanor" and "Cherry Valley". San Francisco proceeded to construct three dams as a part of its initial system, namely Lower Cherry (completed in 1918), Eleanor (also completed in 1918) and O'Shaughnessy (the Hetch Hetchy reservoir completed in 1923). The House Report refers to "Cherry Valley" as being the smallest of the proposed reservoirs and what is referred to now as "Lower Cherry" is the smallest of San Francisco's reservoirs. The fourth reservoir, the Cherry Valley project completed in 1956, is an additional reservoir having a reservoir capacity of 268,200 acre feet.

While the record is not as complete as it might be (due in part to the fact that San Francisco did not become a party to this proceeding), it is sufficient to raise a question in the Examiner's mind as to whether San Francisco in recent years has carried out a more expansive construction program than authorized under the Raker Act. The foregoing and other facts are therefore set forth herein for the Commission's consideration in connection with the license sought by the Districts and also for consideration in determining whether or not to institute an investigation under Section 4(g) of the Federal Power Act to ascertain whether San Francisco's recent construction referred to was in addition to and not in conformity with the Raker Act authorization—and without Commission approval.

In conclusion it should be pointed out that while the Secretary of the Interior has supervision over San Francisco's activities to the extent authorized by the Raker Act, San Francisco's dam and power facilities not within that authorization, if any, would necessarily fall within the Commission's jurisdiction in the absence of sanction by additional special legislation. Of interest here also is the fact that in *United States* v. *City and County of San Francisco*, 310 U.S. 16, decided April 22, 1940, the Supreme Court appears to have been clearly of the view that San Francisco had prior to 1940 constructed and was then utilizing all the power and water facilities authorized by the Raker Act. It said (310 U.S. at p. 29):

> * * * After passage of the Bill the City accepted the grant by formal ordinance, assented to all the conditions contained in the grant, constructed the required power facilities, *and up to date has utilized the rights, privileges and benefits granted by Congress.* * * * [Italic supplied.]

Sixteen years after this decision San Francisco completed the Cherry Valley dam. Twenty years after that decision it completed the Cherry Valley power plant. And now more than twenty-three years after that decision San Francisco has the Canyon power plant under construction.

Variant Views of the Parties

None of the parties recommend denial of the license. Rather the Staff of the Commission and the Interveners contend that the water resources of the Tuolumne River are capable of being put to greater beneficial use than the Districts presently propose. They say that the fuller use of the stream can and should be accomplished pursuant to Section 10(d) of the Act through the incorporation of conditions in the license; and that this can be done without affecting the rights of the Districts or destroying the economic feasibility of the project. In their view, nothing contained in Section 27, upon which the Districts rely, or any other provisions of the Act constitute a bar to the proposed conditions.

The Staff and the Interveners request that the Commission condition the license so as to require releases of water, not now contemplated by the Districts, for anadromous fish spawning in a seventeen mile stretch of the river commencing about five miles below the New Don Pedro site. Additionally, they seek conditions in the license relating to recreation, protection of wildlife resources, access roads, water quality, etc., so that the project will provide, as they say Section 10(d) contemplates, the most comprehensive development of the Tuolumne River.

Before stating the position of the Districts it will facilitate an understanding of the various views if it is pointed out that Section 10(a) of the Act was intended to afford an effective means of bringing about the development of water resources to the maximum practicable extent consistent with the primary purposes of proposed projects, such consistency with the primary purposes being essential since without protection of the primary purposes proposed projects might never be constructed.

In the discharge of its responsibilities the Commission, among other things, gives full consideration to the preservation and enhancement of fish and wildlife resources, the creation and enhancement of recreation potentialities, flood control and irrigation. Except where superior water uses or the law or compelling circumstances dictate otherwise, releases of water from reservoir projects should be adequate to protect the continued use of a stream by fish and wildlife. As for recreation, this matter takes on added significance in densely populated areas and in regions where natural water recreation opportunities are limited. In this regard counsel for the Districts point out that the proximity of New Don Pedro "to large population centers assures substantial use for camping, swimming, boating, water-skiing and sport fishing." It is therefore the Commission's function to require that adequate land, facilities, etc., be constructed and made available for general public use.

Because of limitations in the Act and the fact that particular needs and uses of water vary from stream to stream and region to region, the Commission is unable to apply a single uniform policy to all streams and situations. Accordingly it necessarily has flexibility in its policy and adjusts to the realities of each situation. It goes without saying that a project designed to serve one or more particular purposes may not be of equal benefit to others.

There is a contrariety of opinion as to what constitutes comprehensive development, particularly in the light of the provisions of Section 27 of the Act. The Districts argue "that (1) comprehensive development is fully served by the New Don Pedro project as proposed to be operated, with the salmon fishery downstream to be helped rather than hindered by the new project; and that (2) use of the water for irrigation and domestic purposes are shielded by the * * * Act (Sec. 27) from being undercut by the" proposals made by the Staff and the Interveners.

With respect to fish in the proposed reservoir, the greatly increased size of the reservoir will substantially increase the catch over existing conditions. As to the effect on fish below the project, the evidence shows that if it is constructed there will be, for a number of years following construction, more water in storage than can be used by the Districts and San Francisco. It therefore appears that if the excess stored water is released in adequate amounts during the fish spawning season that, for the years immediately following construction of New Don Pedro, greater benefits can be expected with than without New Don Pedro. But thereafter, assuming San Francisco's needs measure up to estimates, water would not be available in significant amounts and, therefore, the fish and wildlife resources would suffer.

The Districts claim that fish and wildlife conditions will be worse in the future without New Don Pedro than with it. The short answer to this assertion is that it is based upon the unwarranted assumption that San Francisco now has the right to divert the water it proposes to divert and that it would be physically able to do so (see *supra*, pp. 546, 548). San Francisco's present storage without New Don Pedro will permit only a 210 mgd diversion and there is no evidence that it could either physically or legally develop other storage facilities on the river to supply additional water to its Bay area system.

Raker Act Was the Mould in Which Congress Shaped Sections 9(b), 10(a) and 27 of the Federal Power Act

The Raker Act became law in 1913. The Federal Water Power Act (now Part I of the Federal Power Act) was enacted in 1920 after several years of consideration and debate.

The procedure set forth in the Federal Power Act, to the extent relevant to the issues raised herein by the parties, is the same as that which Congress required San Francisco to follow under the Raker Act. In this regard, a matter of great significance in the interpretation of Section 27 of the Federal Power Act is that except for the fact that Section 27 has reference to "the laws of the respective States" whereas Section 11 of the Raker Act was necessarily limited to "the laws of the State of California", the language of Section 27 is identical to language contained in Section 11 of the Raker Act. Accordingly, Section 27 may be interpreted in the light of the Congressional action under the Raker Act. In short, the Raker Act is the mould in which Congress shaped Section 27. It is also the mould in which it shaped the Section 9(b) and 10(a) of the Federal Power Act to which Section 27 is related. Having so shaped these sections, Congress, in effect, handed the Raker Act mould to the Commission for its use in following the Raker Act example.

The Raker Act required prior compliance by San Francisco with the water law of the State of California, just as Section 9(b) of the Federal Power Act requires of each applicant with respect to the law of the state in which the proposed project is to be located. But notwithstanding the necessity for compliance with California water law at the outset, Congress "being jealous of its own responsibility to dispose of * * * rights [in the public domain] in a manner deemed by it most likely to render the benefits widespread" (*United States* v. *City and County of San Francisco*, 344 U.S. 16, 31), exacted from San Francisco conditions consistent with its view of public policy, just as the Commission, now "plainly made the guardian of the public domain" (*F.P.C.* v. *Idaho Power Co.*, 344 U.S. 17, 23), is authorized to exact under Section 10(a) of the Federal Power Act.[29] The conditions exacted of San Francisco were not considered by Congress to be an infringement upon the provisions of Section 11 of the Raker Act prohibiting interference with the laws of the State relating to "water *used* in irrigation or for municipal" purposes. This is true even though some of the conditions, in recognizing and protecting the water rights of the Districts *used* for irrigation purposes, restricted San Francisco's diversion of water for municipal purposes (the highest use to which water may be put) for which San Francisco had obtained its State permits. That is to say, Congress regarded water *to be used* as being subject to the conditions it imposed, with the water *being used* by the Districts subject to the protection afforded by Section 11. As to water San Francisco proposed *to use* Congress, in exercising authority which it has now empowered the Commission to exercise under Section 10(a) of the Federal Power Act, in effect modified the State water permits San Francisco had obtained, but had not then perfected through use, by limiting the water San Francisco could divert under those permits to amounts which would not interfere with the prior and superior appropriative rights[30] of the Districts and then *in use* by the latter. In fact, Congress went even further in limiting San Francisco's use of water by increasing the storage upon which the Districts could rely (see *supra*, p. 537, note[8]) and, as counsel for the Districts point out in their brief, by expressly recognizing "the right of the Districts to divert water for the irrigation of 'not to exceed three hundred acres of land' (§ 9(b), 32 Stat. 242; Ex. 7, p. 6), a point they have not yet reached." That is to say, Congress enforced its views of public policy through the conditions imposed in the Raker Act rather than leaving benefits to be derived completely at the mercy of state legislation. That Section 11 of the Raker Act, like Section 27 of the Federal Power Act, is applicable to State water rights *being used*, as distinguished from water rights proposed *to be used*, is clearly apparent from the provisions thereof:

---

[29] New Don Pedro will occupy public lands. The power of Congress over public lands, conferred by Article 3, section 1, clause 2 of the Constitution, is, as the Supreme Court said in *United States* v. *City and County of San Francisco*, 310 U.S. 16, 29, "without limitation." The imposition of the conditions requested by the Staff or the Commission and the Interveners in the license for New Don Pedro would be under authority of the same constitutional provision.

While it is true that States may make laws respecting the character of rights to the use of water which may be acquired in streams within their boundaries, the Supreme Court long ago held that States may not, by legislation and without the consent of Congress:

> * * * destroy the right of the United States, as the owner of lands bordering on a stream, to the continued flow of its waters, so far at least as may be necessary for the beneficial uses of the government property [*United States* v. *Rio Grande Irrigation Co.*, 174 U.S. 690, 703 (1899)].

The Court had earlier held that admission of a state into the Union did not deprive the United States of power to protect adequately its own property, saying that a "different rule would place the public domain of the United States completely at the mercy of the state legislation." [*Camfield* v. *United States*, 167 U.S. 518, 526 (1897).]

Federal authority over the use of public lands is accordingly complete. And as noted above, under the Federal Power Act "the Commission is plainly made the guardian of the public domain." [*F.P.C.* v. *Idaho Power Co.*, 344 U.S. 17, 23.]

[30] California law includes the rights of use acquired by prior appropriation and rights inherent in the ownership of lands riparian to natural streams, such rights having been in competition throughout California legal history (*United States* v. *Gerlach Live Stock Co.*, 339 U.S. 725, 742–755). The water rights of the Districts and San Francisco were all acquired under the principle of priority of appropriation. The effect to be accorded priority has been construed by the Supreme Court of California as follows:

> * * * One of the essential elements of a valid appropriation is that of priority over others. Under this doctrine, he who is first in time is first in right, and, so long as he continues to apply the water to beneficial use, subsequent appropriators may not deprive him of the rights his appropriation gives him, by diminishing the quantity or deteriorating the quality of the water. [*Joeger* v. *Pacific Gas & Electric Co.*, 276 Pac. 1017, 1026.]

While California law recognizes prior appropriate rights, it should be pointed out that insofar as applications filed with the State Water Rights Board are concerned Section 1254 of the California Water Code provides that "the board shall be guided by the policy that domestic use is the highest use and irrigation is the next highest use of water."

> Sec. 11. That this Act is a grant upon certain express conditions specifically set forth herein, and nothing herein contained shall be construed as affecting or intending to effect or in any way to interfere with the laws of the State of California relating to the control, appropriation, use, or distribution of water *used* in irrigation or for municipal or other uses, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this Act, shall proceed in conformity with the laws of said State.

In other words, as to the water Congress permitted San Francisco to *use* for municipal purposes, the Secretary of the Interior was to proceed in conformity with the laws of the State of California in carrying out the provisions of the Raker Act. Likewise, all conflicting claims and controversies respecting water rights affected by San Francisco's *use* of water are to be determined under State law [see *Meridian, Ltd.* v. *San Francisco*, 90 Pac. 2d 537; 91 P. 2d 105 (1939)].[31]

In connection with the consideration and passage of the original Federal Water Power Act of 1920, which as amended is now Part I of the Federal Power Act, Congress had the Raker Act very much in mind, providing in Section 29 thereof—

> * * * That nothing herein contained shall be held or construed to modify or repeal any of the provisions of the Act of Congress approved December 19, 1913, granting certain rights-of-way to the city and county of San Francisco, in the State of California * * *.

As hereinabove made clear (*supra*, p. 547), it is the conditions imposed by Congress in the Raker Act that have brought San Francisco to the dead-end it is now attempting to by-pass through the purchase of exchange storage in the proposed New Don Pedro reservoir.

Interpretation of Sections 9(b), 10(a) and 27 of the Federal Power Act

Since Sections 10(a) and 27 of the Act, discussed in the briefs of the parties, are intimately related to Section 9(b), a review of the intent of Congress with reference to Sections 10(a) and 27 necessarily must take into account Section 9(b).

---

[31] The *Meridian* case is of interest here. The conflicting claims of the parties involved their rights in and to the waters of the Tuolumne and San Joaquin Rivers and their tributaries. The plaintiff relied upon his rights both as a riparian owner and appropriator downstream from the Hetch Hetchy project.

The plaintiff was the then owner of the El Solyo Ranch (now the El Solyo Water District), located just south of the Banta Carbona Irrigation District (one of the Interveners herein) on the San Joaquin River. The flow of the San Joaquin River past the ranch consisted largely, and at times almost entirely, of waters contributed to it by the Tuolumne River.

The Districts, applicants herein, were among the defendants, although their rights were not involved.

Section 9(b) requires each applicant for a license to submit to the Commission "satisfactory evidence" of its compliance with state laws "with respect to bed and banks and to the appropriation, diversion, and use of water for power purposes and with respect to the right to engage in the business of developing, transmitting, and distributing power, and in any other business necessary to effect the purposes of a license under this Act." Such compliance was intended to be a condition precedent to Commission consideration of an application for a license.

By Section 10(a) of the Act Congress specifically limited the Commission's authority to issue licenses under Section 4(e) to those projects which, in the judgment of the Commission, are—

> * * * best adapted to a comprehensive plan for improving or developing a waterway or waterways * * * for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes; and if necessary in order to secure such plan the Commission shall have authority to require the modification of any project and of the plans and specifications of the project works before approval.

Following submission of an application for license showing compliance with State law as required by Section 9(b), the Commission, on the basis of evidence before it, then determines, *inter alia*, the extent to which the proposed use of water, as reflected in the State permits, is to be modified so that the subsequent use of the water, when State water rights are perfected through actual use, will accomplish the comprehensive development contemplated by Section 10(a). In fact, insofar as the water right permits and other State authorizations obtained by an applicant are concerned, the Commission is empowered to do one of three things: First, by denying the application for license, it can in effect veto all the State permits and authorizations obtained by, but not yet used by, the applicant. Second, it can, where necessary, accomplish full development of a stream through conditions incorporated in the license which modify the purposes for which the water right permits were obtained, doing this where it is shown that the additional purposes are reconcilable with the basic purposes to be served by the project. Third, grant the license as requested, thereby placing its approval upon subsequent perfection of the water rights—through use—for the identical purposes for which such rights were obtained.

As to water right permits obtained under California law and submitted in compliance with Section 9(b) of the Act, it is important to bear in mind that such permits, as counsel for the Districts point out in their brief—

> * * * require the application of water to the proposed use * * * subject to any conditions the permit may impose. * * * Then when the works involved have been constructed and the water applied to the maximum beneficial use, an inspection is made of those works and the use of the water as authorized by the permit. A license is then issued confirming the beneficial use of water made under the application and permit. [California Water Code, Division 2, Part 2, Sections 1200–1677 (1961).]

In other words, an applicant for a license does not have, under state law, an indefeasible water right until he obtains from the Commission the license applied for, constructs the project, and applies the water to an actual beneficial use. Accordingly, the Commission in bringing about the comprehensive development contemplated by Section 10(a), is not normally dealing with water rights already perfected through use, with which Section 27 is concerned, but with rights that can only be perfected in the manner authorized by the Commission to accomplish comprehensive development. Thus, as to water rights pertaining to water proposed *to be used*, any action of the Commission which modifies the purposes for which water right permits have been obtained does not affect or in any way interfere with the laws of California but is wholly consistent therewith for the reason that the effectiveness of the state permits are made to depend upon a Commission license, construction of the project, and actual use of the water through the operation of the project. To borrow the words of the Supreme Court in *P.U.C.* v. *Gas Co.*, 317 U.S. 456, 467, relating to regulation under the Natural Gas Act, state commissions and this commission regulate "without any confusion of functions" to attain what Congress intended, i.e., "a harmonious dual system of regulation * * *—federal and state regulatory bodies operating side by side, each active in its own sphere".

This case presents a factual situation which will rarely be encountered by the Commission but is similar to that involved in the Raker Act authorization. Normally the Commission is confronted with a proposed project for which the applicant has, by obtaining State permits, complied with State law with reference to water he proposes to put to beneficial use. Here, however, the Commission, like Congress in connection with the Raker Act, is dealing with water rights *used* as well as water rights proposed *to be used* for irrigation and municipal purposes. As to the water rights the Districts and San Francisco *are using*, it is clear that such rights may not be impaired through conditions incorporated in the license issued for New Don Pedro. However, as to the water rights obtained by the districts to increase the storage of water over and above the capacity of the existing Don Pedro project, and as to water rights held by San Francisco for use in diverting water in excess of 210 mgd, or whatever lesser amount it is determined San Francisco was actually authorized by the Raker Act to use, the Commission is authorized under Section 10(a) of the Act to limit the proposed use of water by the Districts and San Francisco to whatever extent is practicable and feasible in bringing about comprehensive development.

Before setting out the provisions of Section 27 of the Act, it is important to review, to the extent possible, the Congressional intent underlying Section 27 which is reemphasized in Section 10(a). The legislative history discloses that the phrase "other beneficial uses" contained in Section 10(a) was intended to cover the uses specified in 27. An unsuccessful attempt was made in Congress to insert the word "irrigation" in Section 10(a).[22] This word was not included (see 58 Cong. Rec. 2135 (1919)), not because irrigation was not to be considered by the Commission in arriving at its judgment as to what represents comprehensive development of a particular stream, but because the inclusion of the word "irrigation" in Section 10(a) might tend to give the Commission a semblance of authority over irrigation rights and powers specifically reserved to the States.[23] The word "irrigation" was included in Section 27, however, in order to affirm state jurisdiction over water *used* for irrigation purposes as well as to prevent the Commission from interfering with water *used* for this purpose in licensing power projects.

While Congress assumed that the usual rules of supersedure would apply to state laws in conflict with the Act occupying the field, it included in Section 27 explicit provision to save, in the case of conflict, those state laws not relating to the development of hydroelectric power which it wanted to continue in effect (*First Iowa Hydro-Electric Cooperative* v. *F.P.C.*, 328 U.S. 152, 175–176). Section 27 expressly precludes any supersedure of the State laws relating to water "*used* in irrigation or for municipal or other uses." This section provides:

---

[22] When the original Federal Water Power Act (now Part I of the Federal Power Act) was being debated in 1919, Congressman Raker offered an amendment on the floor of the House (to H.R. 3184, 66th Cong., 1st Sess., 1919), to include "irrigation" as within the Commission's Section 10(a) jurisdiction in determining comprehensive development. The Raker amendment was to: . . . strike out the word "of" before "water power", and insert the word "irrigation." [58 Cong. Rec. 2134 (1919).]

[23] See statement of Congressman Taylor of Colorado (58 Cong. Rec. 2135 (1919)), following which Congressman Raker's amendment was rejected.

> That nothing herein contained shall be construed as affecting or intending to affect or in any way to interfere with the laws of the respective States relating to the control, appropriation, use, or distribution of water *used* in irrigation or for municipal or other uses, or any vested right acquired therein. [Underscoring supplied.]

Section 27 is not intended to deprive the Commission of any jurisdiction which is expressly conferred by the Act, but is only intended to cause the Commission to exercise jurisdiction in a manner which does not deprive the States of whatever constitutional powers they may have with respect to water *used* within their boundaries for the indicated purposes.

While the Commission rarely ever deals with water *used* for irrigation and municipal purposes in connection with its licensing authority, a case in which water *used* for irrigation was involved is *Southern California Edison Co.*, 8 FPC 364. In this case the company claimed that the requirement of the Commission "for release of water for recreational purposes is in direct conflict with the provisions of a certain contract between the Company and downstream riparian owners * * * who have irrigation rights in the waters of the Kern River prior to the Company's rights and requested that the condition be omitted from the license." The Commission held, *inter alia*, that—

> * * * operation of the plant under the proposed condition would not actually or inferentially affect the use of the Kern River water by the lower irrigators * * *. A private agreement to divert all the water from the stream, even though the lower irrigators might be benefited by such diversion, is not binding against the United States. [8 FPC at 372.]

In passing it seems appropriate to point out that the establishment and operation of irrigation districts, such as the districts herein, requires investments by them and their customers running into millions of dollars. Absolutely essential to their creation and maintenance in a beneficial way is a long-term assurance as to water supply which is not subject to change whenever the interests of others dictate. Business reality and the public interest therefore demand that such water users be protected by law from losing their water supply—or be fully compensated if deprived of it. Section 27 of the Federal Power Act, the water law of California, and the Raker Act therefore manifest a proper concern for the legitimate interests of irrigation districts in whose success and financial stability the public has a vital stake. The same, of course, can be said of municipal water systems.

Fish Water Releases Proposed by the California Department of Fish and Game

The primary interest of the California Department of Fish and Game in this proceeding is in connection with the salmon runs of the Tuolumne River. Salmon is an anadromous fish, meaning that it is propagated in fresh water, migrates to salt water where it spends most of its adult life and then returns to fresh water to spawn.

Although there is a general tendency for fish born of spawning in a particular year to return to spawn themselves four years later, it is very common for fish to return as three years olds, five year olds, and even six year olds. These tendencies of the fish not only contribute to the yearly runs but also appear to enable a salmon population to reconstitute itself so that intermittent years of poor or even zero spawning do not mean that runs in a stream will be destroyed.

There is a great variety of species of salmon, but king and silver salmon appear to predominate in California coastal waters. King salmon is the only variety of salmon of consequence in the Sacramento-San Joaquin River system of California's Central Valley. The salmon population of the Sacramento system is considerably larger than that of the San Joaquin system. As to the San Joaquin river system, king salmon spawning populations have been known on the main river as well as on its tributaries, including the Consumnes, Mokelumne, Stanislaus, Tuolumne and Merced Rivers. Of the San Joaquin tributaries the Tuolumne is said to be the largest producer but in relation to the entire Central Valley production, it is indicated that the Tuolumne produced on the average between 7 and 8 percent.

In addition to the Sacramento-San Joaquin River complex there are a great number of coastal streams in California having salmon populations. Among these are the Mad, the Klamath, the Eel and the Smith. There is disagreement in the record as to the importance of the various rivers in salmon production.

Access for the fish to coastal streams such as the Klamath, Eel, Mad and Smith is a matter of going directly from the ocean into the stream. The situation is otherwise for the inland rivers of the Central Valley. First the fish must proceed through San Francisco Bay and then easterly to its upper reaches, known as Suisun Bay, where they enter the great Delta area of the Sacramento and San Joaquin Rivers. Those fish electing the San Joaquin then traverse the maze of Delta channels by a route or routes unknown to reach the lower San Joaquin. It is approximately 50 miles from the Delta area to the mouth of the Tuolumne River.

Mention should also be made of the fact that "straying" is the ability of the salmon to return for spawning purposes to a stream other than the stream in which the salmon was born. It appears that straying is somewhat common for Central Valley salmon.

The California Department of Fish and Game, supported by the Secretary of the Interior, and in part by the Commission Staff, seeks to preserve and enhance the fish resources of the Tuolumne River by conditioning the license so as to provide for the flows hereinafter set forth, such flows being based upon spawning areas over six inches in depth.

King salmon have spawned in a seventeen mile reach of the Tuolumne River extending from La Grange bridge to the Hickman-Waterford bridge. This area begins at the Hickman-Waterford bridge, about thirty-two miles upstream from the point where the Tuolumne joins the San Joaquin and ends just below La Grange bridge, about two miles downstream from the La Grange dam.

Gravels utilized for spawning in the Tuolumne River apparently resulted in part at least from gold dredging activity. The extent and utility of the gravels for spawning are the subject of different estimates. The chief witness for the California Department of Fish and Game considered gravels were available to accommodate at least 80,000 spawning salmon. Witnesses for the Districts considered the gravels such as to accommodate in excess of 25,000 spawning salmon, with the potential being from 40,000 to 60,000.

For successful spawning, salmon require, in addition to gravel, water of suitable temperature, quality, depth and velocities. The spawning areas must contain gravels of certain sizes and composition. Water moving over gravels creates "riffles" in which salmon prefer to spawn. A riffle was described as "a portion of the stream (having) water velocity and depth * * (and) some gradient and have water passing over it at a suitable velocity." But some riffle areas, for reasons known only to the fish, are preferred above others in which areas the fish will indulge in what is known as "mass spawning". This phenomenon occurs even though there are gravels which are unoccupied by any fish and such activity.

The usable salmon spawning area is dependent upon flow, with the area required depending upon several factors including the number of spawning salmon to be accommodated, the distribution of the run as to time and location, numbers of female spawning at any one time and spawning area required per female.

The California Department of Fish and Game contends that the Tuolumne River has an average annual run of 40,000 king salmon; that to maintain the 40,000 average space must be provided for double the average, or 80,000 salmon; that 40 percent of the salmon run are females; that an average of 31 percent of the total run will be on the spawning beds at any one time; that for spawning purposes a female salmon will use 40 to 60 square feet for the actual redd or nest, but will keep other females from using a much larger area of approximately 200 square feet; that the total spawning area requirement for the support of an average run of 40,000 fish would be approximately 1,984,000 square feet; that to provide for migration of any salmon into the Tuolumne River a flow of approximately 200 c.f.s. is needed at the town of Waterford; that to provide for the successful spawning of a run of 80,000 salmon, a flow of 385 c.f.s. is needed over the spawning beds during the spawning season; and that water temperatures of 56° F. or less are needed for successful spawning.

The California Department of Fish and Game and the Secretary of the Interior seek to have fish water releases required for the entire life of the license, with the Commission retaining jurisdiction to reopen the matter for review at any appropriate time. In the view of the Commission Staff, the recommended releases should be allowed, at the outset, for only a period of 20 years and be re-examined at the end of that time. It should be pointed out in this regard that the recommendations of the California Department of Fish and Game failed to take into consideration the proposed diversion of water by San Francisco for municipal purposes. As is clear from the record, shortly after San Francisco's diversion exceeds 295 mgd, estimated to be about 1985 (or 20 years after completion of the project), the dependable capacity of the New Don Pedro project would drop to zero. It is this circumstance that causes the Staff to recommend re-examination of the fish water releases after the initial 20-year operating period.

The water which the California Department of Fish and Game seeks to have released from the New Don Pedro reservoir into the natural stream-bed below the La Grange dam to benefit spawning conditions of fall run king salmon is set forth in its schedules "A" and "B" as follows:

Period	Schedule A (normal year)		Schedule B (dry year)	
	Cfs	Acre-feet*	Cfs	Acre-feet*
Preseason flushing flow	2,500	4,960		
October 1-15	200	5,950	50	1,490
October 16-31	250	7,930	200	6,350
November	385	22,900	200	11,900
December 1-15	385	11,450	200	5,950
December 16-31	280	8,880	135	4,280
January	280	17,210	135	8,300
February	280	15,550	135	7,500
March	350	21,520	200	12,300
April	100	5,950	85	5,060
May-September	3	910	3	910
Total acre-feet		123,210		64,040

*Cfs day equals 1.983 acre-feet.

Concerning the fish water releases requested by the California Department of Fish and Game for the Tuolumne fall run salmon, it should be observed that upstream migration begins in early October and continues through November and into December. Spawning activities begin upon arrival in the spawning areas between Waterford and La Grange, and spawning continues throughout November and December and for some days in January. Incubation begins with first spawning and continues for about 60 days after final spawning until early in March, the actual period depending on water temperature. The period of emergency begins approximately three weeks after hatching. Following emergence the young fish start their downstream migration with the bulk migrating seaward by the end of March. Some, however, remain until April.

Because the proposed fish water releases would have the effect, *inter alia*, of reducing the irrigation supply available to the Districts in critical years below that available from the existing Don Pedro project, a result clearly within the ban of Section 27 of the Act, it would serve no useful purpose, insofar as this opinion is concerned, to pass upon above described contentions of the California Department of Fish and Game or to detail the evidence and contentions of the Districts with reference thereto. No evidence was offered by the Staff of the Commission. Suffice it to say that while there are some areas of agreement as to the evidence and contentions set forth above in a generalized fashion, there are other areas in which opinions differ, such as the weight to be accorded some of the evidence, the amount of water necessary to provide suitable spawning conditions for salmon, the space required by an individual spawner, the need to provide for 80,000 salmon and the amount of space necessary to accommodate that number of salmon, and the water temperature required.

But before proceeding further, an additional contention of counsel for the California Department of Fish and Game should be considered. They argue that the annual power loss of $1,777,000 that their proposed fish conditions would inflict upon the New Don Pedro project can be made up by the Districts by charging the water users for water and raising their present low power rates.[34] In this regard they call attention to the fact that the Districts' portion of the cost of New Don Pedro is proposed to be paid for out of power revenues, with no charge to be made for the additional water to be provided; and that if the Districts "divert a million acre-feet of water each year to the farmers, then a charge of only a little over a dollar an acre-foot would make up the loss in power revenues" (see also *infra.*, p. 566, note 36). In their view, "it is more equitable to let those who get the benefits pay the costs, and in this case, it is readily apparent that the Districts can afford to build the project and provide safeguards for the fish and wildlife resources."

This contention, as counsel for the Districts point out, "misses the crucial point that the proposed fish conditions destroy the primary purpose of New Don Pedro to conserve water for the dry years. As we demonstrated * * *, the result of the State's fish conditions is to reduce the dependable minimum year irrigation supply obtainable from New Don Pedro to below that obtainable from the existing Don Pedro project after six years of operation, or 1972. By 1985 the dependable minimum year irrigation supply under New Don Pedro with the fish conditions would be about 546,000 acre-feet or more than 100,000 acre-feet less than that of existing Don Pedro. Certainly no farmer can be expected to pay more for a new project that will provide less water. He would rightly ask why such a project should be built at all."

---

[34] The consultants for the Districts have recommended a slight increase in power rates so that a reserve fund may be created. The increase recommended by the California Department of Fish and Game would be a further but slight increase.

Limitation on the Commission's Jurisdiction

The desire of the California Department of Fish and Game, the Secretary of the Interior and the Commission Staff to preserve and enhance the fishery resources of the Tuolumne River is understandable, particularly in view of the fact that the spawning areas in coastal streams, which are so important to the fishing industry, recreational pursuits, etc., are shrinking in number. However, the Commission may only issue a license in this proceeding which will not impair the rights of the Districts and San Francisco to water *being used* for irrigation and municipal purposes. So far as the Districts are concerned, not only may the Commission not reduce its irrigation supply available in the critical years below that available from the existing Don Pedro project, but in the Examiner's view, it ought not to unduly interfere with the central purpose of the project to provide the Districts with a more dependable supply during the critical dry years.

For reasons unknown to the Examiner, the proposed fish water releases were intended to be provided solely out of water belonging to the Districts rather than out of water belonging to both the Districts and San Francisco. It is clear, of course, that by limiting the proposed use of water by both to provide for fish water releases, the effect would be less burdensome on the Districts but, on the basis of the record, would after a few years of project operation interfere with San Francisco's water supply for municipal purposes.

The proposal to provide fish water releases out of water belonging to the Districts may be due to the fact that the California Department of Fish and Game, the Secretary of the Interior and the Commission Staff (1) appear to have erroneously assumed that San Francisco has the right to divert in excess of 400 mgd from the Tuolumne River, a right it does not presently possess and, unless New Don Pedro is constructed, will not have (see *supra*, pp. 546, 548); or (2) that they were of the opinion—shared by the Examiner—that water for municipal purposes should take preference over fish. Of course, if there can be a sharing of the water so that fish as well as irrigation and municipal purposes can be provided for, the license should be conditioned to provide therefor.

It is of interest to point out in passing that the fact that San Francisco is not one of the joint applicants, or even a party to this proceeding, in no way hampers the exercise of the Commission's jurisdiction. In the present state of the record, all the Commission needs to do in order to exercise complete control over San Francisco's plans is to prohibit commencement of construction until an agreement satisfactory to the Commission is entered into by the Districts and San Francisco with reference to the construction and operation of the project. In connection with the contract to be executed by the Districts and San Francisco it should be borne in mind that, as stated in *United States* v. *Willow River Co.*, 324 U.S. 499, 503, "only those economic advantages are 'rights' which have the law back of them", and Congress has left the final decision to this Commission rather than to the contracting parties.

Because the record was made on the basis that fish water, if provided, would be provided out of the total volume of water belonging to the Districts the Examiner is unable to compute the water which might be available for fish water releases when provided solely out of a portion of the additional volume of water to become available to the Districts and San Francisco as a result of the construction of the New Don Pedro project. As previously pointed out (*supra*, p. 557), it is only out of the additional water to become available that fish water releases may be provided, assuming that the water which can be provided for this purpose will be sufficient in volume to make it worthwhile. In making a record which will permit this determination to be made it appears that it will be necessary to inquire into, *inter alia*, the circumstances under which, and the period over which, San Francisco proposes to sell water stored in the recently completed Cherry Valley project to the Districts (see *supra*, pp. 549, 550); whether a Commission license is required for the Cherry Valley project; and the justification for the claim that San Francisco's local water supply, which was its sole source of supply until it began receiving Tuolumne River water in 1934, cannot now be depended upon to supply any water in a very dry year (see *supra*, p. 546).

In view of the state of the record concerning fish water releases, and the requirements of the Act with reference thereto, the order accompanying this opinion grants a license on the condition that the Districts maintain minimum stream flows in the Tuolumne River at La Grange bridge as may be prescribed hereafter by the Commission (see Article 30). To expedite disposition of this case the parties may be able to stipulate the necessary facts for the Commission's consideration.

The Districts' Recreation Proposal

Section 10(a) of the Act is quoted hereinabove (see *supra*, p. 556). If, as this Section contemplates, the general welfare is to be served to the maximum practical extent, the Commission's outlook in this case may not be limited to the interests of those who will bear the cost of New Don Pedro. Rather its outlook must be as comprehensive as the total public interest. And as is well known, the Commission is showing a renewed and increasing interest in the development of the Nation's water resources for the benefit of all.

The evidence shows that the New Don Pedro project will create one of the largest low-elevation lakes in the San Joaquin Valley. At full pool it will have a shoreline of 159 miles and afford many varied recreational opportunities including sport fishing, camping, hunting, boating, water skiing, swimming and picnicking, with such opportunities being afforded in a region which, along with the State of California in general, is experiencing an accelerated increase in population and in industrial and other activity.

The Districts plan to employ a consultant to develop a master plan for recreation consistent with the project purposes, but such plan is not proposed for development by the Districts but rather for implementation by interested local, state or federal agencies. The Districts have not offered to create recreational facilities at their own expense, nor have they offered to purchase land for recreational purposes. They contemplate that the only land to be made available for such purposes will be the land within the project boundary and this would be true with respect to the entire 159 miles of shoreline with the exception of the area adjacent to the proposed New Don Pedro dam. Notwithstanding this long shoreline it appears that the only access road proposed to the reservoir will be to the dam site. In the view of Tuolumne County, proper recreational development could be afforded along the entire reservoir shoreline with suitable access roads and the acquisition by the Districts of various sites which lend themselves to recreational development.

Counsel for the Districts request that the following finding, among others, be made:

> The New Don Pedro project at full pool will create a lake of about 12,000 acres and of about 3,000 acres at the minimum storage of approximately 309,000 acre feet, affording many and varied recreational opportunities including fishing, boating, water skiing, swimming and picnicking.

Counsel for the Secretary of the Interior suggests that there be added to this proposed finding the words "if sufficient lands, access roads, and recreational facilities are provided for these purposes." He recommends the addition of this language because it "clearly sets forth the fact that the Applicants intend for someone else to provide the means of achieving the recreational values which they claim will flow from the construction of this project. The record is clear to the effect that the Districts have no present intention of investing any funds in facilities for public use of the reservoir. Unless they are willing to make some contribution other than planning to these uses, it is doubtful that they may claim properly that they are improving the recreational opportunities of the area by the construction of the project." The Examiner agrees.

The proposal of the Districts' to do no more than cause a master recreational plan to be prepared is to be contrasted with the conditions Congress exacted of San Francisco in connection with its construction of the Hetch Hetchy system (also located on public lands) under the Raker Act. In consideration of the rights and privileges granted under that Act, San Francisco was required, *inter alia*, to construct and maintain access and scenic roads, trails and bridges under the direction and approval of the Secretary of the Interior and the Secretary of Agriculture; to construct telephone systems, fences, camp sites, etc.; to permit free access to and use of the Hetch Hetchy area by the public; to supply water for camp purposes; to comply with sanitary regulations; and to dispose of all power generated by the Hetch Hetchy system to the public at cost. In this connection it is of interest to point out that House Report No. 41, 63d Congress, 1st Session, which accompanied the bill that became the Raker Act, stated in part (p. 11, 15):

> Section 7 provides that for and in consideration of the grant the grantee shall make certain payments, the proceeds of which are to be used exclusively for the construction of roads and other improvements in the Yosemite National Park and other national parks in the State of California.
>
> * * * * * * *
>
> Paragraph (p), section 9, provides for the building of roads and trails in the Yosemite National Park as designated by the Secretary of the Interior.
>
> (The routing of these roads and trails was made by Mr. Marshall, of the Geological Survey, who surveyed the Hetch Hetchy Valley and is familiar with all the scenic and topographical conditions there. These roads will cost the city of San Francisco $500,000 to $1,000,000, and are to be turned over, free of charge, to the United States. This is one of the important considerations, and carries compensation to the Government for the rights of way granted. The construction of these roads will make the Hetch Hetchy Valley accessible and will provide a convenient and easy way for mountaineers to reach the higher parts of the Sierra. This paragraph also contains a requirement that the grantee shall provide a water supply for camp purposes at the Meadow camping place, a third of a mile from Hetch Hetchy. It is also provided that all trail and road building shall be done subject to the approval and direction of the Secretary of the Interior or the Secretary of Agriculture, according to their respective jurisdictions.)
>
> Paragraph (q), section 9, provides that the grantee shall furnish water at cost to any authorized occupant within 1 mile of the reservoir, and shall repair and maintain roads and trails constructed under the provisions of the grant.
>
> Paragraph (r) provides that the grantee shall pay all the cost of inspection and investigations which may be required of the Department of the Interior . . . .
>
> * * * * * * *
>
> Paragraph (t) requires the grantee to convey to the United States any and all tracts of land now owned by the city within Yosemite National Park or

the national forest, which lands are not actually required for use under the provisions of this act.

(The city of San Francisco purchased private lands for the purpose of exchanging the same with the Government in lieu of that portion of the floor of the Hetch Hetchy Valley, which is not owned by the city. The purpose of this plan is to provide suitable and desirable camping places for visitors who may wish to visit the Sierra and who would otherwise have camped in the Hetch Hetchy, and at the same time compensate the United States for lands to be submerged.)

Paragraph (u) provides that the grantee shall sell water at cost to the military reservations in San Francisco. * * *

The Raker Act was enacted in 1913 when the population of California and adjoining states was far less than today. Today, for example, California is the largest state in the Nation population-wise. Accordingly, it is apparent that the need for creating and maintaining extensive recreational facilities, access roads, bridges, trails, camp sites, etc., is far greater now than in 1913. The order accompanying this opinion therefore requires that such facilities be provided at the expense of the Districts and San Francisco.

While the Districts claim that they lack legal authority to construct and maintain recreational facilities, there is no merit to this contention. This is particularly so since New Don Pedro will be a licensed project. It clearly appears that under State law the Districts may do any and all acts necessary to providing water and power. But even if this contention had merit the required recreational facilities could be constructed, maintained and paid for by San Francisco, with San Francisco's portion of the other project costs being reduced accordingly.

Tuolumne County has a sincere and urgent interest in the licensing of the New Don Pedro project, particularly insofar as recreational features and the cost of relocation of roads and bridges are concerned. Their counsel stated at the hearing that he had talked with representatives of the Districts "and they have promised nothing." He further stated that the negotiations in which he had participated had led "to complete frustration as far as Tuolumne County is concerned."

Counsel for Tuolumne County points out in his brief that "Tuolumne County . . . has a land area in excess of 1,400,000 acres. Of this land area 72% is owned by the United States and 6% by other tax exempt agencies such as Modesto . . . and Turlock . . . . * * * The New Don Pedro project . . . will remove an additional 8,917 acres from the tax roles . . . ." The county estimates that the total cost of the relocation of the county roads and bridges which they desire to be relocated[35] is roughly $1,618,000.00, but requests that the Districts be held responsible for no more than the actual replacement cost. In this regard counsel points out that, as the evidence indicates, "more than sufficient money has been budgeted [by the Districts] for the County road relocation."

Concerning the recreation potential of the New Don Pedro project counsel for Tuolumne County contends that it "could be unlimited if developed properly" since "it lies within easy reach of the densely populated central valley and bay area regions of California. The fact that the reservoir is at a low elevation means that it would be used by the public for recreational purposes during the greater part of each year. A well planned and controlled recreational development along the shores of New Don Pedro Reservoir would allow a maximum of public use and would tend to make the recreational operation a financial success." Tuolumne County recommends that the recreation facilities be provided at the expense of the Districts since the resources of the County "are already strained to the limit by reason of the fact that over 70% of its land area is owned by tax exempt agencies. With its small tax base, it would be impossible for Tuolumne County to provide the initial basic facilities, the land necessary for these facilities, and the access roads to these facilities." Counsel for the county further states that "After the basic recreational facilities are installed Tuolumne County believes that it should be allowed to participate in the operation of the recreational development with the Irrigation Districts since the reservoir is entirely situated within Tuolumne County. Furthermore, since Tuolumne County will have to provide the police and fire protection and other government services which are afforded by taxes raised solely within the County, there is no way for Tuolumne County to mitigate this financial burden unless it is allowed to participate in the operation of the recreational development."

---

[35] Counsel for Tuolumne County states in his brief that "These are the only county roads which Tuolumne County seeks to have replaced. Other county roads and parts of county roads have been inundated, but Tuolumne County feels that the damage by the loss of these roads and parts of these roads is negligible. Therefore, Tuolumne County does not seek their relocation, nor redress for their loss."

The financial ability of the Districts and San Francisco to provide the recreational facilities, etc., is obvious. The Districts, for example, propose to recover their portion of the cost of New Don Pedro entirely out of power revenues and San Francisco may be able to recover its cost contribution in the same manner. It is not proposed that the farmers of the area, in order to get more water for irrigation, will pay for the additional water they receive.[38] It is clear, of course, that irrigation as well as power will provide revenues and attract capital, as will the high credit rating of the Districts and San Francisco. Moreover, the cost of the project to the Districts and San Francisco is substantially reduced by the Federal Government's payment for flood control space.

Position of Banta Carbona

The source of water of Banta Carbona for irrigation is by diversion from the San Joaquin River below its confluence with the Tuolumne River. In its petition to intervene Banta Carbona stated that:

> In recent years, as the consumptive use of water for irrigation in the San Joaquin Valley upstream from [Banta Carbona's] points of diversion has increased, [Banta Carbona's] water supplies have been seriously impaired, principally through the deterioration of the quality thereof. As a result severe damage to crops and orchards within [Banta Carbona's] service area has been caused by the excessive salinity of the water diverted

---

[38] Counsel for the State of California state that "The two irrigation districts involved had in 1961 a gross agricultural product of over $70,000,000 (Ex. 23). The water which is used to produce this great amount of agricultural income is served to farmers of Modesto . . . without charge, and is served to the farmers of Turlock . . . at a nominal fee of 31 cents an acre-foot . . . . In California, at least, this is a rather unique situation. The United States Bureau of Reclamation and the State of California have built and are building vast irrigation projects so that land may be served with water and produce agricultural crops. This water, however, will not be free. For example, the State of California will serve water to the Delta or upstream from the Delta at $3.50 an acre-foot and the price downstream from the Delta will be the $3.50 an acre-foot plus additional distribution costs."

The past success of the Districts, however, is not a reason for now imposing onerous conditions upon them. It is true, of course, that they have provided the area they serve with a larger and larger slice out of an expanding cake, but the key to that flourishing growth has been the know-how and integrity of a competent management filled with determination and enjoying the confidence of the inhabitants.

> from the San Joaquin River. A substantial part of [Banta Carbona's] water supplies during the early months of the irrigation season is derived from runoff in the Tuolumne River. Heavy snow melt runoff in the Tuolumne River and other tributaries of the San Joaquin River during the spring months has been beneficial to the District in that it has served to flush out the excessive saline water that had previously accumulated in the stream channels and sloughs in the San Joaquin Valley.

As counsel for Banta Carbona states in his brief, "The water quality problem in the lower San Joaquin has been developing gradually over many years. But * * * only in recent years has this problem become so acute that it now constitutes deprivation of property and impairment of vested rights."

Counsel for Banta Carbona recognize, of course, that the serious water quality problem that now exists in the lower San Joaquin River is not due to the proposed construction of the New Don Pedro project. What Banta Carbona seeks is an appropriate condition in the license issued to the Districts to prevent any "further deterioration in the water quality in the lower San Joaquin as a result of" the construction of New Don Pedro. In this regard counsel states that Banta Carbona does "not expect the Tuolumne River to contribute all the water that is necessary to maintain water quality in the lower San Joaquin. We only expect the Tuolumne River to contribute its historical proportion. We do not believe anyone controverts the water rights of the Banta Carbona Irrigation District of the fact that said water rights have a priority dating from August 11, 1911, which is prior to both the existing Don Pedro applications made in 1919 and the New Don Pedro applications made in 1951."

The question of whether a downstream irrigator can require upstream irrigators to prevent an alleged impairment of quality of river flows is an issue of State law depending upon the rights held by the respective users. As counsel for the Districts point out, "The Commission has consistently ruled * * * that once a license applicant has shown prima facie compliance with State laws regarding its water rights * * * a challenge to those rights * * * should be made not to the Commission, but to the appropriate State agency having jurisdiction over State water rights." See *Power Authority of the State of New York*, 19 FPC 186, 190–191; *California Oregon Power Co.*, 13 FPC 1, 5; *Oakdale Irrigation District, et al.*, 10 FPC 810, 811, *East Bay Municipal Utility District*. 1 FPC 12, 13.

Mention should also be made here of the fact that counsel for Banta Carbona point out in their brief "that if mandatory fish releases from the New Don Pedro project are to be made in accordance with the recommendations * * *, these would mitigate the quality problem in the lower San Joaquin River to a considerable extent during part of the irrigation season at least." But as hereinabove pointed out, the Examiner is unable, on the basis of the record made, to calculate the extent that fish water releases can be made consistent with the provisions of the Act.

FINDINGS

Based on the evidence of record, the briefs and arguments of counsel, as well as the preceding portion of this decision, it is further found and concluded that:

(1) The Districts, two public agencies of the State of California, filed a joint application on May 9, 1961, as amended on March 30, 1962 and May 18, 1962, for a major license under the Act to construct, operate and maintain a hydroelectric project known as the New Don Pedro project, FPC Project Number 2299, at approximately river mile 54.5 on the Tuolumne River in California.

(2) No conflicting application is before the Commission. Public notice has been given.

(3) The proposed New Don Pedro project would be located about one and a half miles downstream from and would inundate the existing Don Pedro project of the Districts, located at river mile 56.0, and covered under FPC Minor Part License Number 1086 issued in 1930.

(4) A public hearing was held on the application in San Francisco, California commencing on October 16, 1962, and continuing for nine hearing days ending October 26, 1962.

(5) The proposed project would affect public lands of the United States and is subject to licensing under the Act.

(6) The Chief of Engineers, Department of the Army, has reported that special terms and conditions in the interests of navigation are not considered necessary for insertion in any license which may issue.

(7) The New Don Pedro project, constructed, operated and maintained as hereinafter ordered and conditioned, will not affect any Government dam, nor will the issuance of a license therefor, as herein provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(8) The issuance of a license for the New Don Pedro project will not interfere or be inconsistent with the purposes of any reservations or withdrawal of public lands.

(9) The exhibits filed by the Districts pertaining to the New Don Pedro project conform with the Commission's rules and regulations and should be approved as part of the license, but there shall be filed, as hereinafter provided, Exhibits F and K showing and describing the project boundary and lands.

(10) The New Don Pedro project would consist of a dam about eight hundred feet long at crest Elevation 850, which will have a centrally located impervious rolled earth core and previous gravel and cobble shells; a reservoir of 2,030,000 acre feet capacity at full pool water surface Elevation 830, which will extend about twenty-two miles upstream to a point on the main stream known as Wards Ferry Bridge; a control spillway consisting of a concrete structure with an ogee crest at Elevation 800 and provided with three radial type, hoist operated steel gates capable of passing 81,000 cfs at reservoir Elevation 832; and uncontrolled emergency overflow spillway 1900 feet wide with the crest at Elevation 832 which in combination with the controlled spillway will pass 324,000 cfs with the water surface at Elevation 843.3; a diversion tunnel through the left abutment with permanent outlet works; a power tunnel through the left abutment extending to a steel penstock leading to an outdoor type power house at the downstream toe of the dam containing three units, each consisting of a reaction type turbine with a rated capacity of 69,000 horsepower operating under a 425 feet head and a directly connected generator rated at 45,766 kva, and connected to the main transformers rated at 58,000 kva; a switchyard; and six 69 kv transmission lines to substations of the Districts, together with appurtenant works, the location, nature and character of all of which are more specifically shown and described by the exhibits which form part of the application for license.

(11) The structures proposed as part of the New Don Pedro project conform to sound engineering practice and will be safe and adequate.

(12) The estimated cost of construction of the New Don Pedro project is reasonable.

(13) The project site was selected after examination of four other sites, all in the same general vicinity, and was chosen not only because it will permit the maximum practicable reservoir size which the topography of the area will support but also because it offers superior geologic conditions.

(14) The Tuolumne River has a large annual variation in flow, ranging from 600,000 acre feet to 3,200,000 acre feet over the 39 year representative hydrologic cycle, namely 1923–1961, and storage is essential in order to provide dependable supplies for irrigation and domestic use, permitting the carryover of waters from wet years to dry years.

(15) As proposed, the purposes of the New Don Pedro project are to (a) conserve water for the Districts for irrigation and domestic supply, with releases of water for irrigation purposes to be used in the generation of hydroelectric power; (b) enable San Francisco to increase its upstream diversions and power output; and (c) provide flood control and some recreation.

(16) The major purposes of the Districts in constructing the New Don Pedro project are to generate additional hydroelectric power for distribution in their power service area and to firm up the water supply available for irrigation through providing sufficient storage to carry them over dry years, thus providing the area with needed power and improving and stabilizing the basic agricultural economy of the area.

(17) The major purposes of San Francisco in proposing to contribute to the first cost of constructing the New Don Pedro project are to enable it (a) to increase its ultimate diversion of water from the Tuolumne River to more than 400 mgd; (b) avoid the cost of constructing other storage space and aqueduct facilities; and (c) to generate and sell additional hydroelectric power.

(18) The New Don Pedro project, as authorized herein, is best adapted to a comprehensive plan for the improvement and utilization of water power development and other beneficial public uses, including recreational purposes.

(19) It is anticipated that pursuant to the terms of an agreement previously entered between the Districts and San Francisco that San Francisco will enter into a binding agreement with the Districts fixing San Francisco's contribution to the overall cost of the New Don Pedro project. Under the prior agreement San Francisco agreed to pay the actual cost of constructing the New Don Pedro project to a reservoir capacity of 1,200,000 acre feet.

(20) Construction of the New Don Pedro project should not commence until the Districts and San Francisco enter into an agreement filed with and acceptable to the Commission and allocating the total costs between the parties and obligating San Francisco to pay its proper share of those expenditures. Such agreement should entitle San Francisco to a maximum of 740,000 acre feet of storage in the New Don Pedro reservoir consisting of 570,000 acre feet of municipal exchange storage and 50 percent of the 340,000 acre feet of off-season flood control space.

(21) Federal financial participation in the New Don Pedro project in the interests of flood control was authorized by Congress in the Flood Control Act of 1944 (58 Stat. 887) and the Chief of Engineers, Department of the Army, has reported no objection to the issuance of a license providing that a satisfactory agreement is reached to satisfy the needs of flood control, pursuant to the 1944 Flood Control Act.

(22) The Corps of Engineers, San Francisco and the Districts entered into a contract in 1949 providing for the operation of then existing projects of the Districts and San Francisco for flood control, the construction of Cherry Valley dam by San Francisco to incorporate flood control, and for the transfer of flood control operations to New Don Pedro when completed, with a federal monetary contribution for flood control currently estimated at approximately $14,000,000. about $9,000,000 of which has already been advanced.

(23) The substantial contribution made and to be made by the Federal Government is another demonstration that the water resource development for flood

control space in the New Don Pedro reservoir in the Tuolumne and San Joaquin basins is not a matter limited to local concern.

(24) The contract entered into in 1949 by the Corps of Engineers, San Francisco and the Districts, and referred to in paragraph (22) above, specified that "none of the money paid by the Federal Government under the terms of this agreement shall be expended for purposes other than new work on Cherry Valley or New Don Pedro or other new reservoirs." The only new reservoir constructed by San Francisco is Cherry Valley. New Don Pedro is the only new reservoir which the Districts contemplate constructing.

(25) The Districts transferred to San Francisco the $4,600,000 paid by the Federal Government to them under the 1949 contract in exchange for headwater benefits, a matter subject to the Commission's jurisdiction under Section 10(f) of the Act. The transfer of $4,600,000 by the Districts to San Francisco does not appear to conform to the requirement of the 1949 contract limiting the use of Federal payment to "new work", nor does it appear that such payment is justification for the Commission regarding it as being other than a contribution to the first cost of New Don Pedro.

(26) The California Districts Securities Commission approved the feasibility of the proposed New Don Pedro project in 1961 and authorized the Districts to hold elections on the question of whether general obligation bonds in the amounts of $34,000,000 (for Turlock) and $18,500,000 (for Modesto) should be issued, the issuance of which was approved by the voters of the Districts on November 7, 1961.

(27) The voters on San Francisco approved the issuance of $115,000,000 in general obligation bonds in an election held on November 7, 1961 for utilization in connection with the Hetch Hetchy water supply system, to include approximately $45,000,000 for use in connection with the New Don Pedro project.

(28) The Districts have demonstrated their ability to finance their portion of the New Don Pedro project cost pending the conclusion of a final agreement with San Francisco as to the exact amount of the cost of the project to be paid by San Francisco.

(29) The proposed New Don Pedro project will utilize the head and stream flow of the Tuolumne River to the maximum extent for power purposes.

(30) Under the proposed plan the hydraulic capacity of the New Don Pedro project will be about the same as the combined capacity of the Districts' irrigation canals below La Grange dam.

(31) The New Don Pedro project will have an installed capacity of 130,440 kilowatts and an estimated average annual output of 527,000,000 kilowatt hours, with a peaking capability of 150,000 kilowatts. The additional energy values to be developed in the upstream generation facilities of San Francisco as a consequence of the construction of the New Don Pedro project are not a matter of record.

(32) The combined loads of the Districts' electric systems will be sufficient to absorb the entire output if the New Don Pedro project by the date of its completion.

(33) The at-market power value of the New Don Pedro project is estimated at $19.55 per kilowatt year for capacity plus 4.06 mills per kilowatt hour for energy.

(34) As proposed, the usable storage capacity of the New Don Pedro project will be 1,721,000 acre feet at a drawdown of 230 feet, of which 340,000 acre feet will be for flood control; 811,000 acre feet will be for irrigation; and 570,000 acre feet for exchange storage for San Francisco.

(35) The installed horsepower capacity of the New Don Pedro project for the purpose of computing annual charges is 174,000 horsepower.

(36) It is desirable to reserve for future Commission determination the question of what lands of the United States are affected by the New Don Pedro project and the amount of annual charges to be fixed for the use thereof.

(37) The amount of annual charges to be paid under the license for the New Don Pedro project for the purpose of reimbursing the United States for the cost of administration of Part I of the Act is reasonable.

(38) It is appropriate for the Commission to reserve the right hereafter to determine the transmission facilities to be included in the license.

(39) The Districts at present jointly own 37,500 kilowatts at the existing Don Pedro dam and Turlock Irrigation District owns 4300 kilowatts at the La Grange powerhouse.

(40) The Districts have generated and distributed power within their service area since the completion of the existing Don Pedro project in 1923 and currently purchase power from the San Francisco plants upstream because of the insufficiency of their own generating sources.

(41) The combined peak loads served by the Districts have been increasing at an average annual rate of 8 percent and are estimated to reach 180,000 kilowatts by 1965 indicating that the full installed capacity of New Don Pedro of 150,000 kilowatts would be absorbed in the systems of the Districts when the project goes on the line.

(42) The combined energy requirements of the two Districts have been increasing at a rate of about 8 percent and are estimated to reach 840,000,000 kilowatt hours by 1965, indicating that most, and probably all, of the proposed energy production will be absorbed within the Districts when New Don Pedro project goes on the line, depending upon hydrologic conditions.

(43) The total dependable capacity that would be provided at the New Don Pedro project would be fully utilized in the Districts' systems promptly upon construction of the project.

(44) The lowest alternate source of power to meet the Districts' requirements is steam electric power, the average annual cost of which is estimated to exceed the annual cost of New Don Pedro power by about $316,000 based on the Districts' estimated share of the project cost before making any allowance for fish releases.

(45) The New Don Pedro project is economically feasible as a power plant when operated in the manner proposed by the Districts.

(46) The Districts, organized in 1887, have been engaged since that time in the development of the waters of the Tuolumne River for irrigation purposes, under their rights to the use of river waters.

(47) Developments by the Districts, in addition to the construction of main canal and lateral systems totaling over 400 miles, include the La Grange dam, constructed in 1894 at the site of the then Wheaton dam, the Turlock and Modesto reservoirs, completed in 1911 and 1914, of 50,000 and 28,000 acre-foot capacity respectively which provide offstream storage for waters diverted at La Grange, and the existing Don Pedro project with a 290,000 acre-foot reservoir and a power plant of 37,500 kilowatts installed capacity, completed in 1923.

(48) The Raker Act of 1913 (38 Stat. 242) protected the prior water rights of the Districts against interference by San Francisco and recognized the possibility that the Districts might irrigate up to 300,000 acres.

(49) San Francisco was authorized, pursuant to the Raker Act of 1913, to utilize public lands and rights of way in the development of hydroelectric power

and a water supply on the Tuolumne River, but that authorization did not envisage the construction and operation of the New Don Pedro in connection with San Francisco's Hetch Hetchy system.

(50) San Francisco has developed storage at Hetch Hetchy, Lake Eleanor and Cherry Valley aggregating about 656,000 acre feet, four power plants and a network of diversion dams and tunnels and pipe lines across the San Joaquin Valley which transmit Tuolumne River water over 130 miles to the Bay area for distribution to a service area which in 1961–62 had a demand of 178 mgd.

(51) Additional pipeline construction now underway by San Francisco, to be completed by 1968, will provide capacity in the San Joaquin Valley pipelines of 295 mgd.

(52) It is estimated that demands on the San Francisco water supply system will reach 210 mgd in 1968, 295 mgd by 1984, and 400 mgd by 2015. San Francisco anticipates that it will ultimately require a maximum diversion of 471 mgd from the Tuolumne River watershed.

(53) The existing reservoirs of San Francisco's Hetch Hetchy system will support diversions to San Francisco of 210 mgd and the exchange storage to be provided by the New Don Pedro project will be capable of permitting a future diversion in excess of 400 mgd if no allowance is made for downstream flow maintenance.

(54) The California Department of Fish and Game has recommended that the low level outlets of the existing Don Pedro dam be opened before the filling of the New Don Pedro reservoir, to permit free passage of water, which is agreeable to the Districts.

(55) The California Department of Fish and Game has recommended that vegetation be cleared from the New Don Pedro reservoir site according to a plan developed in consultation with that Department for the purpose of providing maximum fish habitat values consistent with other interests and the Districts are agreeable to this, provided that such a plan will not create any conflict with project operations and will be devised so as not to increase clearance costs.

(56) The California Department of Fish and Game has recommended a minimum project pool of at least 100,000 acre feet which would be covered by the minimum pool proposed by the Districts of 309,000 acre feet.

(57) The Districts have agreed to permit free access to project lands to the California Department of Fish and Game to allow management of fish and wildlife resources; to impose limitations upon contractors constructing project features to prevent unnecessary destruction to fish and wildlife, and, in utilizing river gravels for dam construction, not to disturb gravels in a river channel downstream from the project accommodating approximately 500 cfs, leaving a gravel cover over borrow areas adjacent to such a channel so as to prevent the unnecessary washing of silts and fines by flows above that level.

(58) The record does not contain sufficient evidence to justify requiring the Districts to remove willow growth and other vegetation from salmon spawning areas of the Tuolumne River.

(59) The Districts as public agencies of the State of California have submitted satisfactory evidence of compliance with requirements of all applicable state laws insofar as necessary to effect the purposes of a license for the New Don Pedro project.

(60) The Districts propose to employ a recreational consultant to develop a master plan for recreational purposes, consistent with the primary purposes of the project, and to deliver the plan to interested federal, state and county agencies for implementation.

(61) The New Don Pedro project at full pool will create a lake of about 12,000 acres and of about 3,000 acres at the minimum storage of approximately 309,000 acre feet, affording (in a region which, along with the State of California in general, is experiencing an accelerated increase in population and industrial and other activity) many and varied recreational opportunities including camping, fishing, hunting, boating, water skiing, swimming and picnicking, making it desirable that the Districts not only prepare a master plan but provide, with San Francisco's financial assistance, lands, access roads, and recreational facilities to the maximum practical extent in the same manner as Congress required of San Francisco under the Raker Act.

(62) The New Don Pedro project will permit a seasonal reservoir draft of at least 1,105,000 acre feet for almost 80 percent of the 39 year hydrologic cycle and a draft of 900,000 acre feet for the balance of the time, under a 210,000,000 gallons per day (210 mgd) diversion condition upstream; as seasonal draft of at least 1,105,000 acre feet almost 75 percent of the time and a draft of 900,000 acre feet for most of the balance of the time under a 295 mgd diversion condition upstream; and at least a 1,105,000 acre-foot draft about 56 percent of the time, 900,000 acre feet about 33 percent of the time and smaller diversions for the remaining 12 percent of the time, under a 400 mgd diversion condition upstream, representing the optimum yields possible under the hydrologic cycle.

(63) Major upstream and downstream migration and spawning activity occurs in the stretch of the Tuolumne River from La Grange bridge at river mile 50.5 to Hickman bridge at river mile 31.7 during the months of October through April.

(64) The State of California, acting through its Department of Fish and Game, intervened in this proceeding for the purpose of protecting and maintaining the fishery and wildlife resources of the Tuolumne River.

(65) The California Department of Fish and Game, in its recommendations for the protection of the fish and wildlife resources of the Tuolumne River, has requested that the Districts maintain minimum stream flows downstream from La Grange dam, which aggregate 123,000 acre feet for a normal year (Schedule A) and 64,000 acre feet in a dry year (Schedule B) for the protection and utilization of fish spawning areas downstream during the period October through April.

(66) In its criteria for operation under Schedule A or B the California Department of Fish and Game makes no allowance for the increasing diversions proposed to be used by San Francisco.

(67) The California Department of Fish and Game did not take into account the accretions which occur in the Tuolumne River in its computations of the flows and areas it recommended for salmon spawning.

(68) The report of the Secretary of the Interior states that the New Don Pedro project will have an adverse effect on fish and wildlife resources of the Tuolumne River, and makes various recommendations for the preservation and enhancement of such resources. Insofar as those recommendations call for specific releases of water into the natural streambed below La Grange dam they exceed those proposed by the California Department of Fish and Game by 25,000 acre feet per annum in a normal water year and by 15,000 acre feet per annum in a dry year.

(69) A fall run of king salmon has spawned in a 17-mile reach of the Tuolumne River commencing about two miles below La Grange dam, actual counts of which are available only for the years 1940–42, 1944 and 1946, and estimates of which are available for the years 1947–49 and 1951–61, the estimates for the 1951–61

period ranging from a high of about 46,000 fish in 1959 to a low of 500 in 1951, while the actual counts range from 27,000 in 1941 to 130,000 in 1944.

(70) Salmon spawning gravel surveys were conducted on the Tuolumne River by teams composed of California Department of Fish and Game and Department of the Interior personnel in the fall of 1961 and field studies were made of the spawning gravels inundated, by the personnel of these same agencies, with the cooperation of the Districts in releasing various flows over the February 26–March 6, 1962 period.

(71) In appraising the area which would be inundated over the seventeen mile reach of the spawning area by a flow at La Grange Bridge (about one mile below La Grange dam and at the upstream end of the spawning area) it would be appropriate to take into account accretions which occur in the Tuolumne River as a consequence of return flow from irrigation if these flows were stable and present in the same quantities during the salmon spawning season.

(72) The Tuolumne River is a "gaining" stream and even in times of full diversion of the river at La Grange dam for irrigation purposes when the only flow immediately below the dam is about 2 cfs as a consequence of seepage and leekage at the dam, accretions have resulted in a flow of 80 to 100 cfs at the Hickman-Waterford Bridge (the downstream end of the spawning area), which continued to increase the flow of the river from 200 to 300 cfs at Tuolumne City, just before the confluence of the Tuolumne River with the San Joaquin River.

(73) The Districts' planned operation of the New Don Pedro project does not provide for any minimum flow in the natural streambed below La Grange dam in a critical year.

(74) The fish water releases proposed by the California Department of Fish and Game, the Secretary of the Interior, and the Commission Staff would have the effect of reducing the irrigation supply available to the Districts in critical years below that available from the existing Don Pedro project, a result which is prohibited by Section 27 of the Act.

(75) The Examiner is unable, on the basis of the record as made, to compute the volume of water which might be made available for fish water releases.

(76) There is no necessity in this proceeding for the Commission to pass upon the request of Tuolumne County, California, that the license issued to the Districts contain a condition requiring the Districts to pay any headwater benefits that might result from the proposed construction by the County of an upstream project.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission on appeal, or on its own motion, as provided by its Rules of Practice and Procedure, that:

(A) This license is issued to the Districts (hereinafter referred to as the Licensees) under Section 4(e) of the Federal Power Act for a period of fifty years, effective as of the first day of the month in which the acknowledgment of acceptance thereof is filed with the Commission by the Licensees, for the construction, operation and maintenance of major Project No. 2299, known as the New Don Pedro Project, on the Tuolumne River and its tributaries, affecting certain public lands of the United States, subject to the terms and conditions of the Flood Control Act of 1944 (58 Stat. 887) and the Federal Power Act which are incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Federal Power Act: *Provided, however*, that Licensees shall surrender their license for Project No. 1086, upon completion of the New Don Pedro project.

(i) The proposed project consists of:

All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the Licensees or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed a part of the application for license and which are designated and described as follows:

Exhibit J; sheet	FPC No. 2299-	Title, New Don Pedro Project
1	4	General map—Project location.
2	5	General map—Reservoir area.
3	53	Reservoir capacity and area curves—Profile.

(ii) An earth and rock-fill dam 580 feet high with impervious center core and pervious shells at river mile 54.5 on the Tuolumne River; a spillway on the right abutment comprised of a gate-controlled section and an ungated broad-crested weir section discharging into Gasburg Creek; a reservoir extending 22 miles up the Tuolumne River having a gross storage capacity of 2,030,000 acre feet and an area of 12,960 acre feet at elevation 830 feet; low level intake discharging through Howell-Bunger valves, a power tunnel 2,800 feet long through the left abutment and a penstock extending to a powerhouse located across the river adjacent to the toe of the dam; a powerhouse containing three 69,000-horsepower turbines operating under a rated head of 425 feet connected to three 43,480-kilowatt generators, making a total of 130,440 kilowatts; a switchyard; transmission lines extending to Turlock and Modesto, California; and appurtenant hydraulic, mechanical, and electrical facilities and miscellaneous project works—the location, nature, and character of which structures are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit L; sheet	FPC No. 2299-	Title, New Don Pedro Project
2	38	General project layout.
3	39	Rock-fill dam.
4	40	Diversion tunnel.
5	41	Outlet works—Inlet works.
6	55	Power tunnel.
7	43	Spillway.
8	44	Powerhouse—Service area and longitudinal section.
9	45	Powerhouse—Generator floor and transverse section.
10	46	Powerhouse—Turbine and valve floors.
11	47	Powerhouse main single line diagram.
12	48	Switchyard main single line diagram.
13	49	Switchyard layout.

Exhibit M: "General Description of Equipment" in 3 sheets revised Mar. 12, 1962.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also all water rights the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(B) This license is also subject to the terms and conditions set forth in Form L–2, December 15, 1953, entitled "Terms and Conditions of License for Unconstructed Major Project Affecting Lands of the United States," (17 FPC 62), except for Articles 10, 20 and 21 and the last sentence of Article 23 thereof, and subject to the following conditions set forth herein as additional articles:

Article 25. The Licensees shall commence construction of the project works within one year of the effective date of this license; shall thereafter in good faith and with due diligence prosecute such construction; and shall complete construction of such project works within four years from the effective date of this license.

Article 26. The Licensees shall, within one year from the date of completion of the project, file with the Commission revised Exhibits F and K to define the final project boundary including transmission line rights-of-way in accordance with the rules and regulations of the Commission.

Article 27. The Licensees shall, prior to impounding water, dispose of all temporary structures, unused timber, brush, refuse, or other inflammable material resulting from the clearing of the land or from the construction and maintenance of the project works, and shall clear all lands in the reservoir area up to normal water level; except that all lands in the reservoir area shall be cleared according to a plan to be prescribed by the Commission upon recommendation of the California Department of Fish and Game and the United States Fish and Wildlife Service. The clearing of the lands and the disposal of the material shall be done with due diligence by the Licensees and to the satisfaction of the authorized representative of the Commission.

Article 28. The Licensees shall construct, maintain and operate such protective devices and shall comply with such reasonable modifications of the project structures and operation in the interest of fish and wildlife resources as may be prescribed hereafter by the Commission upon the recommendation of the Secretary of the Interior: *Provided*, that such modifications shall be reasonably consistent with the primary purpose of the project, as may be prescribed hereafter by the Commission upon its own motion or upon recommendation of the Secretary of the Interior or the California Department of Fish and Game after notice and opportunity for hearing and upon a finding that such modifications are necessary and desirable and consistent with the provisions of the Act: *Provided further*, That subsequent to approval of the final design drawings prior to commencement of construction no modifications of project structures in the interest of fish and wildlife resources which involve a change in the location, height or main structure of a dam, or the addition of or changes in outlets at or through a dam, or a major change in generating units, or a rearrangement or relocation of a powerhouse, or major changes in a spillway structure shall be required.

Article 29. Whenever the United States shall desire, in connection with the project, to construct fish handling facilities or to improve the existing fish handling facilities at its expense, the Licensees shall permit the United States or its designated agency to use, free of cost, such of Licensees' lands and interests in lands, reservoirs, waterways and project works as may be reasonably required to complete such fish handling facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensees shall modify the project operation as may be prescribed by the Commission, consistent with the primary purposes of the project, in order to permit the maintenance and operation of the fish handling facilities constructed or approved by the United

States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish handling facilities or to relieve the Licensees of any obligation under this license.

Article 30. The Licensees shall maintain minimum stream flows in the Toulumne River at La Grange bridge as may be prescribed hereafter by the Federal Power Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the California Department of Fish and Game, after notice and opportunity for hearing and upon a finding based on substantial evidence that such minimum flows are available and are necessary and desirable and consistent with the provisions of the Act.

Article 31. Licensees in cooperation with the California Department of Fish and Game shall make studies for the purpose of assuring continuation and maintenance of the fishery of the Toulumne River in the most economical and feasible manner consistent with the Act and the requirements of the Commission thereunder.

Article 32. In the event water temperatures during the critical months of the spawning season are too high for successful salmon spawning, the Licensees and the California Department of Fish and Game shall confer to determine whether project operations may be adjusted to assist in correcting the situation.

Article 33. The Licensees shall, after notice and opportunity for hearing coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, the benefits of which shall be shared equitably by the participants in such coordination.

Article 34. The Licensees shall, prior to the filling of New Don Pedro reservoir, provide for free passage of water through the existing Don Pedro dam either by opening the low-level outlets or breaching the dam near streambed.

Article 35. Gravels of the river channel downstream from La Grange dam shall not be disturbed during the construction of project facilities except in accordance with a plan developed by Licensees after consultation with the California Department of Fish and Game and the U.S. Fish and Wildlife Service with a view toward maintaining the pre-project value of the gravels for salmon spawning. Licensees shall take all reasonable measures to prevent silt, fines and other construction debris from being released into the Toulumne River.

Article 36. The Licensees shall, prior to beginning of operation of the New Don Pedro reservoir, enter into an agreement with the Chief of Engineers, Department of the Army or his designated representative for the operation of the reservoir in the interests of flood control pursuant to the Flood Control Act of 1944 (58 Stat. 887).

Article 37. The Commission expressly reserves the right to determine at a later date what transmission lines and appurtenant facilities, if any, shall be included in the license as part of the project works.

Article 38. The Licensees shall cause to be developed a master plan for recreational use of the reservoir which shall not conflict with the safe and efficient operation of the project. Such plan shall show the location of the areas, access roads and facilities to be constructed, maintained and paid for by the Licensees and San Francisco for fishing, hunting, camping, picnicking, bathing, boat-launching, etc., and shall be prepared in cooperation with interested federal, state and local agencies, including Toulumne County. Such plan shall be submitted to the Commission on or before August 15, 1963, for approval, and shall be accompanied by such written comments as the interested agencies desire to make with reference thereto. Commencement of construction of the project shall be delayed until the Commission, by order, has approved the plan as submitted or as modified by the Commission.

Article 39. Licensees shall acquire sufficient interest in lands of Section 20 and 21, T. 2 S., R. 15 E., M.D.M., to provide parking and road access to National Land Reserve in Sections 19 and 20, T. 2 S., R. 15 E., M.D.M., and shall acquire such additional lands as will be necessary for recreation, fish and wildlife purposes.

Article 40. The Licensees shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part II of the Commission's regulations as in effect from time to time. The authorized installed capacity for such purpose is 174,000 horsepower.

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, including those used for transmission line right-of-way, an amount to be determined hereafter by the Commission.

Article 41. The Licensees shall enter into an agreement with the City and County of San Francisco relating to the allocation of the total cost of the project (including the cost of recreation and other facilities required by the Commission) and its acquisition of storage space in the reservoir. A conformed copy of the agreement shall be filed with the Commission on or before July 15, 1963, for its approval. Construction of the project shall not commence until the Commission, by order, has approved such agreement as submitted or as modified by the Commission.

Article 42. The Licensees shall, if desired by the State of California or by Tuolumne County, California, on or before July 15, 1963, enter into agreements with the State and County obligating the Licensees to pay the replacement cost of all State and County roads involved in the construction and operation of the New Don Pedro project. Such agreements shall be filed with the Commission on or before July 20, 1963.

Article 43. The Licensees shall, if desired by the California Department of Fish and Game, enter into an agreement with that agency which makes available for management by it for fish and wildlife purposes those lands which the Commission hereafter finds to be adaptable to management of fish and wildlife.

Article 44. The Licensees shall allow the public free access to the entire project area, except such limited areas to be reserved for reasons of safety and efficient operation of the project, for all recreational pursuits, and shall permit any road or trail leading to the project area to be freely used by the public.

(C) The exhibits described in paragraph (A) above are approved as part of the license for the project.

(D) This order shall become final 30 days from the date it becomes the final act of the Commission unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgement of the acceptance of this license, it shall be signed for the Licensees and returned to the Commission within 60 days from the date of issuance of this order.

COLORADO-WYOMING GAS COMPANY, DOCKET NOS. RP64-2, CP64-39, CP64-50; COLORADO INTERSTATE GAS COMPANY, CP64-45; CHEYENNE LIGHT, FUEL AND POWER COMPANY, CP64-51

ORDER GRANTING MOTION FOR WAIVER OF INTERMEDIATE DECISION PROCEDURE, ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, GRANTING EXEMPTIONS FROM THE PROVISIONS OF THE NATURAL GAS ACT, ACCEPTING RATE SCHEDULES FOR FILING, APPROVING PROPOSED SETTLEMENT AND TERMINATING PROCEEDING.

(Issued March 12, 1964)

Colorado-Wyoming Gas Company (Colorado-Wyoming) is a natural gas company subject to the jurisdiction of the Commission. It is presently operating two parallel transmission lines extending from Denver, Colorado north to Cheyenne, Wyoming. Most of the Colorado-Wyoming system lies within the State of Colorado and the company purchases approximately 98½% of its gas supply from Colorado Interstate Gas Company (CIG). The gas is sold by Colorado-Wyoming to Public Service Company of Colorado (Public Service), Cheyenne Light, Fuel and Power Company (Cheyenne) and several smaller resale and industrial customers. Colorado-Wyoming and Cheyenne are subsidiaries of Public Service.

On August 9, 1963, Colorado-Wyoming filed an application for a certificate of public convenience and necessity for authority pursuant to Section 7(c) of the Natural Gas Act (1) to construct metering facilities on the west leg of their system near the Wyoming State line to enable it to purchase the gas for the northern portion of the west leg from CIG at this point, thus eliminating the present circuitous route of the gas transported up through Cheyenne, Wyoming; (2) to sell to CIG 3.6 miles of sixteen-inch pipeline located in Colorado to enable CIG to sell gas directly to Cheyenne from the present Colorado-Wyoming meter site; (3) for permission and approval, to abandon, pursuant to Section 7(b) of the Act, by sale to Cheyenne, all of Colorado-Wyoming's facilities located in the State of Wyoming; and (4) to abandon by retirement approximately one mile of six-inch pipeline located in Colorado connecting the Colorado and Wyoming portions of the system and which will no longer be needed; all as more fully set forth in the application. (Docket No. CP64-39.)

On August 19, 1963, CIG filed an abbreviated application for a certificate of public convenience and necessity, pursuant to Section 7(c) of the Natural Gas Act, as amended, seeking authority to (1) acquire and operate 3.6 miles of 16-inch pipeline and appurtenant equipment from Colorado-Wyoming; (2) construct and operate a new meter station as an additional delivery point to Colorado-Wyoming and (3) continue to operate CIG's existing Cheyenne meter station for service directly to Cheyenne, which company is presently a customer of Colorado-Wyoming. (Docket No. CP64-45.)

Additionally, on August 23, 1963, Colorado-Wyoming in Docket No. CP64-50 and Cheyenne in Docket No. CP64-51, filed concurrent applications under Section 1(c) of the Act, as amended, requesting that orders be issued by the Commission declaring that Colorado-Wyoming and Cheyenne would be exempt from the provisions of the Act upon the disposition of properties and abandonment, and subject to the grant of the necessary certificate authority sought by Colorado-Wyoming in Docket No. CP64-39 and CIG in Docket No. CP64-45. The Public Utilities Commission of the State of Colorado, (PUC) in a notice of intervention, has certified that, upon cessation of Colorado-Wyoming's interstate operations and its commencement of intrastate transmission operations, PUC will assume and exercise regulation of the rates, charges and facilities of Colorado-Wyoming. Cheyenne has filed a certificate of the Chairman of the Public Service Commission of Wyoming, stating that the rates, service and facilities of Cheyenne are subject to that Commission's regulation, that it is exercising such regulation and that it will continue to exercise such regulation if such company purchases its gas requirements from CIG at the proposed delivery point.

Docket Nos. CP64–39, CP64–45, CP64–50 and CP64–51 were consolidated for hearing by a notice issued November 15, 1963.

Formal hearing was held January 7, 1964, and was concluded January 9, 1964, at which time counsel for Colorado-Wyoming moved the omission of the intermediate decision and requested that the Commission render a decision pursuant to Section 1.30(c) of the Commission's Rules of Practice and Procedure [18 CFR 1.30(c)], reserving, however, the right to file a brief. This motion was concurred in by all parties. Simultaneous briefs were filed by Colorado-Wyoming, CIG and the Staff on February 3, 1964. Cheyenne joined in the brief filed by Colorado-Wyoming.

By order issued July 3, 1963, in Docket No. RP64–2, the Commission instituted an investigation of Colorado-Wyoming rates. Conferences were held on January 6 and on January 8, 1964, attended by the Commission Staff and representatives of Colorado-Wyoming to discuss settlement of the issues involved in Docket No. RP64–2. On February 6, 1964, Colorado-Wyoming filed an offer of settlement and a request for termination of the proceeding in RP64–2. As part of its offer of settlement, Colorado-Wyoming tendered for filing certain revised tariff sheets[1] which reduce its Colorado rates by $128,914 annually. This proposed rate reduction would be accomplished by decreasing the demand charge of its G–1 rate by 8¢ per Mcf and reducing the GS–1 rate by 0.72¢ per Mcf.

In addition to the savings to Colorado-Wyoming's customers in Colorado other benefits will accrue upon acceptance of this entire proposal by the Commission. The Cheyenne Light, Fuel and Power Company, presently a Colorado-Wyoming customer will thereafter purchase its natural gas requirements directly from Colorado Interstate at lower rates than it is presently paying.

Colorado-Wyoming has submitted the revised tariff sheets on the express condition that they become effective only upon the effective date of the Commission order approving the consolidated proceedings in Docket Nos. CP64–39, CP64–45, CP64–50 and CP64–51 and upon the acceptance by all parties to the provisions in all the proceedings. Colorado-Wyoming further conditioned the proposed settlement upon the understanding that the Commission, upon its acceptance thereof, will terminate the proceeding in Docket No. RP64–2.

The offer of settlement also contains a reservation that no party to the proceeding shall be bound or prejudiced by any part of the offer of settlement in any future proceeding and no party shall be deemed to have approved, accepted, agreed or consented to any rate-making principle, any method of cost of service determination, or any allocation method.

The Commission finds:

(1) Colorado-Wyoming Gas Company and Colorado Interstate Gas Company are natural gas companies within the meaning of the Natural Gas Act, as amended.

---

[1] Third Revised Sheet No. 4, Third Revised Sheet No. 5 and Third Revised Sheet No. 6 to its First Revised Volume No. I, FPC Gas Tariff.

(2) The present and future convenience and necessity permit the construction by Colorado-Wyoming Gas Company, pursuant to Section 7(c) of the Natural Gas Act, as amended, of the metering facilities on the west leg of its system.

(3) The present and future convenience and necessity permit, pursuant to Section 7(b) of the Act, as amended, the abandonment of service to Cheyenne Light, Fuel and Power Company by Colorado-Wyoming Gas Company; the abandonment and sale to Cheyenne Light, Fuel and Power Company by Colorado-Wyoming Gas Company of all Colorado-Wyoming facilities located in the State of Wyoming; the abandonment and sale to Colorado Interstate Gas Company by Colorado-Wyoming Gas Company of 3.6 miles of sixteen-inch pipeline located in the State of Colorado; the retirement by Colorado-Wyoming Gas Company of approximately 1 mile of six-inch pipeline located in the State of Colorado.

(4) The present and future convenience and necessity permit the construction, acquisition and operation, pursuant to Section 7(c) of the Act, as amended, of the facilities proposed by Colorado Interstate Gas Company and the sales of natural gas by it, all as set forth in its application.

(5) Cheyenne Light, Fuel and Power Company is engaged in the transportation, distribution and sale of natural gas within the State of Wyoming; its rates, service and facilities are subject to regulation by the Public Service Commission of the State of Wyoming. Upon consummation of the proposed project Cheyenne Light, Fuel and Power Company will continue under such regulation and the gas it will receive from Colorado Interstate Gas Company will be received in the State of Wyoming and will be ultimately consumed within said State.

(6) Colorado-Wyoming Gas Company, upon its consummation of the abandonments, retirements and sales of facilities authorized herein, will operate only within the State of Colorado, will be an intrastate natural gas company meeting the requirements of Section 1(c) of the Act, as amended, and its rates, service and facilities will be subject to regulation by the Public Utilities Commission of the State of Colorado.

(7) The revised tariff sheets tendered for filing by Colorado-Wyoming Gas Company with the Commission on February 6, 1964, should be accepted for filing, effective on the date this order becomes effective.

(8) The settlement of the proceeding in Docket No. RP64–2 upon the basis of the proposal for settlement which was filed with the Commission on February 6, 1964, is reasonable, proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be approved as hereinafter ordered.

The Commission orders:

(A) The request for the omission of the intermediate decision procedure is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

(B) A certificate of public convenience and necessity is hereby issued authorizing Colorado-Wyoming Gas Company to construct and operate facilities to receive gas from Colorado Interstate Gas Company at a new purchase point, as more fully described in its application.

(C) Colorado-Wyoming Gas Company is hereby permitted to abandon service to Cheyenne Light, Fuel and Power Company, to sell to Cheyenne Light, Fuel and Power Company all facilities located within the State of Wyoming, and to retire or sell to Colorado Interstate Gas Company certain facilities located within the State of Colorado, all as more fully set forth in its application.

(D) A certificate of public convenience and necessity is hereby issued to Colorado Interstate Gas Company authorizing the construction, acquisition and operation of the facilities and sales of natural gas as proposed by it in its application.

(E) The facilities authorized to be constructed and acquired herein shall be constructed, acquired and placed in operation within 120 days from the effective day of the final order herein.

(F) The certificates issued herein shall be subject, as applicable, to the general conditions set forth in Section 157.20 of the Commission's regulations.

(G) From and after the date of consummation of the abandonment, sale of facilities, and retirements by Colorado-Wyoming Gas Company, and the commencement of deliveries of gas by Colorado Interstate Gas Company to Cheyenne Light, Fuel and Power Company as herein ordered, Cheyenne Light, Fuel and Power Company shall be, and it hereby is, declared exempt from the provisions of the Natural Gas Act and the orders, rules and regulations of this Commission issued thereunder.

(H) From and after the date of consummation of the abandonment, sale of facilities and retirements as herein ordered, Colorado-Wyoming Gas Company shall be, and it hereby is, declared exempt from the provisions of the Natural Gas Act and the orders, rules and regulations of this Commission issued thereunder.

(I) The revised tariff sheets filed with the Commission by Colorado-Wyoming on February 6, 1964, are hereby accepted for filing to become effective on the date this order becomes effective.

(J) The conditions within the offer of settlement are hereby approved and made effective as proposed therein.

(K) The proceeding in Docket No. RP64-2 is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SOUTH TEXAS NATURAL GAS GATHERING COMPANY, DOCKET NO. CP63-286 AND DOCKET NO. CP63-339

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 12, 1964)

On April 15, 1963, as supplemented on June 7, 1963, South Texas Natural Gas Gathering Company (Applicant) filed in Docket No. CP63-286 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the twelve-month period ending June 30, 1964, of miscellaneous natural gas gathering facilities necessary to take into Applicant's certificated main pipeline system natural gas which will be purchased from producers thereof in the general area of Applicant's existing transmission system, and to operate such facilities only to take natural gas from producers who have received authorization from the Commission to sell natural gas to Applicant, all as more fully set forth in said application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $1,000,000, and no single project will exceed a cost of $250,000, which costs will be financed from cash on hand and from cash generated from normal operations and internal sources.

On June 7, 1963, as supplemented on November 18, 1963, Applicant filed in Docket No. CP63-339 an application for a certificate of public convenience and necessity authorizing the construction and operation of approximately 6.5 miles of 14-inch pipeline and appurtenant facilities for the purpose of receiving into its pipeline system natural gas which will be purchased from Shell Oil Company and Delhi-Taylor Oil Corporation in the McAllen Ranch area, Hidalgo County, Texas, all as more fully set forth in said application. The estimated cost of these facilities is $265,000, which cost will be financed from funds on hand or internally generated.

Temporary certificate authorization in Docket No. CP63-339 was requested by Applicant on November 18, 1963, and was issued by the Commission on January 2, 1964.

Notice of the application and hearing in Docket No. CP63-286 was issued July 18, 1963, and published in the Federal Register on July 25, 1963 (28 F.R. 7574). Notice of the application and hearing in Docket No. CP63-339 was issued July 19, 1963, and published in the Federal Register on July 26, 1963 (28 F.R. 7620). On August 9, 1963, Colorado Interstate Gas Company filed petitions to intervene in each of these dockets, and the respective hearings were, by notice, postponed without date. Subsequently, on September 30, 1963, Colorado Interstate Gas Company filed notices of withdrawal of the respective intervention petitions and by operation of Section 1.11(d) of the Commission's Rules of Practice and Procedure, such withdrawal became effective on October 30, 1963. Both dockets were again scheduled for hearing by duly published notice, but on October 7, 1963, United Gas Pipe Line Company filed a petition to intervene in these and another docket (since effectively withdrawn), and again both dockets were postponed without date. By order issued March 4, 1964, the Commission denied the intervention requested by United. No other petitions to intervene or notices of intervention have been filed.

At a hearing held on March 12, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits thereto submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, South Texas Natural Gas Gathering Company, a Delaware corporation having its principal place of business in Corpus Christi, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order accompanying Opinion No. 362 issued August 30, 1962, in Docket No. G-18907 (Docket No. G-18638, *et al.*, 28 FPC 401, 418).

(2) The facilities hereinbefore described, as more fully described in the applications, as supplemented, in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificates hereinafter issued and the rights granted thereunder be conditioned upon Applicant's com-

pliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations as to Docket No. CP63-286, and paragraphs (c)(4) and (e) of said Section 157.20 as to Docket No. CP63-339.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization hereinafter granted in Docket No. CP63-286, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(7) The authorization hereinafter granted in Docket No. CP63-286 should be limited to construction during the twelve-month period ending June 30, 1964, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,000,000, with no single project to exceed a cost of $250,000.

The Commission orders:

(A) Upon the terms and conditions of this order, certificates of public convenience and necessity be and the same are hereby issued authorizing Applicant, South Texas Natural Gas Gathering Company, to construct (during the twelve-month period ending June 30, 1964, as to Docket No. CP63-286) the proposed facilities hereinbefore described, as more fully described in the applications in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations as to Docket No. CP63-286, and paragraphs (c)(4) and (e) of said Section 157.20 as to Docket No. CP63-339.

(C) Applicant shall submit within 60 days after the expiration of the authorization granted in Docket No. CP63-286 by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(D) The authorization granted in Docket No. CP63-286 by paragraph (A) above is hereby limited to construction during the twelve-month period ending June 30, 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $1,000,000, with no single project to exceed a cost of $250,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

H. F. SEARS, DOCKET NOS. G-10494 AND G-10752[1]

ORDER REJECTING OFFER OF SETTLEMENT, AND DENYING MOTION TO TERMINATE PROCEEDINGS

(Issued March 13, 1964)

On December 12, 1963, H. F. Sears (Sears) filed an offer of settlement and motion to terminate the above-docketed proceedings. The offer and motion relates to proposed increased rates of 11.0704¢ per Mcf for sweet gas, and 10.6209¢

---

[1] Each of these proceedings are presently consolidated with the proceedings in Docket No. AR64-1, *et al.*

per Mcf for sour gas sold to Phillips Petroleum Company (Phillips) from the Panhandle Field, Hutchinson and Moore Counties, Texas (Texas Railroad Commission District No. 10), by Sears under its FPC Gas Rate Schedule No. 5. Said proposed increases were filed by Sears on May 11, 1956, and were suspended by order of the Commission on May 29, 1956. By appropriate motion, Sears placed such proposed increased rates into effect, subject to refund on November 19, 1956. The offer and motion also relate to a proposed increase in rate to 11.0704¢ per Mcf for a sale of natural gas made to Phillips in the same field under Sears' FPC Gas Rate Schedule No. 4. The latter proposed increase was filed by Sears on June 21, 1956, was suspended by order of the Commission on July 17, 1956, and was made effective, subject to refund, by Sears on December 26, 1956.

Until May 1, 1961, all of the natural gas sold by Sears under its Rate Schedule No. 4 to Phillips, and part of the gas sold by Sears under its Rate Schedule No. 5 to Phillips was processed by Phillips in its Sanford and Rock Creek plants, and the residue thereof was sold by Phillips to Colorado Interstate Gas Company (Colorado Interstate) under Phillips FPC Gas Rate Schedule No. 21. On November 26, 1956, and December, 8, 1959, Phillips filed proposed increases in its rate to Colorado Interstate, which were suspended by orders of the Commission, and made effective, subject to refund, by Phillips on June 1, 1957 and June 8, 1960, respectively.[2] Phillips continued to charge and collect such proposed increased rates, subject to refund, until May 1, 1961, when the sale to Colorado Interstate under Phillip's Rate Schedule No. 21 was abandoned.[3] Subsequently, by order issued, in Docket No. CI64–359, the Commission cancelled Sears' Rate Schedule No. 4 and terminated the certificate related thereto, and cancelled Sears' Rate Schedule No. 5 in part and amended the certificate related thereto. Sears' avers that none of the residue gas from Phillips' Sanford and Rock Creek plants is presently being transported in interstate commerce.

In its offer of settlement, Sears proposes to refund, with applicable interest, all amounts of monies, collected subject to refund, above 11¢ per Mcf for the sweet gas sold and delivered to Phillips, and 10.5534¢ per Mcf for the sour gas. It then requests that the proceedings relating to each of its rate schedules be terminated.

In support of its offer and motion, Sears states (1) that "the Commission has uniformly and without exception considered the 11¢ per Mcf applicable to wellhead sellers in Texas Railroad Commission District No. 10"; (2) that in other proceedings the Commission has approved 11¢ per Mcf rates for sales to Phillips at the wellhead in said District, and (3) that it shares in none of the liquid revenues Phillips may derive from gathering and processing its gas.

In *Foster Petroleum Corporation*, Docket No. RI64–17, *et al.*, 30 FPC 672, (order issued September 9, 1963) we said:

> The area price levels set forth in the Statement of General Policy No. 61–1, as amended (18 CFR, Chapter I, Part 2, Section 2.56), are applicable to pipeline quality gas as that term is generally understood in each area. In the instant case, Phillips gathers the subject gas, among others, into its Panhandle gathering system which connects its Dumas, Sanford and Sneed gasoline plants. After processing, the residue gas is then sold by Phillips to several interstate pipeline companies. We consider the area rate ceiling for pipeline quality gas to be applicable to the sale of residue gas by Phillips at the outlet of its plants. Although Foster's increased rates are not in

---

[2] Docket Nos. G–11622 and G–20561, which are presently consolidated with the proceedings in Docket No. AR64–1, *et al.*

[3] *Phillips Petroleum Company*, Docket No. CI61–1597.

> excess of the 11.0¢ per Mcf increased rate ceiling for pipeline quality gas for Texas Railroad District No. 10, the cost per Mcf to Phillips for the gathering and processing of Foster's non-pipeline quality gas must be taken into consideration in determining the proper rate level for Foster's sales to Phillips. Since such costs are not known, the subject increased rates of 10.5¢ and 11.0¢ per Mcf were properly suspended.[4]

Additionally, in *H. N. Burnett*, Docket No. RI64-334, 30 FPC 1384-A, which involved a sale of both sweet and sour gas by Burnett to Panhandle Producing Company in Railroad District No. 10, which gas after processing by Panhandle was sold to Colorado Interstate, we held that: "We consider the area ceiling to be applicable to the sales of residue gas by Panhandle after processing."

The previous acceptance in other proceedings of certain increased rates similar to the rates of Sears involved in these proceedings does not dictate acceptance of Sears' offer of settlement and granting of the subject motion. *Cf. FCC* v. *Pottsville Broadcasting Company*, 309 U.S. 134, 145; *Panhandle Eastern Pipe Line Company* v. *FPC.*, 236 F. 2d 289. Additionally, the proceedings in Docket No. AR64-1, *et al.*, with which these proceedings are consolidated, had not been initiated when such other proceedings were before us for consideration. *Fly* v. *Heitmeyer*, 309 U.S. 146.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to reject the offer of settlement and to deny the motion to terminate filed by Sears with the Commission on December 12, 1963.

The Commission orders:

The offer of settlement filed by Sears in these proceedings on December 12, 1963, is hereby rejected, and the motion to terminate filed therewith is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

SKELLY OIL COMPANY (OPERATOR), ET AL., DOCKET NO. RI64-531

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF CONTRACT AMENDMENT, AND TERMINATING PROCEEDING

(Issued March 13, 1964)

On January 20, 1964, Skelly Oil Company (Operator), *et al.* (Skelly) submitted an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves a proposed increased rate for sales of natural gas made to Tennessee Gas Transmission Company (TGT) by Skelly. The offer relates to a sale made under Skelly's FPC Gas Rate Schedule No. 145 in Fort Bend County, Texas (Texas R.R. Com. District #3). The proposed increased rate of 14.5¢ per Mcf was suspended by order of the Commission until June 19, 1964.

Under the terms of the offer, Skelly proposes to eliminate the price redetermination and the present periodic escalation provisions from its rate schedule, and to establish a 14.5¢ per Mcf rate for the subject sale.[1] Skelly also proposes to limit future periodic escalations to 1.0¢ per Mcf on January 1, 1969, and each five year period thereafter. No protests or objections have been filed to the offer.

---

[4] In fact, Phillips' Panhandle gathering system connects its Rock Creek, Sanford, Pantex, Canadian, Sneed and Dumas plants, and has an "emergency" connection with its Sherman plant.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Skelly's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases or periodic increases as provided in its offer of settlement. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Skelly's rate and rate schedule.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Skelly on January 20, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Skelly January 20, 1964, is hereby approved in accordance with the provisions of this order.

(B) Skelly shall file, within 30 days from the date of issuance of this order, an executed contractual amendment to its FPC Gas Rate Schedule No. 145, eliminating the price redetermination, and the present periodic escalation provisions therefrom and substituting therefor periodic escalations as specified in its offer of settlement. The contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Upon notification by the Secretary of the Commission that Skelly has complied with the terms and conditions of the order, the rate and charge of 14.5¢ per Mcf at 14.65 psia, specified in its offer of settlement, shall be effective as of the date of issuance of this order, and the above designated proceeding shall be deemed terminated.

(D) The acceptance by the Commission of Skelly's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Skelly, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

SINCLAIR OIL & GAS COMPANY (FORMERLY WESTERN NATURAL GAS COMPANY), DOCKET NOS. G–19828, RI60–263, AND RI61–142

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued March 13, 1964)

On January 9, 1964, Sinclair Oil & Gas Company (Sinclair) as successor in interest to Western Natural Gas Company (Western), submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Tennessee Gas Transmission Company (TGT) in Hidalgo County, Texas (Texas R.R. District No. 4). Western has also joined in the offer of settlement in order to terminate the above-captioned proceedings for the period prior to the transfer of the properties to Sinclair.[1] Details are as follows:

---

[1] The 14.5¢ rate includes a dehydration allowance paid by buyer to seller for delivery of dehydrated gas.

Rate schedule and supplement No.[1]	Docket No.	Suspended rate [2]	Effective date	Settlement rate [2]
264-2	G-19828	[3] 14.87589	4- 1-60	15.0
264-3	RI60-263	[3] 17.02416	9-23-60	15.0
264-4	RI61-142	[4] 17.24347	10-28-60	15.0

[1] Formerly Western Natural Gas Company (Operator), *et al.*, Rate Schedule No. 2.
[2] Cents per Mcf at 14.65 psia, inclusive of tax reimbursement.
[3] Excludes a 0.21931-cent dehydration charge deducted by buyer.
[4] Rate increase filed to reflect elimination of the 0.21931-cent dehydration charge previously deducted by buyer.

Under the terms of the offer, Sinclair proposes to eliminate the favored-nation, price redetermination and the periodic escalation provisions from the rate schedule and to establish a 15¢ per Mcf rate for the subject sale. Sinclair's annual revenues will be decreased about $60,200 from the presently effective rate. No protests or objections have been filed to the offer.

Sinclair and Western propose to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in excess of the settlement rate.[2] Western proposes to make refunds for all gas delivered prior to July 1, 1963, and Sinclair proposes to make refunds for all gas delivered thereafter. The estimated total dollars to be refunded approximates $261,000 exclusive of interest.

The proposed settlement is consistent with the provisions of the Second amendment to the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Sinclair's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Sinclair's rate and rate schedule.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Sinclair on January 9, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

---

[1] The properties were transferred to Sinclair as of July 1, 1963.

[2] All gas delivered prior to July 1, 1960, was subject to a 0.21931¢ deduction made by the buyer for dehydration. However, as of that date, Western commenced the sale of dehydrated gas, thus making the deduction inapplicable. Accordingly, for the period prior to July 1, 1960, allowance must be made in computing the refund for the applicable dehydration charge.

The Commission orders:

(A) The offer of settlement filed with the Commission by Sinclair January 9, 1964, is hereby approved in accordance with the provisions of this order.

(B) Sinclair shall file, within 30 days from the date of issuance of this order, a notice of change in rate providing for the 15¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 264 eliminating the favored-nation, price redetermination, and the periodic escalation provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Sinclair and Western, on the basis heretofore described, shall refund to TGT to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate, making account for proper charges, with simple interest at 7 percent per annum, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination, together with a release from TGT.

(D) Upon notification by the Secretary of the Commission that Sinclair and Western have complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65 psia, specified in the offer of settlement, shall be effective as of the date of issuance of this order, the above designated proceedings shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

(E) The acceptance by the Commission of Sinclair's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Sinclair, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

IOWA POWER AND LIGHT COMPANY, DOCKET NO. E-7150

ORDER AUTHORIZING THE ISSUANCE OF DEBENTURES

(Issued March 16, 1964)

Iowa Power and Light Company (Applicant), incorporated under the laws of the State of Iowa and doing business in that State, with its principal place of business in Des Moines, Iowa, filed an application on February 14, 1964, as supplemented on February 25, 1964 for an order pursuant to Section 204 of the Federal Power Act, authorizing the issuance and sale of $10,000,000 principal amount of ———% Sinking Fund Debentures due 1989.

Applicant proposes to issue the Debentures under a proposed Debenture Indenture to be dated as of April 1, 1964, to Continental Illinois National Bank & Trust Company of Chicago, Trustee.

The Debentures will be unsecured but the Indenture will contain provisions restricting the Company in respect of the creation of specified new liens, and the Company will covenant not to obligate itself with respect to any unsecured funded indebtedness in excess of 25% of its outstanding mortgage bonds plus its capital stock and surplus and unless it meets certain earnings requirements. The Debentures will carry a sinking fund designed to retire 40% of the Debentures prior to maturity.

On or about March 17, 1964, Applicant proposes to invite sealed, written bids for the purchase of the proposed Debentures. All bids, whether from a single bidder or a group of bidders, must be for the purchase of all the Debentures and must be submitted on the Form of Bid furnished by Applicant. Each bid for the proposed issuance of Debentures must specify (1) the interest rate to be borne by the Debentures, which rate shall be a multiple of ⅛th of 1%; and (2) the price (exclusive of accrued interest) to be paid to Applicant for the Debentures, which price shall not be less than 99% thereof if a public offering of the Debentures is to be made, and not less than 100% if no such public offering is to be made.

Unless postponed, all bids for the proposed issuance of Debentures must be presented to Applicant before 10:00 A.M., Central Standard Time, on March 24, 1964, at Room 11A, Corporate Trust Division, Continental Illinois National Bank and Trust Company of Chicago, 231 South La Salle Street, Chicago, Illinois, unless Applicant shall reject all bids for the proposed issuance of Debentures (which it reserves the privilege of doing) or shall exclude a bid or bids for reasons specified in the statement of terms and conditions, it will accept the bid for purchase of the Debentures which results in the lowest annual cost of money to it. Each bid for the proposed issuance must be accompanied by a certified or bank cashier's check or checks, payable in Chicago Clearing House funds, in the aggregate amount of $250,000.

Applicant states that the proceeds to be obtained from the proposed issuance of Debentures will be utilized (1) to repay temporary bank loans incurred and to be incurred prior to the sale of the Debentures to secure funds for construction purposes (which loans totaled $4,570,000 as of December 31, 1963 but are expected to total $4,000,000 on April 1, 1964) and (2) to provide a portion of the funds required for the construction or acquisition of permanent improvements, extensions and additions to the Applicant's property. Present plans, as indicated in the Company's application, call for a 1964 construction budget of $11,953,000. Major items in the 1964 budget are $2,343,000 for a 125,000 kw generating unit at Des Moines Power Station No. 2, $1,050,000 for a plant modernization program (modernization and centralization of controls and instrumentation for three boilers and five turbines) at the same plant, and $1,000,000 for a high pressure gas main extension in Des Moines.

Written notice of application has been given to the State Corporation Commission of Iowa, and to the Governor of that State. Notice has also been given by publication in the Federal Register on February 27, 1964, (29 F.R. 2769), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before March 6, 1964, with the Federal Power Commission, Washington, D.C., 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued May 31, 1961, Iowa Power and Light Company, Docket No. E-6974 (25 FPC 1063).

(2) The proposed issuance and sale of Debentures, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act; and the proposed issuance of securities, therefore, is not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Debentures, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(5) The period of public notice herein is reasonable.

The Commission orders:

(A) The proposed issuance and sale of Debentures upon the terms and conditions and for the purposes specified in the application, all as described above, are authorized subject to the provisions of this order.

(B) The proposed issuance and sale of Debentures at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those regulations relating to affiliations, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by a further order, shall have approved the price to be received by Applicant for the proposed issuance of Debentures and the interest rate thereof.

(C) The authorization contained herein to issue Debentures shall expire unless the transaction thus authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever which is now pending or may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

MINNESOTA POWER & LIGHT COMPANY, DOCKET NO. E-7095

ORDER DENYING APPLICATION FOR REHEARING

(Issued March 17, 1964)

The Minnesota Power & Light Company (Applicant), on January 29, 1964, filed an application for rehearing upon the declaratory order issued on December 30, 1963, 30 FPC 1618, requiring it to apply for a license on its Little Falls Project on the Mississippi River in Morrison County in the State of Minnesota. On March 2, 1964 we issued an order granting rehearing for further consideration of the issues raised in the application and staying the declaratory order until further order.

The application for rehearing presents no new facts. It makes substantially the same contentions as the petition for declaratory order, tendering additional argument on the meaning of subsection 23(a) and the extent of the authority granted under the Special Act of July 3, 1886.

Applicant makes substantially the same contentions as were made in an Application for Rehearing in the matter of the Northwest Paper Company, Docket

No. E-7092. The issue in that matter was whether the Northwest Paper Company had a valid pre-1920 permit for its existing reconstructed project works so as to exempt it from the requirements of Section 23(b) of the Federal Power Act. That case turned on the meaning of the Special Act of April 25, 1886 (24 Stat. 12), which authorized one of the Northwest Paper Company's predecessors, the Mississippi Water-Power and Boom Company, to construct a water power project at Brainerd, Minnesota.

In the instant case we are presented with an almost identical issue. In our deliberations thereon, we have considered the meaning of the Special Act of July 3, 1886 (24 Stat. 123), which authorized the Little Falls Water Power Company to construct a water power project at Little Falls, Minnesota.

For the reasons discussed in the Memorandum Opinion and Order on Rehearing issued by the Commission in the matter of The Northwest Paper Company on March 17, 1964, [printed below] the Application for Rehearing will be denied except as hereinafter provided.

The Commission finds:

(1) It is appropriate and in the public interest in administering the Federal Power Act that the declaratory order, issued December 30, 1963, be amended to allow the Minnesota Power & Light Company to file application for license for its project works at Little Falls, Morrison County, Minnesota within ninety days of either the issuance of the instant order or entry of a final order by any appellate court, whichever is later.

(2) The assignments of error and grounds for rehearing set forth in the application for rehearing filed by the company on January 29, 1964, of the Commission's declaratory order issued herein on December 30, 1963, present no facts or principles of law which were not considered by the Commission when it issued its aforesaid order, or which having now been considered warrant any further change in or modification of the said order.

(3) For the reasons discussed in Opinion No. 421, memorandum opinion and order on rehearing issued March 17, 1964, in the matter of the Northwest Paper Company the relief sought in the application for rehearing will be denied, except as hereinafter provided.

The Commission orders:

(A) The stay of the declaratory order is dissolved.

(B) The declaratory order is amended to allow the Minnesota Power & Light Company to file application for license within ninety days of either the issuance of the instant order or entry of a final order by an appellate Court pursuant to Section 313 of the Federal Power Act (16 U.S.C. 825), whichever is later, and the relief otherwise sought in the application for rehearing be and is hereby denied.

OPINION NO. 421

THE NORTHWEST PAPER COMPANY, DOCKET NO. E-7092

MEMORANDUM OPINION AND ORDER ON REHEARING

(Issued March 17, 1964)*

Syllabus

1. It cannot reasonably be inferred from Applicant's pre-1920 grant that Congress broadly consented to authorize Applicant or its successors to replace original project works with other and different works in perpetuity. P. 596.

---

*Affirmed, *The Northwest Paper Co. v. F.P.C.*, 344 F. 2d 47; 53 (CA8-1965).

2. Since no period is provided for duration of grant only reasonable inference is that authority is for life of project first constructed. P. 596.
3. Subsequent to enactment of Federal Power Act if applicant needed new Federal authorization to construct, operate and maintain its project works, it could only obtain it as a license from Federal Power Commission. P. 596.
4. Post 1920 approval by Chief of Engineers and Secretary of the Army of plans affecting navigation is not a substitute for a license. PP. 596, 597.
5. Upon rehearing, Commission *reaffirms* prior order requiring application for license, in proceeding involving Section 23(b) of the Federal Power Act. P. 597.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

The Northwest Paper Company (Applicant) on January 6, 1964, filed an application for rehearing upon the declaratory order issued on December 9, 1963, requiring it to apply for a license on its Brainerd Project on the Mississippi River at Brainerd, Minnesota. On February 6, 1964, we issued an order granting rehearing for further consideration of the issues raised in application and staying the declaratory order until further order.

Section 23(b) of the Federal Power Act provides that it is unlawful to maintain or operate hydroelectric project works upon navigable waters of the United States except under license from the Commission (41 Stat. 1075, 49 Stat. 846; 16 U.S.C. 817). Exempted from this licensing requirement by subsections (a) and (b) of Section 23[1] are any projects operated or maintained under and in accordance with Federal permits[2] issued prior to the approval on June 10, 1920, of the Federal Water Power Act (Part I of the Federal Power Act since 1935).

The petition for declaratory order claimed that Applicant was entitled to such an exemption under the Act of April 15, 1886 (24 Stat. 12), authorizing the Mississippi Water-Power and Boom Company to construct a water power project at Brainerd. The petition, however, showed that the project completed by 1889 under this authorization, twice was reconstructed and modified, leaving little more of the original project works than certain oak pilings upon which some of the present structures rest. The first generating equipment was installed in 1889–1890 by the Brainerd Light and Power Company, one of Applicant's predecessors, after the completion of the original project works. Applicant stated in its petition that in 1916 and 1917 it constructed a paper mill on the east bank of the Mississippi River adjacent to the original dam. In order to obtain necessary power it reconstructed the dam and built a new powerhouse. The power generation was furnished by two 560 kva, 480v, 60c, 80% P. F. generators. The dam as reconstructed in 1916 and 1917 with some minor changes in equipment and power remained until the spring of 1950 at which time the dam was substantially rebuilt. In the declaratory order, we found that the Act of 1886 does not authorize Applicant to maintain and operate its project works as they now exist. If, as we thus found, Applicant does not hold a valid pre-1920 Federal permit for its project works, it is not entitled to the exemption from the licensing requirement.

---

[1] This section reads in pertinent part:

(a) The provisions of this Part shall not be construed as affecting any permit or valid existing right-of-way heretofore granted or as confirming or otherwise affecting any claim, or as affecting any authority heretofore given pursuant to law. . . .

(b) It shall be unlawful for any person . . ., for the purpose of developing electric power, to construct, operate or maintain any dam, water conduit, reservoir, powerhouse, or other works incidental thereto across, along, or in any of the navigable waters of the United States . . ., except under and in accordance with the terms of a permit or valid existing right-of-way granted prior to June 10, 1920, or a license granted pursuant to this Act. [41 Stat. 1075, 49 Stat. 846; 16 U.S.C. 816, 817.]

[2] Although Section 23 says only "permit," this has been understood and held to mean Federal permit. *Niagara Falls Power Co. v. FPC*, 137 F. 2d 787, 791–792 (2d Cir.), cert. denied, 320 U.S. 792, rehearing denied, 320 U.S. 815 (1943); *Wisconsin Public Service Corp. v. FPC*, 147 F. 2d 743, 748–749 (7th Cir.), cert. denied, 325 U.S. 880 (1945).

The application for rehearing presents no new facts. It makes substantially the same contentions as the petition for declaratory order. However, it tenders additional argument on the meaning of subsection 23(a) and the Act of 1886, and it presses a claim to an exemption from the licensing requirement because of the approval of the Chief of Engineers and Secretary of Army of the reconstruction and modification of the project works in 1950 and 1951.

The application for rehearing recites authority from legislative history and judicial and administrative interpretation that pre-1920 Federal permittees are exempt under subsection 23(a) from the licensing requirement. We believe that it is abundantly clear that a license is not required if the project is operated and maintained under a valid Federal permit.[3] In fact, we expressly found in the declaratory order that this exemption also exists under subsection 23(b):

> Under Section 23(b) of the Federal Power Act, it is unlawful for the Petitioner, as a nonlicensee, to maintain and operate hydroelectric project works upon a navigable water of the United States, *unless it received a Federal permit for such works prior to passage of the Federal Power Act on June 10, 1920*, [Emphasis supplied.]

The only substantial issue before us is whether Applicant holds a valid pre-1920 permit for the project works as they now exist. The resolution of this issue depends upon the meaning of the Act of 1886.

The Commission, in construing Congressional acts authorizing private parties to utilize the Nation's water power must apply the familiar rule of construction "that all federal grants are construed in favor of the Government lest they be enlarged to include more than was expressly included."[4] This rule, which has become a basic principle of statutory construction[5] applies with special force when grantees try to derive private rights of an indefeasible nature from a Federal grant under the commerce power.[6]

The Act of 1886 reads in pertinent part as follows:

> That the consent of the Government is hereby given to the Mississippi Water Power and Boom Company of Brainard, Minnesota, to construct across the Mississippi River at some point not more than two miles from the limits of said city of Brainard, to be approved by the Secretary of War, a dam, canal and appurtenances thereof, for water-power and other purposes, and in connection therewith a wagon and foot bridge for public travel . . .

Pursuant to this authority one of Applicant's predecessors, shortly after 1886, built a water power project (not a hydroelectric project). The Applicant, apparently relying upon the fact that the 1886 law talked in terms of the construction of the named project works "for water-power and other purposes", asserts that Congress broadly consented to an obstruction in a navigable waterway of the United States in perpetuity, regardless of the nature or purpose thereof or the extent to which the obstruction might be changed by subsequent redevelopments.

---

[3] Pursuant to Section 23(a) of the Act, a project owner may continue to operate and maintain its project under a valid Federal permit or it may surrender such permit and obtain a fair value license. *Niagara Falls Power Co.* v. *FPC*, 137 F. 2d 787 (2d Cir.), cert. denied, 320 U.S. 815 (1943).

[4] *United States* v. *Grand River Dam Authority*, 363 U.S. 229, 234, rehearing denied, 364 U.S. 855 (1960).

[5] *Charles River Bridge* v. *Warren Bridge*, 36 U.S. (11 Pet.) 420, 546–551, see also 3 SUTHERLAND STATUTORY CONSTRUCTION § 6402 (3d ed. 1943).

[6] *Louisville Bridge Co.* v. *United States*, 242 U.S. 409, 417 (1917); *Bridge Company* v. *United States*, 105 U.S. 470, 480 (1881).

We cannot reasonably infer from the grant that Congress broadly consented to authorize the Mississippi Water-Power and Boom Company or its successors to replace the original project works with other and different works in perpetuity.[7] Since no period is provided for the duration of the grant we believe that the only reasonable inference is that the authority is to endure for the life of the project first constructed.[8]

We have examined *City of Newark* v. *Central Railroad Co. of New Jersey*[9] and *Rogers Sand Co.* v. *Pittsburgh,*[10] cited by Applicant. Those cases held that consent by a State for the construction of a bridge over a navigable water was broad enough to cover subsequent modification of the bridges. Here Congress has provided in the Federal Power Act an elaborate scheme for continuing regulation of the non-Federal development of water power in the navigable streams of the United States.[11] We believe that perpetual Federal authorization for the obstruction of navigable waters should be less readily implied in such circumstances than continuing State consent for modification of bridges.

Applicant sought and obtained approval from the Chief of Engineers and the Secretary of the Army, on May 18, 1951, for a dam reconstructed in 1950 and 1951.[12] This action, of course, is inconsistent with any claim that the 1886 law, in and by itself, gives authority to the Applicant to reconstruct the original project and to operate and maintain the reconstructed project despite its material difference from that originally authorized.

If, as we believe, Applicant, subsequent to the enactment of the Federal Power Act, needed a new Federal authorization to construct, operate and maintain its project works, it could obtain it only as a license from the Federal Power Commission. The legislative history of the Federal Water Power Act makes this clear.[13] Although Section 4(e) of the Act (16 U.S.C. 797) requires the approval of plans affecting navigation by the Chief of Engineers and the Secretary of the Army, this is not a substitute for a license.[14]

Applicant cannot avoid the licensing provisions, enacted to ensure comprehensive development of the nation's water resources, merely by obtaining the approval of the Chief of Engineers and the Secretary of the Army which since 1920 constitutes only one phase of the statutory scheme.[15]

---

[7] Examples of decisions limiting the duration of legislative authorizations pursuant to the rule of strict construction are *Reichelderfer* v. *Quinn,* 287 U.S. 315, 321 (1932) and *Blair* v. *City of Chicago,* 201 U.S. 400, 472–473 (1906).

[8] We do not find it necessary to consider here whether construction or operation of a hydroelectric project would have been permissible under the language of the Act of 1886. Assuming that the language might have been broad enough to cover such a project if that had in fact been the objective of the permittee, this would not mean that if the original permittee constructed a project not involving the use of hydroelectric energy, his successor could without securing the approval of the appropriate Federal Agency construct an entirely new project for another purpose.

[10] 139 F. 7 (3d Cir., 1905).

[11] 16 U.S.C. 791–823.

[12] The District Engineer of the Corps of Engineers, at Applicant's solicitation, wrote on March 12, 1963, that:

> This approval together with the authorizing Act of 15 April 1886 makes both the original structure and the repairs of 1950 and 1951, lawful structures in the navigable waters of the United States.

[13] H.R. Rep. No. 61, 66th Cong., 1st Sess. 5 (1919), S. Rep. No. 180, 66th Cong., 1st sess. 6 (1919). See also, 32 Ops. Atty. Gen. 525, 528 (1921).

[14] See, *First Iowa Corp.* v. *F.P.C.,* 328 U.S. 152, 180–181, *rehearing denied,* 328 U.S. 879 (1946).

The Commission finds:

(1) It is appropriate and in the public interest in administering the Federal Power Act that the declaratory order, issued December 9, 1963, be amended to allow The Northwest Paper Company to file application for license for its project works at Brainerd, Minnesota, within ninety days of either the issuance of the instant order or entry of a final order by any appellate court, whichever is later.

(2) The assignments of error and grounds for rehearing set forth in the application for rehearing filed by the company on January 6, 1964, of the Commission's declaratory order issued herein on December 9, 1963, present no facts or principles of law which were not considered by the Commission when it issued its aforesaid order, or which having now been considered warrant any further change in or modification of the said order.

The Commission orders:

(A) The stay of the declaratory order is dissolved.

(B) The declaratory order is amended to allow The Northwest Paper Company to file application for license within ninety days of either the issuance of the instant order or entry of a final order by an appellate court pursuant to Section 313 of the Federal Power Act (16 U.S.C. 825), whichever is later, and that the relief otherwise sought in the application for rehearing be and is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

PACIFIC GAS & ELECTRIC COMPANY AND SACRAMENTO MUNICIPAL UTILITY DISTRICT

ORDER APPROVING HEADWATER BENEFITS AGREEMENT

(Issued March 17, 1964)

Pacific Gas & Electric Company (Pacific) on September 16, 1963, requested approval of an agreement with the Sacramento Municipal Utility District (Sacramento) concerning compensation for headwater benefits provided by each party to the other on the South Fork of the American River in California. The Commission, as provided in section 13.1 of the Regulations under the Federal Power Act, may approve such agreements in lieu of a headwater benefits determination under Section 10(f) of the Federal Power Act (16 U.S.C. 803(f)).

The Commission has authorized seven projects on the South Fork and its tributary Silver Creek. Sacramento holds authorizations for four of these—

---

[15] The chief statutory conditions are discussed in *United States v. Appalachian Power Co.*, 311 U.S. 377, 419 in note 65, *rehearing denied*, 312 U.S. 712 (1940). See also, FPC Opinion No. 411, dated November 21, 1963, issuing a major license for the South Carolina Electric & Gas Company's Neal Shoals project, setting out the current license conditions, 30 FPC 1338. [conditions appear at 30 FPC 1658]

Union Valley, Jay Bird, Camino, and White Rock[1]—under one license, Project No. 2101. Pacific maintains and operates two projects—Eldorado and American River—under separate licenses, Project Nos. 184 and 78, respectively. Sacramento and Pacific jointly hold a license for the Chili Bar Project, Project No. 2155.[2]

Sacramento's Union Valley, Jay Bird (including Junction reservoir), and Camino projects benefit Pacific's American River project. Pacific's Eldorado project benefits Sacramento's White Rock project. The Chili Bar project, which is the farthest downstream, receives benefits from all of Sacramento's and Pacific's upstream projects.

On January 5, 1962, Sacramento and Pacific executed an agreement for cooperative development of the Chili Bar project. The essential term of the agreement provided that Sacramento initially would operate the project and then turn it over to Pacific; this transfer was to occur when the Slab Creek reservoir of Sacramento's White Rock project cuts off the water supply for Pacific's American River project (but not later than December 31, 1970). The agreement contained this paragraph on headwater benefits:

> The parties specifically understand and agree that in their negotiations they have taken into full account the provisions of Section 10(f) of the Federal Power Act relating to upstream benefits. They agree that such benefits are of the essence of this agreement and that the considerations forming a part of this agreement take into full account and include both those upstream benefits to be provided by SACRAMENTO to PACIFIC at its American River Project and at CHILI BAR, and those upstream benefits to be provided by PACIFIC to SACRAMENTO at WHITE ROCK and CHILI BAR, and that neither party is entitled to any further consideration with respect to such benefits.

Since each party by this contract relinquished rights to payments for headwater benefits to obtain other valuable rights, the agreement is a contract concerning headwater benefits compensation which may be filed by the parties under section 13.1 of the Regulations under the Federal Power Act for Commission approval in lieu of a headwater benefits determination under Section 10(f) of the Federal Power Act.

The Commission finds:

The agreement executed on January 5, 1962, between the Pacific Gas and Electric Company and the Sacramento Municipal Utility District constitutes an effective and reasonable method for compensating Pacific for benefits received from Sacramento's Project No. 2101 at Pacific's American River project and the Chili Bar project and for compensating Sacramento for benefits received from Pacific's Project Nos. 184 and 78 at Sacramento's White Rock and the Chili Bar project.

The Commission orders:

The aforesaid agreement is approved with respect to headwater benefits under section 13.1 of the Regulations under the Federal Power Act in lieu of a headwater benefits determination under Section 10(f) of the Federal Power Act until changed conditions may require further order of the Commision.

---

[1] The White Rock project has not been installed.

[2] This project is under construction.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EXCEPTIONS TO INTERMEDIATE DECISIONS—BRIEFS—ORAL ARGUMENT, DOCKET NO. R-258

ORDER NO. 277

AMENDING § 1.31 OF THE RULES OF PRACTICE AND PROCEDURE

(Issued March 18, 1964)*

The Commission has concluded that it is desirable to reduce the paper work relating to appeals from examiners' decisions and to facilitate the improvement of the briefs which bring the issues to the Commission.

Accordingly, we are revising § 1.31 of the Rules of Practice and Procedure. In the future, a party objecting to all or parts of an examiner's decision shall in 30 days after service of the decision file his objections in a single document entitled "Brief on Exceptions," comprising the grounds of objection to a decision stated in a reasoned and documented written argument or brief. The style of organization of the brief is prescribed along lines familiar to the bar in appellate briefs. In generally similar style, any party disagreeing with the briefs on exceptions may answer them and support the disputed decision or the challenged parts in a "Brief Opposing Exceptions" filed within 20 days after the time limited for service of briefs on exceptions.

By this revision we are eliminating the present system of separate filing of exceptions and briefs supporting exceptions, the simultaneous filing of exceptions and statements in support of the decision, and the filing of reply briefs.

Under the revised rule, each brief will be limited in length to 50 pages and each must be self contained, i.e., the brief must contain within itself the argument that the party filing desires the Commission to consider, without incorporating by reference earlier briefs or arguments. The 50-page limitation may be altered or waived for each class of brief for good cause on timely application to the Chief Examiner of the Commission.

The revised rule also covers oral argument before the Commission on matters raised by the briefs, and the subject of briefs and oral argument to the Commission in any case where the intermediate decision of the examiner is waived.

The amendment will be effective May 1, 1964, but to avoid confusion as to whether the revised rule or its predecessor applies to examiners' decisions rendered immediately prior to that date, we are providing that the revised rule shall not apply to the intermediate decisions of examiners issued prior to May 1, 1964.

The Commission has been greatly assisted in the revision of the rule by the suggestions of the Committee on Rules of Practice and Procedure of the Federal Power Bar Association.

The Commission finds:

(1) Since the amendments adopted herein involve matters of Commission practice and procedure the notice, hearing and effective date requirements of section 4 of the Administrative Procedure Act are not applicable.

(2) The adoption of these amendments are necessary and appropriate to the administration of both the Federal Power Act and the Natural Gas Act.

The Commission, acting pursuant to the authority granted by the Federal Power Act, as amended, particularly sections 308 and 309 thereof (49 Stat. 858;

---

*Published in Federal Register, 29 F.R. 3698.

16 U.S.C. 825g, 825h), and the Natural Gas Act, as amended, particularly sections 15 and 16 thereof (52 Stat. 829, 830; 15 U.S.C. 717n, 717o) *orders:*

(A) Delete § 1.31 of Part 1, Rules of Practice and Procedure, Subchapter A, Chapter I of Title 18 of the Code of Federal Regulations, and insert in lieu thereof the following:

"§ 1.31. Exceptions to intermediate decisions, briefs; briefs and oral arguments before the Commission.

(a) *Briefs on exceptions, briefs opposing exceptions, filing of*

Any party or staff counsel desiring to appeal to the Commission shall, within 30 days after the service of a copy of an intermediate decision (initial or recommended by subordinates, or tentative by Commission), or such other time as may be fixed by the Secretary, file exceptions to the decision or part thereof in a brief (designated "Brief on Exceptions"). "Briefs Opposing Exceptions" may be filed in response to briefs on exceptions within 20 days after the time limited for the filing of briefs on exceptions or such other time as may be fixed by the Secretary. No further response will be entertained unless the Commission, upon motion or its own initiative, so orders.

(b) *Nature and service of briefs on exceptions and of briefs opposing exceptions*

(1) Briefs on exceptions shall contain (i) a short statement of the case, (ii) a summary of the basic position of the party filing, (iii) the grounds upon which the exceptions rest and (iv) the argument in support with appropriate references to the record and legal authorities. There may also be included specific findings and conclusions proposed in lieu of those to which exception is taken and any proposed additional findings and conclusions. Exceptions to the form of order or rule shall specify the portions thereof to which exception is taken, and may set forth a form of order or rule suggested in lieu of that served. Briefs opposing exceptions shall generally follow the same style prescribed for briefs on exceptions, but may omit a statement of the case if it was correctly stated in a brief on exceptions.

(2) Briefs on exceptions and briefs opposing exceptions shall be self contained and limited to fifty pages in length, provided that for good cause the limitation on length may be altered or waived for either class of briefs upon application to and order of the Chief Examiner of the Commission, or an examiner acting in his absence, within the time limited for filing of the respective briefs.

(3) Subject to the foregoing requirements, briefs shall conform to the applicable provisions of sections 1.15, 1.16, and 1.17, as to copies, form, and service, but need not be verified under oath. Fifteen copies of each such document shall be filed with the Commission in addition to the copies served on the parties to the proceedings.

(c) *Failure to except or to object to rulings on evidence results in waiver*

Failure to file a brief on exceptions within the time allowed under this section shall constitute a waiver of all objections to the intermediate decision served. Objections to any part of an intermediate decision which is not the subject of exceptions may not thereafter be raised before the Commission in oral argument, or in an application for Commission rehearing, and shall be deemed to have been waived. The Commission may refuse to consider exceptions to a ruling admitting or excluding evidence unless there was an objection at the time the ruling was made or within any deferred time provided by the presiding officer.

(d) ***Oral argument on exceptions***

Any party or staff counsel filing a brief on exceptions or brief opposing exceptions may by motion request an opportunity to present oral argument to the Commission on the intermediate decision. Such motion must be filed within the time limited for the filing of briefs opposing exceptions. If oral argument is ordered, it shall be limited, unless otherwise specified, to matters properly raised by the briefs.

(e) ***Briefs and oral argument on waiver of intermediate decision***

Parties requesting a decision by the Commission without an intermediate decision in a proceeding in which the Commission has not presided at the reception of the evidence shall include their requests for opportunity to file briefs or to make oral argument in the motion for waiver of the intermediate decision, as provided in § 1.30(c). Such briefs and argument as may be ordered shall conform to the requirements of § 1.29 insofar as applicable."

(Secs. 308, 309, 49 Stat. 858, 16 U.S.C. 825g, 825h; secs. 15, 16, 52 Stat. 829, 830, 15 U.S.C. 717n, 717o.)

(B) This amendment shall be effective May 1, 1964, except that it shall not apply to intermediate decisions issued before May 1, 1964.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

APPLICATIONS BY INDEPENDENT PRODUCERS PURSUANT TO SECTION 7 OF THE NATURAL GAS ACT—MISCELLANEOUS AMENDMENTS, DOCKET NO. R-241; RATE FILINGS AND CERTIFICATE APPLICATIONS BY INDEPENDENT PRODUCERS—MISCELLANEOUS AMENDMENTS, DOCKET NO. R-244

ORDER NO. 278

AMENDING SUBCHAPTERS E AND G OF REGULATIONS UNDER THE NATURAL GAS ACT

(Issued March 18, 1964)**

Though initiated separately, these two proceedings* are concerned with closely related proposals to amend the Commission's Regulations Under the Natural Gas Act with respect to the requirements to be followed by independent producers of natural gas in filing rate schedules and applying for certificates of public convenience and necessity or for authority to abandon service. Accordingly, we are considering the proposals simultaneously and, to avoid any possible confusion, will dispose of all the amendments proposed in the two dockets as hereinafter ordered.

The amendments are designed to simplify the filing requirements and expedite Commission action on applications and rate filings through the use of forms by which summaries of contract provisions and other information normally supplied

---

****Published in the Federal Register, 29 F.R. 3609.**

***In Docket No. R-241, the Notice of Proposed Rulemaking, issued May 14, 1963, was published in the Federal Register May 23, 1963 (28 F.R. 5161). The Notice in R-244, issued July 15, 1963, was published July 20, 1963 (28 F.R. 7433).**

in the body of an application would be made conveniently available on the first page of the filings.

In response to the invitation in the two notices, comments were received from six producing companies, one pipeline company, two distributing companies and two state commissions.

All respondents favored the proposals in Docket No. R-241 and some recommended that various items be added to the form (§ 250.5) to emphasize gas quality, and delivery conditions under the contract, percentum of ownership of co-owners, names of signatory sellers, dates of fixed escalations and resulting prices, take-or-pay clauses, depths of producing horizons and description of any options granted in the contracts. We do not believe that the possible value of such information is sufficient to justify the added burden which would be imposed upon the producer-applicants.

Of the four producer companies commenting on the proposals in R-244, two were opposed. Others indicated objection to certain portions of the amendments but we are of the opinion that they are not of sufficient merit to overbalance the public interest which would be served by our adoption of the proposed amendments substantially as proposed.

One point requires clarification. The amendments proposed in R-244 are not intended to secure information with respect to the assignment of non-productive acreage. It is clear, however, that the assignee of any such acreage which is dedicated under the assignor's sales contracts, while not required to secure approval of the assignment, is now required, and will continue to be required under the amendments herein adopted, to obtain certificate authorization to sell gas from such acreage. Such assignees (farmouts) will be required to indicate that the sale for which a certificate is applied results from a farmout agreement and to complete the applicable portions of Part II of the Contract Summary. See § 157.24(a) and the *note* and item (5) in § 250.5.

Question was raised as to what may appear to be an unnecessary duplication of filings where a partial assignment of interests is involved. See § 154.92(d)(2) which requires the assignee to file copies of the assignor's contract and the instrument of assignment. We have found, however, that this minor degree of duplication is justified and that filed rate schedules of both the assignor and the assignee must be complete in themselves if the Commission staff in its administration of the Act and outside parties referring to these schedules are to be able to proceed with accuracy and dispatch. The assignor's rate schedule, following a partial assignment, must include both his basic contract *and* the instrument of assignment to show its current status. By the same token, the assignee's rate schedule must contain the same documents. Thus, the rights and obligations of each with respect to the assignor's basic contract, a portion of which was assigned, will be apparent from an examination of the filed schedule of each.

We have concluded, therefore, to adopt the amendments substantially as they were proposed in the two notices. However, one change in form, but not in substance, is being made. In Docket No. R-244, a new form, "Summary to be filed by assignee as a successor in interest" (§ 250.9) was proposed in the notice. But since all applicants are also required to file the form of "Contract summary" specified in § 250.5, we have revised the latter to include the information contained in § 250.9, as noticed. The amendment to § 157.24(a) which, as proposed, required the use of two forms if the applicant is a successor in interest, has been changed to require only the one form, Part I of which is to be completed by all applicants. Applicants who are successors in interest will, in addition, complete Part II to the extent applicable.

One amendment made herein was not proposed in either of the notices. It amends § 154.102(a) to provide that three copies shall be filed of a motion to make a suspended rate schedule effective at the end of the period of suspension. The lack of such a provision seems to have caused some confusion as to how many copies should be filed.

Upon consideration of the entire record in this proceeding which includes the notices of proposed rulemaking and all the comments, views and data filed in response thereto, *the Commission further finds:*

(1) Adoption of these amendments to the Regulations Under the Natural Gas Act are necessary and appropriate to the administration of the Natural Gas Act.

(2) For the reasons heretofore expressed, good cause exists for the adoption herein of the amendment to § 154.102(a) without giving the prior notice required by section 4 of the Administrative Procedure Act.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 4, 7 and 16 thereof (52 Stat. 822, 824, 825, 830; 56 Stat. 83, 84, 76 Stat. 72; 15 U.S.C. 717c, 717f, 717o), *orders:* [Omitted in printing—see 29 F.R. 3699.]

(B) The amendments adopted herein shall become effective on May 1, 1964.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL., AND GENERAL CRUDE OIL COMPANY (OPERATOR), ET AL., CI61–1280

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued March 18, 1964)

On February 14, 1964, General Crude Oil Company (Operator), *et al.*, (General Crude) filed a motion for reconsideration of our order of January 23, 1964, 31 FPC 178, rejecting General Crude's offer of settlement in the above-entitled proceedings.

In its settlement proposal, General Crude proposed, *inter alia*, that a certificate be issued in Docket No. CI61–1280 at an initial rate of 20.4¢ per Mcf and that the rate in effect subject to refund in Docket No. RI63–389 remain in effect subject to refund. The rate in effect subject to refund in Docket No. RI63–389 is 21.6¢ per Mcf.

According to the application in Docket No. CI61–1280,[1] all of the gas production property from which sales are proposed therein was formerly covered by Pan American Petroleum Corporation's (Pan American) Rate Schedule No. 173. A certificate was issued to Pan American authorizing sales from this acreage (and other acreage) at an initial rate of 17.5¢ per Mcf in Docket No. G–3216 on November 2, 1954. Pan American's effective rate at the time of the assignment to General Crude (subject to refund under section 4(e) of the Natural Gas Act) was 20.4¢ per Mcf. The last rate of Pan American not subject to refund was 18.0¢ per Mcf.

As we stated in our order of January 23, *supra*, the issuance of a certificate at the rate proposed by General Crude would violate the principles expressed in our recent Opinion No. 408, *Graridge Corporation (Operator), et al.*, Docket No. G–19246, et al., issued October 31, 1963, 30 FPC 1156. We there held that a certificate issued to a successor in interest should put the successor in the same position in which the predecessor would be, had the latter retained the property transferred. To grant a certificate to General Crude on the terms proposed would put General Crude in a more favorable position than Pan American, its assignor. The settlement terms proposed by General Crude are not sufficient reason to permit a waiver of the principles expressed in *Graridge.*

---

[1] Exhibit A thereto.

The Commission finds:

The motion for reconsideration filed by General Crude Oil Corporation in the above-entitled matters on February 14, 1964, does not present sufficient reason for changing our determinations made in our order of January 23, 1964, herein.

The Commission orders:

The Motion for Reconsideration of Order Rejecting Offer of Settlement filed by General Crude Oil Company in these proceedings on February 14, 1964, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

AZTEC OIL & GAS COMPANY (SUCCESSOR TO HASSIE HUNT TRUST AND HERMAN BROWN), DOCKET NO. CI64–367

FINDINGS AND ORDER AFTER STATUTORY HEARING, CONDITIONALLY ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND CONDITIONALLY APPROVING SETTLEMENT PROPOSAL

(Issued March 19, 1964)

On September 23, 1963, Aztec Oil & Gas Company (Applicant) filed in Docket No. CI64–367 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas in interstate commerce to Texas Gas Transmission Corporation for resale for ultimate public consumption from the North Rousseau Area, Lafourche Parish, Louisiana, all as more fully set forth in the application.

Applicant has acquired an undivided interest in the leases and lands owned by Hassie Hunt Trust and Herman Brown who have applied for certificates to make sales from the subject properties in Docket Nos. CI61–645 and CI61–709, respectively.

On January 7, 1964, Applicant submitted an offer of settlement and a motion for approval thereof similar to those proposals submitted and approved with respect to the applications for certificates consolidated with *Union Texas Petroleum, et al.,* Docket No. G–13221, *et al.* Applicant proposes a reduction in initial price to 20.625¢[1] per Mcf at 15.025 psia including tax reimbursement; a moratorium on future rate changes through March 31, 1968; an agreement to refund to the purchaser the difference between the amounts actually collected for gas delivered under Applicant's FPC Rate Schedule Nos. 15 and 16 and the amounts which would have been collected under the settlement rate, together with interest at the rate of 7 per cent per annum which shall not have accrued after December 31, 1963; an extension of make-up periods for prepaid gas to 4 years; and a condition that the settlement rate is subject to prospective adjustment dependent upon the final determination in Docket No. AR61–2, *et al.*

---

[1] The initial contract price is 23.55¢ per Mcf including tax reimbursement. Applicant has accepted a temporary certificate conditioned to an initial price of 23.25¢ per Mcf and subject to the obligation to refund to the purchaser any amount collected in excess of the rate found to be required by the public convenience and necessity down to 20.0¢ per Mcf, together with interest.

We find this proposal, generally, to be in the public interest and shall approve it subject to the following reservations and conditions.

In the context of the proposal, we interpret the term "delivered" as used in paragraph 1 thereof to include gas required to be taken during the moratorium period but paid for and not taken, and our approval is conditioned upon such determination. Thus, prepayments, if any, shall be made during the moratorium period at a rate no higher than the rate in effect for gas physically delivered.

The settlement provisions for adjustments in rates according to our order or orders in Docket No. AR61-2 seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in the instant case which will control our conclusions in Docket No. AR61-2. The settlement proposal also provides that adjustments in price growing out of Docket No. AR61-2 should go into effect upon conclusion of judicial review of our final order therein. We can not now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61-2. These matters should be decided at the conclusion of that proceeding, and our approval of the settlement will be so conditioned.

Applicant proposes to refund to the purchaser the difference between the amounts actually collected for gas delivered and the amounts which would have been collected under the settlement rate, together with interest which shall not have accrued after December 31, 1963. It is the Commission's present policy to require that interest accrue and be paid on such refunds through the last day of the month in which the settlement proposal has been submitted. Therefore, we shall require that interest accrue and be paid on the refunds made to the purchaser through January 31, 1964.

Petitions to intervene have been filed by Long Island Lighting Company, The Brooklyn Union Gas Company, and the Philadelphia Gas Works Division of The United Gas Improvement Company. A notice of intervention has been filed by the Public Service Commission of the State of New York.

No opposition to Applicant's settlement proposal and motion have been received.

At a hearing held on March 12, 1964, the Commission on its own motion received and made part of the record in this proceeding all evidence, including the application and exhibits attached thereto and the offer of settlement, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Aztec Oil & Gas Company, is a "natural-gas company" within the meaning of the Natural Gas Act and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission.

(2) The proposed sale of natural gas is subject to the jurisdiction of the Commission, and such sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The proposed sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is

required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should amend its related rate schedules as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Aztec Oil & Gas Company, upon the conditions set forth herein, authorizing the sale of natural gas in interstate commerce for resale for ultimate public consumption, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the application and settlement proposal herein.

(B) The certificate granted in paragraph (A) above is not transferable and shall be effective only so long as Applicant continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission.

(C) The certificate granted in paragraph (A) above is granted upon the express condition that Applicant comply fully with the terms of this order and the settlement proposal, which settlement is expressly approved under the conditions of this order.

(D) The grant of the certificate issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved, except as specifically provided by the settlement proposal. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificate.

(E) Applicant shall amend its related rate schedules to reflect the settlement rate and to provide for an extension of the make-up periods for prepaid gas to 4 years; provided, however, the notice provisions of Section 154.94(b) and the detailed submittal provisions of Section 154.94(f) of the Commission's Regulations under the Natural Gas Act are hereby waived insofar as they apply to the reductions in rates.

(F) Within 90 days after the date of this order, Applicant shall refund to Texas Gas Transmission Corporation the amounts actually collected for gas delivered under Applicant's FPC Gas Rate Schedule Nos. 15 and 16 and the amounts which would have been collected under the settlement price approved herein, together with interest at the rate of 7 percent per annum which shall have accrued through January 31, 1964. Within 30 days from the date that the refunds have been made, Applicant shall submit in triplicate a report of such refunds together with a release from the purchaser.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-9

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 19, 1964)

On July 16, 1963, as supplemented on September 9 and November 5, 1963, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64-9 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of additional compressor horsepower at the Jal No. 4 plant, Lea County, New Mexico, the operation of certain existing facilities and the construction and operation of certain other facilities, all in Lea County, in order to provide additional capacity necessary to receive the prorated allowables from the wells presently connected to Applicant's Jal production area 225 psi system and to re-establish operating capacity and flexibility for the connection of new wells in said area, all as more fully set forth in the application, as supplemented.

Specifically, Applicant proposes the following:

(a) To install an additional 1,760 horsepower at the Jal No. 4 plant increasing the total horsepower from 9,450 to a total of 11,210;

(b) To operate existing gathering Trunk Lines L and M now serving respectively Jal plant Nos. 3 and 4, and,

(c) To construct and operate 2.6 miles of 16-inch pipeline in conjunction with the additional compressor facilities and a 17-mile segment of the existing and certificated 16-inch gathering Trunk Line A which line now serves Jal No. 1 plant.

Applicant presently operates, among others, two gathering systems in the Jal area with respective operating pressure of 225 psi and 580 psi. The 580 psi system (Trunk M) transports gas from newly-attached wells to the Jal No. 4 plant. Applicant states that when such wells are no longer capable of flowing against such a pressure, they are reattached to the 225 psi system. The parallel and interconnected Trunks A and L of the 225 psi system transport gas to the Jal Nos. 1 and 3 plants, respectively.

Applicant states that it has expended substantially all of the operating flexibility and capacity of the 225 psi system through the reconnection thereto of numerous wells previously producing into the 580 psi system. Applicant states further that it will therefore be impossible in the future to produce the prorated allowable from each well connected to the 225 psi system. To obviate this problem, Applicant proposes to provide a separate gathering trunk operating at a pressure in the order of 425 psi for those wells which are capable of producing their prorated allowable against a working pressure of 425 psi. The application indicates that there are 98 wells now attached to the 225 psi system which are able to flow against an operating pressure of 425 psi and which are consuming approximately 43,000 Mcf of the 225 psi system's daily capacity.

Applicant proposes, therefore, to isolate a 17-mile segment of Trunk A and to connect said segment by means of the proposed 2.6 miles of 16-inch pipeline to the proposed compressor units at the Jal No. 4 plant. Gas from the above-mentioned 98 wells will be produced into the isolated segment and transported at 425 psi to the No. 4 plant.

On January 3, 1964, Transwestern Pipeline Company (Transwestern) filed a petition to intervene in this proceeding; however, on February 3, 1964, Transwestern filed a notice of withdrawal of said petition.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 12, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplements and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation of the proposed facilities and the operation of existing facilities by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the operation of existing facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to operate existing facilities, as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64–156

FINDINGS AND ORDER AFTER STATUTORY HEARING, PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued March 19, 1964)

On January 7, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64–156 an application pursuant to Section 7(b) of the Natural Gas

Act for permission and approval to abandon by sale to E. G. Rodman, approximately 1.3 miles of 4.5 inch O.D. pipeline extending from the South Cowden Gasoline Plant of Inland Natural Gasoline (Inland) to Applicant's 20 inch Sweetie Peck-Goldsmith line, located in Ector County, Texas, together with a purchase meter station located at the outlet of the said plant, all as more fully described in the application on file with the Commission.

Applicant states that by use of the facilities above described it is currently purchasing gas from Inland under terms of an agreement dated June 25, 1956. Due to a decline in volumes of gas available to Inland for processing it proposes to discontinue the sale of gas to Applicant and they have agreed to the termination of the June 25, 1956, contract.

The facilities above described will be no longer required by Applicant after cessation of deliveries of gas by Inland and it proposes to sell them for a consideration equal to the original cost of $17,416 less accrued depreciation of approximately $3,649, which is the sum of $13,766.75.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 12, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G-288 (4 FPC 486).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application, in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment, as hereinbefore described, is permitted by the public convenience and necessity and an order authorizing and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by El Paso Natural Gas Company, of the facilities hereinbefore described, as more fully described in the application, in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of transfer of the facilities within 10 days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP64-149

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 19, 1964)

On December 26, 1963, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP64-149 an application pursuant to Section 7(c) of the

Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the twelve-month period commencing on the date of issuance of such authorization and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof in the general area of Applicant's existing transmission system, and to operate such facilities only to take natural gas from producers who have received authorization from the Commission to sell natural gas to Applicant, all as more fully set forth in the application.

The total cost of the proposed facilities will not exceed a maximum of $5,000,000, and no single project will exceed a cost of $500,000, which costs are to be financed from funds on hand.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its existing pipeline system supplies of natural gas in various producing areas generally co-extensive with said system.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the twelve-month period commencing on the date of issuance of this order, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Panhandle Eastern Pipe Line Company, to construct during the twelve-month period commencing on the date of issuance of this order, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the twelve-month period commencing on the date of issuance of this order, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP64–130

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 19, 1964)

On December 9, 1963, Tennessee Gas Transmission Company (Applicant), filed in Docket No. CP64–130 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1964 of miscellaneous natural gas gathering facilities necessary to take into its certificated main pipeline system natural gas which will be purchased from producers thereof in the general area of Applicant's existing transmission system, and to operate such facilities only to take natural gas from producers who have received authorization from the Commission to sell natural gas to Applicant, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its existing pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of such facilities is not to exceed a maximum of $2,500,000, with no single project to exceed a cost of $500,000, which costs Applicant proposes to finance from general funds or from revolving credit.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58 (c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1964 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $2,500,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Tennessee Gas Transmission Company, to construct during the calendar year 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $2,500,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

TRUNKLINE GAS COMPANY, DOCKET NO. CP64-114

ORDER DENYING PETITION TO INTERVENE

(Issued March 19, 1964)*

On February 10, 1964, The Superior Oil Company (Superior) filed a petition to intervene in the above-entitled proceeding which involves an application for a certificate of public convenience and necessity filed by Trunkline Gas Company (Trunkline) seeking authorization to increase its pipeline capacity in order to serve the increased requirements of some of its existing customers. Notice of Trunkline's application was issued January 28, 1964, and published in the Federal Register on February 1, 1964, 29 F.R. 1664.

In support of its alleged right to intervene in Docket No. CP64-114 Superior claims that Trunkline owes it in excess of two million dollars for gas taken but not paid for, and that Trunkline may be proposing an uneconomic expansion of its system in Docket No. CP64-114 which might have the effect of impairing Trunkline's financial integrity. Superior also alleges that Trunkline is restraining competition and commerce by its agreement to purchase volumes of gas to be produced from Vermilion Area Block 14 Field, Louisiana, from Pan American Petroleum Company (Pan Am) and Union Oil Company of California (Union) under an arrangement whereby Trunkline will not purchase gas from other producers to the extent that Pan Am and Union are able to meet Trunkline's future need for gas. Superior also contends that Trunkline has refused to purchase gas produced from Superior's uncommitted reserves in the Block 14 Field despite the fact that Superior has offered such gas to Trunkline in an effort to alleviate the drainage Superior is suffering by virtue of Trunkline's purchases of gas produced from the Block 14 Field from Pan Am and Union.

On February 13, 1964, Trunkline filed an "Answer and Objection to Superior Oil Company's Petition to Intervene" requesting that the Commission deny Superior's petition to intervene because of Superior's failure to demonstrate any proper basis for intervening in the hearing regarding Trunkline's application in Docket No. CP64-114.

We agree with Trunkline that Superior has shown no basis for being permitted to intervene in the proceeding regarding Trunkline's expansion application in Docket No. CP64-114. By our order issued March 9, 1964, in *Trunkline Gas Co.* v. *The Superior Oil Co.*, Docket No. RI64-273, *et al.*, *supra*, p. 506, we determined the rates which Trunkline is currently obligated to pay to Superior for gas purchased under Superior's FPC Gas Rate Schedules Nos. 1 and 3. Consequently, there is no longer pending before us a question as to the amount Trunkline may be indebted to Superior for gas taken but not paid for under Superior's Rate Schedules Nos. 1 and 3. Even if there were such an issue pending before us, it would be a matter to be disposed of in Docket No. RI64-273, *et al.*, where the question was originally raised, rather than in the proceeding regarding Trunkline's application in Docket No. CP64-144.

Superior's claims with respect to Trunkline's contracts to purchase additional gas from Pan Am and Union are likewise irrelevant to the instant proceeding. The applications for such sales (Docket Nos. CI64-668 and CI64-669) were noticed on January 14, 1964, and this notice was published in the Federal

---

*Rehearing denied by order issued May 5, 1964, 31 FPC 1118.

Register on January 21, 1964, 29 F.R. 510. Superior, however, failed to file a petition to intervene in those proceedings within the period prescribed in the notice. Having failed to intervene in the proceeding directly concerned with such contracts Superior cannot collaterally attack the matter here.[1]

In short, Superior has failed to state any grounds which would justify its being permitted to intervene in the proceeding regarding Trunkline's application in Docket No. CP64–114. All the matters raised by Superior are either irrelevant to the issues to be considered in Docket No. CP64–114 or are already the subject of decisions which have been made or which should be made in other proceedings as hereinbefore described.

The Commission finds:

Good cause has not been shown by Superior for its being permitted to become an intervener in the proceeding regarding Trunkline's application filed in Docket No. CP64–114.

The Commission orders:

The petition to intervene in Docket No. CP64–114 filed February 10, 1964, by The Superior Oil Company is hereby denied.

---

[1] We note that while Superior claims the contracts between Trunkline and Pan Am and Union deprive Superior of the chance to sell its uncommitted reserves in Block 14 to Trunkline, it has in fact contracted to sell these reserves to American Louisiana Pipe Line Company (see motion filed May 6, 1963, in Docket No. G–6067 for modification of Superior's certificate of public convenience and necessity). We also note that an inspection of the contracts between Trunkline and the two producers fails to support Superior's allegation that Trunkline thereby precluded itself from making additional purchases from other producers. The provision in question is merely a clause providing that if upon redetermination of producers' dedicated reserves more gas is found to exist under the dedicated acreage than originally estimated, Trunkline will purchase additional amounts to the extent it then has need for additional gas. The provision, however, expressly states that in determining Trunkline's purchase obligations there shall be considered not only the contracts it had entered into prior to the effective date of the underlying contract but all other "* * * new purchase contracts and obligations entered into by * * *" Trunkline up to the time of such redeterminations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

JACK W. GRIGSBY, ET AL., DOCKET NOS. G–16665, G–19741, RI61–171, RI62–128, RI63–152, RI64–258

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued March 20, 1964)

On February 5, 1964, Jack W. Grigsby, *et al.* (Grigsby) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure.[1] The offer involves proposed increased rates for sales of natural gas made to Texas Eastern Transmission Corporation (TETC) by Grigsby. The offer relates to sales made under Supplement Nos. 3, 5, 6, 7, 8 and 9 to Grigsby's FPC Gas Rate Schedule No. 4 in the Bethany-

---

[1] Although Grigsby's offer specifically relates only to its own interest under its rate schedule, it is deemed to be applicable also to the signatory parties covered by his rate schedule to the extent that they comply with the provisions of this order.

Longstreet Field, De Soto Parish, North Louisiana. Each of the proposed increased rates were suspended by order of the Commission for the statutory period, and excepting for Supplement No. 9, were made effective by Grigsby in accordance with the Natural Gas Act.

Under the terms of the offer, Grigsby proposes to eliminate the favored-nation, price redetermination and the periodic escalation provisions from the rate schedule and to establish a 16.7756¢ per Mcf rate, inclusive of tax reimbursement, for the subject sale. No protests or objections to the offer have been filed.

The proposed settlement is consistent with the provisions of the Seventh Amendment to the Commission's Statement of General Policy No. 61–1, issued November 27, 1963, 30 FPC 1370, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Grigsby's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Grigsby's rate and rate schedule.

The Commission finds:

The proposed settlement of each of the above-designated proceedings on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Grigsby on February 5, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act, and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Grigsby on February 5, 1964, is hereby approved in accordance with the provisions of this order.

(B) Grigsby shall file, within 30 days from the date of issuance of this order, notice of change in rate providing for the 16.7756¢ per Mcf rate, inclusive of tax reimbursement, specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 4 eliminating the favored-nation, price redetermination, and the periodic escalation provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Upon notification by the Secretary of the Commission that Grigsby, and any other signatory party has complied with the terms and conditions of the order, the rate and charge of 16.7756¢ per Mcf, inclusive of tax reimbursement, at 15.025 psia, specified in its offer of settlement, shall be effective as of the date of issuance of this order, further, the above designated proceedings shall be deemed terminated, as to Grigsby, and as to any other signatory party covered by the subject rate schedule who filed an executed contract amendment in accordance with paragraph (B) hereof. As to any signatory party who does not so comply, these proceedings shall remain in full force and effect.

(D) The acceptance by the Commission of Grigsby's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Grigsby, including area rate or other similar proceedings.

Before Commisssioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PAN AMERICAN PETROLEUM CORPORATION, DOCKET NOS. G-15438 AND CI64-669; UNION OIL COMPANY OF CALIFORNIA, CI64-668

DECLARATORY ORDER AND ORDER CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND CONDITIONALLY ACCEPTING RATE FILINGS

(Issued March 20, 1964)

On December 9, 1963, applications for certificates of public convenience and necessity were filed by Union Oil Company of California (Union Oil) and Pan American Petroleum Corporation (Pan American) in Docket Nos. CI64-668 and CI64-669, respectively.

Notice of such applications was issued under the lead docket *Marathon Oil Company, et al.*, Docket No. G-11821, *et al.* on January 14, 1964, and published in the Federal Register on January 21, 1964 (29 F.R. 510).

Each applicant requests authorization to sell gas to Trunkline Gas Company (Trunkline) from a portion of undedicated "deep" rights underlying their respective 50 percent leasehold interests in Block 26 Offshore Vermilion Parish, Louisiana, at an initial price of 19.5¢ per Mcf. Other elements of the proposal which affect sales heretofore permanently certificated [*Trunkline Gas Company*, Opinion No. 321, 21 FPC 704 (1959)] include the following:

(1) Reduction of Pan American's effective rate of 22¢ per Mcf plus 2.05¢ per Mcf tax reimbursement,[1] to 19.5¢ per Mcf, plus 1.75¢ per Mcf tax reimbursement for gas sold from the "shallow" rights underlying its 100 percent leasehold interest in Blocks 14 and 15 and its 50 percent interest in a small portion of Block 27.[2]

(2) Reduction of Pan American's effective rate of 22¢ per Mcf to 19.5¢ per Mcf for gas sold from the "shallow" rights underlying its 50 percent interest in Block 26, deemed to be located in the Federal domain.

(3) Reduction of Union Oil's effective rate of 22¢ per Mcf to 19.5¢ per Mcf for gas sold from the "shallow" rights underlying its 50 percent interest in Block 26.[3]

Both applicants further propose to amend the contracts covering the previously certificated sales and have the terms of such contracts, as amended, apply to the sales in Docket Nos. CI64-668 and CI64-669. The amendments will:

(1) Replace periodic price increases of 2.0¢ per Mcf every 4 years with periodic increases of 1.0¢ per Mcf every 4 years, the first to be due on January 1, 1968.

(2) Replace annual take-or-pay-for-volume provisions based on an average daily contract quantity of 1 Mcf for every 8,000 Mcf of the underlying reserves with specific take-or-pay-for-volume provisions.

(3) Provide for adjustments in the rates to conform to the area rate or rates ultimately determined in Area Rate Proceeding, AR61-2.

---

[1] The tax reimbursement of 2.05¢ per Mcf is being collected subject to refund in Docket No. G-20288 due to questionable interpretation of the tax reimbursement provisions of the contract. Pan American does not herein propose to settle the Docket No. G-20288 refund matters.

[2] See discussion of the petition for declaratory order, *infra*.

[3] The presently effective rate for gas sold from Union Oil's "shallow" rights underlying its 50% interest in Block 27 is 20.625¢ per Mcf. See order of June 24, 1963, in *Union Texas Petroleum, et al.*, Docket No. G-18221, *et al.*, 29 FPC 1283, approving Union Oil's settlement in that proceeding.

On January 29, 1964, the Public Service Commission of New York (New York) filed a notice of intervention in Docket Nos. CI64–668 and CI64–669. However, on February 24, 1964, New York withdrew its intervention stating that such withdrawal was based upon the circumstances involved in the particular proceedings, i.e., reductions in price under previously committed reserves. New York states that the proposals here are *sui generis* and that the initial prices proposed ". . . would be deemed by us to be unwarrantedly out of line in virtually every other context."

The proposal of Union Oil and Pan American is contingent upon (1) the Commission's approval thereof and the issuance of certificates in Docket Nos. CI64–668 and CI64–669 prior to April 1, 1964, and (2) the issuance of a certificate to Trunkline in Docket No. CP64–114 prior to April 1, 1964.

A certificate will be issued to Trunkline in Docket No. CP64–114 by separate order of this date. However, for the reasons discussed below, we cannot unconditionally approve the Union Oil and Pan American proposal. The proposal is, in general, in the public interest, so we shall approve it conditionally and allow Pan American an opportunity to comply with our condition.

The reason that we cannot unconditionally approve the proposal is that we are of the view that Pan American has no certificate authority to make the sales from the "shallow" rights underlying Block 27. We shall therefore condition our approval of the proposal and our issuance of certificates upon the filing by Pan American of an application for a certificate of public convenience and necessity for authorization to make the sales from the "shallow" rights underlying its leasehold interest in Block 27. The absence of certificate authorization was brought to Pan American's attention by a letter of the Secretary of January 9, 1964. Pan American's response to the Secretary's letter was a "Petition For Declaratory Order", filed January 29, 1964, in Docket No. G–15438. Pan American requests that we find that the sales from the "shallow" rights have been certificated. Pan American's arguments are, (1) the original certificate of public convenience and necessity in Docket No. G–15438 furnished authority to Pan American under Section 7 of the Act to sell and deliver natural gas produced from the reserves identified in Supplement No. 2 to Pan American's FPC Gas Rate Schedule No. 258 (the "shallow" rights in Block 27) and, (2) if the original certificate in Docket No. G–15438 did not furnish authority, then, the Commission's letter of September 2, 1960, accepting for filing Pan American's Supplement No. 2 to its FPC Gas Rate Schedule No. 258 together with Pan American's letter to the Commission of September 22, 1960, advising of commencement of deliveries, furnished Pan American such authority.

As to argument (1), it is clear that our order accompanying Opinion No. 321 issued May 22, 1959, *supra*, granted Pan American no more than it had applied for. Pan American in its application sought authority to make sales of gas in interstate commerce upon the following pertinent terms:

> (1) "5.(b) The source of gas sold pursuant to the terms of said contract is gas produced by Applicant from Blocks 14, 15 and 26 Fields, Vermilion Area, Offshore Vermilion Parish, Louisiana, as defined in said contract.
>
> (2) "6. That attached hereto, marked Exhibit 'A' and made by reference a part hereof, is a key map of the facilities of Applicant which will be in use in connection with the production of the gas covered thereby. The facilities shown on said map are production facilities."

[The map shows shaded Blocks 14, 15 and 26 with facilities. No part of Block 27 is shaded and no wells or facilities are shown on Block 27.]

> (3) "8. That this application covers only the sale of gas made under and pursuant to the terms of the gas sales contract referred to in Paragraph 5(a) hereof . . . and this application is specifically limited to such sale."

(4) "10. That this application shall not be deemed to involve a request for a Certificate of Public Convenience and Necessity broader in scope than the prayer hereof."

Although the contract in Article IV provides that Seller *may*, with Buyer's approval, deliver gas produced from additional acreage under lease to Seller, it further provides that "[s]uch delivery of gas produced from additional acreage or reserves shall be in accordance with a written instrument in form satisfactory to both parties."

The latter provision of the original contract is merely an expression of future possibilities. The important fact is that Pan American prayed in its application for a certificate coextensive with its contract with Trunkline—as the contract was then written.[4] The certificate which it received was the certificate which it applied for. No authorization to make sales from the Block 27 was either applied for or granted. Nor could the mere filing of a later agreement to sell additional gas retroactively extend the breadth of the certificate granted.[5]

As to Pan American's argument (2), the simple answer is that the Secretary's letter of September 2, 1960, could not have provided the requisite certificate authority for Pan American did not apply for it and, more importantly, Section 7(c) requires notice and hearing prior to the issuance of a certificate of public convenience and necessity or a substantive amendment to an outstanding certificate. Furthermore, the letter of the Secretary accepting Pan American's rate filing contained the express proviso that ". . . [t]his acceptance for filing shall not be construed as a waiver of the requirements of Section 7 of the Natural Gas Act, as amended. . . ." Still further, Section 154.101 of the Commission's regulations under the Natural Gas Act provides, "Acceptance for filing of any rate schedule or part thereof, . . . is not to be construed as approval by the Commission, nor to serve in lieu of any requirement of Section 7 of the Natural Gas Act."

The Block 27 reserves constitute a relatively small part of the reserves involved in the overall transaction Pan American's and Union Oil's leasehold interests in Block 27 are limited to 320 acres). Problems concerning this aspect should not be allowed to defeat the whole proposal, when these problems can be cured by acceptable conditions. We shall therefore approve the proposal conditioned upon Pan American's filing an application for a certificate of public convenience and necessity for authorization to make its share of the sales from the "shallow" rights in Block 27.

The question arises as to what price should be allowed for Pan American's share of the sales from the "shallow" rights of Block 27. As noted above, Union Oil settled as to its share of such sales in the Union Texas Petroleum Proceeding at a rate of 20.625¢ per Mcf. Other terms of Union Oil's settlement are set out in the proposal and the order approving same, *supra*. As a basis of settlement, we shall require that Pan American's certificate application provide that the terms (except refund terms) contained in the Union Oil settlement of Docket No. CI62-806 as amended by Supplement No. 5 to Union Oil's Rate Schedule No. 61 (Amendment of November 14, 1963) apply to Pan American's "shallow" sale from Block 27.

---

[4] We are not here considering a contractual time limitation which may conflict with Section 7(b) of the Act.

[5] Union Oil, 50 percent co-owner of the Block 27 "shallow rights", filed an application for a certificate in Docket No. CI62-806 for authorization to make its sales from Block 27 even though its original contract with Trunkline was almost identical to the original Pan America-Trunkline contract. The certificate was granted upon settlement. See footnote 3, *supra*.

The fact remains, however, that Pan American has been collecting 24.05¢ per Mcf for its share of the Block 27 "shallow" gas since August 30, 1960, without certificate authorization. Union Oil, which properly filed a certificate application, was given a temporary authorization which provided a conditional initial rate of 21.25¢ per Mcf until the application for a permanent certificate was acted upon. Had Pan American filed an application it, undoubtedly, would have received a similarly conditioned temporary certificate. Pan American must not be allowed to profit by its failure to comply with the Act, so we shall further condition our approval of the instant proposal upon Pan American's agreement to refund to Trunkline all amounts collected above 21.25¢ per Mcf for gas sold from Block 27 from the date of initial delivery through March 31, 1963, and all amounts collected above 20.625¢ per Mcf since that date. These refunds requirements are consistent with those in Pan American's settlement of its Union Texas Petroleum Proceeding dockets. See orders of November 19, 1963, 30 FPC 1324, and February 4, 1964, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.* Pan American's application for a certificate when filed consistent with the terms of this order, will be noticed for a statutory hearing.

Pan American will also be required to file a Rate Schedule consistent with this order for the Block 27 sale.

At a hearing held on March 20, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Union Oil Company of California and Pan American Petroleum Corporation are natural-gas companies within the meaning of the Natural Gas Act, and are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Each of the applicants herein is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) The petition for Declaratory Order filed by Pan American on January 29, 1964, in Docket No. G–15438 should be granted.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued to Union Oil Company of California and Pan American Petroleum Corporation in Docket Nos. CI64–668 and CI64–669 upon the conditions set forth herein for the sales of natural gas in interstate commerce for resale as proposed and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications herein.

(B) The certificates issued by paragraph (A) above, are granted upon the express conditions that Union Oil complies fully with the terms of the contract amendment dated November 14, 1963, referred to in paragraphs (H) and (I) below and that Pan American complies fully with the terms of the contract amendment dated November 18, 1963, referred to in paragraphs (H) and (I) below, except insofar as said Pan American amendment applies to sales from the "shallow" rights of Block 27.

(C) The certificates issued by paragraph (A) above, are granted upon the further express condition that Pan American complies with ordering paragraphs (D) and (E) below.

(D) Prior to April 1, 1964, Pan American shall file with the Commission in accordance with Section 7 of the Natural Gas Act and the Commisson's rules and regulations, an application for a certificate of public convenience and necessity for authorization to make the sales of natural gas in interstate commerce from the property described in what has been identified as Supplement No. 2 to its Rate Schedule No. 258; such application shall provide the same terms as the settlement proposal of Union Oil in Docket No. CI62–806 (except as to refunds) as amended by Supplement No. 5 to Union Oil's Rate Schedule No. 61 (Amendment of November 14, 1963) and shall provide that Pan American agrees to refund to Trunkline all amounts above 21.25¢ per Mcf collected from the date of initial delivery from Block 27 through March 31, 1963, and all amounts above 20.625¢ per Mcf collected since that date, together with interest on all amounts to be refunded computed at a rate of 7 percent per annum to accrue through December 31, 1963.

(E) Prior to April 1, 1964, Pan American shall file a rate schedule for its Block 27 "shallow" sale consistent with the requirements of paragraph (D) above.

(F) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the notice provisions of Parts 154.92(b) and 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of rate schedule supplements as required by this order and the proposal of Union Oil and Pan American herein.

(G) The grant of certificates herein is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, applicants, the Commission staff, or any affected party herein in any other proceeding.

(H) Upon compliance with the terms of this order, the following are accepted for filing effective April 1, 1964:

Rate schedule No.	Supplement No.	Description
Pan American 258	3	Amendment of 11/18/63.
Pan American 258	4	Notice of rate change (except as it applies to Block 27).
Union Oil 42	3	Amendment of 11/14/63.
Union Oil 42	4	Notice of rate change.
Union Oil 61	5	Amendment of 11/14/63.

(I) Upon compliance with the terms of this order, the following are accepted for filing effective April 1, 1964, or on the dates of initial deliveries thereunder, whichever are later:

Rate schedule No.	Supplement No.	Description
Pan American 388		Contract of 6/26/58.
Pan American 388	1	Amendment of 11/18/63.
Union Oil 85		Contract of 6/17/58.
Union Oil 85	1	Amendment of 11/14/63.

(J) The petition for declaratory order filed on January 29, 1964, by Pan American in Docket No. G–15438 is hereby granted and it is hereby declared that Pan American has no authorization under Section 7 of the Natural Gas Act to make sales of natural gas for resale in interstate commerce from its "shallow" rights in Block 27, offshore Vermilion Parish, Louisiana.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRUNKLINE GAS COMPANY, DOCKET NO. CP64–114

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 20, 1964)

On November 20, 1963, Trunkline Gas Company (Applicant) filed in Docket No. CP64–114 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of increased volumes of natural gas for resale to certain of its existing customers, all as more fully set forth in the application.

Applicant proposes to construct and operate the following facilities:

(a) 3,000 additional horsepower at each of the following existing main line compressor stations: Station No. 57, Pollock, Louisiana; Station No. 75, Shaw, Mississippi; Station No. 93, Dyersburg, Tennessee, and Station No. 112, Johnsonville, Illinois.

(b) 4,000 horsepower at a new compressor station to be designated Station No. 210, Kaplan, Louisiana.

(c) 6,000 horsepower at a new compressor station to be designated Station No. 121, Tuscola, Illinois.

The proposed new facilities will increase the design capacity of Applicant's pipeline system from 830,000 Mcf to 890,000 Mcf per day.

Further, Applicant proposes herein to sell an additional 25,000 Mcf of natural gas per day, commencing April 1, 1964, and a further increase of 25,000 Mcf per day commencing November 1, 1964, to Consumers Power Company. Also, Applicant proposes an additional total increase of 961 Mcf per day to three other existing customers.

Applicant states that it has obtained amendments to existing gas purchase contracts with Pan American Petroleum Corporation and Union Oil Company of California, providing for price reductions regarding existing supplies purchased from those producers in Vermilion Parish, Offshore Louisiana, as well as the dedication of additional supplies, scheduled to become effective April 1, 1964.[1] Applicant states further that it proposes to utilize such price reductions, together with the economies of the herein proposed increased sales, so as to provide a reduction in the level of its rates, following the necessary authorization, to become effective April 1, 1964. Further, Applicant proposes a revision in its R-1 and R-2 Rate Schedules so as to provide different rate levels for winter and summer deliveries and, also, proposes the introduction of a G-2 Rate Schedule.

---

[1] These amendments were filed by the suppliers with the Commission in Docket Nos. CI64–669 and CI64–668 on December 6, 1963, and December 9, 1963, respectively. By order, issued March 20, 1964, in said dockets the Commission conditionally issued certificates to Pan American and Union.

The proposed facilities are estimated to cost approximately $8,700,000, which cost will be financed from funds on hand.

On February 10, 1964, The Superior Oil Company filed a petition to intervene in opposition in this proceeding. However, by Commission order, issued March 19, 1964, said petition was denied.

Several other petitions to intervene and a notice of intervention in support have been filed herein. In each case, the burden of such filings has been that the petitioners did not request formal hearing in these proceedings and did not object to the hearing and disposition of the subject application under the shortened procedure provided for by the Commission's Rules, but that each petitioner desired to preserve its rights to appear and participate fully in the event that these matters should be set for formal hearing. Inasmuch as the shortened procedure is being used herein, no further action on the various intervention petitions appears necessary.

After due notice, no other petition to intervene, other notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 20, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G-882 (8 FPC 250).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sales of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The certificate hereinafter issued should be conditioned upon the rates to be charged by Applicant being no higher than those in the pro forma tariff sheets included in Exhibit P of the subject application.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Trunkline Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sales and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this orders issues.

(D) The certificate issued by paragraph (A) above is hereby conditioned upon the rates to be charged by Applicant being no higher than those in the pro forma tariff sheets included in Exhibit P of the subject application.

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 23, 1964)*

Syllabus

1. Considerations other than "in-lineness" are not valid where, as here, only disputed issue is price level at which certificates should be granted. P. 630.

---

*Initial decision appears on p. 647. Order issued April 30, 1964, partially granted rehearing, etc., 31 FPC 1041. Memorandum Opinion 422–A, issued May 27, 1964 granting stay, etc., 31 FPC 1313.

2. "In-line" practice of initial price regulation to meet standard of Section 7, is in full accord with CATCO; is the only appropriate method and is proper one to be followed here. P. 630.

3. *Affirming* exclusion of cost and financial requirements evidence, Commission *notes* such action is administratively essential to achieving "in-line" determination prior to resolution of area rate proceedings and makes it incumbent on Commission to give special consideration to field price evidence as to shifts in pricing. P. 631.

4. Fact that some of permanently certificated sales have been approved in uncontested proceedings does not, standing alone, destroy their precedental value in formulation of price line. P. 631.

5. Court opinions establishing "suspect price doctrine" do not support proposition that temporary authorizations have no relevance in determining "in-line" price. P. 632.

6. Absent ability to consider temporary authorizations in instant proceedings Commission would not be basing its decision on "substantial volumes of gas moving in interstate commerce." P. 632.

7. A blind application of doctrine that if certificate application is challenged no weight can be given contract prices in determining price line would leave Commission without substantial evidence on which to base its decision. P. 635.

8. Commission *concludes* some measure of weight should be given to guideline price in determining initial price issue for post Policy Statement contracts. P. 636.

9. Commission *finds* 16 cents per Mcf is in-line price for producers sales in Texas Railroad District No. 4, under post Policy Statement contracts here involved. P. 637.

10. 16-cent determination not only preserves, but actually rolls back, initially considered price line for period in issue. P. 637.

11. There is no justification for any allowance above 16 cents for sales by certain producers claiming special circumstances. PP. 637, 638.

12. Certificates conditioned to provide for moratorium on filing of all price increases in excess of 18 cents pending decision in area rate proceedings or January 1, 1968. P. 638.

13. Commission *defers* decision with respect to refund issue [where no refund condition in temporary authorization]; *allows* parties to file further briefs on said issue. P. 639.

14. Commission *issues* permanent certificates of public convenience and necessity under Section 7, of the Natural Gas Act. P. 640.

Commissioner Ross *dissenting*.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and Davis S. Black.

O'CONNOR, *Commissioner:*

This is a certificate proceeding under Section 7 of the Natural Gas Act involving 35 separate applications by 26 producers, individually or as operator, for sales of gas in Texas Railroad Commission District No. 4 to various pipelines for resale in interstate commerce. An initial decision was issued on July 23, 1963. The matter is now before the Commission on exceptions to that decision filed by 18 producers,[1] the Eastern Seaboard Interveners,[2] and The Public Service Commission of the State of New York, which concurs in the Eastern Seaboard exceptions. One request has been made for oral argument before the Commission, this by Cherosage Enterprises Inc., *et al.*, applicant in Docket No. CI62–1459.

---

[1] Gulf Oil Corp., Edwin L. Cox, Union Producing Co., Sohio Petroleum Co. (Operator), *et al.*, Humble Oil & Refining Co., Jake L. Hamon and Jake L. Hamon (Operator), *et al.*, Amerada Petroleum Corp., Sun Oil Co., George H. Coates, Tex-Star Oil & Gas Corp. (Operator), *et al.*, Skelly Oil Co., Texaco Inc., Standard Oil Co. of Texas, MPS Production Co. (Operator), *et al.*, Lamar Hunt, Cherosage Enterprises, Inc., *et al.*, Clark Fuel Producing Co. (Operator), *et al.*, and Emory M. Spencer (Operator), *et al.* By notice issued August 7, 1963, the time limitation on the filing of exceptions was extended to and including September 11, 1963. American Petrofina Co. of Texas, in a letter dated October 24, 1963, requested waiver of the deadline and sought to adopt as its own the exceptions of another producer. The tendered filing was rejected by the Secretary on November 4, 1963.

Exceptions also were filed by W. L. Cotton (Operator), *et al.*, applicant in Docket No. CI61–1572. The production therein involved ceased on May 31, 1963, because of exhaustion of the reserves and application has been made for abandonment of the sale. The docket was severed from these proceedings by order issued November 21, 1963, in *The Atlantic Refining Co., et al.*, Docket No. G–10143, *et al.*

Factual and Procedural Background

The proceeding which now confronts us had its genesis with the issuance on August 30, 1962, of the opinion in *Skelly Oil Company, et al.*[3] In that opinion we determined the "in-line" price in District No. 4 was 15 cents per Mcf[4] including all reimbursements and charges, for contracts entered into prior to the promulgation of the Statement of General Policy No. 61-1 on September 28, 1960. We accordingly conditioned the certificates issued therein to the producer applicants to prohibit a total initial price in excess of the "in-line" price until lawfully changed in the manner provided by the Act. Four applicants[5] were not granted certificates in that proceeding on the ground that the contracts had been entered into after September 28, 1960, and the record did not reveal "the effect, if any, which should be given to the prior establishment of the 18-cent area ceiling upon the determination of the appropriate price at which we should issue permanent certificates for these contracts."[6] We indicated that these applications would be set for a further hearing in conjunction with other certificate applicants whose contracts were contemporaneously executed after the announcement of the guideline ceilings in the Policy Statement. In referring to this severance action the opinion made clear that we were not prepared, in advance of a hearing on the issue, to say that the ceiling prices set out in the Policy Statement are entitled to no weight in determining the initial price under contracts executed after announcement of the ceilings; that we had rejected the contention that the announcement in September 1960 of an 18-cent ceiling in District No. 4 fixed that price as the "in-line" price as of that date; and that the issue of the ceiling's effect on subsequently executed contracts should be the subject of a further hearing.[7]

Two other documents bearing on this proceeding were issued concurrently with the *Skelly Oil Company* decision. One was the Fifth Amendment to the Statement of General Policy No. 61-1 promulgating a new ceiling price level of 16 cents per Mcf on initial sales in Texas District No. 4 contracted for from and after August 30, 1962,[8] and the other an order formally severing the four dockets from *Skelly* and consolidating and setting for hearing all pending certificate applications involving contracts for sales of gas in Texas District No. 4 executed between September 28, 1960, and August 30, 1962. That order, which was the first issued in this proceeding, provided in part: "In such a hearing all of the applicants will have an opportunity to show whether the appropriate price at which they should be permanently certificated should be limited to the 15-cent per Mcf price which we found to be the in-line price as of September 28, 1960, the 16-cent per Mcf price which is being adopted as the future area ceiling price for this area, or the 18-cent per Mcf price established on September 28, 1960."[9] We later indicated that no restriction in the determination of the in-line level was intended by this language but meant only to convey the thought that all parties at the hearing ". . . would have free rein to show the proper in-line price, wherever it might happen to fall."[10]

---

[10] 29 FPC 171, 173, fn. 4 (1963).

The examiner's decision adequately recounts and summarizes the sales here involved. For convenience, the extent of such sales are recategorized, with some variations, as follows:

1. Twelve sales under contracts executed between October 1960 and November 1961 involving estimated monthly deliveries of 1,391,756 Mcf to South Texas Natural Gas Gathering Company at proposed total initial prices ranging from 16 cents to 19.795 cents per Mcf.

2. Thirteen sales to Tennessee Gas Transmission Company under contracts dated between October 1960 and March 1962 for 570,628 Mcf monthly at initial contract prices from 16.5 cents to 17.24347 cents per Mcf.

3. Five sales totalling 441,365 Mcf per month at a price of 18 cents per Mcf and two sales for 145,500 Mcf per month at 16 cents per Mcf, all to Natural Gas Pipeline Company of America under contracts executed between November 1960 and July 1962.[11]

4. Three sales under contracts executed in April, May and June 1961 to Ben Bolt Gathering Company, totalling 55,800 Mcf per month, at prices of 15.944 cents for one and 16 cents per Mcf for the other two.

The hearing in this proceeding extended intermittently from October 29 through December 12, 1962. During its course three events of significance transpired:

(a) On December 6, 1962, the presiding examiner granted a joint motion by Long Island Lighting Company, Philadelphia Electric Company and The United Gas Improvement Company, in which the New York Public Service Commission concurred, and more limited motions by Public Service Electric and Gas Company and the staff counsel, excluding from the record exhibits No. 1 through 15 submitted by the applicants and the related testimony of their witnesses. This material is of the type generally referred to as economic and financial requirements evidence, and included cost trend exhibits, depth of drilling data, projected demand for gas in the United States from 1960 to 1970, cost-of-service evidence, and evidence intended to prove the *de minimis* effect of the contract prices on the purchased gas costs of one of the distributor interveners. In excluding this material, the examiner indicated that certain of the proffered evidence was substantially similar to evidence found irrelevant in the *El Paso*,[12] *Skelly*, and *Texaco Seaboard*[13] certificate cases to the determination of the initial price issue in independent producer certificate cases. Upon appeal from the examiner's ruling we held, in letter-orders dated January 16, 1963, that no "extraordinary circumstances" had been shown to be present as required by Section 1.28(a) of the Rules of Practice and Procedure to justify an interlocutory appeal. We thereupon barred the tender of the appeal papers, making no ruling at that time on the merits of the appeal. Petitions for judicial review of our order filed by Texaco Inc., Texaco Inc., *et al.*, and Sun Oil Company were dismissed by the Court of Appeals on June 24, 1963 (CADC, No. 17608, 17652, and 17700, respectively).[14] A petition for certiorari filed in the Supreme Court by Texaco Inc., *et al.* was denied by order issued December 9, 1963. (375 U.S. 941, No. 475, Oct. term, 1930.)

(b) The second event concerned a motion by Texaco Inc. for the production of all books, papers, records, memoranda, etc., in general, writings of any kind whatsoever, utilized by us in determining the initial service rate for Texas District No. 4 as set out in the Statement of General Policy No. 61–1 and in the Fifth Amendment thereto. The applicant also requested the issuance of a subpoena *duces tecum* and *ad testificandum* directing the Commission's Secretary to produce the papers called for in its motion and to appear before the examiner to testify. Since the application was addressed directly to the Commission, the examiner took no action on the request. The original application being denied under Section 1.12(e) of the Rules of Practice and Procedure by the expiration of a 30-day period without Commission order, an application for reconsideration was filed on December 31, 1962. This application was denied by us by order issued January 30, 1963, for reasons clearly specified therein.[15] Texaco's unsuccessful appeal to the Court of Appeals for the District of Columbia in case No. 17608, *supra*, included a motion for a writ of mandamus to compel production of the Commission records. The petition for certiorari similarly included an appeal from the court's refusal to enter a writ at that time.

---

[11] The two sales here referred to are by Skelly Oil Co. in Docket No. CI63–73 and by Amerada Petroleum Corp., *et al.*, Docket No. CI62–1544, the lead docket in this proceeding.

[12] *El Paso Natural Gas Co., et al.*, Opinion No. 358, 27 FPC 1134 (1962).

[13] *Texaco Seaboard Inc., et al.*, Opinion No. 383, 29 FPC 593 (1963), confirmed on rehearing, Opinion No. 383–A, issued August 27, 1963, 30 FPC 613 (1963).

[14] Opinion filed October 17, 1963, 329 F. 2d 223, cert. den., 375 U.S. 941.

(c) On November 29, 1962, in a motion addressed to the Commission the Eastern Seaboard Interveners, referring to the fact that unconditioned temporary authorizations were in effect in almost all dockets, requested that these temporary authorizations be vacated entirely or, in the alternative, that floorless refund conditions be imposed. On February 5, 1963,[16] we issued an order denying the motion on the ground, among others, that the Commission otherwise ". . . would be in a position of having induced producers to dedicate their gas to the market upon one set of conditions, and then imposing more stringent conditions upon them." We conluded that "Such a course of action, except under the most extraordinary conditions, would appear to be inconsistent with the Commission's obligation to act upon applications with 'such certainty as to allow the exercise of choice upon [the producers'] part.' *Sunray Mid-Continent Oil Company* v. *F.P.C.*, 270 F. 2d 404."

The Examiner's Decision

The initial decision by the presiding examiner would grant permanent certificates to the applicants subject to a condition prohibiting any total initial price greater than 15 cents per Mcf, such price to continue until lawfully changed. The decision also would order refunds, in those authorizations having the applicable conditions, of all amounts collected over 15 cents per Mcf. In addition the examiner would modify the take-or-pay requirement in each contract to be subject to our final order in the Docket No. R–199 rulemaking proceeding as of the effective date of that order, with the proviso that the producers would not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities.

Exceptions to the Examiner's Decision

The Eastern Seaboard Interveners and the New York Public Service Commission take issue only with the refusal of the examiner to order refunds in the dockets in which refund conditions were not included in the temporary authorizations. They also request that the decision be modified to require each pipeline purchaser to flow such refunds through to its customers. In all other respects they ask that the decision be affirmed. The remaining exceptions, all by producers, are directed against each condition which the examiner would include in their certificate. Thus exceptions have been filed to the examiner's conclusion as to the lack of any effect of the guideline rates on the appropriate initial price at which permanent certificates should be issued, the application of the "hold the line" price doctrine and the correlative principle of in-lineness regulation pending the determination of just and reasonable rates, the date of the contract test in the determination of the "in-line" price applicable to these sales, the "in-line" price itself, the ordering of any refunds whatever and, finally, the conditioning of the take-or-pay requirements. Except for the last two mentioned, all exceptions concern the initial price question in one form or another and even the amount of refunds is affected by the resolution of this issue. Accordingly, we direct our attention first to this subject.

---

[15] 29 FPC 171 (1963).

[16] 29 FPC 218 (1963).

Before so beginning, however, it is appropriate to take notice at this point of the recent decision by the Court of Appeals for the District of Columbia[11] unanimously affirming the conditioned initial price of 15 cents per Mcf determined by us to be required by the public convenience and necessity for the issuance of permanent certificates in the *Skelly* proceeding. Starting with the basic premise that "The Commission was obligated to be guided by *Atlantic Ref. Co.* v. *Public Service Comm'n*, 360 U.S. 378" and that, by that decision, the Commission is required to decide the "in-line" price in granting permanent certificates, the court approved our determination to hold initial prices to the "in-line" level computed as of the time the contracts there involved were executed. In finding that the data relied upon by the Commission adequately supported the price condition, the court (as had the Commission in that case) gave controlling weight to the numerous permanent certificates which had been issued for contracts executed in the relevant time period covering a large volume of gas produced in the particular pricing area. Moreover, it should be observed that the court sanctioned fully our refusal to admit into evidence and give consideration to the cost and financial requirements material offered by certain of the producers in that case. We further note the court's agreement that while the guideline prices could not conclusively fix an "in-line" price, guidelines could not be ignored altogether in "in-line" determinations.

In reaching our conclusions herein we have taken full cognizance of the court's decision referred to above, which was rendered during our consideration of this case and prior to the preparation of this decision. In our opinion, the findings which we now make are in full accord with that decision, including the determination of the "in-line" price for these sales, a finding which, as indicated herein, is of necessity predicated on considerations other than those able to be utilized in *Skelly*. The remand by the court of the refund issue in *Skelly*, and the effect of that action on the question of the refunds to be ordered in this proceeding is treated separately on page 638.

Initial Price

As in past area certificate proceedings, general exceptions have been registered to the "in-line" method of determining the initial price and to the application of that method to the dockets at bar. These exceptions allege, in substance, that the "in-line" price determinations are posited on the erroneous theories (1) that the "in-line" price is the sole standard in determining whether conditioned or unconditional certificate should be issued, (2) that the price required by the public convenience and necessity can never be greater than the "in-line" price, and (3) that once an "in-line" price determination is made, future initial contract prices cannot be made permanent unless such prices are equal to or less than the "in-line" price. To the extent that in-lineness of the proposed initial contract prices is not the full measure of the standard utilized in determining whether the sales are required by the present or future public convenience and necessity, we agree with these parties. We do not agree, however, that considerations other than in-lineness of the proposed initial prices are valid where, *as is here the case*, the only disputed issue is the price level at which certificates should be granted. In *Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 677 (DC Cir. 1963), the court held that the Commission acted properly in holding the price issue controlling, ". . . it being conceded that the other requirements of public convenience and necessity have been fully met by the proposed sale." Consequently, little value is to be derived from dwelling on other considerations when, in the course of prior phases of the proceeding, the issues have been so narrowed as to leave only the price question for final resolution.

---

[11] *P.S.C. of New York* v. *F.P.C.*, No. 17582, *et al.*, 329 F. 2d 242 (CADC, January 28, 1964).

As stated in the *Skelly* opinion, our principal guide to the determination of a proper initial price for the producers is the Supreme Court's opinion in *Atlantic Refining Co.* v. *F.P.C.* (*CATCO*).[18] The Court in that case made clear that where ". . . the proposed price is not in keeping with the public interest because it is out of line or because its approval might result in a triggering of general price rises . . . the Commission in the exercise of its discretion might attach such conditions as it believes necessary." From *CATCO* and its various judicial and Commission interpretations and implementations, which have now reached substantial proportions both in numbers and in the amount of natural gas production involved, has come our "in-line" practice of initial price regulation to meet the standard of Section 7. In our opinion, the application of this method in the cases beginning with *CATCO*-on remand[19] is in full accordance with the mandate of the Supreme Court, is the only method so appropriate, and is the proper method to be followed in determining the initial price issue in this proceeding.

It is appropriate to consider at this juncture the examiner's exclusion of evidence by his ruling of December 6, 1962. The attempted appeals from this ruling were denied by us for two reasons: First, because the examiner refused to certify that extraordinary circumstances existed necessitating prompt decision by the Commission to prevent detriment to the public interest,[20] and secondly, because the pleadings submitted to us[21] demonstrated neither a conclusive need for our intervention at that point in the proceeding nor probable cause for modifying, let alone reversing, the action taken below. It is significant to note that when these orders were issued we were engaged in a general review of the basic utility of economic and financial evidence in certificate cases, and when we had already found in *Skelly* that evidence of this nature is normally not relevant.[22] Our decision in this regard has since been buttressed by our conclusions set out in the *Texaco Seaboard*, *Placid Oil* and *United Gas Pipe Line* cases,[23] and by the court's decision affirming the initial price condition in *Skelly*, wherein it stated that consideration of the proffered cost and financial requirements evidence "was not essential." We have thoroughly and completely considered the arguments presented in the December 1962 appeals and in the exceptions to the examiner's decision which go to the exclusion of the offered evidence. Without needlessly resummarizing the various studies presented and the facts shown by this material, amply set out in the intermediate ruling, we conclude, for the reasons expressed in our prior opinions and orders and in the December 6, 1962 ruling, that the examiner did not err in excluding the evidence specified. We therefore adopt the ruling of the examiner as our own for the purpose of this decision. We note, however, that the refusal to permit the producers to attempt to show cost and other economic justifications for a higher price line over that prevailing in an earlier period, administratively essential if we are to achieve "in-line" determinations prior to the resolution of area rate proceedings, makes it incumbent on the Commission to give special consideration to the field price evidence as to shifts in the pricing line.

[19] *Continental Oil Company, et al.*, Opinion No. 351, 27 FPC 96, 99–102; order denying rehearing and clarifying opinion, 27 FPC 592 (1962).

[20] Transcript p. 1049.

[21] Appeals from the examiner's ruling were submitted by Gulf, Texaco, Sun and Standard, and jointly by Amerada, Cox, Gulf, Hamon, Humble, Hunt, Skelly, Sohio, Spencer and Texaco.

[22] See also, *Socony Mobil Oil Co., Inc.*, 27 FPC 347 (1962).

[23] *Texaco Seaboard Inc., et al.*, Opinion No. 383, issued March 27, 1963, 29 FPC 593, *Placid Oil Co., et al.*, Opinion No. 398, issued July 17, 1963, 30 FPC 283; *United Gas Pipe Line Co., et al.*, Opinion No. 399, issued July 17, 1963, 30 FPC 329. In response to applications for review of each of the listed opinions the Commission has refused to modify its findings in regard to evidence of this type.

As in *Skelly* the most important evidence in determining the proper initial price to be allowed for these sales is the field price exhibit submitted by staff. This study shows pertinent data for all sales in Texas District No. 4 with total initial rates of 14 cents per Mcf or more under contracts executed between January 1, 1955, and August 31, 1962, on file with the Commission. The examiner, relying on the exhibit, derived an "in-line" price of 15 cents per Mcf, including all allowances, for the contracts in this proceeding. In so doing he limited his consideration exclusively to sales under contracts executed between September 28, 1960, and August 30, 1962, for which permanent certificates had already been issued. His compilation shows that six such contracts have been made permanent at 14 cents per Mcf (205,500 Mcf),[24] one at 14.7 cents per Mcf (17,280 Mcf), six at 15 cents per Mcf (107,836 Mcf), and one at 17.24 cents per Mcf (25,950 Mcf). He discounted the effect of the 17.24-cent sale for the reason that it was permanently certificated in a shortened procedure case.[25] The examiner also alluded to the fact that, excluding the sales here involved, there have been nine temporary authorizations issued at 14 cents per Mcf (171,800 Mcf), one at 14.5 cents per Mcf (35,000 Mcf), one at 15 cents per Mcf (6,000 Mcf), and one at 18 cents per Mcf (31,000 Mcf).[26] He held, however, that temporary authorizations, being issued *ex parte* and without a hearing, "have no value as precedents for determining in-line prices because the prices contained in the temporary certificates are not necessarily prophetic as to price at which the permanent certificates will be issued." He therefore gave no weight whatever to the prices under temporary authorizations issued during the period.

The fact that some of the permanently certificated sales have been approved in uncontested proceedings does not, standing alone, serve to diminish or destroy their otherwise precedential value in the formulation of a price line. The notice of application issued by us in all cases sets out the initial contract price at which certification of the sale is sought and the absence of any contest on the price issue, we believe, may justifiably be taken to mean that interested consumer groups and our staff have no objection to the issuance of a certificate at the rate proposed.

---

[24] The volume stated in parentheses is the estimated total first month production at each of the price levels under the rate schedules represented.

[25] A number of applicants point out in their exceptions that 13 out of 14 permanent certificates listed by the examiner, rather than only the one, were in fact issued in noncontested proceedings.

[26] The limited number of temporaries is attributable to the fact that all pending applications for sales in District No. 4 having an initial price of 15 cents per Mcf or more were to have been consolidated into this proceeding. The one sale at 15 cents not included apparently was overlooked. The 18-cent sale, which is by Lamar Hunt in Docket No. CI61-1736, was involved until recently in another proceeding, *Hassie Hunt Trust, Operator, et al.*, Opinion No. 412, issued December 9, 1963.

Moreover, we disagree with the examiner that the series of court opinions establishing the "suspect price doctrine" support the proposition that temporary authorizations have no relevance in this determination. The courts rendering those opinions were addressing themselves to situations wherein not only were numerous uncontested contracts readily available for consideration, but where other certificates had been rejected upon judicial review for being issued at excessive rate levels. The facts before us are considerably different. First, unlike *UGI* and the subsequent cases relying upon it,[27] and, in fact, unlike any previous "in-line" determination rendered by this Commission, the record before us contains neither substantial numbers of relevant permanently certificated contracts nor evidence of substantial volumes of gas moving under permanent certificates. Secondly, the certificates herein asserted to be "suspect" have not been judicially rejected, but rather are temporary authorizations. As we previously indicated in *Texaco Seaboard*,[28] permanent certificates are decidedly more persuasive and relevant in "in-line" determinations than are temporary authorizations, but this does not thereby render temporary authorizations *per se* inadmissible. The soundness of this principle is readily apparent when viewed in the light of the facts before us, where, absent the ability to consider these authorizations, we would not be basing our decision upon "substantial volumes of gas moving in interstate commerce."

The examiner's basic error is that by confining his consideration to the relatively few noncontested permanent certificates granted during the time period he ignored the bulk of the evidence. It is not by chance that with the single above-noted exception the only permanent certificates granted during the period were at prices of 15 cents per Mcf or lower, because all applications for higher prices were opposed by some or all of the interveners herein. If these permanent certificates are to control, then the "in-line" price for sales representing over seven times the minimal volumes of gas permanently certificated during this period is being determined, not upon consideration of a hearing record, but by the unreviewable fiat of the interveners. Further, sanctioning his approach under the instant circumstances would bring about the realization of the Ninth Circuit's forewarning as expressed in the *UGI* case:

> As previously indicated, the price line is intended to reflect current conditions in the industry. Therefore comparative prices on which it is based must be prices under which a substantial amount of natural gas presently moves in interstate commerce. *The limitation urged by UGI could well defeat this objective by restricting the comparison to a small number of contracts under which little gas moves today. It could, in fact, require a rollback to prices having no current relevancy.*[[29]] [Emphasis added.]
>
> Assuming the criteria employed by the Commission to be otherwise acceptable, we hold that the consideration for comparative purposes of producer prices not previously scrutinized does not evidence an abuse of discretion.[30]

---

[27] *California Oil Co.* v. *F.P.C.*, 315 F. 2d 652 (10th Cir., 1963); *UGI* v. *F.P.C.*, 290 F. 2d 147 (5th Cir., 1962); *UGI* v. *F.P.C.*, 290 F. 2d 133 (5th Cir., 1961); *UGI* v. *F.P.C.*, 287 F. 2d 159 (10th Cir., 1961, *PSC of New York* v. *F.P.C.*, 287 F. 2d 146 (D.C. Cir., 1960).

[28] 29 FPC 593 (1963).

[29] The court at this point observed that virtually none of the other sales in the area had been scrutinized in rate or certificate proceedings. In the present case the only permanently certificated sales in this period were those few uncontested sales at the lowest end of the pricing scale.

[30] 283 F. 2d 817 (9th Cir., 1960), cert. denied, 365 U.S. 881 (1961).

The volume of gas here in issue represents the largest proportion of the gas sold in interstate commerce in Texas District No. 4 under contracts executed in the period under consideration. Unlike the situation in *Skelly* there is no substantial volume of gas presently under permanent certification. Examination of the staff exhibit reveals that the permanently certificated sales considered by the examiner in fixing the "in-line" price amount to only 1.39 percent of the volumes for all sales shown and to no more than 2.05 percent of the sales permanently certificated in the District contained in the exhibit. The sales by Sotex, Docket Nos. CI61–1377 and CI62–1140, are themselves larger than all 26 sales cited by the examiner while those by Sun in Docket Nos. CI61–657 and CI61–956 have in themselves nearly twice the monthly volumes of the permanently certificated sales. In such circumstances it can hardly be maintained that the "in-line" test of the "prices under which a *substantial* amount of natural gas presently moves in interstate commerce"[21] has been fully met by the examiner. In our opinion it would be manifestly improper to base an "in-line" price upon the initial prices permitted in these few isolated and inherently nonrepresentative sales whose total volume does not even begin to approach the amount of natural gas production involved in these dockets.

The interveners urge, and the examiner holds, that if 15 cents is "in-line" for the past and our task is to "hold the line" the price should remain at 15 cents for any subsequent period. This reasoning ignores the crucial fact that "the key element in our in-line determination is the time at which the contract in issue was executed."[22] We do not believe that our task of assuring adequate supplies of gas in interstate commerce at the lowest reasonable price can be adequately discharged by an approach which requires us to shut our eyes to the evidence presented in later proceedings. A rule of law that would deprive producers of any opportunity to show that the initial prices in the 1950's did not suffice for the 1960's or, conversely, that would deprive consumer groups of an opportunity to show a decline in the price level, is not fair to the producers or in the long-term interest of consumers. Nor is such a rule even suggested by the decisions of the courts. The Supreme Court in *CATCO* emphasized the necessity for the Commission to scrutinize the level of initial rates, to make sure that they are in line and will not trigger a further escalation of producer prices. Holding the line in the present market means stopping unjustified escalations of field prices; it means price stability. It does not mean that, irrespective of evidence to the contrary, an absolute price freeze is to be imposed until some future date when area proceedings ultimately establish just and reasonable rates.

We believe the beginning point in our determination of the "in-line" price for the period in question must be the contract prices at which substantial volumes of gas were sold during the period. These contract prices are, of course, only the beginning, and not the end of our inquiry because our task is to scrutinize these initial prices and not to rubber stamp them. But clearly these contract prices cannot be ignored.

The record reveals the following information with respect to applications filed with the Commission for certificates for sales of gas in Texas District No. 4

---

[21] *Id.* at page 824.

[22] *Hassie Hunt Trust, Operator, et al.*, Opinion No. 412, 30 FPC 1438, 1442. See also *Atlantic Refining* v. *F.P.C.*, 316 F. 2d 677 (CADC, 1963) affirming a Commission decision expressly holding the contract date to be critical.

under contracts executed between September 28, 1960, and August 30, 1962, with initial prices of 14 cents per Mcf or more:

Contract price (cents)	Number of contracts	Permanent or temporary certificate price (cents)	Estimated first month volumes
14.0	15	14.0	377,300
14.5	1	14.5	35,000
14.7	1	14.7	17,280
15.0	7	15.0	113,836
15.944	1	15.944	22,500
16.0	8	16.0	323,350
16.4965	1	16.4965	9,280
16.5	2	16.5	31,366
17.0	3	17.0	405,000
17.24	3	17.24	87,250
17.24347	10	17.24347	504,222
18.0	9	18.0	769,031
19.795	1	18.0	540,000

The total initial contract prices range from 14 cents per Mcf to 19.795 cents per Mcf. By volumes, 17 percent of the sales were contracted at prices between 14.0 and 15.944 cents per Mcf, 11 percent at prices from 16.0 through 16.5 cents per Mcf, 31 percent at prices between 17.0 and 17.3 cents per Mcf, and 40 percent of the production is priced by contract at 18 cents per Mcf or more. Thus, the sales at prices of 16 cents per Mcf and above account for fully 82 percent of the gas presently moving in interstate commerce under contracts executed in the time period here under consideration. The weighted average contract price for all sales listed in the foregoing table is in excess of 17.176 cents per Mcf.

By comparison a listing of contracts executed during the two years preceding September 28, 1960, a period approximately equivalent in duration to that here involved, shows the following distribution:

Contract price (cents)	Number of contracts	Permanent or temporary certificate price (cents)	Estimated first month volumes
14.0	30	14.0	1,514,000
14.5	14	14.5	720,225
14.6	2	14.6	86,350
14.7	1	14.7	90,000
14.8	2	14.8	102,000
15.0	15	15.0	1,309,860
15.5	1	15.5	45,000
16.0	12	15.0	1,118,250
16.0	18	16.0	1,553,420
16.5	1	15.0	600,000
16.5	8	16.5	446,325
17.0	2	15.0	333,733
17.0	4	17.0	562,000
17.24	8	17.24	1,223,604
17.2416	2	17.2416	39,031
17.24347	3	17.24347	86,000
18.0	5	18.0	335,865
19.5	1	19.5	1,000,000
20.0	5	18.0	621,810
20.045	6	18.0	957,720

As may be seen the total initial prices for these contracts ranged up to 20.045 cents per Mcf. A volumetric breakdown similar to that given above reveals that 30 percent of the gas was priced between 14.0 and 15.99 cents (as against only 17 percent in the later period), 29 percent between 16.0 and 16.99 cents (against 11 percent), 18 percent between 17.0 and 17.99 cents (13 percent less than in the later period), and 23 percent at 18 cents and above (17 percent less than the amounts later priced at this level). The weighted average price is 16.50 cents per Mcf, more than six-tenths of a cent under the weighted average in the 1960–1962 period. It is obvious from these figures that the general level of contract prices increased in the latter period.

We are, of course, aware that "the acceptance of questioned existing prices as a guide in setting the line might itself have the anomalous effect of creating a standard by which the questioned rates would then be judged." We, therefore, cannot and do not find that the 17.2-cent contract price average is the "in-line" price. However, a blind application of the doctrine that if a certificate application is challenged no weight can be given to the contract price in determining the price line would leave the Commission without substantial evidence on which to base its decision. We believe that the fact that the great bulk of the gas moving in interstate commerce in the area during this period was contracted for and temporarily authorized at initial rates between 16 and 18 cents per Mcf must be considered in fixing the "in-line" price for this period. Refusal to consider the temporarily authorized prices, in the circumstances of this proceeding, and reliance only on the few permanently certificated prices can only result in a complete stagnation of prices at the "in-line" level initially determined for this District, a level based on prices being paid for gas under contracts drawn up long before these contracts were executed.

We have been told by the court that "the price line is intended to reflect *current* conditions in the industry." Of the 62 contracts for sales of gas executed in the District post-September 28, 1960, within the range of our consideration, over 80 percent have initial prices at or in excess of 16 cents per Mcf. With a few exceptions, the sales below 16 cents per Mcf are for relatively small volumes, a factor which, together with the location of the gas in relation to the lines of prospective purchasers, presumably influenced the amount the contracting purchaser was willing to pay for the specific production.[33]

A major issue in this case is the effect of our policy Statement on the prices in contracts executed after September 28, 1960, when it was issued. The Policy Statement expressly provided that the price levels announced therein were only "for the purpose of guidance and initial action by the Commission and their use will not deprive any party of substantive rights."[34] The applications for rehearing of the Policy Statement filed almost immediately after its issuance were met with a reiteration of this basic premise, namely that the price standards set out in the Policy Statement were not final determinations and would be "subject to all the requirements of the Act and our Rules with respect to hearings."[35] It is and should have been obvious at all times that the Commission's announcement of a guideline price could not deprive interested parties of their right to a hearing to contest a particular application and the interveners who correctly thought that the Commission's ceilings were not "in-line" have consistently asserted their right to such a hearing.

---

[33] Of the 24 contracts priced below 16 cents (not including the one sale herein at 15.944 cents), 14 are for sales to Valley Gas Transmission Company which operates entirely as a gatherer, purchasing gas at less than the price line in order to resell at a rate acceptable to major interstate pipelines. In *Skelly* we specifically referred to the activities of Valley, indicating that its sales are not comparable to the normal producer-pipeline sales. *Cf. Hassie Hunt Trust,* Docket No. G–19115, where the exclusion of Valley Gas Transmission Company sales in Texas Railroad District No. 2 was dissented to by Commissioners O'Connor and Woodward on grounds inapposite to the instant proceedings. The remaining 10 sales are made to a company which, though classified technically a pipeline, operates in this area in a fashion similar to Valley.

[34] 24 FPC 818, 819 (1960).

[35] 24 FPC 1014 (1960).

Our original guideline for Texas District No. 4 indicated that the maximum price which would be consonant with the public convenience and necessity was 18 cents. In *Skelly*, however, we specifically held that the impact of our announcement of the original guidelines upon contracts subsequently executed was an issue that could not then be determined. Consequently we severed out the "post-policy" contracts from the determination, for the purpose of evaluating this impact in later proceedings. That such severance was propitious was indicated in the recent affirmance of the *Skelly* opinion in *P.S.C. of New York* v. *F.P.C.*[36] where the court concluded that:

> As the Commission states, its Policy Statement was a guide to its future action and 'cannot effect an automatic approval of proposed rates, particularly where the contracts were entered into before the Policy Statement.' *The Commission could not have ignored altogether its own Policy Statement*, but was not required to be controlled thereby in deciding, in the Section 7 proceedings, that the in-line price should be fixed at a less amount on the basis of the evidence analyzed in its opinion. [Emphasis added.]

It is apparent from an examination of the instant record that the issuance of the Policy Statement had at least the effect of holding down contract prices to an 18-cent level. Many producers contended that on encountering a pipeline buyer willing to pay 18 cents as an initial rate they stopped searching for a higher paying purchaser and concluded their contracts. Other producers indicated that where their asking price was in excess of 18 cents, they reduced their price demand down to the 18-cent figure in reliance on the ceiling level. The impact of the Policy Statement and the Fifth Amendment thereto on Skelly Oil Company and Amerada Petroleum Corporation was especially forceful. These companies point out that their contracts executed in June and July 1962 had an initial price of 18 cents per Mcf but were voluntarily amended by them in October 1962, subsequent to the Fifth Amendment, to reduce the price to 16 cents per Mcf. The same 2-cent reduction was applied to all other contract prices. Although both sales were temporarily authorized by us at the 18-cent rate, no gas was delivered by either producer prior to the price reductions and all deliveries made subsequent thereto have been at the 16-cent price.[37] To now hold that the promulgation of the 18-cent area ceiling is to be viewed as having absolutely no weight in the determination of the price at which certificates should issue in these dockets is to refuse to acknowledge the purpose of the Policy Statement and its effectiveness as a ceiling on prices in contracts executed after its issuance.

It is with the foregoing in mind that we conclude, as did the court in *P.S.C. of New York* v. *F.P.C.*, that some measure of weight should be given to the guideline price in the determination of the initial price issue for the contracts consolidated into this proceeding. We do not suggest, however, that these sales be certificated to an amount at or even approaching 18 cents per Mcf, for to do so would be to ascribe an irrebuttable conclusiveness to our unilaterally determined guideline price as it existed, and would fail to take into account the variety of other factors influential in our determination.

In the final analysis our action in fixing the price at which these sales should be certificated requires an exercise of our informed judgment and utilization of the expertise developed in the handling of thousands of producer certificate applications. *CATCO* requires that we hold the line pending the determination of just and reasonable rates. This line cannot, however, always be ascertained with mathematical precision. In *Skelly* a 15-cent price was selected on the basis that the contracts previously certificated and thus not involved in that proceeding represented a substantial amount of natural gas and because almost all the contracts above that level were involved in litigation. In this case there is no adequate group of contracts, in litigation or otherwise, made in the relevant time period and involving substantial quantities of natural gas which can be looked to in fixing the line without considering the contracts in issue. The record makes it clear that the lowest price at which substantial volumes of new gas were sold in interstate commerce in the area during the period in question was 16 cents per Mcf. While there is evidence that points in the direction of a higher price we believe the teachings of *CATCO* require that we draw the line at the lowest reasonable level. It is, therefore, our considered opinion, and we so find, that the price required by the public convenience and necessity for these sales is 16 cents per Mcf, including all reimbursements and charges, and that certification of prices above this rate would not be in the public interest and would not serve the public convenience and necessity. We shall, therefore, condition the certificates issued in these dockets to this price.

---

[36] No. 17582, *et al.*, 329 F. 2d 242 (D.C. Cir., January 23, 1964).

[37] The amendment by Skelly was accepted by the Commission on December 13, 1962, and designated as Supplement No. 1 to Rate Schedule No. 176. Amerada's amendment was accepted by letter-order dated January 4, 1963, and is carried as Supplement No. 1 to its FPC Rate Schedule No. 100.

We are supported in our conclusion that 16 cents is the "in-line" price for the contracts before us in the period 1960–1962 by the fact that such a price is in line with the 15-cent price we fixed in *Skelly* for the contracts executed in the late 1950's. This is true because many of the previously permanently certificated sales, upon which we based our prior determinations, contained escalation clauses which would permit these producers to charge up to one cent more for their gas in the period which we are considering. In banning indefinite escalation clauses the Commission expressly approved definite escalations at five-year intervals and a one-cent increase every five years is a common provision in producer contracts. We do not mean to suggest that in any circumstances the mere passage of time will justify an increase in the initial price for gas. Our decision herein draws the line substantially below the average going price for gas in the area and in fact, two cents per Mcf below the Commission's guideline ceiling price prevailing at the time these contracts were executed. The 16-cent determination herein thus not only preserves, but actually rolls back, the initially considered price line for the period in issue.

A few producers excepting to the examiner's decision indicate particular circumstances in their sales which they claim warrant special consideration. Thus, Clark Fuel Producing Company points out that it produces its gas from two fields and then pays a gatherer from 1.74 to 2.24 cents per Mcf for transportation of the gas 22 and 33 miles to the main line of its purchaser. It contends that its sale is more nearly comparable to a sale by a gatherer to a pipeline. Gulf Oil Corporation notes that it delivers its gas at points on its purchaser's pipeline located approximately one mile off the producing leases, seeking more for this service. Both refer to a large volume (480,000 Mcf per month) gathering company sale in District No. 4 permanently certificated at 17 cents per Mcf. However, we notice in the staff exhibit that with one exception all sales permanently certificated in this District at 15 cents and above have either a "field" or "plant" delivery, meaning that a certain amount of gathering has taken place before delivery is made. The sales involved in the present case are almost all field delivery. It must also be recalled that the 15-cent "in-line" price which we have found applicable to the pre-Policy Statement contracts similarly included all reimbursements and charges affecting the base initial price. In determining the total price applicable to the sales herein we have taken into consideration not only the matter of delivery point but also other factors shown in the staff exhibit such as pressure, heating value, escalations,[28] and first month's production. We see no justification for any allowance above 16 cents for any of these sales.

Price Increases

With two exceptions the contracts in these dockets provide for periodic increases in the price of the gas to be delivered to the pipeline purchasers. The majority of the escalations are for one cent per Mcf each five years, although some provide for an escalation each four years of the contract term. In others the escalation is a fraction over or under one cent per Mcf. On February 24, 1964, we issued an order in another proceeding[29] imposing a moratorium on all price increases in excess of 18 cents per Mcf on sales in District No. 4 on the ground that any rate increase filings to a level higher than that amount would have an adverse impact on the pricing structure in this area through the operation of price redetermination clauses. In our opinion the same moratorium should be applied as a condition to the certificates issued in this proceeding. The accompanying order includes this provision.

Refunds and Take-or-Pay

The examiner's decision requires refunds in eight dockets in accordance with conditions imposed in the temporary authorizations. Such refund requirement is hereby confirmed with the exception of the following sales: First, the Sun Oil Company sale, authorized in Docket No. CI62-276, never commenced, and consequently, no refunds would be in order. Secondly, because the total price temporarily authorized MPS Production Company (Operator), Docket No. CI62-726, Amerada Petroleum Corporation, Docket No. CI62-1544, and Skelly Oil Company, Docket No. CI63-73, was 16 cents, the same price we herein determine as "in-line," no refunds are required.

The temporary authorizations issued in the remaining dockets do not provide for refunds in the event the initial public convenience and necessity price is found to be lower than the prices permitted under the authorizations. Based on our conclusion in *Skelly* that refunds should not be ordered where the temporary authorization does not contain an express condition, the examiner denied a request to order refunds in these dockets. The Court of Appeals, in its decision, has now clearly stated that our power to order refunds does not depend upon an explicit refund provision in the temporary authorizations. "Should the occasion be appropriate for its exercise the power resides in the Commission when it grants a permanent certificate. To hold that it may not then require refund of excessive prices previously permitted without notice or hearing or mature consideration, since the Commission acted on an emergent and temporary basis, would be inconsistent with the regulatory responsibility of the Commission to aid in the ascertainment and authorization of just and reasonable rates."[60]

---

[28] Cherosage Enterprises, Inc., *et al.*, contends that its 18-cent price is justified, in part, because its contract contains no provision for price escalations, periodic or otherwise. As we have indicated, most other contracts in this proceeding and throughout District No. 4 call for a price increase of one cent each five years. Allowance of the 18-cent price to Cherosage on this basis would permit it to collect an amount 2 cents over the other producers receiving certificates for five years and, for an additional five years, one cent above the increased prices, all without a refund obligation. We may assume that prior to the expiration of either of these periods, an area proceeding will long since have been concluded for District No. 4 establishing a just and reasonable rate for all gas production in the area. Accordingly, we see no reason to grant Cherosage any special allowance for this feature.

[29] *Hassie Hunt Trust, Operator, et al.*, Docket No. G-19115, *et al.*, Order Granting Application for Reconsideration and Modifying Opinion and Order, 31 FPC 447.

The court has also stated, however, that the existence of the power to order refunds at the time of permanent certification does not mean that its exercise is mandatory. The standard to be followed is the standard of equity, and the decision as to whether refunds should be ordered is to turn on equitable considerations. The existence of a refund requirement is one such consideration but is not controlling; the public interest factors must also be weighed and may be adequate to offset the absence of an explicit condition.

In view of this recent decision, we conclude that the public interest would best be served by deferring for the present the decision whether refunds should be ordered in these remaining dockets, and if so, the extent of such refunds. The parties to the proceeding will be given an opportunity to submit further briefs on the issue of refunds and a determination will be made thereafter. At present it is considered that oral argument before the Commission on this issue will not be necessary.

The order accompanying the initial decision conditions the take-or-pay requirement in each contract to be subject to the provisions of our final order in the rule-making proceeding in Docket No. R–199. This, as well as the limitation in the condition that the producers will not be required to accept provisions for less than 80 percent of the annual contract quantities, is in line with the general practice in our recent decisions. The exceptions to the condition will be denied.

One producer, Cherosage Enterprises, Inc., *et al.*, has requested that oral argument be granted before the Commission. We conclude that no useful purpose would be served by such argument and that the request should be denied. The exceptions not discussed herein are immaterial to the result in this case or are without substantial support or reasonable basis in law and should be denied. The examiner's decision, to the extent not inconsistent herewith, should be adopted as part of this opinion and order.

The Commission further finds:

are engaged in the sale of natural gas in interstate commerce for ultimate public consumption and each is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas hereinbefore described, as more fully described in the applications, are or, upon commencement of the sale, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Subject to the requirements of our order herein and conditions attached to the certificates herein issued, the applicants referred to in paragraph (1) are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of natural gas by the independent producers referred to in the above paragraph (1), together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are and have been required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) Except as herein granted, the exceptions to the examiner's decision should be denied.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued to the applicants named in paragraph (1) above for the sale of gas in interstate commerce for resale as proposed in their applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, upon the terms and conditions of this order.

(B) Each certificate issued severally as provided in paragraph (A) above is hereby conditioned to prohibit any total initial price, including all reimbursements and charges, greater than 16 cents per Mcf at 14.65 psia from the date of issuance of this order and until such prices may be lawfully changed in the manner provided by the Natural Gas Act.

(C) Within 30 days from the date of issuance of this order each of the applicants receiving certificates in paragraph (A) above shall file supplements to their presently filed rate schedules reflecting the conditioned price as the initial price in lieu of the initial price provided in the contract; provided that the notice provisions of Section 154.94(b) and the detailed submittal provisions of Section 154.94(f) of the Commission's Regulations under the Natural Gas Act are waived insofar as they apply to the reductions in rates hereby ordered.

(D) The certificate herein issued to Sun Oil Company in Docket No. CI62-276 is conditioned upon its being accepted in writing by the applicant within 30 days of the issuance of this order.

(E) Within 60 days from the date of issuance of this order each of the applicants in Docket Nos. CI61-1451, CI62-607, CI62-639, and CI62-729 shall refund to the respective pipeline purchaser, with interest, a sum equal to the difference between the price charged to and collected from such purchaser and the total price set forth in paragraph (B) above, applied to all volumes paid for by such purchasers under the contracts which form the subject matter of this proceeding from the date of the contract until the effective date of this order. The interest charge specified herein shall be calculated at the rate of 7 percent per annum and shall continue until full refund has been made.

(F) Within 10 days of the date of the refunds provided in paragraph (E) above, each of the applicants shall file with the Commission an officially certified statement showing the amount of the refund, its manner of computation, the interest payments related thereto, and a statement from the purchaser acknowledging receipt thereof.

(G) The decision whether refunds should be ordered as a condition to the other certificates herein issued is deferred for subsequent determination. Within 30 days from the date of issuance of this order the parties to this proceeding, to the extent desired, may file briefs directed to the issue whether refunds should be ordered in any or all of the dockets and the extent of such refunds, if any. Replies may be filed within 10 days of service of the briefs herein provided.

(H) Each certificate issued in paragraph (A) above is further conditioned to provide for a moratorium on the filing of all price increases in excess of 18 cents per Mcf, inclusive of tax reimbursement, pending the issuance of a final decision in the area rate proceeding in Docket No. AR64-2 or until January 1, 1968, whichever is earlier.

(I) The certificates herein issued are granted upon the further express condition that the allowance of the take-or-pay for provisions in the applicants' contracts is subject to our ultimate disposition with respect to such provisions in the rule-making proceeding in Docket No. R-199. Upon the establishment, by regulation or policy statement, of a general policy governing such provisions in producer contracts, the applicants shall within 30 days file amended rate schedules in conformity therewith, acceptable to the Commission. The producers shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities. Any changes or modifications to be made in accordance with this paragraph shall be prospective only.

(J) The certificates herein issued are not transferable and shall be effective only so long as each of the applicants continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(K) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Regulations thereunder. Such grant is without prejudice to any findings or order which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants. Further, the action in this proceeding shall not foreclose nor prejudice any further proceedings or objections by the Commission relating to the operation of any price or related provision in the gas purchase contracts here involved.

(L) Except as herein granted, the exceptions to the examiner's decision are hereby denied.

(M) The motion for opportunity to present oral argument before the Commission is denied.

(N) The examiner's decision, to the extent not inconsistent herewith, is hereby adopted as part of this Opinion and Order.

Commissioner Ross *dissenting.*

Ross, Commissioner *dissenting:*

I dissent to the 16¢ in-line price determination for the reason that there is no proper evidence in this case to sustain such a result. As a matter of fact, the majority itself has summarized its difficulties by saying, "In this case there is no adequate group of contracts, in litigation or otherwise, made in the relevant time period and involving substantial quantities of natural gas which can be looked to in fixing the line without considering the contracts in the issue."

Originally, the sole purpose of this hearing was conceived as a vehicle to see if the in-line price of 15¢ prior to September 28, 1960 was affected by the issuance of the Policy Statement. The majority in the *Skelly* opinion stated, as to the four certificate cases which gave rise to this proceeding,

> The precise question of the weight to be given in a certificate case to the area price in effect at the time a producer contract is executed has not previously been an issue before this Commission. . . . It [the record] contained inadequate information for evaluating the effect, if any, of the Commission's enunciation of an 18-cent ceiling upon the in-line price in the area at the time the four post-area ceiling contracts were made. . . . We do not suggest that the Commission's announcement of ceiling prices as a guideline for conditioning certificates and suspending rate increases necessarily had the effect of raising the in-line price to that level but the Commission is not prepared in advance of a hearing on the issue to say that its own ceiling prices are entitled to no weight in determining the initial price under contracts executed after the ceiling prices were put into effect . . . and we have placed in the hearing crucible the issue of the effect of the ceiling upon subsequent contracts—a hearing which can be concluded promptly under the new guideline enunciated in this opinion for determining the initial price. [*Skelly Oil Co.*, 28 FPC 401.]

The majority now is faced with a situation of its own making. Apparently they now recognize that the Policy Statement by itself is not sufficient to raise the in-line price, note for example their statement that only "some measure of weight should be given to the guideline price . . ."[1] Thus, it now becomes necessary to dream up some other grounds which, by so doing, raise all kinds of other policy considerations and which in the interests of orderly regulation should be pointed out. It could be that this is substantially a case of "chickens coming home to roost." In any event, it appears that the rule of this case is that when the normal evidentiary basis for establishing an in-line price is absent, then anything else will do because as a last resort the Commission can always say, "On the final analysis our action in fixing the price at which these sales should be certificated requires an exercise of our informed judgment and utilization of the expertise developed in the handling of thousands of producer certificate applications." To this I would refer interested readers to my dissent in *Skelly*. As to our expertise and as to the thousands of producer certificate cases which the Commission has handled, I must say I would be more impressed if, in the last ten years, at least one just and reasonable producer price had been established by which to measure these prices.

---

[1] See explanation and decision of Examiner Binder issued July 23, 1964, in this case and Examiner Weston's decision issued January 14, 1964, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, which dispose of the reliance argument very effectively.

If one is to take the Commission's expertise with a few grains of salt, then the justification for the 16¢ in-line price appears to rest on other grounds. First, the Commission says the result must be correct because this is really not a case of increasing the in-line price of 15¢ to 16¢ but rather "Our decision herein draws the line substantially below the average going price for gas in the area, and in fact, two cents per mcf below the Commission guideline ceiling price prevailing at the time these contracts were executed. The 16¢ determination herein thus not only preserves, but actually rolls back, the initially considered price line for the period in issue." Really! To take a price which the majority itself already has held to be excessive in a prior proceeding by 3¢ and then use this erroneous price to rationalize a 1¢ increase is going too far for me.

The majority also seek to give the 16¢ an aura of gentility by suggesting that, due to the lapse of time, an extra cent wouldn't be unreasonable. I am personally unfamiliar as to exactly what period of time the majority considered. Was it from September 28, 1960 to October 10, 1960, the date of one of the certificates involved herein? Then again, I don't know how much weight to ascribe to their statement "We do not mean to suggest that in any circumstances the mere passage of time will justify an increase in the initial price for gas." Does this mean that persons presently selling gas at our ceilings who have been so doing for over 5 years can secure an extra cent if it is in their contract? If the answer is no, what is the distinction? To what extent will a lapse in time be a relevent factor in setting area rates?

Another apparent basis for the 16¢ price is the decision of the Court of Appeals in *Public Service Commission of New York* v. *F.P.C.*[2] It certainly is an interesting decision all right but is it authority for the majority's position? I don't think so. The majority cite it essentially as a ground for establishing an "in-line" price by relying upon temporaries when there is no other satisfactory evidence. Actually, the court said in upholding our decision that 15¢ was the proper in-line price and that we were correct in using "the situation prevailing there in the years 1958, 1959 and 1960", and taking as "our most important evidence a study prepared by the Commission staff analyzing contract and price data for the years 1955 and later." The court goes on and characterizes our actions as follows, "In addition, as the opinion points out, nearly all the contracts with prices above 15 cents were subject to litigation. Being under a cloud they were eliminated from consideration. The Commission also placed under the same cloud, or in a suspect category, other contract prices above 15 cents which, though not themselves in litigation, appeared because of the higher prices to be subject to the same infirmities as those which were. The Commission also gave less consideration to prices allowed under temporary certificates than under permanent certificates, because the former were issued ex parte and informally, without full investigation." Following this, the court says, "It is principally urged that the Commission erred in limiting, as above indicated, the evidence upon which it relied."

---

[2] *Public Service Commission of the State of New York* v. *F.P.C.*, Nos. 17582, *et al.*, 329 F. 2d 242. (CADC, January 23, 1964.)

Thus it can be readily seen that the import of the decision is simply we were correct in limiting our consideration to principally the staff study actually used in that case and in not allowing the higher temporary prices to establish a higher in-line price as urged by some of the parties. If we had done otherwise, the result would have been different. In fact, the specific holding of the court is that proceedings such as this "permit the Commission to fix the 'in-line' price, not on a basis of cash outlay or replacement costs, but on the basis of the price level established by comparable sales contracted for those placing gas in the area in interstate commerce."

I question whether this holding justifies our unlimited exercise of expertise, or giving very much weight to the Policy Statement and economic time escalation.[3] The majority on page 630 of their decision apparently agrees for they say, "We do not agree, however, the considerations other than in-lineness, of the proposed initial prices are valid where, *as is here the case* the only disputed issue is the price level at which the certificates should be granted." However, on page 633, the majority apparently rejects this in-line concept by stating, "A rule of law that would deprive producers of any opportunity to show that the initial prices in the 1950's did not suffice for the 1960's or, conversely, that would deprive consumer groups of an opportunity to show a decline in the price level, is not fair to the producers. . . ." I leave to the readers of this opinion the unenviable task of determining the import of these conflicting statements.

The principal error of the majority is found on page 634 where it lists those contracts on which it bases its in-line conclusion. Of the 38 contracts listed having prices in excess of 15¢, 36 or about 95 percent, *are the very contracts whose price is being investigated in this case.* This type of bootstrap rationalization is legally indefensible. In the first UGI case, the Court held:

> When a order certificating an initial rate is under court or Commission review, it is possible that the certificate may be eventually denied or price conditions may be attached. In our opinion an existing rate subject to such a hazard does not provide a reasonably reliable basis upon which to predicate a price line. [*U.G.I.* v. *F.P.C.*, 283 F. 2d 817, 824.]

The reason for this holding was explained by the Court in the following language:

> In the event the existing rate is later modified or conditioned as a result of the pending proceedings the foundation of the line derived therefrom would be undermined. Moreover, the acceptance of questioned existing prices as a guide in setting the line might itself have the anomalous effect of creating a standard by which the questioned rates would then be judged. [*U.G.I.* v. *F.P.C.*, 283 F. 2d 817, 824.]

Only six months ago, a unanimous Commission specifically recognized the legal effect of that decision:

> The decision of the Ninth Circuit remanding one of the dockets involved in this proceeding, which was followed by other courts in setting aside other orders of the Commission granting certificates for sales from Southern Louisiana at prices of 21.4 cents and above, has made it clear that sales *which are under Commission or court review are not legally relevant for*

---

[3] As to the necessity to increase levels because of the time factor, I assumed that we were setting an interim price which would only affect a relatively short period of time.

> *purposes of determining an in-line* price. [*Placid Oil Company, et al.*, Docket No. G–13183, *et al.*, Opinion No. 398 issued July 17, 1963; 30 FPC 283, 289; footnotes omitted; emphasis added.]

The majority also errs in predicating its decision on suspect or tainted prices. The suspect price doctrine was erected by the Courts upon the failure of this Commission to adhere to the spirit, if not the letter of the law established in *CATCO*.[4] The command is flat. It says that contract prices under review by the Court or pending review, or even like prices in the same area though not currently subject to review, cannot be used as a basis for an order certificating an initial rate.[5] The Commission has more or less adhered to this mandate—until now. Thus, in the predecessor *Skelly* case, a unanimous Commission carefully analyzed the law of those court decisions and then concluded:

> Thus we must eliminate from the discussion the prices involved in the P.S.C. v. F.P.C. remand. With one minor exception, this leaves no producer prices under permanent certificate above 15 cents at the time the record was closed in this proceeding as shown by the second column of the table. [*Skelly Oil Co., supra*, p. 409.]

The table on page 634 used by the majority to justify its conclusion includes prices which have received *ex parte*, emergency temporary authorization. My legal objections to the use of temporaries in fixing an in-line price have been stated many times before. Nevertheless, it is significant that, for the first time, the majority indiscriminately lumps temporaries with permanently certificated prices. Only 17 months ago in the *Skelly* opinion a unanimous Commission held:

> The prices under temporary certificate fall into approximately the same price categories as those subject to review and thus under the court's reasoning must be regarded as suspect. [*Skelly, supra*, p. 409.]

As stated above, the Commission gave no weight to suspect prices in *Skelly*.

The majority purports to justify its use of temporaries and suspect prices for reasons which are wholly unacceptable.

The majority's major reason for utilizing temporaries and suspect prices is to avoid an "arbitrary freeze". There are two responses. First, the same majority had no difficulty in finding the same in-line price in *United*[5a] and *Placid, supra*, that was initially determined in *CATCO* on remand (Opinion No. 351), even though the contracts covered a greater span of time than they do here. But perhaps more important, I would have thought that if there were insufficient evidence to support a change in an earlier price determination, the majority would adhere to the one previously established, instead of grasping for straws to support a higher price. The majority's attitude falls far short of the *CATCO* spirit, as evidenced in *UGI:*

> We believe that the Supreme Court meant to impress upon the Commission an interpretation of the "public interest" which, in the context of a rising natural gas market, demands a real administrative effort to hold back prices. [*U.G.I.* v. *F.P.C.*, 287 F. 2d 146, 150.]

Were it not for the majority's predilection towards a 16¢ result in this case, we might have expected to have found an approach to an in-line determination at least resembling that utilized in the four most recent proceedings of this kind.[6]

[5] See *U.G.I. Co.* v. *F.P.C.*, 283 F. 2d 817 (CA9), cert. denied, 365 U.S. 881; *P.S.C. of N.Y.* v. *F.P.C.*, 287 F. 2d 146 (CADC), cert. den. 365 U.S. 880: *U.G.I. Co.* v. *F.P.C.*, 287 F. 2d 159 (CA10); *U.G.I. Co.* v. *F.P.C.*, 290 F. 2d 133 (CA5), cert. den. 366 U.S. 965; *Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 677 (1963).

[5a] *United Gas Pipe Line Co.* Docket, No. CP60–36, *et al.*, Opinion No. 399, July 17, 1963, 30 FPC 329.

[6] *Hassie Hunt Trust*, Opinion 412 issued December 9, 1963, 30 FPC 1438; *United Gas Pipe Line Co., supra; Placid Oil Co., supra*, and *Texaco Seaboard Inc.*, Opinion 383, March 27, 1963, 29 FPC 593. The same is true of *Skelly, supra*.

In those cases, the Commission used contracts executed during the most recent three year period which were permanently certificated. A table showing the permanent contracts executed between August 31, 1959 and August 31, 1962 follows:

Price (cents)	Number of contracts under permanent certificates	Estimated first month volumes (mcf)	Price (cents)	Number of contracts under permanent certificates	Estimated first month (mcf)
14.0	27	933,500	15.5	1	45,000
14.5	4	142,000	16.0	1	450,000
14.6	2	86,350	17.0	2	492,371
14.7	1	17,280	17.2	2	52,610
14.8	1	40,000			
15.0	22	1,457,836		63	3,716,947

The above table fails to list the several contracts executed during this period at prices under 14 cents. For the period from the magic escalation date of the majority, i.e., September 28, 1960, there were 23 such contracts permanently certificated at prices between 9.0 cents and 13.8 cents (and two temporaries at 12.2 cents).[7]

This quantum of the above evidence may not be sufficient to satisfy the majority; but after all, the burden of proof is on the applicants.[8] As the Court has held: ". . . the burden of protecting the public interest has fallen on Sections 7 and 4 *where the burden of proof is on the independent producer.*" (*Atlantic Refining Co.* v. *FPC*, supra; emphasis added.)

Before leaving the advisability of relying upon temporaries, I would like to point out the fact that a number of the temporaries are subject to refund with floors in every case below 16¢. As every one knows, temporaries are frequently granted at high prices with not too much concern if there is a refund condition attached. Thus, if weight is to be given to temporaries, the majority should recognize that the refund price is an equally significant factor.

The majority put itself in a box and closed the top when it inflated a solid in-line price, determined after a hearing, to 16¢ and then remanded those contracts executed after September 28, 1960 for a second hearing. The instant opinion is nothing more than a forced rationalization in support of that earlier position. Obviously, the majority strains to justify a higher price than that decided in *Skelly* and affirmed on appeal. Otherwise, the retrial of those cases would be most embarrassing.

In summary, when the forest of verbiage shielding the majority opinion is exposed to the light of day, three important issues emerge from the shadows. First, can the issuance of the Policy Statement—in itself and without reference to any other facts—issued *ex parte* by the Commission serve as a tool to escalate prices for contracts executed after issuance of the Statement? Second, can temporaries alone justify an in-line price, particularly in the light of the majority's policy of refusing to entertain an interested party's objection to temporary certification of a contract if the price is below that listed in the Policy Statement? Finally, can the Commission use the incredible bootstrap of basing its decision as to the proper initial rate for contracts on those very contracts which are being tried? The answer is plainly no to each question, and I suspect the majority would agree were it not for their unfortunate decision to retry the District 4 contracts in the first place.

---

[7] Several of these sales were to gathering companies, and therefore not entitled to much weight, in my opinion.

[8] There are 57 untainted prices here, excluding prices under 14¢. There were 48 in *Skelly, supra.*

On the basis of the foregoing, I therefore hold that the proper in-line price is 15¢.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 23, 1963)

BINDER, *Presiding Examiner:* This proceeding involves applications filed by 29 different producers seeking certificates of public convenience and necessity pursuant to Sections 7 (c) and (e) of the Natural Gas Act in 36 dockets for sales of natural gas to be produced by them in Texas Railroad Commission District No. 4.[1] The sales proposed are to be made to four different pipelines for resale in interstate commerce.[2] Pursuant to Commission order issued August 30, 1962, these 36 dockets were consolidated for hearing. The contracts under consideration were executed at various dates between September 28, 1960, the date of the issuance of the Commission's First Statement of General Policy 61-1 and August 30, 1962, the date of issuance of the Fifth Amendment to such policy statement, 28 FPC 441, which was also the date the Commission issued its opinion and accompanying order in the *Matter of Skelly Oil Company, et al.*, Docket No. G-18638, *et al.*; Opinion No. 362 (*Skelly*), 28 FPC 401. This amendment reduced the ceiling price of new gas in Texas Railroad Commission District No. 4 from 18 cents per Mcf to 16 cents per Mcf (at 14.65 psia).

The initial prices set forth in the producers' contracts under consideration here range from 15.944 cents per Mcf to 19.795 cents per Mcf (14.65 psia).[3] Based on the initial applications, the volumes proposed to be sold by the various producers range from an estimated first-month's volume of 550 Mcf to an estimated first-month's volume of 540,000 Mcf.

The following table sets forth the names of the producers, the docket numbers, the contract dates, the estimated first-month's volumes as furnished by the applicants, and the initial price per Mcf as contained in the contracts.[4] The dockets are set forth in the ascending order of the initial prices contained in the contracts.

---

[1] Since the institution of these proceedings Sun Oil Company (Sun) has withdrawn its applications in Dockets CI61-754 and CI61-755.

[2] The pipelines involved are Tennessee Gas Transmission Company, Natural Gas Pipeline Company of America, Ben Bolt Gathering Company, and South Texas Gathering Company.

[3] These prices include the taxes at the date of the execution of the contracts. The contract in Docket No. CI61-1757 relating to Texaco Inc. is the contract which contains the lowest price under consideration, *i.e.*, 15.94 cents per Mcf, and the contract in Docket CI61-1377 relating to Standard Oil Company of Texas (Sotex) is the contract containing the highest initial price, *i.e.*, 19.795 cents per Mcf. Early in the hearing Sotex counsel stated that it would accept a permanent certificate in this docket continuing in effect the conditioned price of 18 cents per Mcf, specified in its temporary authorization issued in May of 1961 which price Sotex has been collecting since it started deliveries.

[4] The table contains no information relating to Sun's dockets CI61-754 and CI61-755 because the applications in these dockets have been withdrawn.

	Docket No.	Contract date	Estimated first-month volumes	Initial contract price per Mcf in cents

[a] Ratified contract dated 11-1-58.

[b] Ratified contract dated 5-20-55.

[c] On April 9, 1962, the interests of Katz Oil Company in the leases in this docket were transferred to Sohio Petroleum Co. ("Sohio") effective as of March 1, 1962.

By letter order dated May 25, 1962, the Commission ordered the substitution of Sohio for Katz in Docket No. CI61-627 and further granted Sohio temporary authorization to continue the sale and delivery of gas without refund condition at the contract price of 17 cents per Mcf. The aforesaid gas purchase contract has been designated as Sohio Petroleum Co., FPC Gas Rate Schedule No. 71.

It will be observed that there is one contract at 15.944 cents per Mcf; six contracts at 16 cents per Mcf; one contract at 16.4965 cents per Mcf; two contracts at 16.5 cents per Mcf; three contracts at 17 cents per Mcf; two at the 17.24 cents per Mcf level; ten contracts at 17.24347 cents per Mcf; ten contracts at 18 cents per Mcf; and one contract at 19.795 cents per Mcf.

Generally speaking the sales fall into four groups:

1. Thirteen sales, involving estimated monthly deliveries of approximately 1,400,000 Mcf to South Texas Natural Gas Gathering Company at proposed initial contract prices ranging from 16.0 cents to approximately 19.8 cents per Mcf and averaging approximately 17.4 cents per Mcf.

2. Thirteen sales, totaling about 570,000 Mcf per month, to Tennessee Gas Transmission at approximately 17.24 cents per Mcf. (Actually, twelve of the thirteen sales to Tennessee call for this price; the thirteenth by W. H. Hudson, CI62-1074 involves a sale to Tennessee for which estimated monthly volumes are shown at approximately 5100 Mcf and calls for an initial price of 16.5 cents.)

3. Seven sales, totaling approximately 585,000 Mcf per month, to Natural Gas Pipeline Company of America at a price of 18.0 cents per Mcf.

4. Three sales, totaling approximately 56,000 Mcf per month, to Ben Bolt Gathering Company at a price of 16.0 cents per Mcf for two of the sales and 15.944 cents for the third.

The Commission announced in Skelly that it was by separate order severing the applications of four producers who were applicants in that case for permanent certificates, but whose contracts were executed

> between September 28, 1960, when the existing 18-cent area ceiling was adopted and the effective date of the amended area ceiling in this area which we are adopting simultaneously herewith.

These four producers, their docket numbers, initial contract prices estimated first month's production and contract dates are as follows:

	Docket No.	Price (cents)	Estimated first month's production (Mcf)	Date of contract
Katz	CI61-627	17	75,000	10-17-60
Hamon	CI61-922	18	58,333	11-21-60
Sun	CI61-956	17	300,000	12- 1-60
Texaco	CI61-961	16.4965	9,280	12- 1-60

The Commission in its order in the instant proceeding consolidated with these four dockets all of the other dockets set forth in the caption. The reason advanced by the Commission for severing these four dockets from Skelly was that

> . . . the record in this case does not focus upon the effect, if any, which should be given to the prior establishment of the 18-cent area ceiling upon the determination of the appropriate price at which we should issue permanent certificates for these contracts. [*Skelly*, p. 412.]

In addition, the Commission said:

> . . . our determination to sever these four relatively small applications and to consider the price at which they should be permanently certificated in a new proceeding, together with the other temporary certificates issued in Texas District No. 4 since the establishment of the 18-cent ceiling price, resulted not from any unwillingness to expose these parties to the test of a hearing record, but rather from our conviction that the present record provided an inadequate basis for determining the proper initial price for these contracts.
>
> The precise question of the weight to be given in a certificate case to the area price in effect at the time a producer contract is executed has not previously been an issue before this Commission. The *CATCO* case and our other recent certificate decisions all involved contracts executed before area prices were announced. The record in this proceeding also focused on the question of the in-line price for the period prior to the announcement of area ceilings. It contained inadequate information for evaluating the effect, if any, of the Commission's enunciation of an 18-cent ceiling upon the in-line price in the area at the time the four post-area ceiling contracts were made.
>
> * * * * * * *
>
> * * * *We have rejected, after hearing, the contention that the establishment of the 18-cent ceiling in September 1960 fixed that price as the proper in-line price in Texas Railroad District 4 as of that date; and we have*

> *placed in the hearing crucible the issue of the effect of the ceiling upon subsequent contracts*—a hearing which can be concluded promptly under the new guidelines enunciated in this opinion for determining the initial price. [Underscoring supplied; *Skelly*, pp. 417–418.]

The matters which have been put in issue in this proceeding are (1) the effect of the ceiling [in the Commission's Policy Statement issued September 28, 1960] upon subsequent contracts; (2) the level of the public convenience and necessity initial price at which the producer sales herein should be permanently certificated and (3) whether refunds should be ordered on amounts collected heretofore pursuant to temporary authorizations permitting the producers to collect prices in excess of such public convenience and necessity initial price level as may be determined upon in this proceeding.

I. *The Effect of the "Ceiling" Upon Subsequent Contracts*

In the light of the Commission's numerous decisions endeavoring to "hold the line" on initial prices in granting certificates of public convenience and necessity as required by the Supreme Court's decision in CATCO[5] and as required by the substantial number of decisions in the courts of appeal interpreting *CATCO*[6] it is hardly likely that the Commission in establishing price ceilings for new contracts in its Statement of General Policy 61–1, or in any of the amendments to such statement intended to breach or undermine the "hold the line" price doctrine it was admonished by the courts to apply and maintain in Section 7 producer cases. Nor is there good ground to assume or conclude that the Commission issued its Statement of Policy containing ceiling prices for the purpose of bringing about an increase in the "in-line" prices above those which existed immediately prior to the issuance of such document.[7] Moreover, it should be obvious that were the Commission to engage in such an improper purpose it would be reversed by the courts on appeal not long after it had implemented such purpose through the issuance of an order in a contested Section 7 proceeding. Accordingly, if the relevant evidence developed during the course of a contested Section 7 hearing showed that the "ceiling price" was in fact higher than the "in-line" price at the time of the issuance of the policy statement, the former price could not serve as the measuring rod in determining whether or not to impose a price condition. Further, the issuance of the Fifth Amendment to the Statement of General Policy on August 30, 1962, could have had no possible impact and no meaning insofar as either "in-line" or ceiling prices between September 28, 1960 and August 30, 1962, are concerned. The reason is that the Fifth Amendment is not by its terms retroactive and could have an impact only insofar as contracts executed after August 30, 1962, are concerned and there are no such contracts involved in this proceeding. Secondly, no prices higher than the "in-line" price should be employed as the measuring rod for determining the public convenience and necessity price for contracts made immediately after the Commission had made an official determination of where the "in-line" price was located. To hold that it would be appropriate to employ higher prices than such "in-line" price would be to hold directly in contravention of the admonition of the Supreme Court in *CATCO* to "hold the line" and would be directly contrary to the views expressed in the substantial number of Court of Appeals cases interpreting the Supreme Court's holding in *CATCO*.[8] Further, the Statement of General Policy prices was not issued to modify or reverse CATCO or any other court decisions, and in any event they could not effectively do so under the existing law.

[5] *Atlantic Rfg. Co.* v. *Pub. Serv. Comm'n.*, 360 U.S. 378 (1959).

[6] *Cf. United Gas Improvement Co.* v. *Federal Power Com'n.*, 5 Cir., 290 F. 2d 133 (1961); *United Gas Improvement Co.* v. *Federal Power Com'n.*, 10 Cir., 287 F. 2d 159 (1961); *Public Serv. Com'n. of New York* v. *Federal Power Com'n.*, 109 U.S. App. D.C. 292, 287 F. 2d 146 (1960); *United Gas Improvement Co.* v. *Federal Power Com'n.*, 9 Cir., 283 F. 2d 817 (1960).

[7] As the Commission noted in Skelly "We have rejected, after hearing, the contention that the establishment of the 18-cent ceiling in September 1960 fixed that price as the proper in-line price in Texas Railroad Commission District 4 as of that date; . . ." The "in-line" price immediately prior to September 28, 1960, was not higher than 15 cents per Mcf (*Skelly*).

The Commission's Statement of General Policy 61-1 was adopted *ex parte*. Accordingly, insofar as the ultimate determination of the appropriate Section 7 public convenience and necessity price is concerned, the price ceilings contained in such policy statement do not constitute an order binding on the distributors, the public service commissions (who frequently intervene in contested Section 7 proceedings), or upon any party to this contested proceeding. Nor does such policy statement have any evidentiary value which is capable of being measured in any meaningful way because the weight given the various factors going into the formation of the ceiling prices have never been explained or defined in any decision or public statement issued by the Commission. Further the policy statement does not constitute a directive that the ceiling price was thereafter to be considered the public convenience and necessity initial price for the area to which it was related because under the decided cases the public convenience and necessity price must be referenced to the "in-line price" at the time of the execution of the contract in the area where the gas is being produced.

The Commission's price ceiling serve the limited purpose of advising the industry and all other persons of a Commission policy to the effect that normally it will issue certificates of public convenience and necessity to producers in non-contested certificate proceedings at prices no higher than the ceiling and that such producers normally can obtain temporary certificates permitting producers to collect from purchasers at prices no higher than ceiling during the effective period of the temporary certificate in the circumstances described in Section 157.28 of the Commission's regulations (*i.e.*, in *ex parte* situations). However, even in situations where the contract price was at or below the announced ceiling prices, the Commission has exercised its discretion in the granting of temporary certificates both *before and after Skelly* by inserting conditions therein requiring refunds of monies received in excess of the "rate determined to be required by the public convenience and necessity" after a hearing on the merits.

The insertion of conditions of this character in the temporary certificates shows that the applicants had no basis for claiming that the issuance of the policy statement assured them of receiving ceiling prices in any permanent certificate of public convenience and necessity which might be issued after a contested hearing. On the contrary, the insertion of these conditions in the temporary certificates showed that the applicants might obtain less than ceiling if and when a permanent certificate were issued. The insertion of these rate conditions in the temporary certificates illustrated graphically that the Commission never intended that its ceiling prices were to be relied upon as representing the "in-line" price or a rate which was necessarily the "rate . . .

---

[8] See footnotes 5 and 6, *supra*.

required by the public convenience and necessity."[9] Moreover, since the Skelly determination every temporary certificate issued by the Commission in Texas Railroad Commission District No. 4 relating to a contract executed prior to the issuance of the Fifth Amendment proposing prices in excess of 15 cents has been conditioned down to a floor of 15 cents per Mcf (14.65 psia).

The Commission's exercise of discretion in inserting refund conditions in temporary certificates whenever it considered it appropriate to do so, even where the contracts were at or below the ceiling prices, indicated clearly to every producer who accepted such a conditioned certificate that there could be no sound basis for assuming that reliance could be placed upon the ceiling prices announced in the policy statement as affording a right, in the event of a contest, to the agreed upon contract price as long as the latter was at or below the ceiling price. Such reliance would be illusory and wholly inconsistent with the issuance of a refund condition in the temporary certificates. In fact if such an understanding or purported reliance were sound, all the applicants here would be entitled to a permanent certificate at the contract rate without the necessity for a formal hearing and no reasonable purpose would be served by setting this matter down for a hearing in which the rate level was to be considered a major issue, as the Commission contemplated that it would be when it issued Skelly.[10]

The courts have held, and it is still the law, that where there is a contest in which the matter of the initial price becomes an issue there must be a hearing and the applicant must establish, among other things, that the initial price he is seeking is "in-line".

This legal principle was recognized and implemented by the Commission's order issued on January 30, 1963, 29 FPC 171, in the instant proceeding after Texaco had applied for a *subpoena duces tecum* requiring the Commission's Secretary to produce various materials upon which the Commission relied in setting the level of the ceiling prices contained in its policy statement.

---

[9] In Dockets Nos. CI61–1451, *Emory M. Spencer (Operator), et al.*, and in CI62–729, *Tex-Star Oil & Gas Corporation (Operator)* in this proceeding, the Commission issued temporary authorizations in Texas Railroad Commission District No. 4 *prior to Skelly* and after the issuance of the Policy Statement which conditioned the first docket on the refunding of "amounts in excess of the amount resulting from the rate finally determined to be proper . . .", and conditioned the second docket, on the refunding "with interest at 7 percent of any amounts collected in excess of 12.12268 cents per Mcf which amount may be in excess of the rate determined to be required by the public convenience and necessity . . .".

The effective dates of the certificates issued to Emory M. Spencer (Operator), *et al.*, and Tex-Star Oil & Gas Corporation (Operator) are May 25, 1961, and May 4, 1962, respectively.

Spencer's initial contract price was 18 cents per Mcf. Tex-Star's initial contract was at 17.24347 cents per Mcf.

In Dockets Nos. CI62–1544, *Amerada Petroleum Corporation, et al.*; CI62–607, *Gulf Oil Corporation;* CI62–726, *MPS Production Company* (Operator); CI62–73, *Skelly Oil Company;* CI62–276, *Sun Oil Company;* and CI62–639, *Union Producing Company* in this proceeding, the Commission issued temporary authorizations subsequent to Skelly each conditioned on the refunding of "any amounts collected plus interest at 7 percent per annum, in excess of 15.0 cents per Mcf which may be determined to be in excess of the price required by the public convenience and necessity . . .".

The respective effective dates of the temporary certificates for these producers were as follows: *Amerada Petroleum Corporation, et al.*, October 8, 1962; *Gulf Oil Corporation*, October 8, 1962; *MPS Production Company (Operator), et al.*, January 30, 1963; *Skelly Oil Company*, October 8, 1962; *Sun Oil Company*, February 20, 1963; and *Union Producing Company*, October 8, 1962.

The initial contract prices for Amerada, Gulf, Union and Skelly were 18 cents per Mcf and the initial contract prices for MPS and Sun were 16 cents per Mcf.

[10] *Skelly*, Opinion No. 362, p. 412.

In denying Texaco's application the Commission stated:

> Our opinion in *Skelly* makes it clear that the Policy Statement sets forth *only "guideline" prices* at which the Commission indicated it would exercise its discretion *in the absence of protest* by intervening parties to certificate sales in a particular area. *It did not purport to fix the "in-line" price which CATCO and the UGI cases which followed it makes clear are, in the absence of a compelling showing to the contrary, to be the public convenience and necessity price fixed after the statutory Section 7 hearing.*
>
> *The burden of justifying the price at this hearing rests with the producer-applicant, but to the extent that contract provisions allow, this price may be higher or lower than the guideline price as the evidence demonstrates.* [pp. 172–173 footnotes omitted; italic supplied.]

The Commission's statement in the Texaco order issued in the instant case quoted above was repeated on February 7, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 29 FPC 273 when the Commission issued an order denying Texaco's request for a *subpoena duces tecum* in that case. An important footnote in the Commission's order denying Texaco's applications reads as follows:

> 5. Our reference in Skelly to the fact that the producers in those proceedings would be free to show whether the in-line price at the time of their contracts was the original ceiling price established on September 28, 1960, the lower price found to be the in-line price prior to that date or the 16-cent price established in the 5th Amendment to the Statement of General Policy does not mean that they are confined to any of these three separate prices if the relevant in-line price is in fact at some other level. *By this language we meant only to convey the thought that at this hearing all parties would be free to show the proper in-line price, wherever it might happen to fall.* [p. 275; italics supplied.]

The Commission in this footnote again said that the objective of the hearing was to show the locus of the "in-line" price beginning with the period starting on September 28, 1960, and ending August 30, 1962. This directive to find the "in-line" price for this period was made in the context of a holding that the "in-line" price for the period immediately preceding September 28, 1960, was 15 cents per Mcf. The Commission in *Skelly* relied heavily on the CATCO and UGI cases requiring the Commission to hold the line and the Commission held the line at 15 cents per Mcf. The problem to be resolved here is whether in the period immediately following September 28, 1960, up to August 30, 1962, the "in-line" price should be placed at a higher level than 15 cents per Mcf because weight should be given to the 18-cent ceiling price, or because of other considerations.

As he pointed out, the Commission realized that the 18-cent price ceiling did not establish such figure as the "in-line" price in September 1960. Nor could any reasonable consideration of the policy statement be read as making the document a form of promissory note to the industry, authorizing prices higher than "in-line" prices so long as they did not exceed 18 cents per Mcf in future certificates of public convenience and necessity which the Commission might issue. The policy statement containing the 18-cent ceiling price did not stem from any quasi-judicial hearing, was binding on no one, and neither denied nor granted any rights. It was not an order and the document was not adjudicatory in any sense.

Further, the degree of importance which the Commission attached to any of the numerous factors to which it hinged its conclusions concerning ceiling prices has never been disclosed. In these circumstances when the Commission "placed in the hearing crucible the issue of the effect of the ceiling upon subsequent contracts . . .",[11] the producers took various approaches in their attempt to resolve this issue.

For example, some of the producers testified that they "relied" on the Policy Statement as authorizing them to receive differing contract prices, without price conditions so long as such prices were not above 18 cents per Mcf.

Since the Commission in *Skelly* had "rejected, after hearing, the contention that the establishment of the 18-cent ceiling in September 1960 fixed that price as the proper in-line price as of that date"[12] and since there is no basis in the evidence for concluding that the 18-cent price became the in-line price immediately after September 28, 1960, or at any time between September 28, 1960 and August 30, 1962,[13] the testimony of reliance on the ceiling price during the period between September 28, 1960 and August 30, 1962, could hardly be considered a seriously responsive answer to the "precise question of the weight to be given in a certificate case to the area price in effect at the time a producer contract [was] executed" in this case.[14]

Other producers including Texaco sought a *subpoena duces tecum*, among other reasons, for the ostensible purpose of obtaining evidence from the Commission's records which they could employ in resolving the issue of the weight to be given the ceiling prices in determining the appropriate public convenience and necessity price in this proceeding.[15]

Texaco offered evidence by its own witnesses, largely of an economic nature[16] but since no one in this proceeding knows how much weight was given by the Commission to any of the factors referred to in the policy statement or specifically how these factors were considered, Texaco's evidence could hardly be considered responsive to a determination of the issue of the weight to be given to the Commission's ceiling prices. Moreover, Texaco's economic evidence was excluded for the additional reasons set forth in the examiner's ruling of December 6, 1962.

Sun, on the other hand, attempted to make a full rate case presentation and its evidence was also rejected for the reasons set forth in the examiner's December 6, 1962 ruling.

The Commission's statements in Skelly reflect its position that such decision did not purport to modify or reverse the principles expressed in the *CATCO* and *UGI* cases to the effect that the appropriate public convenience and necessity price in the absence of a showing to the contrary, is to be referenced to the "in-line" price in the area under consideration as of the time of the execution of the contract and that in determining such "in-line" price the Commission is not required to determine whether the "in-line" price is the just and reasonable price.

The announcement of the ceiling prices in the policy statement were not intended to require a change in the character of these proceedings from that which antedated the policy statement. The Commission's orders in issuing temporary certificates and in denying Texaco's applications also reflected a Commission view that it understood that the "in-line" price might very well be different than the ceiling price. In addition, the orders denying the subpoena applications reflects the Commission's opinion that the ceiling price levels were not to be considered paramount to or substitutes for the "in-line" price levels in determining whether or not to condition a permanent certificate as to price after a contested hearing.

---

[11] *Skelly*, Opinion No. 362, p. 418.

[12] As a matter of fact the Commission issued its Fifth Amendment on August 30, 1962, the day it issued Skelly, fixing the ceiling price at 16 cents per Mcf. There is no basis in the evidence for concluding that between September 28, 1960 and August 30, 1962 that either the price or the cost of producing gas went down. (*Skelly*, Op. No. 362, p. 418.)

[13] *Skelly*, Opinion No. 362, p. 418.

[14] *Skelly*, Opinion No. 362, p. 417.

[15] Recently, the Court of Appeals for the District of Columbia granted a Commission motion to dismiss Texaco's appeal from a Commission order denying Texaco's application for a *subpoena duces tecum*. Nos. 17608, 17652, 17700 (June 24, 1963).

[16] Texaco in this proceeding offered evidence of essentially the same character as was rejected by the Commission in *Skelly*, Opinion 362, pp. 410 and 411.

Certainly the price ceilings were not issued for the purpose of affording the producers the right to the ceiling price or the "in-line" price whichever was higher, for such a purpose would erode the basic admonition of CATCO to "hold the line". It should be recalled that in Skelly the Commission found that the "in-line" price was 15 cents up to September 28, 1960, and the Commission held such line up to the latter date. As we have noted, one of the purposes of this hearing is to determine whether the Commission has good ground to permit the "in-line" price in certificate cases to be raised to consumers after September 28, 1960, by giving weight to a ceiling price in effect at the time the producer contracts involved in this proceeding were executed. The ceiling price, as the discussion hereinafter shows, was 3 cents higher than the "in-line" price. The importance of giving weight to the in-line price rather than the ceiling price may be highlighted by reference to the statements of the Chairman of the Commission in a speech on September 19, 1961, to the Independent Natural Gas Association where he pointed out that:

> I am fully aware of the great responsibilities of the Commission in the field of producer rates. This year the industry will probably sell something in the order of 13 trillion cubic feet of gas. A difference of a cent a thousand cubic feet is equal to $130,000,000 a year. A cent a thousand difference in the value of the estimated proven reserves is equal to approximately 2½ billion dollars. If we calculate on the basis of the estimates of recoverable gas in the ground in the United States, each cent per thousand is roughly equal to 15 billion dollars. These are indeed astronomical figures, even in Texas, so large that in computing them I checked several times to be sure I was not running in an extra string of zeros.

The importance to consumers and to producers of even a one cent increase in the "in-line" price cannot be minimized. Accordingly, it is clear that even a one cent increase in the "in-line" price from 15 cents to 16 cents is a matter of very great importance, and that an increase in the "in-line" price should not be put into effect simply on the basis of an ex parte policy statement which the Commission advised the Court of Appeals was not an order, was binding on no one, and which did "not modify the procedures under which certificates are granted. . . ."[17] Nor should the "in-line price be considered to have suffered a change because some producers misunderstood the meaning and effect of the policy statement and placed unwarranted reliance on it as affording them higher than "in-line" prices for their gas in certificate proceedings.

Certainly where the "in-line" price is at a different level than the "ceiling price" both could not be used at the same time in the same proceeding as the measuring rod in the determination of the locus of the public convenience and necessity initial price. Further, where it appears that the ceiling price is higher than the "in-line" price, the application of the ceiling price instead of the "in-line" price as the basis for determining whether or not a price condition should be imposed would amount to taking a position directly contradictory to the Supreme Court's admonition in CATCO to "hold the line" until the just and reasonable price can be determined under other sections of the Act.

---

[17] See discussion of Commission's motion to dismiss in *Wisconsin* v. *F.P.C.*, 292 F. 2d 753 discussed hereinafter.

In the Commission's initial Statement of General Policy No. 61-1, the Commission stated, among other things, that it considered eight different factors in arriving at its ceiling prices for initial service rates, 24 FPC at 819. These factors were as follows: (1) cost information from all decided and pending cases, (2) existing and historical price structures, (3) volumes of production, (4) trends in production, (5) price trends in the various areas over a number of years, (6) trends in exploration and development, (7) trends in demands and (8) the available markets for gas.

It is clear that the Commission did not limit itself solely, or even principally to a determination of what the "in-line" price in any of the various areas was at the time it issued the initial policy statement or at the times it issued any of the amendments thereto. Instead, it considered many other matters wholly unrelated to a determination of "hold the line" prices and then the Commission stated that it had applied all such considerations to the determination of what has been referred to here as "ceiling prices". Quite obviously the Commission reached its conclusions as to price levels for policy statement purposes by according weight in an unstated amount and in an unexplained manner to the various factors set forth in the policy statement. The factors usually considered in order to establish the locus of an in-line price are much more limited than those employed by the Commission in reaching ceiling prices. The considerations bearing upon in-line prices are related to and based upon a reasonable comparison of the contract prices previously entered into in the area at the time of the contract being considered and are not necessarily related to the various factors upon which the Commission's ceiling prices were based. This was illustrated by Skelly. The ceiling prices reached by considering the factors referred to by the Commission could, depending upon how such factors were employed, be used to place the public convenience and necessity price at practically any figure. As this case developed it was established that the in-line prices were substantially lower than the ceiling prices. This appears to be one of the reasons why Texaco would rather go into a presentation of evidence based upon its own exposition of certain of the factors considered by the Commission in determining ceiling prices rather than into a presentation of evidence relating to "in-line" price. It may also be observed that since there is no way of comparing a known with an unknown, no meaningful conclusion could be reached by any attempted comparison of the economic data offered by a producer, such as Texaco, with the economic data employed by the Commission.

The considerations relating to the determination of the ceiling prices and those relating to the "in-line" prices were of a different character and if the prices were the same for the ceiling prices and the "in-line" prices it would be pure coincidence. The Commission gave some recognition to this fact when it said in *Skelly* that "We have rejected, after hearing, the contention that the establishment of the 18-cent ceiling in September 1960 fixed that price as the proper "in-line" price in Texas Railroad Commission District 4 as of that date . . .". The Commission arrived at the 16-cent price in its Fifth Amendment by considering the same factors as it had considered when it issued its 18-cent ceiling price.[18] The Commission's quoted comments rejecting the claim that the 18-cent price was the "in-line" price are equally applicable to the 16-cent price set forth in its Fifth Amendment.

---

[18] See particularly footnote 1 in the Fifth Amendment.

In its order of January 30, 1963, the Commission explained that the ceiling prices are not the standard for determining the public convenience and necessity initial price but that the "in-line" price is the standard.[19] In addition, as the Commission pointed out, the *CATCO* and *UGI* cases put it under an obligation to condition its permanent certificates of public convenience and necessity to a hold-the-line standard, at least when an applicant's price is the subject of a contested proceeding.

Accordingly, the attempt by Texaco to make an issue in the instant proceeding of the nature or the correctness of the data employed by the Commission or its judgment in fixing the ceiling prices in the policy statement by the use of the data referred to in the policy statement constituted an attempt to raise an issue which was irrelevant to a determination of a "hold-the-line" price, which is the essential standard in determining whether or not to insert a price condition in a certificate order after a hearing on the merits. The examiner issued a 23-page ruling on December 6, 1962, granting motions to strike and exclude evidence offered by various interveners. Such ruling is incorporated herein in full and is made an integral part of this initial decision.

The Commission's position in issuing its orders denying Texaco's applications for *subpoena duces tecum* were completely consistent with views which it has expressed publicly in the past. For example, shortly after the Commission issued its Statement of General Policy 61–1, the State of Wisconsin and its Public Service Commission sought to have the validity of such policy statement reviewed in the Court of Appeals for the District of Columbia.[20]

The background facts were as follows:

The Commission issued its Opinion No. 338 in *Phillips* on September 28, 1960, 24 FPC 537, and at the same time it issued its Statement of General Policy No. 61–1. The State of Wisconsin and its Public Service Commission were important parties to the Phillips case. They considered themselves aggrieved by the issuance of the policy statement and sought review in the Court of Appeals for the District of Columbia.

The response of the Commission to Wisconsin's petition for review of the policy statement was to file a motion with the Court of Appeals to dismiss it on the ground that the Court lacked jurisdiction. In its motion to dismiss the Commission stated to the Court of Appeals that:

> The [Policy] Statement does not direct anyone to act or refrain from acting. It says that it does not fix the ultimate justness and reasonableness of any rate level. (Pet. Exh. A, p. 3) *It does not modify the procedures under which certificates are granted or rates are changed. It denies no rights and imposes no obligations.* [Italic supplied: see page 2 of FPC's motion to dismiss addressed to the United States Court of Appeals in the District of Columbia Circuit.]

The Court of Appeals in *Wisconsin* v. *F.P.C.*, 292 F. 2d 753, held that:

> It is apparent to us that petitioners here were not parties to a proceeding below within the meaning of the statute.[1] This case is controlled by our decision in *United Gas Pipe Line Co.* v. *Federal Power Commission*, 86
>
> [1] Petitioners also contend that they are "aggrieved" and that the action in question is a final "order." Since we hold that petitioners were not parties to a proceeding below, we find it unnecessary to decide, and hence we expressly refrain from deciding these questions.

---

[19] See "Order Denying Application for Reconsideration and Rehearing" in *Amerada Petroleum Corporation, et al.*, Docket CI62–1544, *et al.*, issued January 30, 1963, 29 FPC 171, particularly the last paragraph, page 172.

[20] *Wisconsin* v. *F.P.C.*, 292 F. 2d 753.

> U.S. App. D.C. 314, 181 F. 2d 796, certiorari denied 1950, 340 U.S. 827, 71 S. Ct. 63, 95 L. Ed. 607. Petitioners there sought review under Section 19(b) of an order of the Federal Power Commission adopted pursuant to the rulemaking procedures established by Section 4 of the Administrative Procedure Act, 5 U.S.C.A. § 1003. No quasi-judicial hearings were held. We ruled that we were without jurisdiction to entertain the appeal, and said "[n]ot all orders were made reviewable under Section 19(b) * * *. On its face, the Act contemplates review of a decision based on evidence presented in a quasi-judicial proceeding before the Commission * * *. Unless the case comes to us after such a proceeding, we are given no authority to directly review the Commission's action." Id., 86 U.S. App. D.C. at pages 316-317, 181 F. 2d at page 798.[2]
>
> [2] It is manifest that the mere filing of a petition for rehearing could not make petitioners parties to a proceeding if they were not already so. Under Section 19(a) of the Natural Gas Act, only a party to a proceeding is entitled to seek rehearing. [292 F. 2d 754, 755.]

It appears that the Court of Appeals was impressed with the Commission's explanation to the effect that the Policy Statement did not modify the procedures under which certificates were to be granted and that the Policy Statement denied no rights.

The holding in this case points up the fact that there was no basis for any producer to consider that he was entitled to rely upon it as affording him a right to any contract price up to 18 cents per Mcf.

One of the important facts which should be kept in mind with regard to the Commission's Policy Statement is that its major emphasis is directed towards informing the industry that the Commission would not issue certificates without a price condition where the proposed initial rates included *"rates higher than those indicated in the appendix* attached to" the policy statement "in the absence of compelling evidence calling for other action by the Commission". The Commission, however, has never defined what it considered "compelling evidence."

The Commission's Policy Statement does not even refer to what action the Commission would take as to conditioning prices where the sales are proposed at initial rates at the level or below the level of the prices set forth in the appendix to the statement. Specifically, the policy statement does not say that the Commission would not attach contingent refund provisions in temporary or permanent certificates where the initial rates proposed were at or lower than the price ceilings but, in fact, as we have pointed out above the Commission has in circumstances where it has deemed it appropriate to do so in cases where the initial rates were below the policy statement prices attached such refund conditions in temporary certificates in Texas Railroad Commission District 4 down to a floor of 15 cents per Mcf.

The Commission has never issued any orders or made any statements to indicate that it had changed its position from that set forth in its motion to the Court of Appeals in *Wisconsin* v. *F.P.C.*, nor has it ever indicated that it intended to abandon the "in-line" standard for one involving higher rates than "in-line" prices. On the contrary the Commission's orders in contested hearings have been consistent with its representations to the court in the Wisconsin case and consistent with *CATCO* and the *UGI* cases. The Commission's order in *Skelly* was based on its effort to hold the line as have all other permanent orders issued by the Commission since *CATCO*.

It was, or should have been, clear to the applicants that no independent producer had a reasonable basis to claim reliance upon the appendix to the policy statement as granting him any rights to higher prices than the "in-line" prices as required by the decided cases. Specifically, the policy statement did not establish any producer's entitlement to any specific contract price in a contested certificate proceeding. The policy statement is not an adjudicatory order and it is not a finding covering the locus of the "in-line" price and, therefore, any statement of reliance thereon made by a producer could not be given any weight.

The Commission in Skelly pointed out that the record in that case "contained inadequate information for evaluating the effect, if any, of the Commission's enunciation of an 18-cent ceiling upon the in-line price in the area at the time the four post-area ceiling contracts were made." (*Skelly*, p. 418.)

The Commission also said that "The precise question of the weight to be given in a certificate case to the area price in effect at the time a producer contract is executed has not previously been an issue before this Commission."

No contention was made by any party or the Staff that some percentage of the difference between ceiling prices and "in-line" prices should be employed to determine the public convenience and necessity initial prices for the producers involved in this proceeding. As the evidence introduced in this case has developed, either the producers should be entitled to rely completely upon the ceiling prices contained in the Commission's Statement of Policy to afford them any price arrived at in arm's length bargaining up to the ceiling price, or no weight should be given to the policy statement insofar as the fixation of the appropriate public convenience and necessity price is concerned.

If, arguendo, it were assumed that weight should be given the ceiling prices in the policy statement, the record is bare of any evidence upon which it could be determined that partial rather than full and complete weight should or could be given to the price ceilings contained in the Commission's Statement of Policy.

The most important case involving the problem of public convenience and necessity in a Section 7 producer case is *CATCO*.[11]

As every one in this industry is aware the Supreme Court in *CATCO* held that the attachment of a rate condition

> is not an encroachment upon the initial rate-making privileges allowed natural gas companies under the Act, *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp., supra*, but merely the exercise of that duty imposed on the Commission to protect the public interest in determining whether the issuance of the certificate is required by the public convenience and necessity, which is the Act's standard in § 7 applications. In granting such conditional certificates, the commission does not determine initial prices nor does it overturn those agreed upon by the parties. Rather, it so conditions the certificate that the consuming public may be protected while the justness and reasonableness of the price fixed by the parties is being determine under other sections of the Act. Section 7 procedures in such situations thus act to hold the line awaiting adjudication of a just and reasonable rate. Thus the purpose of the Congress "to create a comprehensive and effective regulatory scheme. *Panhandle Eastern Pipe Line Co.* v. *Public Service Comm'n of Indiana*, 332 U.S. 507, 520 (1947), is given full recognition. And § 7 is given only that scope necessary for "a single statutory scheme under which all rates are established initially by the natural gas companies, by contract or otherwise, and all rates are subject to being modified by Mobile Gas Service

---

[11] *Atlantic Refining Co., et al.* v. *Public Service Commission of New York, et al.*, 360 U.S. 378 (1959).

> Corp., supra, at 341. On the other hand, if unconditional certificates are issued where the rate is not clearly shown to be required by the public convenience and necessity, relief is limited to § 5 proceedings, and, as we have indicated, full protection of the public interest is not afforded. [360 U.S. 378, 391-392.]

Accordingly when the Commission attaches a rate condition in a Section 7 producer case it is not engaged in initial rate-making but it is merely exercising its duty to protect the public interest during the period when the just and reasonable rates can be determined under other sections of the Act. *Section 7 procedures in such situations thus act to hold the line awaiting adjudication of a just and reasonable rate.*

To place the line up to 20 percent above "in-line" prices determined as they were in *Skelly*, the *UGI* cases and others under principles established by the courts in contested cases is to avoid the duty which the Supreme Court said was imposed upon the Commission under the Act.

In *The Atlantic Refining Co., Petitioner v. Federal Power Commission, Respondent, et al.*, the United States Court of Appeals for the District of Columbia No. 17,166 decided March 21, 1963, the court noted that:

> . . . the public must be protected from the time the gas first enters interstate commerce. Since there is no mechanism for refund of overcharges under Section 7, *if the Commission is to err in setting an initial rate, it should err on the low side* because the company under Section 4, can immediately increase the rate, subject to disallowance by the Commission after a full rate proceeding, the public being protected as to refunds in the interim.

The court's reference to the lack of a mechanism for refund of overcharges obviously refers to overcharges made in the context of the issuance of a permanent certificate where higher than "in-line" prices were authorized or to a situation where a temporary certificate was issued without refund conditions at higher than "in-line" price.

Both the Court of Appeals for the District of Columbia in The Atlantic Refining Company case and the Circuit Court of Appeals for the Tenth Circuit in *California Oil Company, Western Division* v. *Federal Power Commission*, No. 7148, decided in the March, 1963, Term referred to "the purpose of the Natural Gas Act to 'underwrite just and reasonable rates to the consumers of natural gas'" and both opinions also noted that "As the original § 7(c) provided, it was 'the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use at the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest.'" 52 Stat. 825. "The Act was so framed as to afford consumers a complete, permanent and effective bond of protection from excessive rates and charges." *Atlantic Refining Co.* v. *Public Service Commission, supra*, 360 U.S. at page 388.

A member of the Federal Power Commission recently expressed some personal views regarding the ceiling prices set forth in the Statement of General Policy and the "in-line" prices as applied in independent producer certificate proceedings. The Commissioner's statement [2a] reads in pertinent part as follows:

> Apparently there has arisen a great deal of misunderstanding with respect to the difference between the so-called "guideline" prices set forth in the General Policy Statement, and the so-called "in-line" price which is determined as a result of hearing in independent producer certificate proceedings.

[2a] Address of Lawrence J. O'Connor, Commissioner, Federal Power Commission, before the Eastern District of the American Petroleum Institute, Pittsburgh, Pennsylvania, May 3, 1963. Commissioner O'Connor joined in the majority opinion in Skelly.

> The "guideline" price as set forth in the Statement of Policy is the maximum price at which the Commission will issue an unconditioned temporary certificate to enable the initiation of service in cases of emergencies under Section 157.28 of the Commission's Regulations under the Natural Gas Act. *In the absence of protest or petition to intervene, after publication of notice, the Commission will issue a permanent certificate at the "guideline" price.*
>
> *The "in-line" price is the adjudicated public convenience and necessity price fixed after the statutory hearing required under Section 7 of the Natural Gas Act.*
>
> I refer to this only because the Commission was, in effect, accused of bad faith in not adhering to the Statement of Policy price in determining the "in-line" price. This happened in the *Skelly* case. One of the producers in that case contended "that if the Policy Statement is to be effective, a producer should be able in good faith to rely on the prices set forth in the Statement—at least until lawfully superseded."
>
> In answer to that contention, the Commission attempted to make its position clear when it stated:
>
> > An important consideration in making our findings in this proceeding is the effect to be given our Statement of General Policy No. 61-1. This Statement was issued September 28, 1960, to assist in meeting the practical problems of regulating the prices of the independent producers pending completion of the various area rate proceedings. It sets forth price levels applicable to various areas in determining whether certificates for new sales should be conditioned upon acceptance of a lower price and increased rate filings should be suspended. * * * However, as the language of the Policy Statement makes clear, the area ceilings are guidelines to future action. *Our Policy Statement cannot effect an automatic approval of proposed rates * * *.* [*Skelly Oil Co.*, et al., 28, FPC 401, 407 Opinion No. 362, Docket No. G-18638, *et al.*, issued August 30, 1962. See also, *Amerada Petroleum Corporation, et al.*, Docket No. CI62-1544, *et al.* "Order Denying Application for Reconsideration and Review," issued January 30, 1963, 29 FPC 171.]
> >
> > *The reason why the Policy Statement cannot effect an automatic approval of proposed rates must be clear to you. The Policy Statement was issued without hearing. Parties had no opportunity to contest the guideline prices set forth therein. Section 7(c) of the Natural Gas Act requires notice of an application be given and a hearing be held prior to the issuance of a permanent certificate. It is only after notice has been published that potential protestants and interveners are made aware of the prices proposed to be charged in the event a permanent certificate is issued. Thus, those parties who have valid protests must be heard prior to final action on the certificate application. They cannot legally be denied the right to hearing afforded by statute.* [Italic supplied.]

The point being made was that the policy statement cannot be converted into an order—certainly it could not be converted into an order binding upon any persons who had no opportunity to be heard and who might be adversely affected thereby.

As we have noted, the Commission in its decision in Skelly, Opinion No. 362 and accompanying order, severed four dockets and consolidated them into the instant proceedings. These dockets were CI61-62 involving Kats (for whom Sohio has been substituted), CI61-922 involving Hamon, CI61-956 involving Sun, and CI61-961 involving Texaco. These dockets will be discussed at this point and thereafter, to the extent reflected in the pertinent and material evidence the examiner will further consider the problem of what weight, if any, could be afforded the policy statement, insofar as the determination of the public convenience and necessity price in this proceeding is concerned.

In connection with the claim of reliance upon the policy statement it is noted that at page 6 of Skelly (Slip Opinion), the Commission quoted Hamon as saying "that if the Policy Statement is to be effective a producer should be able in good faith to rely on the prices set forth in the statement—at least until lawfully superseded."

Presumably Commissioner O'Connor's comments referring to a misunderstanding with respect to the difference between the so-called guideline prices and the "in-line" price, related to the claim of reliance upon the guideline price made by Hamon and by some other producers.

The Commission in *Skelly* again referred to Hamon and pointed out that the then presiding examiner did not recommend the imposition of a price condition, except for Hamon, whose 18-cent price he would reduce to 16.5 cents for lack of arm's length bargaining (p. 406). The Commission said the then presiding examiner had "referred to the Staff's exhibits as showing an existing price level in the 16–17 cent range." (*Skelly*, p. 406.) Later, at page 412, fn 25, of *Skelly*, the Commission said that

> The action taken here [the severance of the Hamon docket] obviates the need for determining in this order whether the Hamon sale was or was not made at arm's length, and we do not adopt the examiner's discussion of this point.

A reading of the Staff's brief in the *Skelly* case shows that the Staff contended that on the basis of Hamon's testimony his agreement with South Texas was not at arm's length, and the examiner after considering the evidence agreed with the Staff. The basis for the Staff's contention was that the purchaser was South Texas Gathering Company; South Texas is wholly owned by Coastal States and the latter and Hamon each had a 50 percent interest in the gas which was being sold to South Texas. Accordingly, the negotiations leading to the execution of the Hamon contract were colored by the fact that there was a very close economic relationship between the seller and the buyer and there was no independent showing that the price agreed upon would be the same as that reached in normal arm's length bargaining by persons not having such a close relationship.[22] The idea that a buyer would engage in as hard bargaining to arrive at the lowest possible price in this situation as he would in the normal situation where there was no relationship between seller and buyer is entitled to be viewed with a reasonable degree of skepticism.

While "the price of gas is of no great concern [to a pipeline], because whatever price it pays can be recovered from the consumer through an increase in rates" [23] the price of the gas would be of great concern to the producer and to the consumer, and is of grave concern to the Commission in this proceeding.

In any event, 18 cents per Mcf was substantially higher than the "in-line" price, as pointed out in the discussion hereinafter. In the circumstances Hamon's as well as the other producers' easy reliance upon a ceiling price which was substantially higher than the "in-line" price as a standard for establishing the public convenience and necessity price was understandable. At the same time, particularly in view of *CATCO*, the *UGI* cases, the Wisconsin case, and the standard for determining the public convenience and necessity price actually employed by the Commission in Skelly, and in view of the marked differences in derivation between ceiling prices and in-line prices, it is most difficult to see how weight could be given to the ceiling prices or any claim of reliance upon ceiling prices as the basis for determining the public convenience and necessity price for gas sold in Texas Railroad Commission District No. 4 subsequent to September 28, 1960. Further, if it were assumed, arguendo, that some weight should be given ceiling prices in this Section 7 proceeding the fact is that there is no evidence in this record showing specifically how such weight could or should be measured, or how the weight to be imputed to the ceiling prices could or should be applied to the varying contract prices of the numerous producers in this proceeding.

---

[22] During the hearing counsel for Texaco took the position that the entire record in Skelly was a part of the record in the instant proceeding. This record, among other things, contains substantial evidence relating to "in-line" prices. The undersigned expressed his agreement with the position taken by Texaco's counsel.

[23] See *Atlantic Refining Co. v. F.P.C., et al.*, United States Court of Appeals for the District of Columbia Circuit, No. 17,166 decided March 21, 1963, 316 F. 2d 677 at p. 679, footnote 11.

The Commission in *Skelly* found that the "in-line" price in Texas Railroad Commission District No. 4 was 15 cents per Mcf up to September 28, 1960.

Hamon has two contracts involved in this proceeding, one made less than two months after September 28, 1960, and one made approximately seven months thereafter, both at an initial price of 18 cents per Mcf.

It is clear that the ceiling prices contained in the policy statement when promulgated on September 28, 1960, did not of themselves constitute an order or a rate adjudication denying or granting any rights to Hamon, UGI, the public service commissions, or anyone else. The policy statement of itself did not limit Hamon in making agreements for the sale of his gas to an 18-cent per Mcf price or any other level. He had and still has the right to make contracts at as high a price as he can obtain.

If the certificate which is issued by the Commission upon the filing of an application by Hamon or any other producer contains a price condition, such condition serves only for an interim period awaiting the determination of the just and reasonable rate level for such producer under other sections of the Act.

The testimony of Hamon and other producers that they are entitled to obtain their contract prices in the certificate proceeding without any price condition because they relied on the price ceilings contained in the policy statement adds up to no more than an unsupported contention that the Commission's policy statement was the equivalent of an order after hearing establishing the ceiling prices as the initial public convenience and necessity prices subsequent to September 28, 1960. In this connection, it should be noted that the public convenience and necessity price for Texas Railroad Commission District 4 was found by the Commission, after an extended hearing on the merits, to be no higher than 15 cents per Mcf up to September 28, 1960, the date of the issuance of the policy statement.

In this proceeding, when Hamon or any other producer asserts that in negotiating a contract he relied upon a ceiling price (which was substantially higher than the "in-line" price at the time) what he is saying is that he was entitled to consider that the policy statement in and of itself effected an automatic approval by the Commission of higher than the "in-line" prices beginning the day after September 28, 1960, so long as such higher prices were not more than 20 percent higher than the in-line prices determined as of the latter date. To accept the producers' contentions concerning their reliance on the ceiling prices would be to hold that the Commission by issuing the policy statement had prejudged the only controverted issue in the proceeding, *i.e.*, the appropriate public convenience and necessity initial price.

On this theory of the case there would be no point in trying out the only matter which has been put in issue by Staff and the interveners.

As Commissioner O'Connor pointed out, however, "Our Policy Statement cannot effect an automatic approval of proposed rates . . .".

The Commission in *Skelly* (p. 407) referred to *Coastal Transmission* and pointed out that the "price guides do not constitute a floor to be used to raise proposed initial prices to the highest levels abstractly permissible thereunder."[34]

Hamon joined with Amerada, Gulf, Humble, Lamar Hunt, Skelly, Sohio, Spencer, Texaco and Union Producing Company in the filing of an initial joint brief. This brief was submitted for the purpose of persuading the examiner and the Commission that the testimony of witnesses Clark, Owens, and Schantz, constituted admissible evidence showing the " 'Reasons Why' These Sales should be Certificated at the Prices Provided in the Various Producer Contracts". In addition the joint brief contended that for various reasons the examiner's ruling of December 6, 1962, should be reconsidered and reversed. The examiner has further considered the arguments made by the parties and adheres to the conclusions expressed in the latter order striking the testimony of the aforesaid witnesses for the reasons expressed therein.

Hamon's certificate should be conditioned at 15 cents per Mcf which as the subsequent discussion shows is the in-line price level in Texas Railroad Commission District 4.

In Docket CI61-627 it appeared that Sohio succeeded to Katz' interests and was substituted for him. Katz had been a party to Skelly and, as we have noted, his docket was severed from the latter proceeding and consolidated with the instant one. Katz testified in both the Skelly case and in the instant proceeding. In the instant proceeding Katz testified that he relied upon the Commission's ceiling prices in the negotiations which led up to the 17 cents per Mcf contract which he executed. Having succeeded to Katz' interests, Sohio claimed in view of Katz' reliance in the course of the negotiations upon the 18 cents per Mcf level ceiling prices it was entitled to obtain a permanent certificate at the contract level, with no price conditions attached to the certificate.

The examiner's views with regard to the matter of reliance by the producers upon the Commission's ceiling prices have been expressed hereinabove and are applicable to Sohio and all other producers who "relied" on the ceiling prices to sustain their contracts with regard to the initial public convenience and necessity price.

The Commission's policy statement was issued on September 28, 1960, and the contract between Katz and South Texas, the purchaser, was dated October 17, 1960.

While Katz testified in the instant proceeding that he had relied upon the ceiling prices in negotiating his contract, the same witness testified with regard to his negotiations with the pipeline, South Texas, in regard to the same contract in the Skelly case and in the latter case he testified that:

> Finally, in August of 1960, we [Katz] entered into finalization of a contract with South Texas, which contract is the October 17th contract referred to above. [Docket G-18638, *et al.*, Transcript p. 274.]

Since in August 1960 when Katz' contract was "finalized" the policy statement had not even been issued, Katz' statement of reliance upon the policy statement as a causative factor in the negotiaton of his 17-cent contract simply cannot be given any weight in this proceeding. Moreover, even if Katz' testimony of reliance were considered credible the effect of giving weight to such testimony would be to substitute ceiling prices which were higher than in-line prices as the standard for determining whether or not a rate condition should be imposed. To take this position would be to destroy a principle established by the courts in the interpretation of Section 7 and to supplant it with a totally different and wholly inconsistent doctrine whose principal effect would be to raise natural gas prices in Texas Railroad Commission District No. 4 and elsewhere above the in-line standard for certificate purposes and thus deprive consumers of the protection which the courts have admonished the Commission to afford them during this interim period while the just and reasonable rates for gas are being determined under other sections of the act.

---

[34] *Coastal Transmission Corp.*, 26 FPC 677 at 682, Docket No. G-18238, *et al.*, Order of November 2, 1961.

Sohio is not entitled to a certificate without a price condition determined at the in-line price.

Sun in Docket CI61–956 is seeking a certificate authorizing a price of 17 cents per Mcf. The major part of Sun's evidence is devoted to a full cost of service presentation such as would be appropriate in a Section 4(e) or Section 5(a) case. This evidence is not admissible in this proceeding for the reasons set forth in the examiner's ruling striking such evidence.[28] The evidence offered by Sun was of no assistance in arriving at any conclusion relative to the weight which should be given the policy statement.

After the examiner's ruling rejecting the bulk of Sun's evidence only the evidence of its witness Hamilton remained. Hamilton did not affirmatively state that in negotiating Sun's contract the company relied upon the Commission's policy statement as the basis for reaching agreements with the buyer or that the policy statement was the equivalent of an order and as an order the policy statement gave Sun the right to any price it could get in this district up to 18 cents per Mcf.

Sun presented no evidence as to the in-line prices in this proceeding. It argues, however, that all of its various prices including that in Docket No. CI61–956 are in-line.

There is nothing in Sun's testimony which would be helpful to reaching a conclusion that any weight could be given the policy statement.

Texaco in Docket CI61–961 is seeking a certificate authorizing 16.9465 cents per Mcf for its gas.

The bulk of Texaco's evidence has been considered and disposed of in the examiner's ruling of December 6, 1962, which is incorporated in this decision as if fully set forth herein. A major part of Texaco's evidence was excluded for the reasons stated therein.

Texaco filed a brief jointly with others. There is nothing helpful in this brief, which has been referred to hereinabove. There is nothing in this brief (which consists in part of a reargument of the ruling of December 6, 1962, striking evidence) which is helpful to a resolution of the weight to be given ceiling prices.

More importantly there is nothing in the separate brief filed by Texaco or in the evidence presented by Texaco which is responsive to the resolution of the problem posed by the Commission in *Skelly*, namely what weight, if any, should be given the ceiling prices.[29]

It must be concluded that the evidence presented in the four dockets severed from Skelly was not helpful to a resolution of the issue posed by the Commission in the severance of these dockets.

---

[28] See also examiner's ruling in *Hassie Hunt Trust, Operator, et al.*, issued May 31, 1962, appeal denied on its merits by the Commission July 19, 1962, where the same contention was made by an applicant.

[29] See discussion of Texaco's evidence in examiner's ruling of December 6, 1962.

We shall turn now to a consideration of the other contracts involved in this proceeding.

Based on the estimated first month's volumes figures supplied by all applicants in these proceedings, the total amount of gas proposed to be delivered on a monthly basis by the producers herein will be approximately 2,635,000 Mcf.

The producers making the five largest sales in this proceeding are Standard Oil Company of Texas (Sotex), Sun, Coates, Amerada, and Gulf Oil Corporation (Gulf). The sales proposed by these five applicants involve a total of 1,688,050 Mcf on an estimated first month's delivery basis. This represents over 60 percent of all the gas proposed to be delivered in these proceedings,[27] and the evidence presented by these five applicants is fully representative of the varying positions of the parties to this proceeding.

The largest volumes of gas proposed to be sold by any individual applicant are those involved in the dockets of Sotex. Sotex has two applications under consideration here (Docket Nos. CI61–1377 and CI62–1140), totaling first month's volumes estimated by the company at 695,000 Mcf per month.

The initial contract price in Docket No. CI61–1377, covering estimated first month's volumes of 540,000 Mcf, was 19.795 cents per Mcf.[28]

The initial contract price in Docket No. CI62–1140, covering estimated first month's volumes of 155,000 Mcf was 18 cents per Mcf.[29]

At the hearing Sotex' counsel took the position that the company "is proceeding with sales under these two contracts pursuant to the regulations as they have been publicly announced and prescribed by the Federal Power Commission". In this connection counsel stated that Sotex would accept a permanent certificate in each of the dockets conditioned at an initial price of 18 cents per Mcf.

Sotex sponsored certain "trend" and other economic evidence through witnesses Owens and Schantz and Exhibits 1, 2, 3, 4, 5, and 7. This was the same evidence as was presented on behalf of Texaco and other parties and is discussed fully in the examiner's ruling of December 6, 1962, excluding such evidence.

Sotex presented no testimony by any witness relating to the negotiations which preceded the execution of the contracts to which they were a signatory. In principle, the legal position of Sotex and Texaco are substantially similar. Texaco's theory of the case is discussed, and a disposition is made of a major part of the latter's theories in the examiner's ruling of December 6, 1962. The examiner's views regarding Texaco's approach are equally applicable to Sotex.

As we have noted, the contract price for Sotex' largest sale involved herein, namely that in Docket CI61–1377, was 19.795 cents. This contract was executed on March 14, 1961 long after the issuance of the policy statement. Since the ceiling price was 18 cents (inclusive of all taxes)[30] there was no supportable basis for any claim that in executing this contract at 19.795 cents Sotex relied upon the ceiling prices. While it is correct to point out that at the hearing Sotex agreed that it would accept a certificate with an 18-cent price level, this does not change the fact that this record contains no support for any claim that in executing its contract in Docket No. CI61-1377 Sotex relied upon the ceiling prices as a basis for executing such contract. Moreover, even if Sotex had negotiated on the basis that it had relied upon the policy statement in reaching an agreement with the purchaser such reliance would not have been helpful to support its cause for the reasons expressed hereinabove.

---

[27] In addition, it should be noted that special attention has been devoted heretofore to the four dockets severed from Skelly, *i.e.*, Docket Nos. CI61–62 covering Sohio's sales (estimated first month's production of 75,000 Mcf); Docket No. CI61–922 covering Hamon's sales (estimated first month's production of 58,333 Mcf). In addition a second Hamon sale in Docket No. CI62–1745, covering estimated first month's volume of 58,333 Mcf, has been considered. Docket No. CI61–961 covering Texaco's sale of estimated first month's production of 9280 Mcf and Sun's Docket No. CI61–956 were also considered earlier but the volumes there considered are also part of the volumes being further specially considered hereinafter in this decision.

[28] The base price in Docket CI61–1377 was 18½ cents per Mcf and the difference between the latter price and the price of 19.795 cents per Mcf reflects the operation of a tax reimbursement clause relative to taxes imposed by the State of Texas. Sotex has never collected more than 18 cents per Mcf for any of its natural gas which is the subject of this proceeding.

[29] Sotex' 1962 contract (CI62–1140) does not provide for reimbursement to the producer of Texas state taxes.

Sotex' contract in CI62-1140 involving estimated first-month's volumes of 155,000 Mcf was executed in 1962.

While Sotex interprets the Commission's Statement of General Policy 61-1 issued September 28, 1960, as on its face affording it a right to at least an 18 cents initial price, this interpretation was rejected by the examiner for the reasons which have been set forth hereinabove.

The second largest total volumes proposed to be sold by an individual producer herein are involved in five applications filed by Sun (Docket Nos. CI61-657, CI61-956, CI61-1101, CI61-1584, and CI62-276). The total first-month's volumes for these five dockets were estimated by the company at 558,000 Mcf. Sun's contract in Docket No. CI62-276 was at a 16-cent price level covering a proposed delivery of estimated first-month's volumes of 550 Mcf. Sun's contract in Docket No. CI61-956 covers an estimated first-month's volume of 300,000 Mcf at 17 cents. Sun's contract in CI61-1584 covers a proposed delivery of estimated first-month's volumes of 2500 Mcf at 17.24 cents per Mcf. Sun's contracts in Docket Nos. CI61-657 and CI61-1101 covers estimated first-month's volumes of 240,000 Mcf and 15,000 Mcf, respectively, at an initial contract price of 17.24347 cents per Mcf.

At the outset of this case Sun's counsel stated that "We are making a companywide cost showing, Mr. Examiner, in support of our certificate applications". Schedule 10 of Exhibit 10 offered in evidence by Sun showed a companywide "cost per Mcf of 26.390 cents".[31]

Sun's essential purpose was to show that the prices contained in its contracts under consideration here were substantially below its claimed cost of service to produce an Mcf of gas. In substance, it would try a full-scale companywide case as part of its Section 7(c) presentation. This approach has been rejected by the Commission in the past and the courts have held that the Commission is not required to try a Section 4(e) or a Section 5(a) case within the confines of a Section 7 certificate case. Sun's cost of service evidence was excluded by ruling of the examiner.

Sun offered the testimony of its witness Hamilton who testified regarding the negotiations leading up to the execution of Sun's contracts. The witness testified as to his knowledge of contracts which were executed in Texas Railroad Commission District No. 4, and as to the length of time over which these negotiations took place. He also claimed that the company considered that the prices negotiated were fair and reasonable because of previous actions by the Federal Power Commission in certificating other sales in Texas Railroad Commission

---

[30] See page 2 of Statement of General Policy No. 61-1 relating to taxes.

[31] In *Sun Oil Company, et al.*, Docket No. G-8288, *et al.*, a combination Section 4(e) and 5(a) case, the presiding examiner issued an initial decision on March 11, 1963, in which he found after a hearing on the merits that Sun's companywide cost of service was 12.476 cents per Mcf. The examiner's decision is still pending before the Commission, following the filing of exceptions.

Districts 2 and 4 without initial price conditions and at initial prices higher than those for which the company agreed to deliver its gas in this proceeding. He also testified that while the negotiations in this case had been carried on prior to September 28, 1960, when the Commission issued its *Statement of General Policy No. 61-1*, 24 FPC 818, the fact in each case was that the negotiations had not been concluded until after the policy statement had been issued and that Sun's contracts had not been actually executed until after the date of the Statement of General Policy.

His statement could be read as implying that Sun relied upon such Statement of General Policy but the witness never affirmatively asserted that the company had in fact relied upon such policy statement in negotiating Sun's contracts.

Sun's principal reliance for obtaining its contract price was not upon the policy statement but upon the evidence which the examiner excluded in a ruling made herein on December 6, 1962. This evidence is described and discussed fully in such ruling.

Hamilton's testimony was not persuasive that Sun's price was arrived at by reason of any reliance upon the Commission's Statement of General Policy.

It may also be noted that in Docket No. CI62-276 Sun sought and obtained a temporary certificate. This certificate contained a refund condition down to a floor of 15 cents per Mcf and required the refunding of "any amounts collected plus interest at 7 percent per annum, in excess of 15.0 cents per Mcf which may be determined to be in excess of the price required by the public convenience and necessity . . . ."

The fact that the Commission conditioned the 16-cent price in the temporary certificate was clear notice to Sun that it could not rely upon such contract price as necessarily being the public convenience and necessity price in the permanent certificate which it was seeking.[33]

Sun's testimony did not include any evidence which would show the weight, if any, which should be accorded the policy statement in determining the appropriate public convenience and necessity price in this proceeding. Sun's testimony had no relation to in-line prices, was unrelated to the Commission's policy statement, and was not helpful to the resolution of the weight, if any, which should be accorded to the Commission's policy statement in the determination of the appropriate public convenience and necessity price in this proceeding.

The third largest volume proposed to be delivered by any individual producer is covered by an application filed by George H. Coates in Docket No. CI62-355, and he estimated his first month's deliveries as being 180,000 Mcf. The initial price in Coates' contract was 18 cents per Mcf.

Coates did not offer the testimony of any witness to support his claim that in the negotiation of his contract he relied upon the policy statement.

Coates is relying principally on the testimony being offered in this proceeding by Texaco and Sun to support his application. Texaco's evidence and Sun's evidence has been discussed hereinabove, and as has been pointed out hereinabove such evidence is not helpful to the resolution of the issues in this proceeding. Coates offered in evidence his application for a certificate of public convenience and necessity and his rate schedule and presented no witnesses at all. Coates offered no evidence responsive to the problem of the weight to be accorded in this proceeding to the Commission's Statement of Policy.

---

[33] It is realized that the temporary certificate in this docket was not issued until February 20, 1963, long after the contract was executed, but no deliveries under this contract could have been made lawfully prior to such time. However, as pointed out hereinabove, other temporary certificates were issued to other producers in Texas Railroad Commission District No. 4, both before and after *Skelly*, and it would be somewhat naive to believe that the Commission's practices and orders regarding the issuance of temporary certificates, particularly its practices and orders concerning the making of refunds, were unknown to the larger companies in this industry, of which Sun is one of the largest.

In substance Coates is relying upon an interpretation which he has made of the meaning of the Commission's Statement of General Policy to the effect that the policy statement in and of itself authorized him to obtain up to 18 cents per Mcf for his gas. This interpretation has been rejected for the reasons discussed hereinabove.

The fourth largest volume is proposed to be delivered by Amerada Petroleum Company in Docket No. CI62-1544, and the estimated first month's volumes are 135,000 Mcf. Amerada's initial contract price was 18 cents per Mcf. Later Amerada's contract was amended to provide for a 16-cent price per Mcf.

Amerada's contentions as to the appropriate public convenience and necessity price which should be employed here are somewhat different than the contentions made by other producers in this proceeding. Amerada's contract was dated June 15, 1962, and the initial price was 18 cents per Mcf.

While Amerada's contract with the purchaser, Natural Gas Pipeline, specified an initial price of 18 cents per Mcf it also provided for deductions of 2 cents per Mcf until the pipeline received into its facilities some seven billion cubic feet.

On August 28, 1962, Amerada requested a temporary certificate which was issued on October 8, 1962. The temporary certificate contained a condition that the initial price for the services proposed shall be 18 cents per Mcf, subject to Amerada's refunding to the purchaser from the date of first delivery any amounts collected, plus interest at 7 percent in excess of 15 cents per Mcf which may be determined to be in excess of the price required by the public convenience and necessity in these proceedings. Amerada accepted the certificate on October 18, 1962.

In its brief, Amerada referred to the date when the Commission issued its *Statement of General Policy No. 61-1,* namely September 28, 1960, and the date when the Commission issued its *Fifth Amendment*, namely August 30, 1962, 28 FPC 441, which reduced the price ceilings in Texas Railroad Commission District No. 4 from 18 cents per Mcf to 16 cents per Mcf effective August 30, 1962.

The latter date was also the date when the Commission issued its *Skelly* Opinion No. 362 which held that up to September 28, 1960, the in-line price in Texas Railroad Commission District No. 4 was no higher than 15 cents per Mcf. The Commission also issued its Fifth Amendment on August 30, 1962, fixing 16 cents per Mcf as the ceiling price for Texas Railroad Commission District 4. Following the issuance of the Commission's Fifth Amendment to the General Policy Statement, Amerada and Natural Gas Pipeline amended their contract on October 16, 1962, by reducing the initial price to 16 cents per Mcf.

In substance, the position of Amerada appears to be that it had a right to receive an 18-cent price when it executed its original contract dated June 15, 1962. However, Amerada claimed that it was entitled to 16 cents per Mcf after the Commission issued the Fifth Amendment to the Policy Statement fixing the ceiling price at 16 cents per Mcf.

As pointed out above, the ceiling prices were not issued for the purpose of escalating gas prices to consumers; the 16-cent ceiling price neither gave nor denied rights to any person; and the policy statement and amendments thereto were not orders and were not binding on anyone for any purpose.

The in-line price for gas in Texas Railroad Commission District No. 4 at the time when Amerada's contract price was negotiated was 15 cents per Mcf. Amerada had accepted a certificate containing a refund provision down to a floor of 15 cents per Mcf. The adoption of the Fifth Amendment to the Policy Statement on August 30, 1962, providing a 16-cent price ceiling in Texas Railroad

Commission District 4 did not serve to raise the in-line price to 16 cents as of August 30, 1962, or October 16, 1962, if the in-line price were 15 cents per Mcf at the time.

There is no evidence in this record to show that the in-line price had risen to 16 cents per Mcf after the Commission had issued its Skelly decision or after September 28, 1960.

Amerada's contentions with respect to conditioning its certificate herein at a 16 cents per Mcf level rather than a 15 cents per Mcf level were not based upon any probative evidence in this record. Moreover, Amerada's evidence as a whole does not serve to show that any weight should be given in this proceeding either to the Commission's first price ceiling of 18 cents per Mcf or its subsequent price ceiling of 16 cents per Mcf for Texas Railroad Commission District No. 4.

The fifth largest volume is proposed to be delivered by Gulf Oil Corporation in Docket No. CI62-607. The estimated first month's volumes are 120,000 Mcf, and the initial contract price was 18 cents per Mcf. Gulf's contract with Natural Gas Pipeline was executed on October 20, 1961. Gulf's evidence was considered and discussed in the examiner's ruling of December 6, 1962, and as a result the examiner issued his ruling striking important sections of Gulf's evidence.[33]

Gulf argues that since the wells which will produce the gas proposed to be sold herein required deeper drilling than those which were considered by the Commission at the time it wrote Opinion No. 362 (Skelly), it should receive a higher price for the gas proposed to be sold here. Essentially, this is a cost-of-service approach but it is not a sound cost-of-service approach.

The fact that a well is drilled to greater depths does not itself establish that the producer is entitled to more for his gas. If, for example, the volumes of reserves found at greater depths is greater than the volumes of gas found at a point which is not as deep, the unit cost of the gas which is obtained by drilling deeper may be less than the unit cost of gas which is found at lesser depths. There is no evidence relating to the reserves found in this case as compared to those in the earlier proceeding. There is no evidence as to the comparative costs of producing gas in the new wells as compared to those considered in Skelly.

Gulf did not attempt to present a cost-of-service case, and of course, it would have been inappropriate to have done so. Further, the cost to a particular company of gas produced in a few wells is not an appropriate standard for the purpose of determining the cost of gas in a Section 7 proceeding.[34]

While Gulf executed its contract on October 20, 1961, it did not deliver any such gas until after it had received a temporary certificate on October 8, 1962. On October 8, 1962, temporary authority was issued to Gulf subject to Gulf's agreement to refund to Natural from date of first deliveries any amounts collected plus interest at 7 percent per annum in excess of 15 cents per Mcf which may be determined to be in excess of the price required by the public convenience and necessity. Accordingly, before Gulf had delivered a single Mcf of gas it was well aware of the fact that it could not rely on the Commission's Statement of Policy as reflecting a Commission intent to authorize it to obtain the ceiling prices in a contested certificate proceeding.

As we have pointed out, the purpose of the Commission since *CATCO* has been to "hold the line." Where it is shown that the ceiling price is higher than the in-line price, it would be violative of the Supreme Court's admonition to permit the ceiling price to be substituted for the in-line price as the standard for determining the public convenience and necessity price. If such a course were followed the court's admonition to hold-the-line would be destroyed, and the benefits to the consumers of the court's holding in *CATCO* and in the various holdings by the courts of appeals subsequent to *CATCO* would be eroded.[25]

---

[33] See particularly pp. 15 and 16 of examiner's ruling of December 6, 1962.

[34] See Commission's order issued February 9, 1962, in *Socony Mobil*, Docket No. G-13780, 27 FPC 347, holding that costs attributable to a single field are of no value and examiner's order in *Hassie Hunt*, G-19115 issued May 31, 1962, appeal denied on its merits July 19, 1962.

In Docket No. G–9520, *et al.*, Gulf's rates were the subject of a Section 4(e) and 5(a) proceeding. The examiner in that case in a decision issued September 24, 1962, [Unreported] found that Gulf's nationwide cost of producing an Mcf of gas was 12.598 cents. The examiner's decision in that case noted that the exploration expenses in 1957, the test period in that case, were the highest in the company's history (pp. 29 and 63 of examiner's initial decision), and that the exploration expenses were substantially lower in the following years. Further, as the examiner noted in his decision (p. 63), if Gulf's costs were updated to 1959, it would have been found on the basis of Phillips' cost-of-service allocation principles that Gulf's cost-of-service would have been lower in 1959 than it was in 1957, but that its rates in 1959 were substantially higher than in 1957.

This comment relating to the examiner's decision regarding Gulf's nationwide cost of service to produce an Mcf of gas is not made for the purpose of applying such nationwide costs to Gulf's prices in Texas Railroad Commission District No. 4 in this case but only to point out that reaching a correct cost of service figure for a comparatively few wells in Texas Railroad Commission District 4 for Gulf on an individual basis as suggested by Gulf's presentation in the instant proceeding would hardly be a feasible method of determining costs. In arriving at Gulf's cost-of-service for Texas Railroad Commission District 4 it would have been necessary on an individual case approach to develop a rate design for the Gulf system including its operations in Texas Railroad Commission District No. 4. Meaningful costs for Section 7 purposes or for any other purposes cannot be made to depend solely on the fact that deeper drilling was required for a comparatively few wells.

It may also be observed that the Commission issued an order on April 21, 1963, approving a rate settlement of Gulf's dockets in Docket G–9520, *et al.* Attached to the Commission's order approving the settlement was an appendix. Such appendix shows (Sheet 10 of 17) that in no case did the Commission authorize any settlement rate in Texas Railroad Commission District No. 4 in excess of 15 cents per Mcf. In these circumstances, and particularly in view of the fact that the in-line price in Texas Railroad Commission District No. 4 as found hereinafter was not in excess of 15 cents per Mcf, it would not appear unreasonable to condition Gulf's certificate in this case at a rate not in excess of 15 cents per Mcf.

Gulf did not offer any evidence which could be used in any way in determining the weight, if any, to be given the Commission's ceiling prices in Texas Railroad Commission District No. 4.

In a speech delivered on July 5, 1963, to the Mineral Law Section of the Texas Bar Association at Dallas, Texas, the General Counsel of the Commission in a correct and succinct explanation of the applicable law said that

> . . . in the *CATCO* case the Supreme Court in June 1959 had made clear that in view of the delays in setting just and reasonable rates under any

---

[25] See *United Gas Improvement Co.* v. *Federal Power Commission*, 283 F. 2d 817 (C.A. 9), certiorari denied 365 U.S. 879, 881; *Public Service Commission of New York* v. *Federal Power Commission*, 287 F. 2d 146 (C.A. D.C.) certiorari denied 365 U.S. 880; *United Gas Improvement Co.* v. *Federal Power Commission*, 287 F. 2d 159 (C.A. 10); *United Gas Improvement Co.* v. *Federal Power Commission*, 290 F. 2d 133 (C.A. 5), certiorari denied 366 U.S. 147; *Atlantic Refining Co.* v. *Federal Power Commission*, 316 F. 2d 677 (CADC); *California Oil Co.* v. *Federal Power Commission*, 315 F. 2d 652 (C.A. 10).

> system, the Commission was obliged to consider price at the time it certificated a producer's sale and to take appropriate steps at that time to maintain the price line pending the fixing of area rates. A series of subsequent cases in the courts of appeals have spelled out that this required fixing an in-line price as of the time of the producer's contract with the pipeline—a line reflecting primarily the permanently certificated sales in the particular production area not tainted by procedural irregularity or suspect because they were based on such a tainted sale. [Footnotes Omitted.]

The General Counsel also pointed out that

> There still will remain, however, a hard core of applications for certificates in areas where the consumer groups have not as yet agreed to our guideline rates as fair approximation of the in-line rate set in accordance with CATCO principles. In these cases, which include the Texas Gulf Coast (Texas Railroad Districts 2, 3 & 4) and Southern Louisiana, *formal certificate hearings to fix the in-line price will be required.* This a process which has been greatly simplified by a number of recent Commission cases which have limited the types of evidence which may be considered in such proceedings. . . . [Italic supplied.]

The General Counsel was not speaking for the Commission and, of course, his comments were not binding on it. However, in the examiner's opinion, the General Counsel's statements were a sound reflection of the law applicable in these proceedings.

There is no basis to be found in the evidence presented in this proceeding for placing any weight on the Commission's ceiling prices in determining the appropriate public convenience and necessity price for Texas Railroad Commission District No. 4. On the other hand, the employment of in-line prices constitutes an appropriate standard for conditioning the permanent certificates which will be issued in this proceeding.

II. *In-Line Price*

We will now turn to a consideration of the in-line price for the period September 28, 1960, to August 30, 1962, in Texas Railroad Commission District 4.

The starting point for determining the locus of the in-line price for the applicants in this proceeding is *Skelly*. The examiner takes official notice of the Commission's opinions in *Skelly* (Opinion Nos. 362 and 362-A) and adopts the discussion in such opinions relating to in-line price as an integral part of this decision. [28 FPC 401 and 1065]

The Commission in *Skelly* utilized the Staff's field price evidence in the preparation of a table (appearing at page 408 of its opinion in Skelly) for the purpose of arriving at a judgment as to the locus of the in-line price up to September 28, 1960.

The Commission in *Skelly* concluded that for a period prior and up to September 28, 1960, the in-line price in Texas District was 15 cents per Mcf and on this basis conditioned the certificates in *Skelly* to such price.

The Staff in this proceeding prepared and the examiner received in evidence a field price exhibit (Exhibit 16), showing the pertinent data for all sales in Texas Railroad Commission District 4 dated 1955 and later with total rates of 14 cents or more as accepted for filing by the F.P.C.[30] The only difference between the exhibit in *Skelly* and the one in this proceeding (Exhibit 16) is that the cutoff date in *Skelly* was April 1, 1961, and in the instant case the cut-off date was August 31, 1962.

---

[30] The exhibit contains three schedules. Schedule No. 1 lists the proposed sales which are involved in this proceeding. Schedule No. 2 lists the permanently certificated sales and Schedule 3 lists the temporarily authorised sales.

The in-line price in *Skelly* was determined by reference to the prices contained in other contracts entered into in the area in 1958, 1959, and 1960.

In a brief filed on behalf of a number of distributors[37] who were interveners in this proceeding an analysis of the Staff field price exhibit was made along the lines followed by the Commission in *Skelly.* This analysis also prepared in the form of a table[38] correctly shows data on permanently certificated and other sales under contracts executed between September 28, 1960 and August 31, 1962, as follows:

Total initial price (cents per Mcf)	Permanent certificates		Temporary certificates	
	Number of rate schedules	Estimated first-month production	Number of rate schedules	Estimated first-month production
14.0	6	205,500	9	171,800
14.5			1	35,000
14.7	1	17,280		
15.0	6	107,836	1	6,000
17.24	1	25,950		
18.0			1	31,000
Total	14	356,566	12	243,800

The facts in this case are that since September 28, 1960, six contracts were permanently certificated at 14.0 cents per Mcf; one contract was permanently certificated at 14.7 cents; six contracts were permanently certificated at 15 cents per Mcf; and one contract was permanently certificated at 17.24 cents per Mcf. The only case of a permanent certificate at a price in excess of 15 cents was that of *Dulaney Oil Company*, Docket CI61-1355. The latter sale was permanently authorized in a shortened procedure case. As has been pointed out hereinabove, the ceiling prices are used only where there is no objection by any party, and there is no contest. This was the situation with Dulaney. The shortened procedure cases are of limited value as precedents.[39]

The temporary certificates are issued ex parte, and the prices which holders of such certificates are permitted to collect have no value as precedents for determining in-line prices because the prices contained in the temporary certificates are not necessarily prophetic as to the price at which the permanent certificates will be issued. Moreover, the price contained in the temporary certificate is not reached upon the basis of a hearing adjudicating the locus of the in-line price or initial public convenience and necessity price.

In this case the evidence shows that there were 12 temporary certificates issued in which only one, Lamar Hunt, Docket No. CI61-1736 carried a price in excess of 15 cents per Mcf. The price was 18 cents per Mcf. However, on April 11, 1963, the examiner issued an initial decision conditioning the initial price in *Lamar Hunt*, Docket CI61-1736 at 15 cents per Mcf. The initial decision is pending before the Commission on exceptions filed thereto.

The leading cases which have been cited hereinabove require the Commission to determine the public convenience and necessity price by reference to the in-line price as of the time of the producer's contract with the pipeline. This line should reflect primarily the permanent certificated sales which are reasonably comparable in the particular production area (Texas Railroad Commission District 4 in this case) not tainted by procedural irregularity or suspect because they were based on such a tainted sale.

---

[37] The Brooklyn Union Gas Company, Long Island Lighting Company, Philadelphia Electric Company, and The United Gas Improvement Company.

[38] The table, of course, does not include the contracts which are the subject of consideration here.

[39] In this connection, see examiner's initial decision in *Texaco Seaboard, Inc., et al.*, Docket No. CI61-118, *et al.*, 29 FPC 593, 603 at p. 614 (September 25, 1962).

The application of this principle requires an order in this case conditioning the certificates which should be issued here to an initial price of 15 cents per Mcf.

III. *Refunds*

We now turn to the question of refunds. The Commission in Docket Nos. CI62-1544, Amerada Petroleum Corporation, *et al.;* CI62-607, Gulf Oil Corporation; CI62-726, MPS Production Company (Operator); CI63-73, Skelly Oil Company; CI62-276, Sun Oil Company; and CI62-639, Union Producing Company issued temporary certificate authorizations (which were accepted by the aforesaid applicants) conditioned upon the refunding to the purchasers of "any amounts collected plus interest at 7 percent per annum in excess of 15.0 cents per Mcf which may be determined to be in excess of the price required by the public convenience and necessity. . . ."

In addition the Commission issued temporary certificates containing refund conditions to Emory M. Spencer in Docket No. CI61-1451 and Tex-Star Oil and Gas Corporation (Operator) in Docket No. CI62-729.

The initial price required by the public convenience and necessity has been determined to be the in-line price for Texas Railroad Commission District 4 at the time the contracts were executed, *i.e.*, 15 cents per Mcf at 14.65 psia for each applicant. In accordance with the Commission's specific directions in the temporary certificates refunds will be required of the aforesaid eight companies of all sums collected by them for gas sold and delivered under the aforesaid temporary certificate authorizations in excess of 15 cents per Mcf plus interest at 7 percent per annum.

The temporary certificates issued by the Commission to the other applicants in this proceeding do not provide for refunds in the event that the initial public convenience and necessity price is found to be lower than the prices authorized under the temporary certificate authorizations.

The Commission in *Skelly* (Opinion No. 362) said, among other things, that

> Unlike the situation in *CATCO* where all of the unconditioned price certificates by which gas was dedicated to interstate commerce were either subject to timely court review because challenged and appealed or (in one case) granted pending such review, the producers here have been operating, pending this hearing on their permanent certificate application, pursuant to effective temporary certificates containing no price condition, the validity of which have never been challenged on appeal. Under these circumstances we believe that there is no basis for ordering refunds for the period, prior to the effective date of the permanent certificates being issued herewith, during which the producers were receiving the temporary certificates. [p. 413.]

On October 15, 1962, in an initial decision issued in Cities Service Company *et al.*, Docket No. G-16563, *et al.*, (Cities Service), the presiding examiner in that case on the basis of the Skelly precedent held that he had no power to require refunds. On April 22, 1963, the Commission issued an order adopting the presiding examiner's decision.

The undersigned considers that he is bound by the Skelly and Cities Service precedents and for that reason will not issue an order requiring refunds in any of the other dockets.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the presiding examiner finds and concludes, in addition to the findings and conclusions hereinbefore stated, that

(1) Each of the applicants named in the caption of this decision is a natural gas company within the meaning of the Natural Gas Act as an independent producer of natural gas, as that term is defined in Section 154.91(a) of the Commission's Regulations, engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption and such sales together with the construction and operation of any facilities are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(2) Each of the applicants named in the caption is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(3) The sale of natural gas as proposed by each of the applicants herein together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor are required by the public convenience and necessity and a certificate authorizing the same should issue to each of them upon the terms and conditions of the order herein, which terms and conditions are required by the public convenience and necessity.

(4) The public convenience and necessity requires that the initial price charged by the independent producers named in the caption for the sales proposed in their certificate applications in this proceeding be not greater than 15 cents per Mcf at 14.65 psia and that the take-or-pay requirement in their contracts be revised in accordance with the final order of the Commission to be issued in Docket R-199 commenced by Notice of Proposed Rulemaking dated May 22, 1961, provided, however, that the applicants shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities.

(5) In accordance with the conditions attached to the temporary certificate authorizations granted in Docket No. CI61-1451 to Emory M. Spencer; in Docket No. CI62-729 to Tex-Star Oil and Gas Corporation (Operator); in Docket No. CI62-1544 to Amerada Petroleum Corporation, *et al.;* in Docket No. CI62-607 to Gulf Oil Corporation; in Docket No. CI62-726 to MPS Production Company (Operator), *et al.;* in Docket No. CI63-73 to Skelly Oil Company; in Docket No. CI62-276 to Sun Oil Company and in Docket No. CI62-639 to Union Producing Company, such companies should refund any sums obtained from their pipeline purchasers for gas sold and delivered to them in excess of 15 cents per Mcf at 14.65 psia, together with 7 percent interest per annum on all such sums.

ORDER

WHEREFORE, *It is ordered,* subject to review by the Commission on appeal, or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) A certificate of public convenience and necessity is hereby issued to each of the applicants referred to in finding (1) for the sale of natural gas in interstate commerce for resale as proposed in their applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, upon the terms and conditions of this order.

(B) The certificate to be issued to each of such producer applicants is hereby conditioned to prohibit any total initial price, including all reimbursements and charges, greater than the 15 cents per Mcf at 14.65 psia from the date of issuance of this order until such price may be lawfully changed in the manner provided by the Natural Gas Act.

(C) The certificate of such producer applicants shall be conditioned so that the take-or-pay for requirement in each contract is subject to the provisions of the Commission's final order in Docket No. R-199 as of the effective date of that order, provided, however, that the producers shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities.

(D) The certificates issued herein are conditioned upon their acceptance in writing by the respective producer applicants within 30 days of the issuance of this order.

(E) The certificates issued herein are not transferable and shall be effective only so long as each of said applicants continues the acts and operations herein authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(F) In accordance with the conditions attached to the temporary authorizations in Docket No. CI61-1451, Emory M. Spencer; in Docket No. CI62-729, Tex-Star Oil and Gas Corporation (Operator); in Docket Nos. CI62-1544, Amerada Petroleum Corporation, *et al.*; in CI62-607, Gulf Oil Corporation; in CI62-726, MPS Production Company (Operator); in Docket No. CI63-73, Skelly Oil Company; in Docket No. CI62-276, Sun Oil Company; and in Docket No. CI62-639, Union Producing Company, each of such applicants shall refund to their respective pipeline purchasers within 90 days of the issuance of this order any sums collected from such purchasers in excess of 15 cents per Mcf, with 7 percent interest on such sums from the time of receipt to the date of refund and shall report to the Commission in writing the details of such refunds within 15 days after making them.

(G) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of the Commission's Regulations under said Act requiring the filing of rate schedules for the service herein authorized and is without prejudice to any findings or orders which may have been or hereafter may be made by the Commission in any proceeding now pending or hereinafter instituted by or against the applicants. Further, the action taken in these proceedings shall not foreclose nor prejudice any further proceeding or objection relating to the operation of any price or related provisions in the gas contracts here involved.

SAMUEL BINDER,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

IOWA POWER AND LIGHT COMPANY, DOCKET NO. E-7149

ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued March 23, 1964)

Iowa Power and Light Company (Applicant), incorporated under the laws of the State of Iowa and doing business in that State, with its principal place of business in Des Moines, Iowa, filed an application on February 14, 1964, for an order, pursuant to Section 204 of the Federal Power Act, authorizing the issuance of up to 1,095,922 shares of Common Stock, par value $10 per share, to effect one and one-half for one split of the outstanding Common Stock of the Applicant and of Common Stock reserved for issuance under Applicant's Employee Stock Purchase Plan.

The Applicant has outstanding 2,142,361 shares of Common Stock plus 49,481 shares of Common Stock reserved for issuance through its Employee Stock Purchase Plan authorized in Docket No. E-7081 (April 26, 1963). A one and one-half for one split will require an increase of 1,071,181 shares of Common Stock for issuance to holders of outstanding stock and an increase of 24,741 in the number of shares of Common Stock reserved for issuance under the Employee Stock Purchase Plan. On the books of the Applicant, the issuance of 1,071,181 additional shares of Common Stock, par value $10 per share, to holders of outstanding Common Stock, will be reflected by a credit of $10,711,810 to Account 201, Common Stock. This credit will be offset by debits of $8,398,077 to Account 207, Premium on Capital Stock (Common Stock) and $2,313,733 to Account 216, Unappropriated Earned Surplus.

According to the Applicant, the objective of the stock split is to broaden the market for its Common Stock, by increasing the number of shares of such stock and lowering the market price per share, to the end that the Common Stock will become more attractive to a larger number of investors, facilitating future common equity financing for the Company, and in these respects serving the interests of the Company and its stockholders. Increase in the number of shares reserved pursuant to the Employee Stock Purchase Plan will prevent reduction in the percentage of the Applicant's Common Equity assigned to achieve the purposes of the plan.

Written notice of the application has been given to the Iowa Commerce Commission and to the Governor of that State. Notice of the application also was published in the Federal Register on February 28, 1964, (29 F.R. 2801), stating that any person desiring to be heard or to make any protest with reference to said application should on or before March 13, 1964, file with the Federal Power Commission, Washington, D.C. 20426, petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued May 31, 1961, *Iowa Power and Light Company* Docket No. E-6974 (25 FPC 1063).

(2) The proposed issuance of 1,071,181 shares of Common Stock to holders of Applicant's outstanding Common Stock and the proposed reservation for issuance and sale of 24,741 shares to Applicant's employees under its Employee Stock Purchase Plan, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) The proposed issuance and sale of Common Stock as described above is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a (a) (1) thereof.

(4) The proposed issuance and sale of Common Stock, as hereinafter authorized, will be for a lawful object within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance and sale of Common Stock, upon the terms and conditions and for the purposes specified in the application, as described above, are hereby authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Common Stock are hereby exempted from the competitive bidding requirements of Section 34.1a (b) and (c) of the Commission's Regulations under the Federal Power Act.

(C) This authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

OTTER TAIL POWER COMPANY, DOCKET NO. E-7151

ORDER AUTHORIZING ISSUANCE OF PREFERRED STOCK

(Issued March 23, 1964)

Otter Tail Power Company (Applicant), incorporated under the laws of the State of Minnesota, and doing business as a qualified foreign corporation in the States of North Dakota and South Dakota, with its principal place of business in Fergus Falls, Minnesota, filed an application on February 24, 1964, pursuant to Section 204 of the Federal Power Act, seeking authorization to issue and sell 30,000 shares of $4.65 Cumulative Preferred Stock, no par value, and exempting such issuance and sale from the Commission's competitive bidding requirements.

By letter dated January 16, 1964, Docket No. IN-964, the Commission, pursuant to Sec. 34.2 (f) (2) (ii) of its Regulations under the Federal Power Act, authorized Applicant to enter into negotiations for the underwriting and sale of a proposed issuance of up to 30,000 shares of Preferred Stock. The Commission's letter stated that the Applicant should submit evidence of having negotiated with at least three prospective purchasers. Applicant has advised that, pursuant to the authority granted by the Commission's letter, the Applicant discussed the proposed sale of new Preferred Stock with five investment banking firms and then employed Glore, Forgan & Co., and Kalman & Company, Inc., for the purpose of finding purchasers for new Preferred Stock. Glore, Forgan & Co., and Kalman & Company, Inc., discussed the proposed sale of new Preferred Stock with twelve institutions and that, as a result of such discussions, informal commitments were obtained from three insurance companies or their separate but affiliated companies to purchase 30,000 shares of $4.65 Preferred Stock, no par, at a price of $100.00 per share, plus accrued dividends, if any. The names of the insurance companies and the number of shares to be taken by each company, are as follows:

State Farm Mutual Automobile Insurance Company, Bloomington, Illinois	12,500 shares
The Lincoln National Life Insurance Company, Fort Wayne, Indiana	10,000 shares
Continental Assurance Company, Chicago, Illinois	7,500 shares

Applicant proposes to pay a finder's fee of ½ of 1% of the purchase price or $15,000 to Glore, Forgan & Co. and Kalman & Company, Inc. in payment for their services in finding buyers for the new Preferred Stock.

Applicant states it compared the proposed finder's fee with recent underwriting spreads and to information generally available with respect to finder's fees paid by other public utilities, and that it believes that such fee is reasonable.

Applicant requests that the proposed issuance be exempted from the competitive bidding requirements of Section 34.1a (b) and (c) of those Regulations upon findings as set forth in Section 34.1a (a) (4) thereof.

Applicant proposes to utilize the net proceeds from the issuance and sale of the new Preferred Stock estimated at about $2,971,000 to repay short-term bank construction loans incurred in late 1963 and defray a portion of the expense of its construction program in 1964. Total construction for 1964 has an estimated cost of $7,667,000. $2,355,000 will be spent on Applicant's Hoot Lake Plant, $737,000 on its 115 kv Grid, $1,965,000 on other transmission facilities and substations, and most of the balance on distribution facilities.

Written notice of the application has been given to the Railway and Warehouse Commission of Minnesota, the Public Service Commission of North Dakota, the Public Utilities Commission of South Dakota and to the Governor of each of those states. Notice of application was also given by publication in the Federal Register on March 6, 1964 (29 F.R. 3119), stating that any person desiring to be heard or to make any protest with reference to said application, should on or before March 16, 1964, file a petition or protest with the Federal Power Commission, Washington, D.C., 20426. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued October 25, 1957, *Otter Tail Power Company*, Docket No. E-6776 (18 FPC 538).

(2) The proposed issuance of Preferred Stock as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) There is no affiliation, direct or indirect, through directors, officers or stockholders, or the ownership of securities, or otherwise between Applicant and Glore, Forgan & Co. and Kalman & Company, Inc.

(4) The fee proposed to be paid to Glore, Forgan & Co. and Kalman & Company, Inc. does not appear to be unreasonable.

(5) Under the circumstances of this case, sufficient cause has been shown for exempting the proposed issuance of Preferred Stock from the competitive bidding requirements of Section 34.1a (b) and (c) of the Commission's Regulations under the Federal Power Act.

(6) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance of Preferred Stock, as described above, is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(7) The proposed issuance of Preferred Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(8) The period of public notice herein is reasonable.

The Commission orders:

(A) The proposed issuance of Preferred Stock, as described above, upon the terms and conditions and for the purposes specified in the application is hereby authorized, subject to the provisions of this order.

(B) This authorization shall expire unless the transaction hereby authorized is consummated within 60 days from the date of this order.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of costs, or any other matter whatsoever which is now pending or which hereafter may come before this Commission or any other regulatory body.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners; Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2082

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL PROJECT COST, NET CHANGE THEREIN AND PRESCRIBING ACCOUNTING THEREFOR

(Issued March 23, 1964)

Pacific Power & Light Company, Licensee[1] for Project No. 2082[2] on September 22, 1959, filed a statement pursuant to Section 4.1 of the Commission's

---

[1] The California Oregon Power Company, original licensee, was merged into Pacific Power & Light Company as of June 21, 1961 and by order of the Commission the license was transferred as of that date.

[2] The Big Bend Development, now called the John C. Boyle Plant, was constructed pursuant to the license issued by this Commission in Project No. 2082 to the California Oregon Power Company (Copco) effective as of March 1, 1956, and it was placed in service in October 1958. This development consists principally of a diversion dam about 650 feet long and about 70 feet high across the stream bed and a powerhouse containing two turbines each rated at 56,000 horsepower and each driving a generator with a name plate rating of 40,000 kw. Appurtenant to the John C. Boyle development is a 230 kv transmission line, 69.9 miles long. The plant is located on the Klamath River approximately 6 miles west of Keno, Oregon.

Five existing developments were added to the project by Amendment No. 3 to the license (Instrument No. 5) accepted by Copco on January 26, 1960 which are described in the findings of the initial decision adopted by the Commission by order issued January 13, 1960, and incorporated by reference in the order issuing license as follows:

> *East Side Development* on Link River consisting of a canal and penstock extending from Link River dam to the powerhouse containing a 4,250-horsepower turbine driving a 3,200-kilowatt generator; *West Side Development* on Link River consisting of a canal and penstock extending from Link River dam to the powerhouse containing a 1,040-horsepower turbine driving a 600-kilowatt generator; *Keno Regulating Dam* on Klamath River consisting of a wood-bent structure with earth abutments and control works for maintaining the level of Ewauna Lake and Klamath River between Keno and Klamath Falls; *Copco No. 1 Development* on Klamath River about 31 miles below Keno consisting of a concrete gravity arch dam with tainter gates creating a reservoir about 4½ miles long; penstocks, a powerhouse containing two 18,600-horsepower turbines each driving a 10,000-kilowatt generator, and a substation; *Copco No. 2 Development* on Klamath River about ¼ mile below the Copco No. 1 Development consisting of a concrete and earth diversion dam, a conduit composed of two tunnels, a wood-stave pipe and penstocks leading to the powerhouse containing two 20,000-horsepower turbines each driving a 13,500-kilowatt generator, and a substation; and appurtenant facilities. [23 FPC 61, 64.]

Also added to the project by Amendment No. 3 was the proposed Irongate Development not included in the scope of this order.

Regulations under the Federal Power Act claiming an actual legitimate original cost as of May 31, 1959 for the John C. Boyle Plant of $14,329,561.73.[3] Licensee also filed, on December 27, 1960, pursuant to Section 4.20 of the Commission's Regulations, individual statements for each of five previously constructed plants hereinafter referred to as the Constructed Plants (Copco No. 1, Copco No. 2, East Side, West Side, Keno Regulating Dam) claiming an actual legitimate original cost, as of March 1, 1956 for those plants aggregating $7,628,239.40.[4]

Licensee has also, from time to time, filed statements pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act claiming for the period March 1, 1956 through December 31, 1960 (1) net additions to the Constructed Plants of $639,717.29 consisting of additions of $811,629.15 and retirements of $171,911.86 and (2) a resulting actual legitimate original cost for those plants as of December 31, 1960 of $8,267,956.69. For the John C. Boyle Plant, Licensee claimed for the period June 1, 1959 through December 31, 1960 (1) net additions of $79,684.92 consisting of additions of $81,048.71 and retirements of $1,363.79 and (2) a resulting actual legitimate original cost as of December 31, 1960 of $14,409,246.65. Licensee's resulting claimed total actual legitimate original cost as of December 31, 1960 for the project was $22,677,203.34.

The Commission's staff made an examination of the books and records of the Licensee and other data for the purpose of ascertaining the correctness of those amounts. Following that study a conference was held by the staff with representatives of the Licensee, at which an agreement, subject to Commission approval, was reached with respect to certain proposed adjustments and accounting dispositions. The adjustments agreed to, resulted in a net increase in claimed initial cost of the newly constructed John C. Boyle Plant as of May 31, 1959 in the amount of $10,830.33; a net decrease in the claimed initial cost of the constructed developments of the project as of March 1, 1956 in the amount of $191,590.32; and a net decrease in the recorded changes in the cost of the constructed developments for the period from March 1, 1956 to December 31, 1960 in the amount of $328,970.27. These adjustments can be summarized as follows:

Description of claimed initial cost	Total	John C. Boyle plant May 31, 1959	Constructed plants Mar. 1, 1956
Land and land rights	$14,790.19	($301.09)	$15,091.28
Interest during construction	11,131.42	11,131.42	
Nonproject items	(206,681.60)		(206,681.60)
Total adjustments of initial cost	(180,759.99)	10,830.33	(191,590.32)
Description of recorded changes		**John C. Boyle June 1, 1959–Dec. 31, 1960**	**Constructed plants Mar. 1, 1956–Dec. 31, 1960**
Nonproject items	($298,414.27)		($298,414.27)
Excessive system overheads	(7,518.19)		(7,518.19)
Understated retirements	(23,037.81)		(23,037.81)
Total adjustments of plant changes	(328,970.27)		(328,970.27)
Total adjustments	(509,730.26)	$10,830.33	(520,560.59)

---

[3] Articles 47 and 48 of the license, as amended, provide for the determination of the actual legitimate original cost, estimated where not known, and the accrued depreciation of the Constructed Plants, the actual legitimate original cost of the parts of the project to be completed after the effective date of the license, and the actual legitimate original cost of any addition to or betterment of the project.

[4] We do not undertake as a part of this order to determine the accrued depreciation applicable to the Constructed Plants.

The foregoing adjustments, including certain reclassifications which do not affect the total project cost, are reflected in the attached Schedule I* which also shows the distribution of project indirect and overhead costs to prescribed primary plant accounts as proposed by the staff and concurred in by Licensee's representatives.

The staff recommends and Licensee's representatives have concurred, by letter dated August 9, 1962, that the Commission determine (1) the actual legitimate original cost of the Constructed Plants as of March 1, 1956 be $7,436,649.08, (2) the net change in actual legitimate original cost for the Constructed Plants for the period March 1, 1956 through December 31, 1960 be $310,747.02 consisting of additions of $442,290.94 and retirements of $131,543.92, (3) The resulting actual legitimate original cost of the Constructed Plants as of December 31, 1960 be $7,747,396.10, (4) the actual legitimate original cost of the John C. Boyle plant as of May 31, 1959 be $14,340,392.06, (5) the net change in actual legitimate original cost for the John C. Boyle plant for the period June 1, 1959 through December 31, 1960 be $79,684.92 consisting of additions of $81,048.71 and retirements of $1,363.79, (6) the resulting actual legitimate original cost of the John C. Boyle plant as of December 31, 1960 be $14,420,076.98, and (7) the resulting project cost as of December 31, 1960 be $22,167,473.08; all as more specifically shown by primary plant accounts in the attached Schedule I before and after the distribution of indirect and overhead construction costs.

The accounting disposition of all amounts involved in the proposed adjustments as agreed to by the staff and representatives of the Licensee is shown by the following composite journal entry:

Account No.	Title	Debit (credit)
	Adjustments	
101 [1]	Electric plant in service—Project No. 2082	$(476,628.61)
	Recommended Accounting Disposition	
101	Electric plant in service—Nonproject	444,711.12
108	Accumulated provision for depreciation of electric plant in service:	
	Project No. 2082—East Side	23,176.46
121	Nonutility property	12,371.62
184	Clearing accounts	7,518.19
216	Unappropriated earned surplus	(11,131.42)
401	Operation expense	(17.36)
	Total disposition	476,628.61

[1] Account references are to account numbers and titles prescribed in the Commission's revised Uniform System of Accounts for Public Utilities and Licensees, effective January 1, 1961, except in the attached schedules, which employ account numbers and titles prescribed in the Comission's Uniform System of Accounts prior to January 1, 1961. This reflects the fact that items of project cost were entered upon Licensee's books of account prior to January 1, 1961.

The difference between the above total adjustments to claimed costs of $(509,730.26) and the total disposition of $476,628.61, is a difference of $33,101.65, resulting from the Licensee's claimed costs exceeding its recorded costs for the Constructed Plants as of March 1, 1956. The difference, a net debit adjustment of $33,101.65, as shown in Schedule II* will adjust the recorded cost to the claimed cost.

The California Public Utilities Commission by letter dated August 21, 1962 and the Oregon Public Utilities Commissioner by letter dated December 25, 1962, responding to Commission staff request for comment on the proposed adjustments, indicated no objection thereto.

---

*Omitted in printing.

The Commission finds:

(1) Licensee by its letter of August 9, 1962, tentatively agreeing to the staff's proposed adjustments herein, the California Public Utilities Commission by letter dated August 21, 1962, and the Oregon Public Utilities Commissioner by letter dated September 25, 1962, have obviated the necessity for notice and opportunity to protest provided by Sections 4.4 and 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments and accounting dispositions are reasonable and proper for the purposes of the Federal Power Act.

(3) The actual legitimate original cost of the project as of March 1, 1956, is $7,436,649.08, the net change in actual legitimate original project cost from March 1, 1956 through December 31, 1960, is $14,730,824.00 composed of (a) the initial actual legitimate original cost of the John C. Boyle plant as of May 31, 1959, of $14,340,392.06, (b) additions to the John C. Boyle plant from May 31, 1959 through December 31, 1960, of $81,048.71, (c) retirements from the John C. Boyle plant for the same period of $1,363.79, (d) additions to the Constructed Plants for the period March 1, 1956 through December 31, 1960, of $442,290.94, (e) retirements from the Constructed Plants for the same period of $131,543.92, and the resulting actual legitimate original project cost as of December 31, 1960, is $22,167,473.08, classified by primary plant accounts as shown by the attached Schedule I.

(4) It is necessary and appropriate for the purposes of the Federal Power Act that the determination of the accrued depreciation applicable to in-service project properties of Project No. 2082 be reserved for future Commission consideration as hereinafter provided.

The Commission orders:

(A) The provisions of Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act are hereby waived for purposes of this order.

(B) The foregoing adjustments and the accounting dispositions as proposed by the staff and agreed to by the Licensee are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project accounts for Project No. 2082 showing the debit amount of $7,436,649.08 as the actual legitimate original project cost as of March 1, 1956, the effective date of the license, showing a debit amount of $14,730,824.00 as the net increase or change in actual legitimate original cost for the period from March 1, 1956 through December 31, 1960, and the total debit balance of $22,167,473.08 as the actual legitimate original cost of the project as of December 31, 1960, all as more specifically shown in the attached Schedule I classified by primary plant accounts of the Commission's Uniform System of Accounts prescribed for Public Utilities and Licensees.

(D) The matter of Commission determination of the accrued depreciation applicable to in-service project properties of Project No. 2082 is hereby expressly reserved for future Commission consideration and decision.

(E) Licensee shall within 90 days from the issuance of this order file with the Commission in quintuplicate, F.P.C. Form No. 7 and certified copies of Licensee's adjusting journal entries showing compliance with this order; three copies of that form and those journal entries to be submitted to the Secretary, Federal Power Commission, Washington, D.C., 20426, and two copies thereof to be submitted to the Regional Accountant, Federal Power Commission, San Francisco, California, 94111.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PUBLIC SERVICE COMPANY OF COLORADO, PROJECT NO. 2351

ORDER ISSUING LICENSE (MAJOR)

(Issued March 23, 1964)

Application was filed on March 7, 1963, and supplemented on July 8 and July 25, 1963, respectively, by Public Service Company of Colorado (Applicant) of Denver, Colorado, for a license under Section 4(e) of the Federal Power Act (Act) for proposed Project No. 2351, to be known as the "Cabin Creek Pumped Storage Hydroelectric Project", to be located on South Clear Creek and its tributary, Cabin Creek, in Clear Creek County, Colorado, and affecting lands of the United States within the Arapaho National Forest.

The proposed project would consist of Upper and Lower Reservoirs formed by rock-fill dams with an average water surface elevation difference between them of about 1,125 feet; a power tunnel about 3,600 feet long from Upper Reservoir to a powerhouse located at the edge of Lower Reservoir having a total installed generating capacity of 225,000 kilowatts in three reversible pump-turbine units; a switchyard adjacent to the powerhouse: and a 35-mile long double-circuit 230-kv transmission line to Applicant's Golden substation. The project would utilize steam-electric energy from Applicant's system (about 210,000,000 kwh annually) during off-peak hours to pump water from Lower Reservoir to Upper Reservoir. The reverse flow of the water would be used to generate electric energy during the peak-load period of Applicant's system which, at the end of 1962, had generating plants with a total rated capacity of 949,060 kilowatts. Annual generation by Project No. 2351 would be about 150,000,000 kwh.

The total estimated capital cost ($26,091,000) of the proposed project, resulting in $116 per kilowatt, has been reviewed and found to be reasonable. The estimated annual benefit of $4,927,500 would exceed by $597,700 the estimated annual cost of $4,329,800, giving a benefit cost ratio of 1.14. The project is estimated to operate at less annual cost than alternative sources of power.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, have advised that the provisions of the Federal Power Act (to which any license for the project would be subject) would adequately protect the interests of the Corps.

The Department of the Interior, in reporting on the application, recommended, for inclusion in any license for the project, certain conditions in the interests of the Department. In addition, it was reported that the U.S. Geological Survey has relatively little knowledge of the regional geology and that inasmuch as the proposed project tunnel excavation would provide a favorable opportunity to observe the geology of the area, the Survey wishes to examine the tunnel during its construction. We believe the Survey's wishes can be met through timely arrangements by and in cooperation with the Commission's Fort Worth Regional Office and provisions will be made for such arrangements.

The Department of Agriculture, in reporting on the application, has recommended for inclusion in any license for the project, certain conditions in the interests of the Department.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Colorado, and has submitted satisfactory evidence of compliance with the require-

ments of all applicable State laws insofar as necessary to effect the purposes of a license for the project.

(2) The proposed project will affect lands of the United States.

(3) Public notice of the application has been given as required by the Act. No protests or petitions to intervene have been filed. The Public Utilities Commission of the State of Colorado filed on April 19, 1963, a notice of intervention and has stated that by such notice it did not intend to seek a hearing. No conflicting application is before the Commission.

(4) The issuance of a license for the project as hereinafter provided will not interfere or be inconsistent with the purposes for which the Arapaho National Forest was created or acquired.

(5) The project will not affect a Government dam.

(6) The issuance of a license for the project will not affect the development of any water resources for public purposes which should be undertaken by the United States.

(7) The project is best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(8) The installed horsepower capacity of the project for the purpose of computing the capacity component of the administrative annual charge is 300,000 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the cost of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(9) The amount of annual charges to be paid under the license for the use, occupancy and enjoyment of lands of the United States by the project should be determined at a later date as hereinafter provided.

(10) The transmission facilities described in paragraph (B) below are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(11) The exhibits designated and described in paragraph (B) below, which were included as part of the application for license, conform to the Commission's rules and regulations and should be approved as part of the license for the project, to the extent therein indicated.

The Commission orders:

(A) This license is hereby issued to the Public Service Company of Colorado (Licensee) of Denver, Colorado, under Section 4(e) of the Federal Power Act (Act) for a period of 50 years, effective as of March 1, 1964, for the construction, operation and maintenance of Project No. 2351, affecting lands of the United States within the Arapaho National Forest, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2351 consists of:

(1) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the applicant or by the United States; such project area and project boundary being more specifically shown and

described by certain exhibits which formed a part of the application for license and which are designated and described as follows:

Exhibit	FPC No. 2351-	Title, Cabin Creek Pumped Storage Hydroelectric Project
J	4	"General map," and.
K	5	"Project area" insofar as it shows the tentative project boundary.

(ii) All project works consisting principally of:

A rock-fill, concrete-faced dam across Cabin Creek, about 174 feet high, incorporating an ungated open-channel spill-way and creating Upper Reservoir with gross storage capacity of about 1,400 acre-feet between maximum and minimum water surface Elevations 11,169 and 11,050 feet; a rock-fill, impervious core dam across South Clear Creek, about 98 feet high, incorporating an ungated open-channel spillway and creating Lower Reservoir with gross storage capacity of about 1,800 acre-feet at maximum water surface Elevation 9,998 feet; a power tunnel extending approximately 3,600 feet from an ungated intake at the floor of Upper Reservoir to the penstocks of the powerhouse; a semi-outdoor type powerhouse located at the upstream end of Lower Reservoir, housing three generating units each consisting of a generator-motor, rated at 75,000 kw as generator, direct-connected to a reversible pump-turbine rated at 110,000 hp as a turbine; a switchyard adjacent to the powerhouse; a double-circuit, 230-kv transmission line extending from the switchyard to the Licensee's Golden Substation near Golden, Colorado; and appurtenant hydraulic, mechanical, and electrical facilities and miscellaneous project works—the location, nature, and character of which structures are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit L	FPC No. 2351-	Title, Cabin Creek Pumped Storage Hydroelectric Project
Sheet 1 of 3	6	"Dams and Waterways,"
Sheet 2 of 3	7	"Powerhouse Structure,"
Supplement Sheet 1	10	"Spillway Details & Rating Curves," and
Supplement Sheet 2	11	"Outlet Works—Lower Dam."

Exhibit M: Entitled "General Description of Equipment" in five sheets filed March 7, 1963, except for the inclusion of the 115-kv transmission line and for the extent of the double-circuit 230-kv transmission line.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-2 (February 1, 1964) entitled "Terms and Conditions of License for Unconstructed Major Project Affecting Lands of the United States" (*supra*, p. 528), which terms and conditions, designated as Articles 1 through 33, are attached hereto and made a part hereof, except for Articles 21 and 22 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 34. The Licensee shall commence construction of the project works not later than July 1, 1964, shall thereafter in good faith and with due diligence prosecute such construction, and shall complete construction of such project works not later than July 1, 1967.

Article 35. The Licensee shall submit in accordance with the Commission's rules and regulations Exhibit L drawings showing the final designs of the project works; and the Licensee shall not begin construction of the project structures until the Commission has approved such exhibits.

Article 36. The Licensee shall, within one year from the date of completion of the project, file with the Commission revised Exhibits F and K to show and describe the entire project, including transmission lines.

Article 37. The Licensee shall prior to impounding water clear all lands in the bottoms and margins of reservoirs up to high-water level, shall clear and keep clear to an adequate width lands of the United States along open conduits, and shall dispose of all temporary structures, unused timber, brush, refuse, or inflammable material resulting from the clearing of the lands or from the construction and maintenance of the project works. In addition, all trees along the margins of reservoirs which may die from operation of the reservoir shall be removed. The clearing of the lands and the disposal of the material shall be done with due diligence and to the satisfaction of the authorized representative of the Commission.

Article 38. Timber on lands of the United States cut, used, or destroyed in the construction and maintenance of the project works, or in the clearing of said lands, shall be paid for and the resulting slash and debris disposed of in accordance with the requirement of the agency of the United States having jurisdiction over said lands. Payment for merchantable timber will be at current stumpage rates, and payment for young growth timber below merchantable size will be at current damage appraisal value. However, the agency of the United States having jurisdiction may sell or dispose of the merchantable timber to others than the licensee, with the provision that timber so sold or disposed of will be cut and removed from the area prior to or without undue interference with clearing operations of the licensee and in coordination with his project construction schedules. Such sale or disposal to others will not relieve the licensee of the responsibility for the clearing and disposing of all slash and debris from project lands.

Article 39. The Licensee shall do everything reasonably within its power and shall require its employees, contractors, and employees of contractors to do everything reasonably within their power, both independently and upon the request of officers of the agency concerned to prevent, make advance preparations for suppression, and suppress fires on the lands to be occupied or used under the license. The licensee shall be liable for and pay the costs incurred by the United States in suppressing fires caused from the construction, operation, or maintenance of the project works or of the work appurtenant or accessory thereto under the license.

Article 40. The Licensee shall replace to Forest Service standards and specifications, in a location acceptable to Forest Service, the eleven (11) recreational family units of the Lower Clear Creek Campground to be inundated by the lower reservoir. Replacement shall be at the expense of the Licensee, and concurrent with project construction.

Article 41. The Licensee shall take whatever precautions are necessary during construction operations to prevent the entry into project streams of silt, clay, sand, gravel, detritus or other material which is injurious to fish and wildlife or other habitat.

Article 42. The Licensee shall bypass a continuous minimum flow of at least three (3) cubic feet per second or the natural inflow to the Lower Reservoir, whichever is less, to South Clear Creek; this minimum bypass to be made during the period of construction, the initial filling of the reservoir, and during periods of operation and maintenance of the project and its features.

Article 43. The Licensee shall provide gates in the fence of the Lower Reservoir so as to permit adequate access by fish trucks for stocking fish.

Article 44. The Licensee shall participate with the Forest Service, the U.S. Fish and Wildlife Service, and the Colorado Department of Game, Fish, and Parks in a study which the Licensee will use to develop the fishery potential of the project area.

Article 45. The Commission expressly reserves the right to determine at a later date what additional transmission lines and appurtenant facilities, if any, shall be included in the license as part of the project works.

Article 46. The Licensee shall, within one year from the effective date of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 47. The Licensee shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's regulations in effect from time to time. The authorized installed capacity for such purpose is 300,000 horsepower.

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, including those used for transmission-line right-of-way, an amount to be determined hereafter by the Commission.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license to the extent therein indicated.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SACRAMENTO MUNICIPAL UTILITY DISTRICT, PROJECT NO. 2101

ORDER APPROVING REVISED PROJECT EXHIBITS AND ADJUSTING AUTHORIZED INSTALLED CAPACITY

(Issued March 23, 1964)

On July 23, 1963, Sacramento Municipal Utility District, licensee for Project No. 2101, filed for Commission approval revised Exhibits K, L, and M pertaining to the tunnel, penstock, and power plant at the White Rock Division of the project.

Our approval of the revised exhibits would authorize: (1) an increase in the installed capacity of the White Rock Power Plant from 150,000 kilowatts to 200,000 kilowatts; (2) a slight realignment of the White Rock tunnel; (3) an increase in the tunnel diameter from 21 feet to 24 feet; and (4) an increase in the size of the penstock. The penstock formerly authorized tapers from 15 to 14 feet in diameter, bifurcated to 9-foot branches. The penstock which would be authorized by approval of the revised exhibits tapers from 16 to 14 feet, bifurcated to 9.5-foot branches.

The enlarged tunnel and penstock are satisfactorily designed to carry flows required to operate the increased size of the generator units at White Rock Power Plant. The larger plant will allow utilization of the additional 200 cfs of water made available to the White Rock Plant under the January 5, 1962, contract between the licensee and Pacific Gas & Electric Company, mentioned in the Commission's license for Project No. 2155 issued August 28, 1962.

The increase of 50,000 kilowatts in the capacity of White Rock Power Plant will be accompanied by an average annual increase of 11,000,000 kwh in energy output. According to the licensee, the additional capacity can be fully utilized on the licensee's system load by 1969.

The increased capacity of the power plant and tunnel will cost an estimated additional $7,529,000, and the estimated annual value of the additional project output would be $674,930, which exceeds by $275,030 the estimated annual cost of $399,900 for such capacity.

The Department of Agriculture has advised that the proposed changes to the project will not interfere or be inconsistent with the purposes for which Eldorado National Forest was created or acquired, and that the terms and conditions of the present license for the project are adequate for the protection and utilization of the national forest affected.

The Commission finds:

(1) The following described revised project exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project to the extent indicated, and the exhibits mentioned herein as being superseded should be eliminated from the license:

Exhibit	FPC No.	Title
K-25 & L-110	2101-178	"White Rock Development—General Arrangement," insofar as it shows the alignment of the power tunnel and penstock;
L-108	2101-179	"White Rock Tunnel—Typical Sections";
L-109	2101-180	"White Rock Penstock—Plan and Profile";
Superseding Exhibit L-101 (FPC No. 2101-164), now part of the license; and—		
M-5		Entitled, "White Rock Power Plant—General Description of Equipment" in one typewritten sheet filed July 23, 1963, superseding Exhibit M (Revised) in one typewritten sheet dated May 4, 1962, and filed May 16, 1962.

(2) The presently authorized installed capacity of the project for the purpose of computing the capacity component of the administrative annual charge is by this order increased from 545,000 horsepower to 612,000 horsepower, and the annual charge for reimbursing the United States for the costs of administration of Part I of the Act, based on such capacity, is reasonable as hereinafter provided.

The Commission orders:

(A) The revised Exhibits K, L, and M described in finding (1) above are hereby approved as part of the license for Project No. 2101 to the extent therein indicated, and the exhibits described in the same finding as being superseded are hereby eliminated from the license for the project.

(B) Article 46(a) of the license for the project is hereby amended, effective as of January 1, 1964, to show 612,000 horsepower as the authorized installed horsepower capacity of the project.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

IOWA POWER AND LIGHT COMPANY, DOCKET NO. E-7150

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF DEBENTURES

(Issued March 24, 1964)

By order issued March 16, 1964, *supra*, p. 590, in the above-entitled matter, the Commission authorized Iowa Power and Light Company (Applicant) to issue and sell at competitive bidding $10,000,000 principal amount of Debentures, due 1989, subject to the provisions, among others, set forth in Paragraph (B) of that order, as follows:

> (B) The proposed issuance and sale of Debentures at competitive bidding shall not be consummated until:
>
> (i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those regulations relating to affiliations, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.
>
> (ii) The Commission, by a further order, shall have approved the price to be received by Applicant for the proposed issuance of Debentures and the interest rate thereof.

Applicant, on March 24, 1964, filed an amendment, pursuant to the requirements of the aforementioned Commission order, setting forth, among other things, that it proposes to accept, as providing the lowest annual cost of money to it, the bid of White, Weld & Co. to purchase the proposed issuance of $10,000,000 principal amount of Debentures for the price of 100.119 of principal amount with an interest rate of 4⅝%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued March 16, 1964, in the above docket, and under the bid it proposes to accept for the Debentures, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Debentures, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Debentures and the interest rate thereof under the bid referred to above are approved as reasonable.

(B) The proposed issuance and sale of Debentures referred to above, upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are hereby authorized subject only to the provisions of paragraphs (A), (C), (D), and (E) of the Commission's order issued March 16, 1964, in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MISSISSIPPI GAS CORPORATION, DOCKET NO. CP64-87; STARKS UTILITIES, INC., DOCKET NO. CP64-11

FINDING AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued March 24, 1964)

On July 3, 1963, Starks Utilities, Inc., Lake Charles, Louisiana, filed an application (Docket No. CP64-11) and on August 19, 1963 and October 28, 1963, supplements thereto, pursuant to Section 7(a) of the Natural Gas Act, for an order of the Commission directing Texas Eastern Transmission Corporation (Texas Eastern to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Starks Utilities, Inc. and to sell natural gas to Starks Utilities, Inc. for local distribution in the town of Starks, Calcasieu Parish, Louisiana, and in the area adjacent thereto.

The service area proposed to be served, including Starks, an unincorporated community, has a population of approximately 1,200. Its estimated peak day and annual requirements for the first three years of operation are as follows:

	Peak day (Mcf)	*Annual (Mcf)*
1st year	413	15,120
2d year	433	15,840
3d year	443	16,200

Starks Utilities, Inc. owns and operates the water system in Starks.

The only gas service available to the residents of this area at the present time is provided by the sale of bottled gas.

The pipeline of Texas Eastern is located in close proximity to the town of Starks and is shown to be just south of said community.

Stark Utilities, Inc. shows that the total cost of the project will be in excess of $50,000, which will be financed by a loan in the amount of $39,800, which has been authorized by the Small Business Administration, and from its own funds.

Texas Eastern filed an answer in Docket No. CP64-11 on August 26, 1963, stating it was able to supply the small volume of gas requested without impairing Texas Eastern's ability to render adequate service to its customers, but saying that the delivery of the small volume of gas involved by Texas Eastern was not economically feasible. Texas Eastern said, however, it would abide by whatever decision the Commission might make on the merits of the application. Thereafter, on February 27, 1964, Texas Eastern filed an amended answer stating that in the event the Commission finds the service proposed to be in the public interest and directs Texas Eastern to render such service, then Texas Eastern will file with this Commission a rate schedule applicable to its Zone A, providing service to customers such as Starks Utilities, Inc. at a present price of 26.07 cents per Mcf, and in due course execute its regular form service agreement with Starks Utilities, Inc. providing for the service directed.

Mississippi Gas Corporation (Mississippi Gas), 3404 Iroquois Street, Baton Rouge, Louisiana, filed on October 7, 1963, an application (Docket No. CP64-87) and on November 18, 1963, and on February 14, 1964, supplements thereto, pursuant to Section 7(a) of the Natural Gas Act, for an order of the Commission directing Texas Eastern to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Mississippi Gas and to sell and deliver natural gas to Mississippi Gas for resale and distribution in the Village of Reeves, Louisiana, and its environs, at a rate not to exceed 26.13 cents per Mcf.

Mississippi Gas originally estimated its peak day third year requirements at only 98 Mcf and its third year annual requirements at 10,512 Mcf. Its supplement two revised said requirements to be as follows:

	Peak day (Mcf)	*Annual (Mcf)*
1st year	200	20, 257
2d year	210	20, 521
3d year	220	20, 785

This change in estimated requirements was shown to be due to requests from rice farmers north of Reeves for service for 14 additional residential customers, 5 rice dryers, and 7 irrigation wells.

Mississippi Gas proposes to construct a two-inch transmission line approximately 2 miles long to connect with Texas Eastern's 30-inch transmission pipeline south of Reeves, where a metering station is proposed to be installed. It shows that the estimated cost of its project, including transmission line and distribution system, will be $37,000, which it will finance from its own funds and by the issuance and sale of six percent, 20 year, revenue bonds in the amount of $30,000.

The only gas supply available to Reeves at the present time is liquefied petroleum gas.

Mississippi Gas also requests that its supply of natural gas be sold to it at a rate not to exceed 26.13 cents per Mcf. On November 13, 1963, Texas Eastern filed an answer in Docket No. CP64-87 stating, among other things, that it did not have any rate on file with the Federal Power Commission as proposed by Mississippi Gas and upon which the application is based. It was also asserted by Texas Eastern that the sale of the requested volume—98 Mcf, as originally proposed—would not recover the cost of serving Mississippi Gas and that the proposed sale was not economically feasible to Texas Eastern. Thereafter, on February 26, 1964, Texas Eastern filed an amended answer stating, that in the event this Commission finds the service proposed by Mississippi Gas Corporation to be in the public interest and directs Texas Eastern to render such service, then Texas Eastern will file with this Commission a rate schedule applicable to its Zone A, providing service to customers such as Mississippi Gas Corporation at a present price of 26.07 cents per Mcf, and in due course execute its regular form service agreement with Mississippi Gas Corporation providing for the service directed.

Starks Utilities, Inc. and Mississippi Gas each show that it has received from the Louisiana Public Service Commission authorization and acceptance of its rates for service in the Villages of Starks and Reeves, respectively. Starks Utilities, Inc. has been granted a franchise for the construction and operation of its system by the Police Jury of Calcasieu Parish, Louisiana. Mississippi Gas has been granted a franchise by the Board of Aldermen of the Village of Reeves.

Mississippi Gas also owns and operates gas systems in Bougechitto, Mississippi and in Ward 5, St. Helena Parish, Louisiana.

Pursuant to due notice, a public hearing was held upon a joint record in Washington, D.C. on February 26, 1964, respecting the matters involved in and the issues presented by the applications herein. No petition to intervene, protest to the granting of the application or other pleading has been received except the answers and amended answers filed by Texas Eastern, as hereinbefore described.

At the close of the evidence, staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Texas Eastern Transmission Corporation, a Delaware corporation, having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued March 30, 1949, in Docket No. G-1089 (8 FPC 228).

(2) Mississippi Gas Corporation is a private corporation organized and existing under the laws of the State of Mississippi and is authorized to engage in the local distribution of natural gas in the States of Mississippi and Louisiana.

(3) Starks Utilities, Inc. is a private corporation organized and existing under the laws of the State of Louisiana, and is authorized to engage in the local distribution of natural gas in said state.

(4) It is necessary and desirable in the public interest that Texas Eastern Transmission Corporation be directed to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Mississippi Gas Corporation and to sell and deliver to it volumes of natural gas up to 220 Mcf per day for resale and distribution in the Village of Reeves, Louisiana and its environs.

(5) It is necessary and desirable in the public interest that Texas Eastern Transmission Corporation be directed to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Starks Utilities, Inc. and to sell and deliver to it volumes of natural gas up to 443 Mcf per day for resale and distribution in the Village of Starks, Louisiana, and in the area adjacent thereto.

(6) The requirement that Texas Eastern Transmission Corporation serve Mississippi Gas Corporation and Starks Utilities, Inc., as above set forth, will not place any undue burden upon it nor require it to enlarge its facilities nor impair its ability to render adequate service to its existing customers.

(7) Texas Eastern should file an initial rate schedule applicable to its Zone A, providing service to customers such as Mississippi Gas Corporation and Starks Utilities, Inc. at a present price of 26.07 cents per Mcf, and also execute and file its regular form service agreements with Mississippi Gas Corporation and Starks Utilities, Inc. providing for said service in accordance with Texas Eastern's amended answers.

(8) Mississippi Gas Corporation and Starks Utilities, Inc. should be prepared to receive natural gas from Texas Eastern within one year from the date of issuance of this order.

(9) A request having been made by staff counsel for omission of the intermediate decision procedure, and all requirements of the provisions of Section 1.30(c)(1) [18 CFR (c)(1)] of the Commission's Rules of Practice and Procedure having been satisfied, sufficient cause exists for the Commission forthwith to render its final decision herein.

The Commission orders:

(A) Texas Eastern Transmission Corporation be and it is hereby directed to establish physical connection of its transportation facilities with the proposed facilities of Mississippi Gas Corporation and to sell and deliver to it volumes of natural gas up to 220 Mcf per day for resale and distribution in the Village of Reeves, Louisiana, and its environs.

(B) Texas Eastern Transmission Corporation be and it is hereby directed to establish physical connection of its transportation facilities with the proposed facilities of Starks Utilities, Inc. and to sell and deliver to it volumes of natural gas up to 443 Mcf per day for resale and distribution in the Village of Starks, Louisiana, and in the area adjacent thereto.

(C) Texas Eastern Transmission Corporation shall file with this Commission an initial rate schedule applicable to its Zone A, providing service to customers such as Mississippi Gas Corporation and Starks Utilities, Inc. at a present price of 26.07 cents per Mcf, and to execute and file its regular form service agreement with Mississippi Gas Corporation and Starks Utilities, Inc. providing for said service in accordance with Texas Eastern's amended answers.

(D) Mississippi Gas Corporation and Starks Utilities, Inc. shall be prepared to receive natural gas from Texas Eastern within one year from the date of issuance of this order.

(E) Texas Eastern shall report to the Commission in writing the date of commencement of service to said applicants within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. G-18340

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 25, 1964)

On April 22, 1959, Colorado Interstate Gas Company (Applicant) filed in Docket No. G-18340 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain pipeline facilities, all as more fully set forth in application.

Applicant proposes to construct and operate a 180 horsepower skid-mounted compressor station in the Table Rock field of Wyoming in order to compress and deliver volumes of natural gas purchased in said field into Applicant's Green River-Denver mainline for ultimate delivery to Applicant's Rocky Mountain markets.

The total estimated cost of the proposed facilities is $114,099, which cost will be financed from current working funds on hand.

On May 8, 1959, Applicant was granted a temporary certificate authorizing the construction and operation of the proposed facilities.

On April 29, 1959, Public Service Company of Colorado filed a petition to intervene in this proceeding. Said petition is in support of the subject abbreviated application. Accordingly, inasmuch as the shortened procedure is being used herein, no further action on the said petition to intervene appears necessary.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 20, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G-294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsection (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the subject facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado Interstate Gas Company, to construct and operate the subject facilities as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

SABINE PIPE LINE COMPANY, DOCKET NO. CP64-97

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 25, 1964)

On October 25, 1963, Sabine Pipe Line Company (Applicant), filed in Docket No. CP64-97, an application pursuant to Section 7(c) of the Natural Gas Act, for a certificate of public convenience and necessity, authorizing the construction and operation of approximately 127 miles of 24-inch pipeline and related facilities for the transportation of natural gas from the Erath Plant of Texaco Inc. (Texaco) in Vermilion Parish, Louisiana, to Texaco's Port Arthur plants in Jefferson County, Texas, all as more fully set forth in the application on file with the Commission.

Applicant, a wholly owned subsidiary of Texaco, proposes to construct and operate the pipeline for the purpose of providing a transportation service for Texaco to transport approximately 155,000 Mcf of natural gas on an average day and approximately 187,000 Mcf on a maximum day during the first full year of operation. The gas to be transported will be supplied from uncommitted reserves in the Erath Field, Vermilion Parish, Louisiana, and will be delivered into Applicant's line at the tailgate of Texaco's Erath Plant for transportation to and use in Texaco's Port Arthur plants in Jefferson County, Texas.

The cost of the facilities to be constructed and operated by Applicant is estimated to be $15,700,000, and will be defrayed from funds provided by the sale of common stock to, and an unsecured loan from Texaco.

Following the issuance of notice on December 23, 1963, United Gas Pipe Line Company (United) filed a petition for leave to intervene alleging that the construction of Applicant's pipeline "would subject United's existing markets in the Beaumont-Port Arthur Area and its markets all along the proposed pipeline to an invasion by Texaco, and would have an adverse effect (sic) on United of a direct and substantial character."

Thereafter by letter dated February 24, 1964, Applicant advised the Commission that it and United had agreed that Applicant would raise no objection to the issuance of a certificate which includes the following condition:

> The certificate issued * * * is subject to the express condition that gas so transported through Sabine's facilities pursuant to this authority shall be restricted solely to use in Texaco's Port Arthur Plants.

Subsequently, United on February 28, 1964, withdrew its petition for leave to intervene.

We are of the opinion that the insertion of such condition in this order issuing the certificate is unnecessary and would be mere surplusage.

Applicant's certificate application seeks authority to construct and operate a pipeline to transport Texaco's own produced gas from point of production to Texaco's plants in the Port Arthur area of Texas. Thus the certificate we are issuing grants only such authority. If Applicant, in the future, desires to operate its pipeline for any other purpose it will have to apply for authority to do so. Applicant cannot engage in operations other than those for which it has sought a certificate unless otherwise authorized or ordered by the Commission.

At a hearing held on March 20, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including

(1) the application and exhibits hereto, and upon consideration thereof finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Sabine Pipe Line Company, a Delaware corporation having its principal place of business in Houston, Texas, upon commencement of the proposed transportation of natural gas will be engaged in the business of transporting natural gas in interstate commerce subject to the jurisdiction of the Commission, and will therefore be a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The construction and operation of facilities for the transportation of natural gas by Applicant for Texaco Inc., as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The proposed construction and operation of facilities for the transportation and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (b), (c)(1), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Sabine Pipe Line Company, to construct and operate facilities and to transport natural gas in interstate commerce for use in Texaco's Port Arthur plants, as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby further conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(1), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized in (A) above shall be constructed and placed in operation within three years from the date hereof.

(D) United Gas Pipe Line Company is hereby granted permission to withdraw its petition to intervene filed in this proceeding on January 15, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. Charles R. Ross, Harold C. Woodward, and David S. Black.

TOWN GAS COMPANY OF ILLINOIS, DOCKET NO. CP64-3

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE AND DELIVERY OF NATURAL GAS

(Issued March 25, 1964)

Town Gas Company of Illinois (Applicant), filed an application on July 3, 1963, and supplements thereto on December 3 and 17, 1963, in Docket No. CP64-3, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Panhandle Eastern) to establish physical connection of its transmission facilities with the proposed facilities of, and to sell natural gas to Applicant, for distribution and resale in the Village of Middletown, Illinois, and environs, all as more fully set forth in the application and supplements thereto on file with the Commission.

Applicant proposes to construct and operate a distribution system in the Village of Middletown, as well as 7,637 feet of 4½-inch lateral transmission line connecting the proposed distribution system with the transmission facilities of Panhandle Eastern.

The application and supplements thereto show Applicant's estimated third year peak day and annual natural gas requirements to be 217 Mcf and 26,124 Mcf, respectively.

The total estimated cost of the transmission and distribution facilities for the project is $114,682, of which $100,000 will be financed by the issuance of First Mortgage Bonds bearing 5⅝ percent interest.

On January 7, 1964, Panhandle Eastern filed a revised answer to its original answer filed July 25, 1963, and stated it was able and willing to render the requested service to the Applicant.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on February 28, 1964 (29 F.R. 2802). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) Applicant, Town Gas Company of Illinois, an Illinois corporation having its principal place of business in Virden, Illinois, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Panhandle Eastern to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Panhandle Eastern in accordance with the Commission's Regulations, up to 217 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Panhandle Eastern serve Applicant, as hereinafter ordered, will not (a) place an undue burden upon Panhandle Eastern, (b) require Panhandle Eastern to enlarge its transportation facilities, or (c) impair Panhandle Eastern's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Panhandle Eastern for distribution in the Village of Middletown, Illinois, and environs within one year from the date of the issuance of this order.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, Town Gas Company of Illinois as herein described, and to sell and deliver up to 217 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Panhandle Eastern in accordance with the Commission's Regulations, for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Panhandle Eastern's presently filed appropriate rate schedule.

(B) Panhandle Eastern shall report to the Commission, in writing the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED NATURAL GAS COMPANY AND THE MANUFACTURERS LIGHT & HEAT COMPANY, DOCKET NO. CP64-67; THE SYLVANIA CORPORATION, DOCKET NO. CP64-69

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 25, 1964)

On September 18, 1963, as supplemented on November 12, 1963, United Natural Gas Company (United) and The Manufacturers Light & Heat Company (Manufacturers) filed in Docket No. CP64-67 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing United to construct and operate certain facilities and to operate certain existing facilities and authorizing United and Manufacturers to exchange and deliver natural gas pursuant to two separate agreements, all as more fully set forth in the joint application, as supplemented.

The joint application shows that United proposes to purchase natural gas from The Sylvania Corporation (Sylvania) produced by the latter from fields in Brush Valley and Cherryhill Townships, Indiana County, Pennsylvania. United will construct and operate approximately 500 feet of 3-inch pipeline extending from Sylvania's well to an existing tap on Manufacturers' 4-inch line, together with a meter station and appurtenant facilities. Said facilities are estimated to cost $5,385, which cost will be financed out of cash on hand.

Since United has no pipeline in Indiana County, it proposes to exchange gas with Manufacturers whereby gas purchased from Sylvania will be delivered by United, by means of the herein proposed 3-inch line, into Manufacturers' 4-inch line at a point in Brush Valley Township; Manufacturers will in turn deliver equal volumes of gas to United at an existing connection near Medix Run, Benezette Township, Elk County, Pennsylvania. This proposed exchange arrangement is pursuant to an agreement, dated July 3, 1963, between United and Manufacturers.

The joint application shows further that United and Manufacturers have also been exchanging gas in Elk County, pursuant to an agreement, dated March 8, 1960, as supplemented. Under this agreement, as supplemented, gas purchased by United in the Benezette Field is delivered into Manufacturers' 4- and 12-inch production lines and then redelivered by Manufacturers through United's Medix Run Station into United's Line No. F-100.[1] United and Manufacturers state that the facilities utilized for this exchange were considered production facilities; however, United and Manufacturers state further that by the Commission's order issued January 18, 1963, as amended, in Docket No. CP62-275, United's Line No. F-100 was authorized to be utilized for a jurisdictional service. Accordingly, United and Manufacturers request herein authorization to continue the exchange, pursuant to the March 8, 1960, agreement, as supplemented, and, further, United requests herein authorization to operate its Line No. F-100 and its Medix Run Station and the connecting 12-inch line related thereto in order to effect said exchange.

---

[1] Said agreement, as supplemented, also permits Manufacturers to use a portion of the capacity at the Medix Run Station to pump its own gas, with Manufacturers paying its pro-rata share of the cost of operating and maintaining the station.

On September 18, 1963, Sylvania filed in Docket No. CP64-69 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas to United produced from fields in Brush Valley and Cherryhill Townships, Indiana County, Pennsylvania, all as more fully set forth in the application.

The initial price is 27 cents per Mcf at 15.025 psia.[3]

On December 5, 1963, United, Manufacturers and Sylvania were granted temporary certificates authorizing the subject proposals.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on March 20, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications, supplement and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Natural Gas Company, a Pennsylvania corporation having its principal place of business in Oil City, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1943, in Docket No. G-328 (3 FPC 959).

(2) Applicant, The Manufacturers Light & Heat Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G-593, *et al.*, (4 FPC 821).

(3) Applicant, The Sylvania Corporation, a Pennsylvania corporation having its principal place of business in Oil City, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 17, 1943, in Docket No. G-237 (3 FPC 1066).

(4) The facilities to be constructed and operated and the existing facilities to be operated by United, as hereinbefore described and as more fully described in the joint application, as supplemented, in Docket No. CP64-67, are proposed to be used in the exchange and delivery of natural gas in interstate commerce between United and Manufacturers, subject to the jurisdiction of the Commission, and the construction and operation of such facilities and the operation of existing facilities by United and the exchange and delivery of natural gas between United and Manufacturers are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The sale of natural gas by Sylvania hereinbefore described, as more fully described in the application in Docket No. CP64-69, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sale by Sylvania, together with the construction and operation of any facilities subject to

---

[3] Sylvania agreed to accept a permanent certificate at an initial price of 27.0 cents per Mcf at 15.025 psia by letter received October 1, 1963.

the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(6) The sale of natural gas by Sylvania, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) The construction and operation of the proposed facilities and the operation of the existing facilities by United and the proposed exchange and delivery of natural gas between United and Manufacturers are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(8) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(9) Public convenience and necessity require that the certificate issued hereinafter to United and Manufacturers in Docket No. CP64–67 and the rights granted thereunder be conditioned upon said Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(10) The certificate issued hereinafter to Sylvania in Docket No. CP64–69 should be subject to the express condition that the initial price for gas sold by Sylvania to United shall not exceed 27.0 cents per Mcf at 15.025 psia.

(11) The certificate issued hereinafter to Sylvania in Docket No. CP64–69 should determine only the payments which may legally be made by the buyer to the seller and do not and cannot estop the Commission from considering the appropriate cost to be attributed to these sales should United's purchased costs be in issue in a further rate proceeding under either Sections 4(e) or 5(a) of the Natural Gas Act.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued jointly to Applicants, United Natural Gas Company and The Manufacturers Light & Heat Company, authorizing United to construct and operate the described facilities and to operate the described existing facilities and authorizing United and Manufacturers to exchange and deliver natural gas as hereinbefore described, all as more fully described in the joint application, as supplemented, in Docket No. CP64–67, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity be and the same is hereby issued, upon the terms and conditions of this order, authorizing the sale by Sylvania of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sale, all as hereinbefore described and as more fully described in the application in Docket No. CP64–69.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon United's and Manufacturers' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(D) The certificate issued to Sylvania in paragraph (B) above is not transferable and shall be effective only so long as Sylvania continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(E) The grant of the certificate issued in paragraph (B) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Sylvania. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sale of natural gas subject to said certificate.

(F) The certificate issued to Sylvania in paragraph (B) above is hereby made subject to the express condition that the initial price for gas sold by Sylvania to United shall not exceed 27.0 cents per Mcf at 15.025 psia.

(G) The certificate issued to Sylvania in paragraph (B) above determines only the payments which may legally be made by the buyer to the seller and do not and cannot estop the Commission from considering the appropriate cost to be attributed to these sales should United's purchased costs be in issue in a further rate proceeding under either Sections 4(e) or 5(a) of the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ALGONQUIN GAS TRANSMISSION COMPANY, DOCKET NO. RP64-21

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING AND APPROVING PROPOSAL TO FURTHER REDUCE RATES

(Issued March 27, 1964)

Algonquin Gas Transmission Company (Algonquin) on February 27, 1964, tendered for filing certain revised tariff sheets to its FPC Gas Tariff, Original Volumes Nos. 1 and 2.[1] The proposed change in rates would make effective as of March 1, 1964, a reduction in Algonquin's jurisdictional rates of 0.73 cents per Mcf, or approximately $538,000 annually, based upon its operations for the twelve months ended December 31, 1962, adjusted, subject to certain conditions. The proposed rate filing, which we have docketed as shown above, also includes a proposal to make refunds of charges for deliveries of gas during January and February 1964, and to make further rate reductions on July 1, 1965, such reductions being subject to additional terms and contingencies summarized in part below.

The proposed change in rates reflects a reduction in Algonquin's cost of service which includes a reduction of approximately $184,000 in Algonquin's Federal income tax resulting from the recent reduction in the tax rate for corporations from 52 percent to 50 percent. According to Algonquin's proposal, it will make refunds to its customers, by crediting current bills, so as to reflect the reduction in Federal income tax as of January 1, 1964. The proposed reduction in charges for January and February deliveries is 0.25 cent per Mcf.

---

[1] Original Volume No. 1: Fourth Revised Sheet No. 5; Fourth Revised Sheet No. 10; Fifth Revised Sheet No. 11-A; Fifth Revised Sheet No. 12; Fourth Revised Sheet No. 14; Original Volume No. 2: Fifth Revised Sheet No. 4; Second Revised Sheet No. 57.

Algonquin's rate reduction proposal has resulted from conferences with the Commission staff. These conferences were initiated by letter of the Executive Director to Algonquin on September 6, 1963, as a consequence of the staff's continuing supervision and periodic review of the reports filed by natural gas companies with the Commission.

The proposal is summarized in part as follows:

(1) Effective as of March 1, 1964, Algonquin's jurisdictional rates will be reduced to the levels set forth in Appendix A hereto.

(2) Algonquin will credit current bills with an amount so as to reduce the bills previously rendered for January and February 1964, deliveries, to reflect a reduction of 0.25 cents per Mcf in the rates charged effective January 1, 1964.

(3) On July 1, 1965 if Algonquin is utilizing liberalized depreciation in determining its Federal income tax, it will file reduced rates to reflect a reduction in Rate Schedule F-1 by $0.10 demand and 0.15 cent commodity and make corresponding reductions in Rate Schedules E-1, ERS-1 and I-1. If it is not thus utilizing liberalized depreciation, it will, nevertheless file a 0.10 cent per Mcf reduction in its rates at that time to give effect to the deduction of the accumulated deferred tax balances in Account No. 282 from its rate base. In the event any party seeks court review of the Commission's determinations with respect to liberalized depreciation in its Opinion No. 417, issued February 3, 1964, in *Alabama Tennessee Natural Gas Company*, Docket No. G-5471, *et al.*, 31 FPC 208, Algonquin's proposal also affords the company the option of deferring the aforementioned rate reductions until 20 days after the date of final court affirmance of the Commission's "rate flow-through" principle relating to the utilization of liberalized depreciation, as well as of the deduction of Account No. 282 accumulated deferred tax balances from rate base. However, upon such affirmance, Algonquin's obligation, as provided above, to reduce its rates (including the making of refunds as applicable) shall be effective as of July 1, 1965. The proposed agreement also provides that Algonquin shall not be under such obligations in the event of the enactment of any future legislation intended to deny the use of liberalized depreciation as a basis for prescribing reduced rates.

(4) Algonquin's existing obligation to pass on gas supplier refunds and to reflect in its rates the reductions in rates of its supplier, Texas Eastern Transmission Corporation, as set forth in its settlement agreement approved by Commission order issued November 16, 1961, in Docket No. G-19133, shall remain in effect during the term of this agreement.

(5) Algonquin will not make effective any increase in its jurisdictional rates before July 1, 1965, unless prior to that date Texas Eastern files for an increase in rates.

(6) This rate reduction agreement shall terminate on the date that either Algonquin makes effective an increase in rates, or the Commission makes effective a reduction in rates as a result of any future investigation of its rates. Algonquin reserves the right to make filings not specifically restricted by its proposed agreement and reserves legal rights not specifically provided for therein.

(7) The Commission is requested to waive compliance by Algonquin with the requirements of the Commission's general rules and regulations, particularly Part 154 thereof, to the extent necessary to effectuate all of provisions of the proposal.

No protests or objections to Algonquin's proposed reduced rates have been received.

The Commission finds:

(1) Good cause exists for waiving the 30-day notice and other requirements of Section 154 of the Commission's Regulations under the Natural Gas Act in order that the revised tariff sheets specified above may become effective as hereinafter ordered.

(2) The proposed revised tariff sheets, the rate reductions therein contained and Algonquin's agreement to further reduce its rates as provided in the proposal, are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be accepted for filing and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The 30-day notice requirement and other provisions of Section 154 of the Commission's Regulations under the Natural Gas Act are hereby waived subject to the terms and conditions of this order and of the rate reduction proposal.

(B) The revised tariff sheets specifically described hereinabove are accepted for filing to become effective on March 1, 1964, the proposed refunds of charges collected for January and February deliveries, and Algonquin's proposal to further reduce its rates, are approved and made effective as proposed in Algonquin's agreement filed on February 27, 1964, subject to the terms and conditions of this order.

(C) Algonquin shall comply with each of the provisions of Algonquin's rate reduction agreement relating to future refunds and rate reductions.

(D) Within twenty (20) days of making refunds in accordance with paragraph (C) herein, Algonquin shall report to the Commission, in writing and under oath, the amount of the refund made to each customer, showing separately the amount of principal and interest so paid together with a computation showing the manner in which such refund was determined, and shall serve a copy of such report upon each customer receiving a refund.

(E) This order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Algonquin Gas Transmission Company, the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against Algonquin Gas Transmission Company or any other persons or parties affected by this order.

Commissioner Ross *dissenting.*

AREA RATE PROCEEDING, ET AL., DOCKET NO. AR61-2, ET AL.

ORDER DENYING MOTION OF SUPERIOR OIL COMPANY FOR AMENDMENT OF COMMISSION ORDER REGARDING INDIVIDUAL COMPANY COST PRESENTATIONS

(Issued March 30, 1964)

On February 24, 1964, The Superior Oil Company filed a motion for modification and/or clarification of the Commission's order of May 16, 1963 herein (29 FPC 981, reconsideration denied July 24, 1963, 30 FPC 400) which declared individual company cost presentations to be inadmissible in the present hearing. Staff filed its answer on March 4, 1964. We are of the opinion that Superior's motion should be denied.

The only new contention made here is that it might be appropriate to present by way of rebuttal material we have excluded from the direct cases of the parties. We see no basis for this distinction and note that the examiner who was familiar with the evidence presented in the direct cases of the parties rejected the proffered evidence as not proper rebuttal. He has not certified the issue to us and we have been presented with no reason which would justify our intervention at this interlocutory stage of the complex proceeding.

The Commission orders:

For the foregoing reasons the motion of The Superior Oil Company filed February 24, 1964 is denied.

OPINION NO. 423

CAROLINA PIPELINE COMPANY, COMPLAINANT v. SOUTHERN NATURAL GAS COMPANY, RESPONDENT, DOCKET NO. RP63-4

OPINION AND ORDER

(Issued March 30, 1964)*

Syllabus

1. Different treatment in curtailment of overrun gas for different classes of customers is justified. P. 707.
2. It is reasonable for pipeline to protect itself and customers against possible detriment by allocating its limited supply of overrun gas. P. 707.
3. Commission *concludes* that differentiation by Southern between CDL-AOL and CD customers is not unreasonable - - noting that not all difference in treatment is illegal, only unjust, unreasonable or undue discrimination. P. 707.
4. Under instant circumstances Carolina is receiving favorable service and fair treatment; it has not sustained request for even more favorable service. P. 707, 708.
5. Fact that Buyer applied for, supported and contracted for the CDL-AOL service does not estop it from challenging such service. P. 709.
6. Instant record affords no basis for any finding of any anti-trust violation by Southern. P. 709.

---

*Initial decision appears on p. 714. Rehearing denied on May 22, 1964, 31 FPC 1279.

[Ed. Note: Dismissal of Complaint was appealed by Carolina to CADC; thereafter case was remanded per Commission request—See settlement order 34 FPC 547]

7. Commission *dismisses* complaint against Southern Natural in proceeding arising under Sections 4(b) and 5(a) of the Natural Gas Act. PP 710; 725.

Commissioner Ross *dissenting.*

Stanley M. Morley and *John T. Ketcham* for Carolina Pipeline Company.

William S. Tarver and *Hugh J. Morgan, Jr.* for Southern Natural Gas Company.

Allen Post, Albert G. Norman, Jr. and *Jacob Goldberg* for Atlanta Gas Light Company.

Richard Young Bradley for Gas Light Company of Columbus.

Horace E. Richter and *Jimmie McFerrin* for Georgia Municipal Authority.

Harry A. Poth, Jr., Richard M. Merriman, Peyton G. Bowman, III and *John M. Kuykendall, Jr.* for Mississippi Valley Gas Company.

H. H. Hillyer, Jr., Andrew McCollam, Jr. and *John M. McCollam* for South Atlantic Gas Company.

Harry A. Poth, Jr., Richard M. Merriman, Peyton G. Bowman, III and *Arthur M. Williams, Jr.* for South Carolina Natural Gas Company.

Samuel B. Ross for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SWIDLER, *Chairman:*

The question presented by this case is whether Southern Natural Gas Company (Southern) illegally discriminates against its customer Carolina Pipeline Company (Carolina) in its allocations of "overrun" gas (interruptible gas in excess of firm requirements) between Carolina, and its other customers. The case arose on a formal complaint filed by Carolina on September 6, 1962, against Southern, alleging discriminatory violations of sections 4(b) and 5(a) of the Natural Gas Act. After a formal hearing, the Examiner issued an initial decision on October 3, 1963, finding no illegal discrimination, and ordering Carolina's complaint dismissed. Exceptions were filed by staff and Carolina on October 23, 1963, and by Southern and Atlanta Gas Light Company (Atlanta) on November 12, 1963. Replies to exceptions were also filed by certain parties.

Southern has separate rate schedules for different classes of customers. Its CDL–AOL service is expressly designed for companies with "one or more other sources" of supply additional to the supply from Southern. Its CD service is designed for customers wholly or primarily dependent on Southern for their gas supply.

Carolina complains that it is eligible to purchase gas only under Southern's CDL and AOL Rate Schedules, which are "subject to curtailment or interruption at any time" by Southern. Under Southern's CD Rate Schedule, Southern's deliveries of overrun gas to the CD customers are not subject to curtailment except on at least four hours' notice. Southern renders overrun service to its CDL-AOL customers only at such times as Southern's service to its other customers would not be adversely affected, and such CDL–AOL overrun service is subject to curtailment without notice to meet the needs of Southern's other customers. Southern's CD customers thus have first call on overrun gas. Carolina avers that such difference in treatment unduly discriminates against it, contending that during a 13-month period embracing the year 1962, its takes of overrun gas from Southern were totally curtailed on 35 days, while CD customers continued to receive gas, even though Carolina paid the same rate that the CD customers paid. By way of relief, Carolina requests that it be permitted to receive service under Southern's CD Rate Schedule rather than under the CDL and AOL Rate Schedules.

Basically, the Examiner held that Southern's curtailing Carolina's overrun gas while continuing to serve other customers does not illegally discriminate against Carolina, because of the material differences between the CDL-AOL customers (including Carolina) and the CD customers. As the Examiner pointed out different treatment for these different classes of customers is justified.

Carolina is basically a customer of Transcontinental Gas Pipe Line Corp. purchasing over 80 percent of its firm gas from Transco. It would seem equitable that overrun gas be allocated in proportion to firm gas purchases. By such a standard, Carolina is now receiving generous treatment from Southern. A customer with more than one source of gas supply and a large market for overrun gas may well take excessive volumes of overrun gas from one supplier to meet its interruptible demands, to the detriment of that supplier and its customers, unless the supplier can control by curtailments the purchaser's takes of overrun gas. It is reasonable for a pipeline supplier to protect itself against such a possibility in the allocation of its limited supply of overrun gas.

We conclude, with the Examiner, that the differentiation by Southern between the CDL-AOL customers (including Carolina), and its CD customers, is not unreasonable. Not all difference in treatment is illegal under the Act, but only unjust, unreasonable, or undue discrimination, see section 5(a); *Michigan Consolidated* v. *F.P.C.*, 203 F. 2d 895, 901.

The difference between the services is justified by the facts of Carolina's operations. Carolina has a disproportionately large market for interruptible gas by virtue of its large industrial customers.[1] Thus, some 90 percent of Carolina's total purchases from Southern are of overrun gas, compared to some 10 percent of firm gas, a much higher proportion of overrun gas than is purchased by any other resale customer.[2] To meet its large industrial demands, Carolina utilizes its flexibility of supply to purchase a much greater proportion of its overrun gas from Southern, while continuing to purchase from Transco, its initially certificated supplier, greater volumes of firm gas. As the Examiner indicated, in 1962 Carolina took about eight times as much overrun gas from Southern as it did from Transco, while taking about five times as much firm gas from Transco as it did from Southern. Its purchases from Southern have been running very nearly 1000% load factor.[3] Indeed, Carolina's stated policy is to purchase overrun gas from Southern in preference to Transco, because the cost of overrun gas from Southern is only 24.9 cents per Mcf (on an equivalent basis) compared to 28 cents per Mcf for Transco interruptible gas. Also, as the result of Carolina's high load factor purchases from Southern, the average cost to Carolina of both firm and interruptible gas purchased from Southern in 1962 was some four cents less than the next lowest cost of any of Southern's other major resale customers in any zone. Considering all the circumstances, we think that Carolina is receiving favorable service and fair treatment and that its request for even more favorable service has not been sustained on this record.

---

[1] Carolina's sales in 1962 totaled some 15,176,000 Mcf. of which some 12,412,000 Mcf were main-line direct sales to industries (of which 11,996,000 Mcf were interruptible), while only 2,231,000 Mcf were wholesales to resale customers, with the remainder of some 534,000 Mcf being sold on Carolina's local distribution system.

[2] Comparing certain CD customers of Southern, South Carolina Natural Gas Company purchases from Southern some 65 percent overrun gas and some 35 percent firm gas, South Georgia Natural Gas Company purchases some 10 percent overrun gas and some 90 percent firm gas, and Atlanta Gas Light Company, Southern's largest customer, purchases some 3.4 percent overrun gas and some 96.6 percent firm gas.

[3] Thus, in 1962 Carolina purchased from Southern some 8,534,000 Mcf of interruptible overrun gas and 890,000 Mcf of firm gas, compared to purchases from Transco of some 1,029,000 Mcf of interruptible gas and some 4,894,000 Mcf (or more) of firm gas.

Carolina in its exceptions contends, however, that the distinction on which the difference between the CDL–AOL service and the CD service is based is arbitrary and unreasonable, as shown by the fact that other customers of Southern, notably the Atlanta Gas Light Company (Atlanta), are permitted to take the CD service. Also, Carolina says that the only other customers classified for CDL–AOL service are Florida Gas Transmission Company (Florida Gas) and Texas Eastern Transmission Corporation (Texas Eastern), that they are much larger than Carolina and are otherwise unlike it. Carolina adds that Southern makes overrun gas available to its other customers on the basis of their needs, and that Carolina's needs are equally entitled to consideration with the needs of such other customers, especially Southern's direct interruptible industrial customers. It claims that overrun gas is of vital importance to Carolina's economic health because of the peculiar character of its markets, while its requirements are so small that giving it equal treatment in volumes of overrun gas would have little or no adverse impact on Southern or its other customers. In this connection, Carolina points out that its volumes of overrun gas declined from some 500,000 Mcf between January 20 and February 15, 1962, to some 20,000 Mcf in a similar period in 1963.

The above contentions of Carolina do not, in our judgment, support the relief it seeks. Atlanta purchases the great bulk of its firm gas supply from Southern and not from another pipeline, as does Carolina.

The distinction between Atlanta and Carolina is the same as between a firm and interruptible customer. Different treatment is not only proper but is expected. Atlanta is basically a firm customer of Southern and receives from Transco only small volumes of firm gas in relation to its total firm requirement. Carolina in contrast as we have stated is basically a firm customer of Transco. Although Florida Gas and Texas Eastern are larger than Carolina, they have the same relationship to Southern that Carolina does, purchasing only a small portion of their firm gas supply from Southern. It is true that Carolina aids Southern's operations by purchases of surplus gas. All sales should benefit both buyer and seller. This fact has no bearing on Southern's responsibility to accord fair treatment to all of its customers in accordance with their relationship to Southern and its right to limit purchases by Carolina of overrun gas on the winter peak days when the total demand for such gas from all of Southern's customers exceeds the supply.

We have found that at present Southern does not unduly discriminate against Carolina by its curtailment of overrun gas. We are concerned, however, by the fact that the availability of overrun gas to Carolina declined from 500,000 Mcf in a portion of January and February of 1962, to only 20,000 Mcf in a similar period in 1963. Carolina fears that the volumes of overrun gas Southern makes available to it will continue to decline and may result in serious financial injury to it in the light of its present heavy dependence on industrial sales. Southern replies, however, that the reduction resulted from an exceptionally cold winter in 1962 and not from any calculated curtailing of Carolina's takes. Accordingly, while we do not exclude the possibility that Southern's curtailments of Carolina's deliveries may be found unduly discriminatory in a future proceeding, the present record does not support such a finding for the reasons given in the Examiner's decision and in this Opinion.

Certain other considerations discussed by the Examiner also support our conclusion in this case, including the fact that Southern's CDL–AOL service has been found in the public interest in three separate proceedings before the Commission, namely, when we authorized the new CDL–AOL service by Southern to Carolina in 25 FPC 518 (1961), to Coastal Transmission Corporation (now Florida Gas) in 26 FPC 318 (1961) and to Texas Eastern in 28 FPC 1035 (1962).

The exceptions raise certain other matters that can be disposd of briefly. Staff agrees that Carolina is properly classified for CDL–AOL service, but raises a question whether Atlanta is properly classified for CD service, arguing that such an improper classification exists and results in undue discrimination against Carolina and others. Accordingly, staff recommended that a show cause order be issued requiring Southern to show cause why Atlanta should not be reclassified for CDL–AOL service.

The Examiner rejected this recommendation on the ground, *inter alia*, that Atlanta's service classification was not an issue in this case under our hearing order, and that the facts do not disclose that Atlanta is incorrectly classified for CD service. We agree with the result reached by the Examiner. Even if Atlanta's service classification is properly an issue in this case, a careful consideration of all the evidence of record, some of which is discusssed briefly above, sufficiently indicates that Atlanta is not improperly classified for CD service.

Carolina also complains that the tariff provision requiring four hours' notice of curtailments of CD overrun gas is not applicable to CDL–AOL customers. Southern states it would have no objection to an amendment to its tariff accomplishing this result, but points out that this would necessarily result in more frequent curtailments by Southern and reduced deliveries of gas. Such being the case, it would seem that Carolina would not desire such an amendment to the tariff, but it is free to renew its request if it sees fit.

We agree with the Examiner that the fact that Carolina applied for, supported, and contracted for the CDL–AOL service does not estop it from challenging the service. In our view, Carolina's actions in this regard have little if any bearing on the question whether the service is unduly discriminatory.

Concerning another point, as the Examiner held, this record affords no basis for any finding of any anti-trust violation by Southern. The 90 percent ratchet complained of by Carolina and staff has not been shown to operate in a manner that unduly discriminates against Carolina.

We have considered the other matters urged in the exceptions, and find that they are not of sufficient substance to change the result we reach. Because of the completeness of the briefs and exceptions, the oral argument requested by Carolina is unnecessary.

A word appears to be in order with regard to the dissenting statement, which in citing *Lynchburg Gas Company*, Docket No. RP63–5 has misconstrued that decision. There, Lynchburg and all other customers received overrun service under the same tariff and the pipeline was attempting to apply the tariff in a discriminatory manner. In this case, Carolina is served under a different tariff than the one under which it would like to be served, and claims no discrimination under the tariff which covers its present service. The standards by which Carolina and other pipeline purchasers from Southern were classified are clearly stated in the Availability Clause of the CDL–3 Tariff quoted in the dissent. What Carolina is seeking is either a change in the CDL–3 tariff which would give it the same benefits as are received by customers under the CD–3 tariff, or that it be permitted to take service under the CD–3 tariff, ignoring the differences in Carolina's operations as compared with Southern's customers now receiving service under that tariff. We hold here only that Southern's classification was not unreasonable.

The Commission orders:

The initial decision of the Presiding Examiner, issued October 3, 1963, in the above-entitled proceeding is, consistent with this Opinion, adopted by the Commission, to comprise with this Opinion its decision in this case, and the exceptions thereto and request by Carolina for oral argument are denied.

Commissioner Ross *dissenting.*

Ross, *Commissioner, dissenting:*

Southern discriminates against Carolina regarding deliveries of interruptible or overrun gas. That much is clear and uncontested. Southern's unique CDL-AOL tariffs applicable to Carolina give Southern the right to curtail deliveries "at any time". Carolina has the lowest priority of *any* customer of Southern, either jurisdictional or nonjurisdictional, for overrun gas. During periods of curtailment, Carolina is first off the line and the last to get back on (Tr. 396-7). The majority points out: (1) that deliveries of such gas to Carolina were totally curtailed on 35 days during a period when other jurisdictional customers continued to receive gas and (2) that Carolina's volumes of overrun gas declined from 500,000 Mcf between January 20 and February 15, 1962, to some 20,000 Mcf in a similar period in 1963. The majority finds that the discrimination practiced against Carolina is not undue or unjust principally because Carolina has an alternate source of supply. As will be shown herein, this basis is irrelevant.

In order to properly understand this proceeding, it is necessary to review its background as well as certain characteristics of Southern's rate structure.

Southern's CD-3 rate schedule (its contract demand rate schedule for Zone 3) in essentially the same form it has today was initially effective as a result of the settlement of a *Southern* rate case decided on May 19, 1955 (14 FPC 742). The applicability of this rate schedule constitutes one of its terms, as required by § 4(c) of the Natural Gas Act:

RATE SCHEDULE CD-3

Contract Demand Service, Rate Zone 3

1. Availability:

This rate schedule is available to a purchaser (hereinafter called PURCHASER) for the purchase from Southern Natural Gas Company (hereinafter called COMPANY) of natural gas, for resale, at such delivery points, located in the above named rate zone, as may be agreed to from time to time and set out in the contract between COMPANY and PURCHASER.

2. Applicability and Character of Service:

This rate schedule is applicable to all gas delivered by COMPANY to PURCHASER hereunder. Delivery of gas up to the CONTRACT DEMAND for any delivery point, or up to the sum of the CONTRACT DEMAND for delivery points which have been grouped as specified in Exhibit A to the contract, shall not be subject to curtailment or interruption by COMPANY, except as provided in Sections 8.3 and 16.2 of the GENERAL TERMS AND CONDITIONS.

This is the only rate schedule under which Southern made jurisdictional sales in Zone 3. At least, it was until Carolina became a customer of Southern.

Carolina initially requested service under this CD-3 rate schedule in a conference with certain of Southern's officers on April 16, 1959 (Tr. 130). Southern refused this request and indicated that it would agree to sell gas to Carolina only under a new set of rate schedules which Southern would devise (Tr. 130-1, 421). The President of Southern, C. P. Rather, explained in detail why Southern did not see fit to offer service to Carolina on a par with that available to southern's other jurisdictional purchasers. The grounds for Southern's different attitude toward Carolina are as follows:

(1) Southern's other jurisdictional purchasers are solely dependent on it for their gas supply or receive trivial amounts from other sources;

(2) An unsuccessful effort to get a greater contract demand from Carolina;

(3) Southern's belief that the sale to Carolina would not carry "its fair share of the system load";

(4) Southern's desire to avoid complaints by its other customers;

(5) Southern's direct sale customers are more lucrative;

(6) Southern's wish to give assurance of delivery of interruptible gas to its nonjurisdictional customers for 300 days every year;

(7) The "physical characteristics" of Carolina differ from its other CD customers.

(Tr. 426-7, 431-3, 663, ex. 2)

In the actual drafting of the new tariffs proposed by Southern for sales to Carolina, Southern specifically had Carolina in mind, designed it deliberately to cover Carolina and attempted to distinguish Carolina from all its other customers (Tr. 638). In the attempt to artificially segregate Carolina, the resulting tariff comes out most perplexingly. The new CDL tariff provides:

RATE SCHEDULE CDL-3

Contract Demand—Limited Service, Rate Zone 3

1. Availability:

This rate schedule is available to a natural gas pipeline company (whether or not it is also a distributor) (hereinafter called PURCHASER) obtaining natural gas from one or more other sources, for the purchase for resale, from Southern Natural Gas Company (hereinafter called COMPANY) of natural gas at a single delivery point, located in the above named rate zone, and set out in the contract between COMPANY and PURCHASER.

Carolina had no choice. It either took gas on Southern's terms or it took no gas from Southern. Carolina chose the lesser of two evils and reluctantly capitulated to Southern's stiff terms, and the Commission approved the sale in routine fashion.[1] The decision authorizing the sale did, however, reflect the reasons why the sale was considered to be consistent with the public interest:

> It is obvious that the attachment of a new source of supply from a second interstate pipeline company will advantage Carolina Pipeline in respect of flexibility and safety of its service, *e.g.*, in the event of an emergency affecting supply from Transco. * * * Additionally, the attachment of the new source may in the future give Carolina Pipeline a bargaining position vis-a-vis its two independent suppliers for additional volumes of gas as needed to meet expanding markets. It is concluded that the public interest is advantaged in the case of both Southern and Carolina Pipeline in respect of the supply and deliverability features of the proposal.[2]

Carolina had no criticism of Southern's overrun policy during the first year of service. However, as described by the majority, Southern drastically reduced overrun deliveries to Carolina during the 1962-1963 winter season; and on days when other of Southern's jurisdictional customers received their full contract demand plus substantial volumes of overrun gas, Carolina received none. Carolina renewed its request for service under the CD-3 tariff which was again refused, and this proceeding resulted.

---

[1] In the absence of any party's complaint, the examiner found that the differences between CD and CDL-AOL tariffs were minor. *Southern Natural Gas Company*, 25 FPC 518, 520.

[2] *Southern Natural Gas Company, supra*, p. 520.

At the hearing, C. P. Rather, President of Southern, identified the standards supporting Southern's different classification of Carolina. He conceded that these standards were not a part of the tariff:

> Q. With respect to the points you have mentioned, the standards by which you distinguished between Carolina and Atlanta Gas Light, one is many points of delivery, is that to be found in the tariff as a distinguishing feature for the rendering of service?
>
> A. No.
>
> Q. A long history, is that to be found in the tariff?
>
> A. No, sir.
>
> Q. Southern's concept of fair and equitable treatment, is that to be found in the tariff?
>
> A. Not spelled out as I have here, no.
>
> Q. Are the words "fair and equitable treatment" to be found in the tariff?
>
> A. I don't think they are, no.
>
> Q. Is there a provision in the tariff that when a CD customer wants more gas and Southern can not supply it, that that will be a standard by which a differentiation in service is judged?
>
> A. No, sir.
>
> [Tr. 448-9.]

This concludes most of the relevant background and squarely raises one obvious issue: does Southern's CDL-AOL tariff conform to the requirements of Section 4(c) of the Natural Gas Act. This Section provides:

> . . . every natural-gas company shall file with the Commission. . . . schedules showing all rates and charges for any transportation or sale subject to the jurisdiction of the Commission, and the *classifications*, *practices*, and *regulations* affecting such rates and charges, together with all contracts which in any manner effect or relate to such rates, charges, classifications, and services. [Emphasis added.]

By its own testimony, Southern has admitted that its classifications and practices are not described in its tariffs. Accordingly, it should be ordered to desist its discriminatory practice against Carolina. Only six months ago, the Commission in a summary order directed Atlantic-Seaboard to desist from using a practice in overrun deliveries which was not identified in the tariff.[3] The Commission took this action carefully noting that it was not passing upon the propriety of Seaboard's policy. The Commission not only should, but is legally obligated to, take a similar position here.

There is a second objection. Southern's CD-3 tariff explicitly prohibits Southern from discriminating among its customers in its deliveries of overrun or interruptible gas. Section 9 of CD-3 states:

> COMPANY [Southern Natural] shall not discriminate as among its direct sale customers and its resale customers in the delivery of interruptible or excess gas

A similar provision is found in Section 16.1.

While the CDL-AOL tariff incorporates by reference several of the Sections included in the CD-3 tariff, Sections 9 and 16.1 are specifically excluded. Thus, it might be fairly said that Southern can render undue, unjust, and illegal discriminatory service to customers under its CDL-AOL tariffs. This is, at least,

---

[3] *Lynchburg Gas Company*, Docket No. RP63-5, order issued October 1, 1963, 30 FPC 934.

Southern's position, for Mr. Baum testified that Southern can curtail deliveries under its CDL and AOL rate schedules "at the sole discretion of Southern Natural Gas Company" (Tr. 655). And Mr. Rather testified: "It is our decision whether we grant Carolina gas or not during times of curtailment (Tr. 447).

Even the majority states its concern that Southern can, under the CDL and AOL tariffs, unjustly discriminate against Carolina:

> We are concerned, however, by the fact that the availability of overrun gas to Carolina declined from 500,000 Mcf in a portion of January and February of 1962, to only 20,000 Mcf in a similar period in 1963. * * * Accordingly, while we do not exclude the possibility that Southern's curtailments of Carolina's deliveries may be found unduly discriminatory in a future proceeding, the present record does not support such a finding for the reasons given in the Examiner's decision and in this Opinion. [Opinion, p. 708.]

Any tariff which allows a natural gas company to illegally discriminate in the service it provides is improper and inconsistent with Sections 4(b) and 5(a) of the Natural Gas Act. At the very least, the majority should modify these tariffs now so as to prevent Southern from discriminating in the future.

Southern's CDL and AOL tariffs are fatally defective for the additional reason that the standards described in the tariffs afford no basis for discrimination. It is initially important to recognize that the CDL (and AOL) tariff is *not* applicable to purchasers with an alternate source of supply, as the majority incorrectly assumes. Such a classification would have included certain of Southern's existing customers, namely Atlanta and Mississippi Valley. To the contrary, the CDL tariff was made applicable to "a natural gas pipeline company" which purchases gas from Southern at a single delivery point when it has an alternate source of supply.

The tariff does not define "a natural gas pipeline company", and what it means is anybody's guess. Carolina, just like all of Southern's CD-3 customers purchases gas for resale from Southern and transports the gas by means of a pipeline system to its various customers. Of course, we could speculate. The term could mean sales of a certain magnitude, sales through pipeline of a specified diameter, or sales for resale, or a pipeline system embracing a certain land or population area. But the Gas Act obviates the need of such speculation. As pointed out above, it requires natural gas companies to describe the classifications of their customers. Southern's tariff is deficient under this standard.

The significance of a single delivery point is not described in the record of this proceeding, and I for one am at a loss to justify discrimination on such a feeble ground. Certainly, a distinction in service based on the fact that purchases are taken at but a single delivery point makes no economic sense. The best that can be said is that it constitutes an artificial basis for distinguishing between Atlanta Gas and Mississippi Valley, who also have alternate sources of supply, from Carolina. The former take gas from Southern at numerous delivery points; Carolina purchases at only one.

This brings us to the majority's rationale. The majority fails to consider whether the CDL and AOL rate schedules meet the basic requirements of Sections 4(b) and 4(c) of the Natural Gas Act. It also fails to consider whether the standards—in the tariff—are such as to justify the limitless discriminatory treatment Southern can practice against Carolina. The majority views this case as raising the general question as to what standard should govern Southern's deliveries of overrun gas to a customer having multiple sources of supply, in contrast to those customers which purchase only from Southern. After stating a general principle applicable to all purchasers, the majority considers a number of factors it feels justifies at least the amount of discrimination practical against Carolina shown herein. It is a most interesting analysis, but hardly relevant to this case.

Despite the irrelevance of this approach, there are certain statements in the opinion upon which I feel compelled to comment. The general rule the majority enunciates is: "It would seem equitable that overrun gas be allocated in proportion to firm gas purchases." *This is the alternate relief requested by Carolina* (Tr. 207) and it is exactly the position adopted by those of Southern's customers who addressed themselves to this point, *i.e.*, Atlanta and South Atlantic Gas Co.[4] Why doesn't the majority utilize this standard in this case?

Next, the majority feels that it is necessary to let Southern curtail Carolina as it desires because otherwise Carolina could take "excessive" volumes of gas to the detriment of Southern. The price Southern receives for overrun gas from *jurisdictional* customers is, without exception, whether on the CD-3 or CDL-AOL tariffs, precisely the same. Thus, Southern could not be adversely affected by selling more overrun gas to Carolina than to any other jurisdictional customer.

However, the record seems to indicate that Southern makes more money from nonjurisdictional direct sales than from jurisdictional sales. For this reason, Southern prefers the freedom to discriminate against Carolina (Tr. 431-3). This is a repeat of a situation long ago considered by the Commission. Almost 14 years ago, the Commission recognized that Southern would have the tendency to prefer its nonjurisdictional customers over its jurisdictional customers regarding deliveries of interruptible gas. Recognizing that the Natural Gas Act was designed to protect jurisdictional customers, the Commission in that case specifically forbade Southern from this type of discrimination.[5] Today, the majority suggests that it is all right for Southern to discriminate against certain of its jurisdictional customers because otherwise Southern would not make as much nonjurisdictional profit. I cannot subscribe to this position.

The majority also places tremendous stress on the proportion of overrun gas purchased by Carolina *vis-a-vis* its firm purchases. The only time Carolina purchases much overrun gas from Southern is during the summer when not a single other customer of Southern is interested. Such purchases by Carolina improve Southern's low system load factor and its take or pay situation to the advantage of Southern and all its customers (Tr. 642). Southern recognized the advantages of its summer sales to Carolina and actually has encouraged Carolina in its effort to develop an interruptible market (Tr. 632, 642, 657, 660). Just how the majority views these beneficial summer sales as a basis for discrimination is another mystery I cannot unravel.

These appear to be the principal basis of the majority opinion which, in my opinion, are irrelevant and incorrect. A proper evaluation of this proceeding unmistakably leads to the conclusion that Southern is unduly discriminating against Carolina respecting deliveries of overrun gas.

INITIAL DECISION

OF THE PRESIDING EXAMINER UNON COMPLAINT OF DISCRIMINATION UNDER SECTIONS 4(b) AND 5(a) OF THE NATURAL GAS ACT

(Issued October 3, 1963)

KANE, *Presiding Examiner:* This proceeding arises out of a formal complaint, filed on September 6, 1962, by Carolina Pipeline Company (Carolina) against

---

[4] Tr. 534, Brief of South Atlantic, p. 12.

[5] *Southern Natural Gas Co.*, 9 FPC 756, 760-1. This explains Sections 9 and 16.1 of Southern's CD-3 tariff. See p. 712, *supra*.

Southern Natural Gas Company (Southern) pursuant to Sections 4(b) and 5(a) of the Natural Gas Act (Act), seeking an order (1) directing Southern to cease and desist its discrimination against Carolina; (2) directing Southern to furnish contract-demand (CD) service to Carolina; and (3) for such other and further relief as the situation warrants.

Carolina's complaint alleged *inter alia* (1) that Southern's CDL–AOL Rate Schedules[1] under which Carolina purchases gas permit discrimination and that in consequence thereof Southern is enabled to effect undue discrimination against Carolina in deliveries of overrun gas; (2) that the language of the CDL–AOL Rate Schedules is unduly discriminatory in several respects; (3) that the preference and discrimination in favor of Southern's customers having only one source of supply prevents them from accepting gas from potential alternate sources of supply and consequently restricts competition; (4) that because of the discriminatory disposition of overrun gas Carolina is forced to curtail its service to small industrial customers, schools, and hospitals; (5) that Carolina can obtain overrun gas from Southern under its CDL–AOL schedules only after Southern notifies it that overruns are available while Southern's CD customers are permitted to take unlimited overruns until notified by Southern to limit the takes to their contract; (6) that Carolina is subject to undue discrimination in numerous ways by reason of the CDL–AOL Rate Schedules and the manner in which Southern operates, while Southern's CD customers are protected against undue discrimination.

On October 8, 1962, Southern filed its answer to Carolina's complaint in substance denying any undue discrimination. On October 23, 1962, Carolina filed its reply to Southern's answer. The Commission, by order issued January 25, 1963, *inter alia* directed that a public hearing be held to resolve the substantial questions of law and fact raised by the pleadings. At such hearing the complainant, Carolina, was to be required to sustain the burden of proof and to go forward with the presentation of its direct case-in-chief. At a prehearing conference held on Monday, March 25, 1963, in compliance with the Commission's direction, it was agreed that the unresolved issues and substantial questions of law and fact were (1) whether the Rate Schedules complained of were in fact discriminatory; (2) whether the operations under such Rate Schedules were discriminatory; and (3) whether, if discrimination in fact exists, does such discrimination constitute "undue discrimination" in violation of Sections 4(b) and 5(a) of the Act. Also included in the issues requiring resolution is the possible existence of evidence of violation of the anti-trust laws and need for transmission of such evidence to the Attorney General of the United States pursuant to Section 20(a) of the Act.

Eleven petitions to intervene in the proceedings were filed and all such petitions were approved by order of the Commission issued March 7, 1963.[2] The hearing, commenced on May 7, 1963, was concluded on May 10, 1963. The case was fully submitted on August 6, 1963, after applications by various parties to the proceeding for extensions of time within which to file briefs.

---

[1] Southern's CDL Rate Schedule is a contract-demand rate schedule limited to purchasers receiving gas from Southern at a single delivery point, and who also obtain gas from one or more other suppliers. The AOL schedule is the companion schedule for authorized overrun service in excess of contract demand.

[2] Alabama Gas Corporation; Gas Section of the Georgia Municipal Gas Association; Gas Light Company of Columbus, Georgia; Town of Winsboro, South Carolina; South Atlantic Gas Company, Georgia; York County Natural Gas Authority, South Carolina; Mississippi Valley Gas Company, Mississippi; Lancaster County Natural Gas Authority, South Carolina; Chester County Natural Gas Authority, South Carolina; South Carolina Natural Gas Company; and Atlanta Gas Light Company, Georgia.

There is no substantial disagreement as to the facts. Southern is a natural gas pipeline company subject to the jurisdiction of the Commission. Its transmission lines extend from Louisiana as far as the Atlantic Seaboard, terminating at Savannah, Georgia.

Carolina is a natural gas pipeline company with facilities located entirely within the State of South Carolina. By order of July 17, 1958 (20 FPC 54) the Commission, in accordance with Section 1(c) of the Act, exempted Carolina from the provisions of the Act and the orders, rules and regulations of the Commission issued thereunder. Carolina's natural gas pipeline system, which as of December 31, 1962, comprised approximately 492 miles of intrastate pipelines and 135 miles of distribution mains, traverses the entire state of South Carolina. It consists principally of two supply lines and laterals extending from such lines. One supply line extends some 85 miles in a southeasterly direction from a point of connection with main line system facilities of Transcontinental Gas Pipe Line, Corporation (Transco)[3] near the North Carolina border to a point near Bethune. This supply line is connected at that point with another line extending in a northeasterly direction to Bethune from a point of connection with Southern's facilities at Aiken, South Carolina, where Southern is currently authorized to deliver 5,000 Mcf per day to Carolina which contract demand volume, by agreement of the parties, will become 7,500 Mcf per day on November 1, 1963. Service is provided by laterals extending from these supply lines to 22 communities in 10 of which Carolina owns and operates the distribution facilities. In addition, Carolina provides service directly to several industries on both a firm and interruptible basis.[4]

On May 14, 1959, Southern and Carolina entered into a precedent agreement under which Southern contracted to serve Carolina under a CDL Rate Schedule, significant portions of which provided that overrun gas service, while available to Carolina pursuant to advance operating arrangements, would be subject to curtailment or interruption at any time by Southern.

The May 14, 1959 agreement was superseded by a precedent agreement dated September 11, 1959, which was amended under date of February 16, 1960. The September 11 agreement retained the provision for service under the CDL Rate Schedule and no change in that provision was made by the subsequent February 16 amendment. After Southern obtained its certificate to commence service to Carolina, a service agreement in the form appended to both precedent agreements was executed under date of April 20, 1961. This service agreement specified that the sale and purchase of the gas indicated was to be under Southern's CDL-3 Rate Schedule.

During the negotiations between Carolina and Southern the important items considered were (1) the effective date of the contract; (2) the extent to which Southern was prepared to make further commitments; (3) Carolina's desire to minimize the contract quantities and Southern's wish to maximize them; (4) Carolina's desire to purchase overrun gas at the commodity charge and to minimize the contracted for quantity so as to hold the unit of cost to the minimum.

---

[3] Transco is authorized to deliver approximately 25,000 Mcf per day to Carolina. Authorization to reduce this amount to 12,500 Mcf per day was sought in Docket No. G-10000. The Presiding Examiner's initial decision issued on June 18, 1963, subject to review by the Commission, while denying the full reduction, found that a reduction to 17,219 Mcf per day was permitted and required by the present and future public convenience and necessity.

[4] Carolina also operates a natural gas pipeline system in Abbeville County located in the western part of South Carolina which serves the communities of Calhoun Falls, Abbeville, and Due West. The entire requirements of this system are obtained from Transco and are not involved in this proceeding.

The negotiating parties clearly understood that Carolina's situation was different from the other customers of Southern in that (1) Carolina was a pipeline company already being supplied by Transco, another pipeline company, as a major supplier; Carolina had greater flexibility of operations than did Southern's CD customers and would not be dependent on Southern to the extent that such CD customers were; (2) Carolina's needs were for large quantities of overrun gas and low contract quantities; and (3) Carolina had a very large direct sale interruptible load compared to its firm deliveries.[5] They further recognized that other customers of Southern were in a position to oppose the proposed transaction on the ground that the addition of Carolina as a customer could result in diminution of the volume of gas available to them. The adoption of the provisions reflected in the CDL Rate Schedule was designed in some measure to meet this potential objection.

Southern applied for and obtained from the Commission the necessary certificate of public convenience and necessity authorizing it to render service to Carolina in accordance with the Presiding Examiner's decision issued February 8, 1961, and adopted by the Commission by notice issued March 14, 1961, in Docket No. G–19632, *re Southern Natural Gas Company*, 25 FPC 518. There can be no question but that the service applied for, contemplated, and undertaken pursuant to the terms of the precedent agreement, was to be under a new rate schedule to be filed by Southern and designated as Rate Schedule CDL–3,[6] a type of service obviously and concededly different from CD service. The most significant difference was the fact that overrun gas would not be made available to Carolina except at times when service to Southern's CD, G, and direct customers would not be adversely affected. The difference between the two types of service including the limitations with respect to overrun gas were recognized and accepted by both parties to the agreement and at no time during the negotiations or during the certificate proceedings did Carolina express any dissatisfaction with the arrangements for CDL service. On the contrary, Mr. Warren, Carolina's President, acknowledged in the instant proceeding that at the time he testified in the certificate proceeding in Docket No. G–19632, he understood the operating procedures provided by the CDL schedule. Mr. Goodwin, Chairman of the Board of Carolina, in his letter transmitting the executed May 14, 1959 precedent agreement, likewise acknowledged that Southern had no contract obligation to supply Carolina with any excess gas and expressed his appreciation for Southern's fine cooperation in the negotiations.

In connection with the certificated service the Presiding Examiner in his initial decision in Docket No. G–19632 was explicit in summing up the transaction as follows: (25 FPC 520)

> Southern will serve under provisions similar to those in effect for service to its other zone 3 customers except for minor provisions slightly more beneficial to Southern in respect of permission to take "overrun" gas and in respect of minimum billing. These exceptions have the purpose and effect of making Carolina Pipeline's general obligations to Southern equate with its obligations to Transco (Transcontinental Gas Pipeline Corporation).[4] [*Sic*] There is nothing to indicate that the general terms of the tariff and service agreement are not consistent with the public interest.
>
> [4] With respect to "overrun" gas, since it has another major source of supply, Carolina Pipeline must await Southern's indication of availability, rather than taking subject to Southern's indication of nonavailability. With respect to minimum bill, the Carolina Pipeline expects to actually take a 95-percent load factor.

---

[5] The direct sale interruptibles took 81.8 percent of Carolina's total delivery in 1962.

[6] It was to meet the Commission's filing requirements that the overrun service was incorporated into a separate AOL Rate Schedule.

Carolina concedes that Southern has complied with the provisions of the rate schedules. The basic objection is stated by counsel for Carolina at page 157 of the transcript, "We understood the language of it. Now it hasn't worked out as we anticipated, and we don't like it." Despite his testimony as set out above, on October 26, 1961, even prior to the commencement of service to Carolina under the certificate authorization, Mr. Goodwin, Chairman of the Board of Carolina, complained about its contract obligations for CDL service stating then that in his opinion the CDL-3-AOL-3 Rate Schedules were discriminatory. Thus, the Commission is, in effect, being called upon to determine in these proceedings whether the CDL-3-AOL-3 Rate Schedules as applied to Carolina were initially, and since, unduly discriminatory despite the Presiding Examiner's conclusion in Docket No. G-19632, "that the public interest is advantaged in the case of both Southern and Carolina Pipeline in respect of the supply and deliverability features of the proposal * * *. There is nothing to indicate that the general terms of the tariff and service agreement are not consistent with the public interest." (25 FPC 520.)

The basic questions involved are adequately summarized by Carolina as follows: "There is no substantial disagreement over the facts. The controversy stems from the applicability of Southern's rate schedule to Carolina and whether the service currently rendered violates the prohibitions of Sections 4(b) and 5(a) of the Act against undue discrimination." (Br. p. 6.)

The relief sought by Carolina in these proceedings is clear. It now seeks service under a different rate schedule from the one sought and approved in the certificate proceedings in Docket No. G-19632 with the resultant allocation of a larger part of Southern's pipeline capacity to serve Carolina than the Commission allowed in the order granting the certificate of public convenience and necessity. Thus, discussing Staff's suggestion that the discrimination might be eliminated by imposing CDL-AOL service on Atlanta Gas Light Company (Atlanta), Carolina contends that such proposal "fails to recognize that the cure lies not in imposing CDL-AOL service on Atlanta but in elevating the quality of service rendered Carolina at least to the level of that rendered other direct resale customers. * * * But it is obvious that rather than tinker with the tariff provisions a more simple solution is to require that Southern provide Carolina service under the CD-3 rate schedule." (Reply Br. p. 5.) In the concluding paragraph of its reply brief Carolina reaffirms the relief sought as follows: "Carolina urges that the Examiner and the Commission issue an order in these proceedings directing that Southern forthwith provide service to Carolina under the CD-3 rate schedule."

Before examining the merits of Carolina's complaint, it is necessary to determine the validity of the contention advanced by Southern and some of the interveners to the effect that Carolina is estopped from collaterally attacking, in this proceeding, the service it is obtaining from Southern because of its active participation in, and support of, the certificate application for that very service.

In considering the merits of this contention it must be kept in mind that the Natural Gas Act, and the reason the Commission is authorized to impose conditions on the authorization sought is to protect the present and future public convenience and necessity. In the final analysis, in this connection, the protection of the ultimate consumer of the natural gas is of prime importance. Furthermore, there is no gainsaying the power of the Commission to adjudge alleged discriminations or preferences and practices in contracts and in classifications of service as well as its authority to affect or change the terms or conditions of Southern's rate schedules or its contracts with customers where such schedules or contracts provide for, or result in, discriminatory practices either as to rates or allocations of available gas and facilities. *Cf. Panhandle Eastern Pipe Line Co.*, 9 FPC 443, 444–445. Section 1(a) of the Act states, in part, "The business of transporting and selling natural gas for ultimate distribution to the public is affected with the public interest and * * * Federal regulation in matters relating to the transportation of natural gas and the sale thereof in interstate and foreign commerce is necessary in the public interest."

The Congress has committed to the Commission the task of determining the existence of proscribed preferences, advantages and discriminations by the application of an informed judgment to existing acts. *Michigan Consolidated Gas Co.* v. *Federal Power Commission*, 203 F. 2d 895, 901. Sections 4(b) and 5(a) of the Act, while not attempting to define an unlawful discrimination with mathematical precision, do provide the guidelines for the conduct of natural gas companies with respect to the granting of any undue prejudice or disadvantage or the maintaining of any unreasonable differences in rates, charges, service, facilities or in any other respect either as between locality or as between classes of service.

Notwithstanding the possible applicability of the estoppel doctrine as between private parties if no public interest were involved, there can be no question that the conduct of any such parties cannot be deemed to estop the Commission from examining and determining whether any undue discrimination has been practiced within the purview of sections 4(b) and 5(a) of the Act. It is one of the Commission's duties in the protection of the public interest to prevent an interstate pipeline company from discriminating among its customers either as to rates or allocations of available gas and facilities. See *El Paso Natural Gas Company*, 22 FPC 900, 903, Fn. 3. This duty transcends the narrow interest of the parties involved in this particular case. Such duty, furthermore, is administrative and regulative and must be discharged within broad limits, discretion and judgment. Whether a discrimination in the rates or services of a natural gas company, within the purview of the Natural Gas Act, is undue or unreasonable is thus a question peculiarly within the expertise, and committed to the judgment, of the administrative body based upon an application of all the facts and circumstances affecting the traffic. *Cf. Swayne and Hoyt* v. *United States*, 300 U.S. 297, 304; *Michigan Consolidated Gas Company* v. *F.P.C.*, 203 F. 2d 895.

Notwithstanding the fact that the certificate proceedings may have been the more appropriate vehicle for performance of the Commission's duty with respect to prevention of unjust discrimination; and that at no time during the certificate proceedings did Carolina object to, complain of, or contend that, the service sought was discriminatory, or unduly unreasonable; and that upon consideration of the application the Commission granted the certificate and the very service applied for; yet Carolina, if its complaint be justified, cannot be held to be wholly without remedy because of the interposition of an estoppel. However, evidence of Southern's and Carolina's prior practice as well as consideration of the application made for the type of service in question, supported by Carolina at the time of the application, may be entitled to some weight in determining whether Carolina has sustained the burden of proof in establishing that the CDL–3–AOL–3 Rate Schedules as applied to it are in fact unduly discriminatory or unreasonable within the purview of Sections 4(b) and 5(a) of the Act.

The CDL–3–AOL–3 Rate Schedules established a special service not previously offered by Southern and while modeled on Southern's existing CD Rate Schedule were "designed to provide service to customers whose gas requirements differ considerably from those which rate schedule CD–1 was designed to meet." *Re Coastal Transmission Corp. et al.*, 26 FPC 318, 333. Rate Schedule CDL-3 is intended to be available for contract demand service to customers in Zone 3 who have another source of supply. The AOL-3 Rate Schedule is available to purchasers under Rate Schedule CDL-3 and covers the purchase of gas delivered in excess of contract demand pursuant to advance operating arrangements (see Commission's order accepting Rate Schedules, etc., Docket No. G-20509, issued October 5, 1961). It was designed as merely an adjunct to the CDL Rate Schedule and was not, and cannot be, regarded as a planned source of supply, deliveries thereunder being available providing that Southern has adequate facilities and gas supply. However, Carolina now takes the position that "overrun gas is the life blood of this company since its financial stability is dependent upon such gas." (Car. Br. p. 5.) In this context, however, it must be remembered that Carolina while actively participating in the certificate proceedings advanced no such contention in such proceedings waiting until after the certificate had been issued to do so.

In 1962, Carolina sold 2,230,687 Mcf of natural gas at wholesale to customers for resale, and 533,644 Mcf directly from its local distribution system. The remaining 12,411,562 Mcf of the company's total sales of 15,175,893 Mcf consisted of direct main line sales to industrial customers.

Carolina obtains a major part of its firm gas supply from Transco, and the gas obtained from both Southern and Transco as suppliers is commingled in its pipeline for transportation and transmission to its markets throughout the State. It was not disputed at any time during the hearing that Carolina controlled the means by which gas was transported from one place to another for resale; was principally a pipeline company under the commonly understood meaning of the term; and had two main sources of supply. A rate schedule specifically designed for, and deemed applicable to, a natural gas pipeline company obtaining natural gas from two or more other sources, therefore, indisputably would be available to that company.

The CDL-AOL Rate Schedules involved in this proceeding are not at all unique although it appears that Carolina was the first Southern customer to adopt their provisions. Subsequently, Southern sought and obtained certificate authorization for the sale of gas under substantially similar CDL Rate Schedules to Coastal Transmission Corporation (Coastal),[7] and Texas Eastern Transmission Corporation (Texas Eastern),[8] both pipeline companies. The type of service contemplated under such Rate Schedule is best described in the proceedings involving Coastal, wherein the Commission in adopting, for the most part, the decision of the presiding Examiner[9] noted the previous authorization of similar service to Carolina in Docket No. G-19632 and approved the difference in classification saying:

> This new rate schedule is an initial rate schedule which, while modeled on Southern's existing rate schedule CD-1, is applicable to a service not heretofore offered by Southern in its Rate Zone 1.[38] [*Sic*] While the proposed schedule will provide for the same rates as contained in Rate
>
> [38] Southern, save for some insignificant differences, has an identical rate schedule for its rate zone 3 entitled Southern's Rate Schedule CDL-3 which has been held to be a new rate schedule. See *Southern Natural Gas Company*, Docket No. G-19632, Examiner's Decision of February 8, 1961, which became final on March 10, 1961, 25 FPC 518, wherein we authorized the commencement of service to Carolina Pipeline Co., to begin September 1, 1961, under Southern's Rate Schedule CDL-3.

---

[7] 26 FPC 318, 333. (Coastal now known as Florida Gas Transmission Co.)

[8] 28 FPC 1035 adopting Presiding Examiner's decision 28 FPC 1039, with minor exceptions.

[9] 26 FPC 330.

> Schedule CD-1 the character of the service to be offered thereunder will differ from that which Southern renders to customers under rate schedule CD-1 in three significant aspects. First, service under Rate Schedule CDL-1 is available to a pipeline company having other sources of supply while service under rate schedule CD-1 is available to other purchasers generally. Second, service under Rate Schedule CDL-1 restricts takes to the contract demand 'except pursuant to advance arrangement between Southern and purchaser for the sale of overrun gas' whereas service under rate schedule CD-1 permits purchasers to exceed their contract demand except when specifically restricted to it by Southern. And, finally, Rate Schedule CDL-1 provides a 65 percent annual minimum bill provision whereas Rate Schedule CD-1 provides for a 40 percent annual minimum.
>
> It is clear that the proposed rate schedule CDL-1 is designed to provide service to customers whose gas requirements differ considerably from those which Rate Schedule CD-1 was designed to meet. [26 FPC 333.]

In his initial decision in that proceeding, too, the Presiding Examiner similarly had found and concluded that the differences in service to be obtained under Rate Schedule CDL-1 as compared to Rate Schedule CD-1 were "due and reasonable." P. 344. In adopting the Staff's position taken in that proceeding, the Presiding Examiner concisely stated that the justification for differences in the two schedules which are equally applicable to the instant proceedings, as follows: "The evidence shows that control of overrun gas service to a pipeline company customer is important to Southern, since a pipeline company has virtually an unlimited market. The evidence shows, on the other hand, that since a pipeline company has alternative sources of supply, it is proper for Southern to protect itself from having the pipeline use Southern merely for swings." 26 FPC 344.[10]

It is contended that if Southern were unable to limit the takes of overrun gas by Carolina except by advance arrangements, Carolina could take away from Southern's CD and direct customers portions of the excess gas which they are now receiving. Carolina would understandably do so since Transco's E-2 rate currently is 28 cents per Mcf while Southern's comparable AOL rate is approximately 24.9 cents per Mcf and Carolina could sell more of Southern's lower priced overrun gas to its main line interruptible industrial customers at a greater profit.

It is highly significant that the decisions in the Texas Eastern, Coastal, and Carolina proceedings in G-19632, were in complete accord in finding that the service contemplated under the CDL Rate Schedules was required by the public convenience and necessity. It is also evident that in the certificate application proceedings, where the type of service applied for is carefully scrutinized in terms of the public convenience and necessity, the Commission has concluded that pipeline companies such as Texas Eastern, Coastal and Carolina, satisfying certain prescribed requirements, may rightfully be served under rate schedules different from those of Southern's regular distribution customers. In the same context, however, it must be borne in mind that the unanimity of action in the certificate proceedings referred to cannot be construed as a carte blanche directive to Southern permitting it to pick and choose from the same category of customers those with whom it wishes to deal and to determine arbitrarily the type of service to be rendered such customers. Illusory, inconsequential differences without distinctions will not support a difference in rate schedules and cogent reasons for such differences in treatment of customers must be shown. *Cf. Panhandle Eastern Pipe Line Co., et al.*, 10 FPC 328, 331.

---

[10] See also the Presiding Examiner's decision in *Texas Eastern Transmission Corporation, supra*, reaffirming and adopting the rationale upon which the differences between the proposed CDL rate schedule and Southern's CD-1 rate schedule are based.

The evidence adduced at the hearing sustains Carolina's complaint to the limited extent that CD-3 customers are obtaining full complements of overrun gas at times when it, a CDL-3-AOL-3 Rate Schedule customer, is cut off entirely from participation in such overrun gas. Such total curtailments occurred on approximately 50 days during the year during the cold weather. There is no evidence, however, to establish that such curtailments were based upon any arbitrary or capricious action by Southern, and no contention is made that Southern refused to deliver any overrun gas on the days it had the necessary pipeline capacity available. On the contrary, it appears that the decisions to curtail were based upon necessity in pipeline operations caused by limitation of pipeline capacity. Significantly, under current operating arrangements, Carolina has obtained more than nine times the amount of overrun gas from Southern than it has obtained from Transco. while at the same time purchasing more than five times the amount of firm gas from Transco.

Furthermore, Southern's discretion with respect to curtailment of gas when necessary to fulfill the firm usage and overrun privileges of its CD customers is limited by the proper, necessary and implied condition that it shall be nondiscriminatory. Thus, curtailments when made may not be made in any arbitrary manner to the disadvantage of any of Southern's customers and the advantage of others similarly situated. *Cf. Panhandle Eastern Pipe Line Co., et al.*, 13 FPC 301, 309, affirmed 232 F. 2d 467, cert. denied, 352 U.S. 891. This proposition would apply whether the proscription against discrimination were contained in the Rate Schedule or not since discrimination against some of the customers and in favor of others in the same group results in an unjust discrimination. See *Ayshire Corp.* v. *United States*, 335 U.S. 573.

The question remains, however, whether the admittedly different treatment accorded Carolina as a member of the group relegated to CDL-AOL service constitutes an unjust discrimination within the meaning of Sections 4(b) and 5(a) of the Act since the statutory prohibition against discrimination is not unqualified. Not all preferences, advantages and discriminations are forbidden. Only those which are "undue", "unjust", "unfair" and "unreasonable". Thus, a preference in order to be unlawful must be undue and a difference to be unlawful must be unreasonable. Differences in rates, practices and services which are reasonably predicated upon substantial factual differences are not unduly discriminatory. See *Michigan Consolidated Gas Company* v. *F.P.C.*, 203 F. 2d 895, 901. This distinction between differences in service and undue discrimination in service has been recognized by both courts and regulatory agencies. As concisely stated in *Michigan Consolidated Gas Company* v. *F.P.C.*, *supra*, "There is clearly a difference in the situation of those customers which are wholly dependent upon Panhandle for their natural gas and those which have another source of supply as well. To distinguish in treatment between the two classes cannot of itself alone result in an undue preference or advantage or in an unreasonable difference in service." P. 901. *Cf. Atlantic Seaboard Corporation, et al.*, 28 FPC 860.

The generally applicable rule of law has been appropriately stated in *U.S.* v. *Oregon Railroad and Navigation Co.*, 159 Fed 975, 978-979, wherein the court said, "The inhibition against making or giving any undue or unreasonable preference or advantage, or subjecting any person or firm to any prejudice or disadvantage, is suggestive that there may be preferences or advantages given or suffered that may be perfectly lawful and proper. Indeed, such is the case in business and commercial experience and practices. * * * If there be elements existing which afford proper grounds for distinguishing one shipper from another then, as between them, there can be no undue or unreasonable preference or advantage, because each will stand in his own class, and each will be entitled to be accorded a different standard or treatment, and the fact that a different standard is accorded each, under dissimilar conditions can afford no grounds of complaint." *Cf. U.S.* v. *Chicago Heights Trucking Co., et al.*, 310 U.S. 344.

Likewise, the Supreme Court has repeated time and time again that "it is not all discrimination or preference that fall within the statute; only such as are unjust and unreasonable", *Interstate Commerce Commission* v. *B&O Railroad*, 145 U.S. 276. To the same effect are *Swayne and Hoyt, Ltd.* v. *United States*, 300 U.S. 297, 303–304, *U.S.* v. *Wabash Railroad Company*, 321 U.S. 403, 411.

Differences in competitive conditions may justify a discrimination in types of service offered and rendered and the giving of some advantage to a particular classification of service does not in and of itself constitute an unjust discrimination. The prohibition in the statute is designed to prevent attempts by a pipeline to discourage any particular class of service by discriminatory rates or inadequate service. Its purpose is clearly to enforce the requirement that a pipeline accept all reasonable business which might be rendered ineffective by placing an undue disadvantage upon a class of service although nominally standing willing to accept it. The tariff provisions recognizing the difference in service between a pipeline company having alternate sources of supply and the other resale customers of Southern are not proscribed by either the scope or purpose of such statute and are not unduly discriminatory. See *Michigan Consolidated Gas Co.*, 203 F. 2d 895.

The Staff adopts a somewhat ambivalent position in these proceedings. Thus, at the hearing in response to the Presiding Examiner's request, Staff counsel stated "The Staff takes the position that Southern has not unduly discriminated against Carolina Pipeline Company." Tr. 120. Staff counsel went on to state that it was its position that terms in Southern's tariff lacked preciseness and definition and should be amended in order to correct such indefiniteness. It was also Staff's position that certain sections of Southern's tariff, to it, Section 9 and Section 16.1 which were specifically excepted from the CLD–AOL schedule constituted protection against discrimination and that such omission constituted an implied license to discriminate. In its brief, however, Staff while not wholly repudiating its stated position concludes that Atlanta Gas Light Company, an intervener in these proceedings, has, in effect, obtained preferential treatment vis a vis Carolina and that its recommended remedy was an order "calling upon Southern to show cause why the granting of CD–3 service to Atlanta is not in violation of the Act under Southern's tariff and why Southern should not be required to serve Atlanta under its CDL-AOL rate schedules." (Staff Br. p. 12.)

Finally, the Staff restates its position as follows: "Southern's service to Atlanta under CD rate schedule in contrast with its service to Carolina under CDL–AOL rate schedule creates an unreasonable difference in service and an unjustifiable preference to Atlanta contrary to public interest." However, in suggesting the remedy in the instant proceedings based upon the conclusion that Atlanta's service under the CD–3 classification was improper because Atlanta's operations allegedly satisfied the requirements which Southern's tariff prescribes for CDL–AOL service, Staff readily admits that "Two wrongs would not make matters right," and that, therefore, it would violate "the cardinal principle and purpose of utility regulation by means of published tariffs to transfer Carolina to the CD–3 classification simply because a mistake has been made by Southern in providing Atlanta with the type of service to which it is not entitled." (Staff Br. p. 42.) Thus, the Staff apparently concedes that Carolina's service under the CDL–3–AOL–3 Rate Schedules does not constitute undue discrimination. Where it parts company with Southern is the inclusion of Atlanta in a CD Rate Schedule rather than in the CDL-3-AOL-3 Rate Schedules. Suffice it to say, the evidence does not support any conclusion that any mistake had been made by Southern in connection with the type of service provided to Atlanta. Furthermore, the suggested change or modification of the Rate Schedule applicable to Atlanta is not an issue before the Presiding Examiner for adjudication in this proceeding. It is neither a matter described in the Commission's order of hearing delineating the issues, by implication or otherwise, nor in the issues as agreed upon at the prehearing conference. In substance the Staff is seeking a major modification of a Rate Schedule applicable to Atlanta without appropriate notice for so drastic a remedy. Any change or modification of such Rate Schedule would certainly involve the rights of other Southern customers as well as those appearing in this proceeding. The giving of appropriate notice to all parties concerned, would it appears, be an absolute *sine qua non* for any such contemplated action. Furthermore, Carolina, the complainant in this proceeding, could not obtain its sought after relief from Staff's recommended remedy, and its adoption would accord it little or no comfort.

It is pertinent to note Staff's admission to the effect that if circumstances justify, Southern has the right not only to establish different classes of service but to place one customer against another in different classifications provided the placement is justifiable under the tariff. (Staff Br. p. 23.) The evidence adduced at the hearing bearing on the basis for differences in classification was at best meager and was not calculated to establish any justifiable placement of customers in different categories, and the resultant preferential treatment of any such customers. Such evidence certainly cannot be deemed to have the probative value required to sustain the burden of proof properly imposed upon Carolina.

The Staff also contends that Southern's tariff specifically forbids discrimination among customers within the CD classification, and that the exception of such specific prohibition from the CDL-AOL Rate Schedules is an invitation to discrimination. The short answer to such argument is that not only did the Commission find that "Good cause has been shown for accepting Southern's tariff sheets and service agreement" (with Carolina)[11] but the Act, itself, protects against any undue discrimination. The omission from the Rate Schedules of specific provisions providing against such discrimination for what ever purpose such omission was designed, does not and cannot confer the right upon Southern to discriminate unjustly. In any event, certainly no evidence was adduced to support any charge of discrimination among the customers included under the CDL-AOL Rate Schedules. The omission, therefore, of these provisions from the Rate Schedules has not resulted in undue discrimination. In the absence of any indication that any such discrimination is anticipated no purpose would be served by requiring, in this proceeding, that they be inserted therein.

In accordance with the Commission's Order Providing For Hearing indicating the possibility of evidence of violation of the Antitrust Laws and need for transmission of such evidence to the Attorney General pursuant to Section 20(a) of the Natural Gas Act, we must consider the anti-competitive effects of Southern's tariff which differentiates between customers taking all their requirements from one supplier from those taking only a portion of such requirements. It is apparent that the CDL-3-AOL-3 Rate Schedules were not designed to destroy competition or competitors but rather to insure adequate service at reasonable prices to all Southern's customers including those lacking access to competing sources of gas. *Cf. Atlantic Seaboard Corporations, et al.*, 28 FPC 860, 867.

---

[11] "Order accepting Rate Schedules and Service Agreement, etc.," issued October 5, 1961, in Docket No. G-20509.

Southern's adoption of different rate schedules to satisfy the requirements of customers with materially different requirements apparently is designed to strike a balance between the need of the Southern system and its customers. No reason was advanced and no evidence was submitted to indicate that such procedure was not appropriate within the regulatory scheme. The advantages created for the customer purchasing gas under the CD schedule are not so substantial as to insure for all practical purposes that Southern would remain the sole supplier of gas to its existing markets. Nor would such advantages tend to discourage purchasers from other sources when in the customer's interest to do so. In any event, none of the parties, including the Staff, introduced evidence to support the charge of violation of the policies of the antitrust laws requiring reference to the Attorney General pursuant to Section 20(a) of the Natural Gas Act. Their briefs, furthermore, completely avoid any reference thereto.

CONCLUSION AND ORDER

Southern's failure and refusal to offer and afford Carolina service under a CD-3 Rate Schedule while at the same time providing such service to others of its customers under what has been held to be substantially different conditions constitutes neither an unlawful discrimination in service among customers nor an undue preference and advantage to such other customers and undue prejudice and disadvantage to Carolina in violation of the Natural Gas Act.

The conditions and circumstances adopted by Southern as a basis for differentiation in Rate Schedules CD-3 and CDL-3 have apparently been accepted by the Commission as valid exceptions to the doctrine of equality of treatment. Necessarily implicit in the Commission's conclusion is its judgment that the difference in service contemplated by and obtained under these different rate schedules is not unreasonable and is not based upon, and does not result in, undue discrimination. Carolina has not, in this proceeding, sustained its burden of proof of establishing any factual basis for a contrary conclusion.

WHEREFORE, *it is ordered*, subject to review by the Commission, that the relief sought by Carolina in these proceedings is denied and its complaint dismissed.

MAX L. KANE,
Presiding Examiner

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

*Additional applicants printed *infra.*, pp. 728, 729.

cate by adding acreage) filed under Section 7 of the Natural Gas Act to sell natural gas produced in the State of Texas (Railroad District #3) for resale in interstate commerce, all as more fully described in the appendix attached hereto and in the respective applications (and supplements or amendments thereto) which are on file with the Commission and open to public inspection.

The Commission finds:

(1) It is appropriate and in the public interest to sever the matters in Docket Nos. G–18077, G–18175, G–18481, G–18805, G–18857, G–19308, G–19964, G–20155, G–20359, G–20385, and G–18384 from the proceedings in Florida Gas Transmission Company, *et al.*, Docket No. G–18338, *et al.*[1]

(2) By its opinion and order issued December 9, 1963, Docket Nos. CI61–1221, CI61–1282, CI61–1283, CI61–1343, CI61–1344, CI61–1345, and CI61–1346 were severed from the proceedings in *Hassie Hunt Trust, Operator, et al.*, Docket No. G–19115 *et al.*, 30 FPC 1438.

(3) It is appropriate and in the public interest that the above-captioned matters be consolidated for hearing and decision as hereinafter ordered.

(4) The expeditious disposition of these proceedings may be effectuated by holding a prehearing conference and to that end a prehearing conference should be held on April 23, 1964, as hereinafter ordered.

The Commission orders:

(A) The matters in Docket Nos. G–18077, G–18175, G–18481, G–18805, G–18857, G–19308, G–19964, G–19971, G–20155, G–20359, G20385, and G18384 are hereby severed from the proceedings in Florida Gas Transmission Company, *et al.*, Docket No. G–18338, *et al.*

(B) The matters in Docket Nos. CI61–1221, CI61–1282, CI61–1283, CI61–1343, CI61–1344, CI61–1345, and CI61–1346 previously severed from the proceedings in *Hassie Hunt Trust, Operator, et al.*, Docket No. G–19115, *et al.*, and the captioned matters set forth in paragraph (A) above are hereby consolidated for the purposes of hearing and decision.

(C) Pursuant to the provisions of Section 1.18 of the Commission's Rules of Practice and Procedure, a prehearing conference before a duly designated presiding examiner shall commence at 10:00 a.m. (EST) on April 23, 1964, in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., for the purpose of effectuating the expeditious disposition of these consolidated proceedings.

(D) The purpose of such conference shall be to consider all matters at issue in the above dockets, the manner in which evidence shall be presented, to fix dates for the distribution of such evidence, to fix the date on which the consolidated hearing shall commence, and to consider any and all matters which might contribute to an expeditious disposition of these consolidated proceedings.

(E) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held on a date to be fixed by the presiding examiner in accordance with paragraph (D) above, in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., concerning the matters involved in and the issues presented by such applications.

---

[1] Formerly Coastal Transmission Corporation.

(F) Protests or petitions to intervene may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Rules of Practice and Procedure (18 CFR 1.8 or 1.10) on or before April 17, 1964. Protestants and Petitioners shall state with particularity the dockets in which they claim to have an interest.

Commissioners Ross and Black *concurring* stated that had the majority decided Docket Nos. CI61-1221, CI61-1282, CI61-1283, CI61-1343, CI61-1344, CI61-1345, and CI61-1346 in the *Hassie Hunt* proceeding (Opinion Nos. 412 and 412-A) at the time they were originally heard, it would be unnecessary to retry these applications anew in this case. Since it did not, despite the dissents in that case, there is no other alternative than to proceed as set forth herein.

---

[1] Initial price is subject to the condition that the seller will refund any amounts collected in excess of 16.0¢/Mcf (plus interest), which may be determined to be in excess of the price requiredby the public convenience and necessity.

[2] Temporary certificate issued without condition.

[3] The price is subject to the condition that H. B. Lively will refund any amounts (plus interest) in excess of the amount computed at the rate determined to be required by the public convenience and necessity in Docket No. CI62-1220.

[4] The price is subject to the condition that the total initial price shall not exceed 18¢ per Mcf at 14.65 psia, with such rate to be effective for the duration of the temporary authorization and until a different prospective rate is established.

[5] The price is subject to the condition that the total initial price shall not exceed 18¢ per Mcf at 14.65 psia.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NEW LONDON GAS COMPANY, DOCKET NO. CP63-20

ORDER AMENDING OPINION NO. 386 AND ORDER ISSUED APRIL 17, 1963

(Issued March 30, 1964)

On November 29, 1963, New London Gas Company, joined by Morning Sun Gas Company (Movants) filed a motion to amend the Commission's order issued on April 17, 1963, in Docket Nos. CP62-303, CP63-20 and CP63-21 (Opinion No. 386, 29 FPC 754) by substituting the Morning Sun Gas Company for New London Gas Company as the party recipient of the gas service from Michigan Wisconsin Pipe Line Company in Docket No. CP63-20.

Movants state in their motion that on May 15, 1963, New London Gas Company sold and assigned its franchise to serve gas and its property and distribution system within the Town of Morning Sun, Iowa, to Morning Sun Gas Company.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the motion to amend has been filed.

At a hearing held on March 20, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the motion to amend filed on November 29, 1963, and exhibits, submitted in support of the substitution of parties sought herein, and upon consideration of the record,

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued April 17, 1963, in Docket No. CP63-20 (Opinion No. 386, 29 FPC 754) be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued April 17, 1963 (Opinion No. 386, 29 FPC 754) be and the same is hereby amended by substituting the name of Morning Sun Gas Company for that of New London Gas Company as purchaser in Docket No. CP63-20, all as more fully set forth in the motion to amend.

(B) In all other respects said Opinion and Order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ORDER SEVERING PROCEEDINGS, APPROVING PROPOSED SETTLEMENTS, AND ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 30, 1964)

On the dates set forth below the following companies filed motions for severance of the above-captioned dockets from the proceedings in Pan American Petroleum Corporation, *et al.*, Docket No. G–19417, *et al.*, for approval of their respective settlement proposals and for the prompt issuance of certificates of public convenience and necessity without intermediate decision procedure:

Shell Oil Company (Operator), *et al.*	December 19, 1963
Ashland Oil & Refining Company	January 10, 1964
Humble Oil & Refining Company	January 13, 1964
Union Oil Company of California (Operator), *et al.*	January 22, 1964
Phillips Petroleum Company (Operator), *et al.*	January 23, 1964
The Pure Oil Company	January 27, 1964
Sinclair Oil & Gas Company	January 29, 1964
Union Texas Petroleum	February 7, 1964
Union Texas Petroleum	February 11, 1964
The Atlantic Refining Company	February 20, 1964
Gulf Oil Corporation	February 25, 1964
Pan American Petroleum Corporation, *et al.*	February 26, 1964
Continental Oil Company	February 27, 1964
Marathon Oil Company	March 4, 1964
Pan American Petroleum Corporation, *et al.*	March 6, 1964
	March 9, 1964
Cities Service Oil Company	March 9, 1964
Amerada Petroleum Corporation	March 11, 1964
Tidewater Oil Company	March 12, 1964
Sun Oil Company	March 23, 1964
Cleary Petroleum Inc. (Operator), *et al.*	March 23, 1964

All of the above applicants have indicated in their motions for severance their willingness to accept permanent certificates on the same terms and conditions as contained in their temporary certificates.[1] More particularly, all of the above moving parties have indicated their desire to accept permanent certificates providing *inter alia*, for an initial price of 15¢ per Mcf, the present ceiling price contained in the Statement of General Policy No. 61-1 for the "Other Oklahoma" area.[2] No answers have been filed by any parties or interveners to these motions.

---

[1] It may be noted that temporary certificates have been issued in all dockets consolidated in these proceedings except CI63–417 and CI63–876. The temporary certificates in all dockets but five were conditioned to the initial rate of 15¢ per Mcf. At the time of issuance of each temporary certificate, the Commission asked to be advised whether the applicant would be willing to accept permanent authorization on the same terms. In some cases the applicant indicated that it would take the Commission's offer under consideration but, in most cases, refused the offer of a permanent certificate on the same conditions as contained in the temporary certificate.

In a number of dockets in which offers of settlement have been made, the contract with the purchasing pipeline follows the same pattern as outlined in Opinion No. 353 (27 FPC 449, 459). In these dockets it is appropriate and in the public interest that certificates issued herein to the producer-applicants be granted upon the conditions contained in paragraphs (C), (D), and (E) of the order in that Opinion.[3]

It further appears that in all of the motions for severance wherein the contract with the purchasing pipeline contains a Btu adjustment clause, the offer of settlement proposes that such provision shall be subject prospectively to disposition in accordance with the rule-making proceeding in Docket No. R-200. Accordingly, this will be so provided in the instant order.

A number of dockets herein contain no Btu adjustment provisions and the moving parties request permanent certificates on the same conditions as already provided in our order issued March 6, 1964, which severed the proceedings in CI61-1620 and CI61-1796.

There are several conditions which we feel must be imposed uniformly in every case where a motion for severance and settlement proposal is made to the Commission in these proceedings. In all cases wherein motions for severance are filed in these consolidated proceedings we shall establish a uniform pattern of conditions with respect to (1) take-or-pay-for liabilities and (2) boundary changes resulting from amendment to Policy Statement No. 61-1. Furthermore, as indicated above, all Btu adjustment clauses shall be subject prospectively to the proceedings in Docket No. R-200.

There remain, finally, two dockets wherein the issuance of permanent certificates will require the refund of any amounts previously collected over 15¢ per Mcf up to the date of the issuance of the permanent certificate herein (Pan American Petroleum Corporation, Docket No. G-19417[4] and Union Texas Petroleum, Docket No. CI61-1275).[5] Pan American has indicated that it is willing to accept a permanent certificate in Docket No. G–19417 upon the condition that Pan American shall within ninety days refund to Cimarron the difference between 15.5¢ and 15¢ per Mcf at 14.65 psia for deliveries occurring under this docket from initial delivery to the effective date of price reduction to 15¢ per Mcf, plus interest at the rate of 7% per annum through March 31, 1964.

---

[2] The original contracts contain proposed initial prices ranging from 15.5¢ per Mcf to 19.5¢ per Mcf.

[3] Including a requirement that the producer-applicant file within 30 days of date hereof a supplement to the related rate schedule providing for a full downward Btu adjustment in price for gas containing less than 1,000 Btu per cubic foot.

[4] In accordance with the mandate of the United States Court of Appeals for the Tenth Circuit (Case Nos. 6670 and 6724), the Commission modified, effective as of January 24, 1962 (the date upon which the Court issued its mandate in the two cases), the temporary authorizations issued November 3, 1960, March 2, 1961, and April 28, 1961, so as to permit Pan American Petroleum Corporation to collect the full contract price as provided in Rate Schedule No. 277 including the Btu price adjustment subject to Pan American Petroleum Corporation refunding to Cimarron Transmission Company any amounts plus interest at 7 percent per annum collected in excess of 15 cents per Mcf which may be determined to be in excess of the price required by the public convenience and necessity in Docket No. G-19417. By letter order of June 28, 1962, the effective date of refund was modified to be effective from and after the date of initial delivery in lieu of January 24, 1962.

[5] The temporary certificate issued to Union Texas Petroleum is subject to a refund of any amounts collected over 15¢ per Mcf.

By its letter of March 27, 1962, granting a temporary certificate to Union Texas Petroleum, the Commission provided the following condition:

> The initial price for this service shall be 15 cents per Mcf at 14.65 psia, inclusive of tax reimbursement and subject to a Btu price adjustment for Btu content above or below 1,000 Btu per cubic foot. Such initial price shall be further subject to Union Texas refunding to Natural Gas Pipeline Company of America any amounts collected (plus interest at 7 percent per year) in excess of the amount computed at the rate determined to be in accordance with the requirements of the public convenience and necessity in Docket No. CI61-1275, as to the service hereby authorized.

Union Texas Petroleum has indicated that it is willing to refund any amounts collected by virtue of the operation of its Btu adjustment clause from the date of issuance of its temporary certificate until the date of issuance of a permanent certificate herein, down to a floor of 15¢ per Mcf.

We find the settlement proposals herein to be in the public interest. Accordingly, we shall sever the above-captioned dockets from the consolidated proceedings in Pan American Petroleum Corporation, *et al.*, Docket No. G–19417, *et al.*, omit the intermediate decisions in regard to these dockets, and conditionally issue certificates of public convenience and necessity.

In a hearing held on March 26, 1964, the Commission, on its own motion, received and made part of the record in these proceedings all evidence, including the applications and exhibits attached thereto, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Each Applicant is a "natural-gas company" within the meaning of the Natural Gas Act and is engaged in the sale and delivery of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, Rules, and Regulations of the Commission thereunder.

(4) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(5) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The matters in the above-captioned dockets are severed from the consolidated proceeding Pan American Petroleum Corporation, *et al.*, Docket No. G–19417, *et al.*

(B) The certificates of public convenience and necessity are hereby issued to the above-named Applicants, on the conditions set forth herein, authorizing the sale of natural gas in interstate commerce for resale for ultimate public consumption, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as more fully described in the applications and settlement proposals herein.

(C) The certificates granted in paragraph (B) above are not transferable and shall be effective only so long as Applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable Rules, Regulations, and Orders of the Commission.

(D) The grant of the certificates issued in paragraph (B) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificates aforesaid for service to the particular customer involved imply approval of all the terms of the contract, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificates.

(E) The authorizations issued herein are subject to the following conditions:

(a) The initial price, including tax reimbursement, shall not exceed 15¢ per Mcf at 14.65 psia.

(b) In the event that the Commission amends its Policy Statement No. 61–1 by adjusting the boundary between the Panhandle area and the "Other Oklahoma" area so as to increase the initial wellhead price for new gas in the areas involved herein, Applicants thereupon may substitute the new rates consistent with their contracts reflecting the amount of such increase, and thereafter collect these new rates prospectively in lieu of the initial rates herein required.

(c) The allowances for take-or-pay provisions in the related rate schedules are subject to the ultimate disposition with respect to such provisions in the rule-making proceeding in Docket No. R–199; however, Applicants will not be required to file take-or-pay provisions for less than 80 percent of the annual quantity.

(d) The allowance for any Btu adjustment provision in the related rate schedule is subject to the ultimate disposition with respect to such provision in the rule-making proceeding in Docket No. R–200; provided, however, as a further condition of the issuance of the certificates herein, that the rate schedules to be filed by the producer-applicants in Docket Nos. CI63–286, CI63–328, CI63–336, CI63–337, CI63–647, CI63–1086, CI63–1585, CI63–148, CI63–459, CI61–752, CI63–462, CI63–575, CI63–1241, and CI61–1275 shall also make provision for a full percentage downward adjustment in price for gas containing less than 1000 Btu's per cubic foot. The precedent processing agreements, where applicable, shall be similarly modified to provide reimbursement to Michigan Wisconsin on the same basis for Btu's below 1000 removed by the producers in processing the gas.

In Docket No. CI61–1275 (Union Texas Petroleum Corp.) the Btu adjustment provision shall operate above or below 1,000 Btu per cubic foot as specified in the temporary certificate issued March 27, 1962.

(F) The order issuing certificates of public convenience and necessity in Docket Nos. CI61–516, CI61–524, CI61–752, and CI61–1620 be and the same are hereby amended by authorizing the sale and delivery of natural gas from additional acreage and in all other respects except as herein provided said orders shall remain in full force and effect.

(G) The order herein issuing a certificate of public convenience and necessity to Gulf Oil Corporation in Docket No. CI63–459 relates to Gulf acreage in North Oakdale Field and Lenora Field, including acreage added to the basic contract by amendment dated November 16, 1962, but does not cover acreage added to Gulf's contract with Michigan Wisconsin relating to proposed sales of gas from the Northwest Quinlan Field and the Northeast Cedardale Pool, which are in the Panhandle area rather than the "Other Oklahoma" area. The authorizations granted herein to Pan American in Docket Nos. CI61–516, CI63–336, and CI63–337 cover acreage only in the "Other Oklahoma" area.

(H) As a further condition to the issuance of permanent certificates in Docket Nos. G–19417 and CI61–1275, Pan American Petroleum Corporation and Union Texas Petroleum, A Division of Allied Chemical Corporation, *et al.*, shall refund respectively to Cimarron Transmission Company and Natural Gas Pipeline of America any amounts collected (plus interest at 7% per annum) in excess of 15¢ per Mcf from the date of issuance of their temporary certificates[6] up to the date of issuance of the order herein.

(I) The motions for waiver of hearing and intermediate decision pursuant to Section 1.32 of the Commission's Rules of Practice and Procedure are hereby granted.

Commissioner BLACK *dissenting in part.*

BLACK, *Commissioner, dissenting in part:*

The certificates here issued should contain the same refund condition with respect to amounts collected by the producers under Btu adjustment clauses as have been required in the temporary certificates approved by this Commission during the past two years.[1] I object to the Commission's decision making the Btu adjustment clauses subject only prospectively to our conclusions in the pending rulemaking proceeding in Docket No. R–200.

The Commission's decision in Opinions 350 and 353 (27 FPC 35 and 449, respectively) permitted collection of upward Btu adjustments subject only to a prospective change dictated by the R–200 proceedings. I think the Commission's decisions in those cases were wrong; but in any event they are not necessary precedents for the action taken here. Since the issuance of Opinions 350 and 353 in early 1962, we have strictly limited their applicability to certificates issued producers who were in the same unique factual circumstances as were there involved. As recently as March 20, 1964, this Commission in Docket No. CP60–116 issued a temporary certificate for sale of gas in the Oklahoma Panhandle area to Michigan Wisconsin Pipe Line Company at the guideline ceiling price plus Btu adjustment—but subject to refund. In fact in all other gas-producing areas, contract provisions such as the Btu clause here involved have been recognized in general rate settlements as a basis for reaching the ceiling but never for breaching it.[2]

If we permit the producers to keep all amounts collected under Btu clauses no matter what we decide is proper in R–200, we are either pre-judging the outcome of that proceeding or failing to provide the gas purchaser the protection he is entitled to expect from the Federal Power Commission.

---

[6] As of date of initial delivery in the case of Pan American Petroleum Corporation in accordance with the letter order of June 28, 1962.

[1] See, for example, Pan American Petroleum Corporation, *et al.*, Docket No. G–19417, involved in this order, wherein the refund obligations were imposed by order of the Court of Appeals, 10th Circuit (298 F. 2d 478), in conformity with its decision in *Sohio Petroleum Company* v. *FPC*, 298 F. 2d 465. The Sohio case concluded that the Commission lacked authority to summarily reject the Btu adjustment clause and that the acceptance of that clause, subject to refund in conformity with the outcome of any future proceedings initiated to establish the validity of such price adjustment clause was the proper administrative tool for the protection of both consumer and producer interests, citing *Pure Oil Co.* v. *FPC*, 292 F. 2d 350, and *J. M. Huber Corp.* v. *FPC*, 294 F. 2d 568. See also, the temporary certificate issued to *Union Texas Petroleum Co.*, Docket No. CI61–1275, also involved in this order; for other dockets not involved here, see *Pan American*, Docket No. CI63–269, order of January 24, 1963; Docket No. G–18435, order of June 6, 1962; and Docket No. CI61–228 of September 21, 1961.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. RP64-18

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING AND APPROVING PROPOSAL TO FURTHER REDUCE RATES

(Issued March 30, 1964)

Panhandle Eastern Pipe Line Company (Panhandle), on February 26, 1964, tendered for filing certain revised tariff sheets to its FPC Gas Tariff, Original Volume No. 1.[1] The proposed change in rates would make effective on April 1, 1964, a reduction in Panhandle's jurisdictional rates in the sum of approximately $7,400,000 annually, based upon its operations for the twelve months ended October 31, 1963, subject to certain conditions. The filing of the proposed rates, which we have docketed as shown above, also includes a proposal to make further rate reductions subject to certain terms and contingencies summarized in part below.

The proposed rate reduction reflects Panhandle's deliveries of gas to National Helium Corporation.[2] The reduction also reflects lower cost of service allowances included among which is an approximately $3.8 million reduction in purchased gas cost which would result from a concurrently proposed rate reduction of Panhandle's affiliated supplier, Trunkline Gas Company.[3] Also included is an approximately $600,000 reduction in the Federal income tax allowance to reflect the recent reduction in the tax rate for corporations from 52 percent to 50 percent.

Panhandle's rate reduction proposal has resulted from conferences with the Commission staff. The conferences were initiated by letter of the Executive Director on September 6, 1963, as a consequence of the staff's continuing supervision of natural gas companies and the periodic review of the reports filed with the Commission by such companies.

The proposal is summarized in part as follows:

(1) Effective April 1, 1964, Panhandle's jurisdictional rates will be reduced to the levels set forth in Appendix A hereto.

(2) Panhandle will reflect the principles specified in the Commission's Opinion No. 417 issued on February 3, 1964, in *Alabama-Tennessee Natural Gas Company*, Docket No. G-5471, *et al.*, 31 FPC 208, by filing revised tariff sheets, to take effect on October 1, 1965, reducing the level of the rates specified in its proposal. If, however, Panhandle does not claim liberalized depreciation tax deductions in its 1964 Federal income tax return, its obligation hereunder to reduce rates as of October 1, 1965 shall not encompass liberalized depreciation tax savings for the twelve-months period ending October 1, 1965. However, the filing of reduced rates to give effect to the deduction of the accumulated balances in Account No. 282, as also prescribed by Opinion No. 417. shall not be contingent upon Panhandle's current utilization of liberalized depreciation. Panhandle's proposal also affords the company the option of deferring the aforementioned rate reductions until twenty days after the date of final court affirmance of Opinion No. 417,

---

[1] First Revised Sheets Nos. 26-E, 26-F, and 26-G; Second Revised Sheets Nos. 26-A and 26-B; Seventh Revised Sheets Nos. 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 16, 17, 19, 20, 22, 23, 24, 29, and 31; Eighth Revised Sheet No. 27; and Eleventh Revised Sheet No. 25.

[2] Panhandle's deliveries of gas to National Helium Corporation are subject to our further order in Docket No. CP63-159 in which our Opinion No. 410 and order were issued November 12, 1963, 30 FPC 1260. On December 27, 1963, Panhandle filed a petition for review of that opinion and order, which is now pending in *Panhandle Eastern Pipe Line Company* v. *F.P.C.*, CA10, No. 7587.

[3] Trunkline's reduction proposal has been accepted for filing on this date by order issued in Docket No. RP64-19.

with respect to both the flow-through of the tax savings and the reduction of the rate base elements of the decision in Opinion No. 417. However, upon such affirmance, Panhandle's obligation, as provided above, to reduce its rates (including the making of refunds as applicable) shall be effective as of October 1, 1965. The proposed agreement also contains specific provisions directed toward the contingency that after electing not to use liberalized depreciation in 1964, Panhandle resumes its use in 1965.

(3) Panhandle's existing obligation to pass on gas supplier refunds applicable to gas purchased on and after September 1, 1958, relating to specific gas supplier proceedings, (Appendix B hereto), as provided in the Stipulation and Agreement dated June 22, 1962, approved by Commission order issued July 20, 1962, 28 FPC 200, in Docket No. G–14755, *et al.*, is continued during the term of the new agreement. Additionally, with respect to gas purchased on and after April 1, 1964, Panhandle assumes the obligation to pass on the jurisdictional portion of any gas supplier refunds ordered by the Commission in the gas supplier proceedings specifically listed in Appendix C hereto, which have been initiated subsequent to the date of the Stipulation and Agreement in Docket No. G–14755, *et al.*, proceedings. In addition to increased rate proceedings, such as additional proceedings include temporary certificate proceedings and certificate proceedings subject to remand on judicial review.[4]

(4) During the period in which the rates provided for in the subject agreement remain in effect Panhandle is obligated to reduce its rates to reflect the reduction in the rates of its gas suppliers subject to proceedings specifically listed, (Appendix D hereto) including both those subject to the Stipulation and Agreement in Docket No. G–14755, *et al.*, and those additional proceedings subject to refund flow-through obligations as stated in the next preceding paragraph. The amount of the reductions shall equal the reductions in Panhandle's cost of purchased gas computed on a weighted average basis for the 12-months' periods preceding such supplier rate reductions and which result in cost reductions below the level of 13.9 cents per Mcf, all as more specifically prescribed in the subject proposal.[4]

(5) The proposed reduced rates shall not become effective unless:

(a) the Commission shall have entered a final, nonappealable order, containing the Commission's agreement expressed in paragraph (4), above, as of April 1, 1964;

(b) Trunkline's proposed reduced rate, (*supra*, footnote 3) $2.00 Demand, 25.9 cents per Mcf Commodity, in its Rate Schedule P–1, shall have been permitted to become effective without suspension; and

(c) Panhandle's proposed revised tariff sheets set forth in Appendix A of the proposed filing (listed in footnote[1] herein), containing the rate levels set forth in Appendix A hereto, shall have been made effective without suspension as of a date not earlier than the effective date of Trunkline's proposed P–1 rate specified in subparagraph (5) (b) above.

(6) The Commission is requested to waive compliance by Panhandle with the requirements of the Commission's general rules and regulations, particularly Part 154 thereof, to the extent necessary to effectuate all of the provisions of the proposal.

---

[4] At the time of Panhandle's filing of its rate reduction proposal, no docket number had been assigned to Trunkline's contemporaneously filed rate reduction proposal accepted for filing this date. Appendices B, C and D of Panhandle's proposal and of this order hereby are corrected to include Docket No. RP64–19 assigned to the Trunkline proposal. The rates of both Michigan Gas Storage Company and the Ohio Fuel Gas Company, Panhandle's only pipeline resale customers, are currently subject to the obligation to flow-through and reflect Panhandle's refunds and rate reductions.

(7) Neither Panhandle, the staff, nor any other person shall be bound or prejudiced by any ratemaking principle, or any method of cost of service determination, or any allocation underlying or supposed to underlie any of the rates or any of the refunds provided for herein.

As Panhandle's proposal indicates, the proposed reduced rates reflect Panhandle's deliveries to National Helium Corporation. In our Opinion No. 410, 30 FPC 1260, Docket No. CP63–159, involving Panhandle's transportation and sale of natural gas to National Helium at Liberal, Kansas, we held that Panhandle should submit an application for a certificate for transporting natural gas for the purpose of extracting therefrom hydrocarbons at the Helium Plant. We observed that our determination with respect to the transportation and sale of gas to that company for fuel, etc., ". . . will not affect the question of crediting possible revenues of National Helium against Panhandle's costs in any future rate case involving the latter". Without resolving or affecting any other issue presented in Docket No. CP63–159 proceedings, the Commission agrees that in making effective the proposed reduced rates as provided herein, and for so long as the rates provided for in this order shall remain in effect, no further adjustment will be made in Panhandle's rates or tariff on the basis of the effects of Panhandle's deliveries to National Helium, as a result of the certificate proceedings.

No protests or objections to Panhandle's proposed reduced rates have been received. Comments upon Panhandle's reduced rate proposal have been received from Michigan Gas Storage Company, the Illinois Commerce Commission, the Public Service Commission of Indiana, and the Public Service Commission of Michigan. In general, all of these comments support our acceptance of Panhandle's reduced rates for filing effective on April 1, 1964, as proposed, although Michigan Gas Storage and the Michigan Commission expressed doubt as to the propriety of utilizing a uniform reduction, in cents per Mcf, to all zones.

The Commission finds:

(1) Good cause exists for waiving the requirements of Section 154 of the Commission's Regulations under the Natural Gas Act in order that the revised tariff sheets specified above may become effective on April 1, 1964, as hereinafter ordered.

(2) The proposed revised tariff sheets, the rate reductions therein contained and Panhandle's agreement to further reduce its rates as provided in the proposal, are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be accepted for filing and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The provisions of Section 154 of the Commission's Regulations under the Natural Gas Act are hereby waived subject to the terms and conditions of this order and of the rate reduction proposal.

(B) The revised tariff sheets specifically described hereinabove are accepted for filing to become effective on April 1, 1964, and Panhandle's agreement filed on February 26, 1964, is approved and made effective as proposed therein, subject to the terms and conditions of this order.

(C) Panhandle shall comply with each of the provisions of the rate reduction proposal relating to future refunds and rate reductions.

(D) Within twenty (20) days of making refunds in accordance with paragraph (C) herein, Panhandle shall report to the Commission, in writing and under oath, the amount of the refund made to each customer, showing separately the amount of principal and interest so paid together with a computation showing the manner in which such refund was determined, and shall serve a copy of such report upon each customer receiving a refund.

(E) Except as hereinabove stated with respect to Opinion No. 410, this order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Panhandle Eastern Pipe Line Company, the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against Panhandle Eastern Pipe Line Company or any other persons or parties affected by this order.

Commissioner Ross *dissenting.*

APPENDIX A

PANHANDLE EASTERN PIPE LINE COMPANY

STATEMENT OF RATES TO BECOME EFFECTIVE APRIL 1, 1964

Rate schedules and zones	Charges per Mcf

TRUNKLINE GAS COMPANY, DOCKET NO. RP64-19

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING AND APPROVING PROPOSAL TO FURTHER REDUCE RATES

(Issued March 30, 1964)

Trunkline Gas Company (Trunkline) on February 26, 1964, tendered for filing certain revised tariff sheets to its FPC Gas Tariff, Original Volume No.1.[1] The proposed change in rates would make effective on April 1, 1964, a reduction in Trunkline's jurisdictional rates in the sum of approximately $8,600,000 annually, based upon its operations for the twelve months ended September 30, 1963, subject to certain conditions. The filing of the proposed rates, which we have docketed as shown above, also includes a proposal to make further rate reductions subject to additional terms and contingencies summarized in part below.

---

[1] Original Sheets Nos. 9–AE, 9–AF, 9–AG; Second Revised Sheets Nos. 5–A, 9–P, 9–R; Third Revised Sheet Nos. 6–C, 9–D, 9–F, 22; Fourth Revised Sheets Nos. 6–B, 9–G; Fifth Revised Sheets Nos. 6–A, 7; and Sixth Revised Sheets Nos. 1, 4, and 9.

The proposed change in rates reflects a reduction of approximately $6 million in Trunkline's cost of service arising primarily from its expansion project under Docket No. CP64–114.[2] Also included are an approximately $2 million reduction in the cost of gas purchased from two independent producers,[3] and approximately $600,000 reduction in federal income tax allowance to reflect the recent reduction in the tax rate for corporations from 52 percent to 50 percent.

Trunkline's rate reduction proposal has resulted from conferences with the Commission staff. These conferences were initiated by letter of the Executive Director to Trunkline on September 6, 1963, as a consequence of the staff's continuing supervision of natural gas companies and the periodic review of the reports filed with the Commission by such companies.

The proposal is summarized in part as follows:

(1) Effective April 1, 1964, Trunkline's jurisdictional rates will be reduced to the levels set forth in Appendix A hereto.

(2) Trunkline will reflect the principles specified in the Commission's Opinion No. 417 issued on February 3, 1964, in *Alabama-Tennessee Natural Gas Company*, Docket No. G–5471, *et al.*, 31 FPC 208, by filing revised tariff sheets, to take effect on October 1, 1965, reducing the level of the rates specified in its proposal. If, however, Trunkline does not claim liberalized depreciation tax deductions in its 1964 Federal income tax return, its obligation hereunder to reduce rates as of October 1, 1965, shall not encompass liberalized depreciation tax savings for the twelve-months period ending October 1, 1965. However, the filing of reduced rates to give effect to the deduction of the accumulated balances in Account No. 282, as also prescribed by Opinion No. 417, shall not be contingent upon Trunkline's current utilization of liberalized depreciation. Trunkline's proposal also affords the company the option of deferring the aforementioned rate reductions until twenty days after the date of final court affirmance of Opinion No. 417, with respect to both the flow-through of the tax savings and the reduction of the rate base elements of the decision in Opinion No. 417. However, upon such affirmance, Trunkline's obligation, as provided above, to reduce its rates (including the making of refunds as applicable) shall be effective as of October 1, 1965. The proposed agreement also contains specific provisions directed toward the contingency that after electing not to use liberalized depreciation in 1964, Panhandle resumes its use in 1965.

(3) Trunkline's existing obligation to pass on gas supplier refunds applicable to gas purchased on and after March 1, 1960, relating to specific gas supplier proceedings (Appendix B hereto), as provided in the Stipulation and Agreement dated April 19, 1962, approved by Commission order issued May 10, 1962, in Docket No. G–12884 *et al.*, 27 FPC 930, is continued during the term of the new agreement. Additionally, with respect to gas purchased on and after April 1, 1964, Trunkline assumes the obligation to pass on the jurisdictional portion of any gas supplier refunds ordered by the Commission in the gas

---

[2] Trunkline's expansion proposal has been approved and authorized by order issued March 20, 1964, in Docket No. CP64–114.

[3] Trunkline's amended agreements with Union Oil Company of California and Pan American Petroleum Corporation, respectively, providing for reduced rates for gas produced from Block 14 Field, in southern Louisiana, and proposed to become effective April 1, 1964, subject to conditions specified therein, have been accepted for filing by our order issued March 20, 1964 in *Pan American Petroleum Corporation, et al.*, Docket No. G–15438, *et al.*

supplier proceedings specifically listed in Appendix C hereto, which have been initiated subsequent to the date of the Stipulation and Agreement in Docket No. G–12884, *et al.* proceedings. In addition to increased rate proceedings, such additional proceedings include temporary certificate proceedings and certificate proceedings subject to remand on judicial review.[4]

(4) During the period in which the rates provided for in the subject agreement remain in effect, Trunkline is obligated to reduce its rates to reflect the reduction in the rates of its gas suppliers subject to proceedings specifically listed (Appendix D hereto), including both those subject to the Stipulation and Agreement in Docket No. G–12884, *et al.*, and those additional proceedings subject to refund flow-through obligations as stated in the next preceding paragraph. The amount of the reductions shall equal the reductions in Trunkline's cost of purchased gas computed on a weighted average basis for the 12-months' periods preceding such supplier rate reductions and which result in cost reductions below the level of 18.3 cents per Mcf, all as more specifically prescribed in the subject proposal.[4]

(5) The proposed reduced rates shall not become effective unless:

(a) The Commission shall have entered a final, nonappealable order, approving and making the proposal effective April 1, 1964;

(b) The Commission shall have granted certificates, by final, nonappealable orders, to Union Oil in Docket Nos. CI64–688 and CI64–669, respectively, and shall have accepted for filing the respective rate reduction tariff revisions proposed by the two producers in said docketed proceedings, effective as of April 1, 1964; and

(c) The Commission, on or before April 1, 1964, shall have granted a certificate to Trunkline in Docket No. CP64–114 without conditions or modifications other than those to which Trunkline shall have agreed upon such date.

(6) The Commission is requested to waive compliance by Trunkline with the requirements of the Commission's general rules and regulations, particularly Part 154 thereof, to the extent necessary to effectuate all of the provisions of the proposal.

(7) Neither Trunkline, the Staff, nor any other person shall be bound or prejudiced by any ratemaking principle, or any method of cost of service determination, or any allocation underlying or supposed to underlie any of the rates or any of the refunds provided for herein.

No protests or objections to Trunkline's proposed reduced rates have been received. Comments upon Trunkline's reduced rate proposal have been received from the Illinois Commerce Commission, the Public Service Commission of Indiana, and the Public Service Commission of Michigan. In general, all of these comments support our acceptance of Trunkline's reduced rates for filing effective on April 1, 1964, as proposed.

The Commission finds:

(1) Good cause exists for waiving the requirements of Section 154 of the Commission's Regulations under the Natural Gas Act in order that the revised tariff sheets specified above may become effective on April 1, 1964, as hereinafter ordered.

---

[4] The rates of both Panhandle Eastern Pipe Line Company and Mississippi River Transmission Corporation, Trunkline's only pipeline resale customers, are currently subject to the obligation to flow-through and reflect Trunkline's refunds and rate reductions.

(2) The proposed revised tariff sheets, the rate reductions therein contained and Trunkline's agreement to further reduce its rates as provided in the proposal, are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be accepted for filing and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The provisions of Section 154 of the Commission's Regulations under the Natural Gas Act are hereby waived subject to the terms and conditions of this order and of the rate reduction proposal.

(B) The revised tariff sheets specifically described hereinabove are accepted for filing to become effective on April 1, 1964, and Trunkline's agreement filed on February 26, 1964, is approved and made effective as proposed therein, subject to the terms and conditions of this order.

(C) Trunkline shall comply with each of the provisions of the rate reduction proposal relating to future refunds and rate reductions.

(D) Within twenty (20) days of making refunds in accordance with paragraph (C) herein, Trunkline shall report to the Commission, in writing and under oath, the amount of the refund made to each customer, showing separately the amount of principal and interest so paid together with a computation showing the manner in which such refund was determined, and shall serve a copy of such report upon each customer receiving a refund.

(E) This order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Trunkline Gas Company, the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against Trunkline Gas Company or any other persons or parties affected by this order.

Commissioner Ross *dissenting*.

ORDER CANCELLING FORMAL HEARING AND AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 31, 1964)

Each of the above dockets concerns an application for a certificate of public convenience and necessity seeking authorization to sell natural gas produced in North Louisiana for resale in interstate commerce. The initial rates proposed in the applications are in excess of the Statement of General Policy 61-1 guideline level of 17¢ per Mcf (plus tax reimbursement). Each applicant is presently making its sale under temporary authorization conditioned to the guideline price of 17¢ per Mcf plus contractual tax reimbursement.

By order issued in these proceedings on January 28, 1964, these matters were set for formal hearing to commence on March 30, 1964.[1] Several petitions to intervene were filed[2] and a notice of intervention was timely filed by the Public Service Commission of New York on February 10, 1964. Subsequent to the filing of the petitions and notice of intervention each of the applicants filed a motion for severance and for issuance of certificate under the abridged procedure.[3]

Each applicant, by its motion, agrees to accept a certificate conditioned to the Commission's Statement of General Policy No. 61-1 guideline price. Subsequent to the filing of these motions, all persons who previously had filed petitions to intervene in opposition, filed statements in answer to the motions stating that they have no objection to the issuance of certificates conditioned to an initial price of 17¢ plus tax reimbursement under the abridged procedure. The Public Service Commission of New York filed a like answer.

Pursuant to the above motions and answers thereto and in view of the withdrawals of the petitions to intervene and notice of intervention, a hearing was held on March 26, 1964. The Commission on its own motion received and made a part of the record in the proceeding all evidence, including the applications and exhibits attached thereto and the motions to sever, which amend the applications, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicants are natural-gas companies within the meaning of the Natural Gas Act and are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission.

(2) The sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to Applicants upon the conditions set forth herein, authorizing the sales of natural gas in interstate commerce for resale for ultimate public consumption, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications as amended by the motions for severance herein.

---

[1] By Notice of the Secretary issued March 3, 1964, the commencement of the hearing was postponed to April 29, 1964.

[2] Petitions to intervene were filed by Long Island Lighting Company on February 12, 1964, United Gas Pipe Line Company on February 12, 1964, Public Service Electric and Gas Company on February 13, 1964, Philadelphia Gas Works Division of the United Gas Improvement Company on February 17, 1964, and United Fuel Gas Company on February 19, 1964.

[3] The filing dates are as follows: Humble Oil & Refining Co., Docket No. G-19191, February 18, 1964; Sunray DX Oil Company, Docket No. CI60-85, February 24, 1964; Chicago Mill and Lumber Co., Docket No. G-19192, March 4, amended March 19, 1964; Wheless Drilling Company, Docket No. CI61-587, March 6, 1964.

(B) The certificates granted in paragraph (A) above are not transferable and shall be effective only so long as Applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission.

(C) The certificates granted in paragraph (A) are granted upon the express condition that the initial price under these certificates is 17¢ per Mcf plus contractual tax reimbursement.

(D) The grant of the certificates issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customers involved imply approval of all of the terms of the contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificates.

(E) The formal hearing in this proceeding scheduled to commence on April 29, 1964, and all procedures in connection therewith, are hereby cancelled.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TOTAL GAS SUPPLY OF PIPELINE COMPANIES—ANNUAL REPORT FORM, DOCKET NO. R-239

ORDER NO. 279

PRESCRIBING ANNUAL REPORT FORM NO. 15 AND STATEMENT OF POLICY WITH RESPECT THERETO

(Issued March 31, 1964)*

We are here promulgating an annual report form to be used by certain natural gas pipeline companies in furnishing information with respect to their total gas supply and deliverability. Our need for this information and the purposes we are seeking to achieve are fully set out in the notice of proposed rulemaking initiating this proceeding, issued April 25, 1963, and published in the Federal Register on May 2, 1963 (28 F.R. 4365).

In general the information will enable the Commission to make a continuing review of gas reserves and deliverability of pipeline companies now made only at such times as a company seeks a certificate of public convenience and necessity. Of course, the question of reserves can be raised as an issue in future proceedings but such proceedings should be expedited by the filing of the annual reports since we are by our order in Docket No. R–240, issued this day [*infra.*, 754] and our statement of policy issued herein, providing for their incorporation by reference in such proceedings to satisfy the burden, in most instances, of proving reserves and deliverability. The notice also indicated that information from the reports will make it possible to relax the Commission's 12-year deliverability life requirement where the information supplied by the pipeline company indicates it has an active procurement program, its system extends into production areas with continuous exploration and the results thereof indicate continuing ability to meet gas requirements.

---

*Published in the Federal Register on April 7, 1964 (29 F.R. 4873).

As noted, this proceeding was commenced by notice published in the Federal Register and served upon interested parties, including State and Federal regulatory agencies. Twelve weeks were given within which protests, views, data, and comments could be filed. Comments were received from 18 interested parties (producers, pipeline companies, distributing companies and one State commission) and from the Independent Natural Gas Association of America, representing 23 pipeline companies.

Although there was some opposition to the promulgation of any new report form, the comments generally supported the Commission's objective of expediting the disposition of certificate cases and, with one exception, all comments were in favor of the relaxation of the 12-year deliverability requirement, as outlined in the proposed policy statement set out in the notice. Numerous comments were directed at various changes and modifications in content and language, many of which were helpful and have been adopted.

Specifically, we are adopting the following suggestions and changes: that companies purchasing their entire gas supply from other jurisdictional pipeline companies be exempted from filing annual report form 15; that the fiscal year report be changed to a calendar year report; that there be special provisions for reporting Appalachian area gas supplies, in view of the special difficulties for that area; that the use of a pressure base of 14.73 psia for reserve estimates be used as a reporting base for summary levels only; that we eliminate the requirement for a detailed listing of the names, business addresses and phone numbers of certain company employees, as required in Part I, item 4; that Part I, item 6, the requirement that the reporting company submit a statement of assets and revenues be eliminated; and that, after initial submittal, maps need be filed only where significant changes have occurred.

On the other hand, we have not adopted suggestions that would have eliminated Schedule No. 2 of Part III of the proposed Report, Deliverability Summary, completely or required it only every third year; or that we should use a 12 to 15-year study rather than the 20-year study proposed in the notice. In such instances, we concluded that the advantages of receiving the material as originally proposed outweighed the burdens which would be imposed on the respondents thereby.

Objection was made to the proposed use of automatic data processing (ADP) as a reporting medium, as well as to filing on ADP forms. The use of ADP may be effective to correlate and analyze the data which will be submitted by the companies. We recognize, however, that the specific questions raised by the comments concerning the use of ADP (relating to Parts IV, V and VI of the proposed annual report) cannot be resolved until after the information required by the first three Parts of the Report has been submitted, and that further time, accordingly, is required prior to the determination of the reports on ADP form.

The notice herein proposed a report in six parts, to be filed annually. However, in the light of the comments received, our recognition of the need for further resolution of questions concerning the ADP forms and the absence of a suitable nationwide field and reservoir coding system needed in the development of the proper use of ADP, we now find that the annual report should be promulgated in two phases. The First Phase, which we are adopting here, will require submission of a Report consisting only of Parts I, II and III of the Report substantially in the form as originally proposed and will be filed with respect to information covering the calendar year 1963. This initial Report will furnish us with summary information on the reporting company's total gas supply, deliverability life and reserves for each source of supply from which it obtains its gas. This information is a prerequisite to the preparation of the remaining parts (IV, V and VI in the notice) of the complete Report. It will also make possible a proper standardization of those parts as to both form and content. Finally, it will supply the information upon which a future decision could be made with respect to the possible exemption of smaller companies from filing the Report thereafter. We contemplate that we will adopt for reporting for subsequent years an annual No. 15 Report Form consisting not only of Parts I, II and III, as here prescribed or hereafter revised, but also such other Parts as may then be determined to be appropriate to obtain such of the information set out in Parts IV, V and VI of the notice as then appears desirable. We recognize, however, that the promulgation of any substantial changes in the report form, including the use of ADP, will be subject to the approval of the Bureau of the Budget.

Accordingly, we are, at this time prescribing the new report, FPC Form No. 15, which for the first reporting years will consist of Parts I, II and III as described below and, for succeeding years, those Parts together with such other Parts as may hereafter be prescribed. We are, also at this time, adopting the statement of general policy as proposed in the notice.

The Commission further finds:

(1) In view of the foregoing and upon consideration of all relevant matters presented, it is necessary and appropriate in carrying out the provisions of the Natural Gas Act that FPC Report Form No. 15, consisting of Parts I, II, and III, be adopted and promulgated in two phases, as hereinafter ordered.

(2) Good cause exists to postpone consideration and promulgation of Parts IV, V and VI (included in the Form annexed to the notice of proposed rulemaking herein) until subsequent to the receipt of the information required to be furnished, with respect to the calendar year 1963, in the First Phase of the Report on or before July 1, 1964.

(3) Good cause exists to promulgate and authorize the use of the Report Form, herein adopted, effective immediately upon the issuance of this order, as hereinafter provided.

The Commission, acting pursuant to the Natural Gas Act, as amended, particularly sections 7, 10(a), 14(a) and 16 thereof (52 Stat. 825, 826, 828, 830; 56 Stat. 83; 15 U.S.C. 717f, 717i(a), 717m(a), 717o), *orders:*

(A) Part 2, General Policy and Interpretations, Chapter I, Title 18 of the Code of Federal Regulations, is amended by adding a new § 2.61 to read as follows:

§ 2.61 Pipeline companies—natural gas reserves—deliverability life.

Simultaneously with its promulgation of the annual report, FPC Form No. 15, to be filed by certain pipeline companies with respect to total gas supply and deliverability (§ 260.7 of this chapter), the Commission issued the following statement of policy:

(a) When a pipeline company has demonstrated through the Annual Reports filed pursuant to § 260.7 of this chapter that it has an active gas procurement organization and its pipeline system extends into production areas in which exploration is continuing, the twelve-year deliverability life heretofore found to be a primary requisite by the Commission will not necessarily be applied and the Commission's deliverability requirement will be flexible.[1]

(b) Unless otherwise ordered by the Commission, existing pipeline companies will not be required to file information with regard to gas supply and deliverability in support of pipeline system expansions, other than with respect to applications to serve major new markets or to serve existing markets from new sources of gas supply by new routes involving extensive expansion of existing facilities, but may rely on the information set forth in filed annual reports, by reference thereto (§ 157.13(b) of this chapter).

(c) The deliverability life showing of a new pipeline company seeking to initiate service, or of an existing pipeline company seeking to serve major new markets or to serve major existing markets from new sources of supply over new routes will be dependent upon the future availability of gas in its proposed new supply areas, but in no event shall the minimum deliverability life of the incremental supply needed to serve the new or expanded market be less than twelve years.

(B) Part 260, Statements and Reports, Subchapter G, Chapter I of the Code of Federal Regulations, is amended by adding a new § 260.7 to read as follows:

§ 260.7 Form No. 15, Annual report of gas supply and deliverability for certain natural gas companies.*

(a) An Annual Report of Total Gas Supply and Deliverability for natural gas companies, designated as FPC Form No. 15, is being prescribed in two phases. The First Phase report, consisting of Parts I, II and III is prescribed for requesting information relative to the calendar year 1963. The Second Phase report, consisting of Parts I, II, III, and such other Parts as are hereafter promulgated by order of the Commission, after approval by the Bureau of the Budget, will be prescribed for annual use commencing with information for the calendar year 1964.

(b) Each natural gas company, as defined by the Natural Gas Act, as amended (52 Stat. 821), other than a company purchasing its entire supply of natural gas from other companies subject to the provisions of this section, shall prepare and file with the Commission for the calendar year ending December 31, 1963, on or before July 1, 1964, and for subsequent years on or before each May 1, thereafter, an original and four conformed copies of FPC Form No. 15. A company exempt from this paragraph by virtue of the fact that it purchases its entire supply of natural gas from another company or companies subject to this section shall file, in lieu of the Report, a statement giving the name(s) and address(es) of the company or companies from which it purchases its supply. One copy of the Report should be retained in its files. The conformed copies may be carbon or reproduced by any means that provide clearly and accurately aligned impressions.

---

[1] "Deliverability" as used herein represents the number of future years during which a pipeline company can meet its annual requirements for its presently certificated delivery capacity from presently committed sources of supply. The availability of gas from these sources of supply shall be governed by the physical capabilities of these sources to deliver gas, by the terms of existing gas-purchase contracts and limitations imposed by state or federal regulatory agencies.

*As used herein, "natural gas company" does not include "independent producers," as defined in § 154.91(a) of this chapter.

(c) This annual report is designed to furnish the Commission with information concerning the gas supply organization of the company, the company's total gas supply, the company's gas procurement program, each reservoir from which the company obtains gas, contracts under which the company purchases gas and deliverability data.

[Secs. 7, 10(a), 14(a), 16, 52 Stat. 825, 826, 828, 830, 56 Stat. 83; 15 U.S.C. 717f, 717i(a), 717m(a), 717o]

(C) The First Phase of the report, FPC Form No. 15, approved and prescribed in paragraph (B), above, and consisting of General Instructions and Parts I, II and III, attached hereto, is approved and prescribed for reporting with respect to the calendar year 1963.

(D) Further consideration of Parts IV, V and VI of the form proposed in the notice in this proceeding will be deferred to a time subsequent to July 1, 1964.

(E) The amendments to the Commission's Regulations, the form and the statements of policy approved herein shall be effective upon the issuance of this order.

(F) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

APPLICATIONS BY PIPELINE COMPANIES PURSUANT TO SECTION 7 OF THE NATURAL GAS ACT—MISCELLANEOUS AMENDMENTS, DOCKET NO. R-240

ORDER NO. 280

AMENDING MISCELLANEOUS SECTIONS OF THE COMMISSION'S POLICY STATEMENTS AND REGULATIONS UNDER THE NATURAL GAS ACT

(Issued March 31, 1964)*

The Commission, by public notice issued April 25, 1963 (28 F.R. 4360, May 2, 1963), proposed to issue a statement of policy and to amend its regulations relating to the requirements to be followed by natural gas pipeline companies submitting applications for certificates of public convenience and necessity pursuant to section 7(c) of the Natural Gas Act. We also proposed to prescribe regulations covering applications to abandon facilities or service under section 7(b) of the Act and to provide a simplified form for use by small distributors seeking gas service for a single community pursuant to section 7(a).

In response to the invitation in our notice, comments were received from 9 pipeline companies, 8 distributing companies, 1 State commission and the Independent Natural Gas Association of America. Generally the comments were favorable and most of the suggestions for revision have been incorporated in the amendments we are adopting in this order.

Four suggestions of some significance, however, are not being adopted. Several respondents suggested lengthening the period for curing deficiencies (§ 157.8) from 20 to 30 days but, since one of the basic purposes of this proceeding is the expedition of cases, we are retaining the 20-day limit. The Secretary will continue, as he has in the past, to grant extensions where a real need therefor is shown.

---

*Published in the Federal Register on April 7, 1964 (29 F.R. 4875).

Several respondents requested the deletion of the requirement in § 157.14(a) (10) *Exhibit H* (vi) to substantiate gas reserves and deliverability when the proposed capacity increase is large—over 25,000 Mcf a day and 5% of sales capacity—since, as stated by INGAA, as long as the annual report of gas supply is filed (as proposed in R-239) proof of gas supply should not be required for any expansion. We agree that the size limitations originally suggested do not reflect the situations in which gas supply information will be necessary and have eliminated them. We believe, however, that such proof will still be necessary in situations where the pipeline seeks to serve major new markets or existing markets from new gas supply sources by new routes involving the extensive expansion of existing facilities, and have revised the provision accordingly.

We are not adopting a suggestion that the requirement in Exhibit I, *Market data* (§ 157.14(a)(11)(i)) for "an explanation" of the end use to which large industrial customers will put the gas be amended by adding "if such an explanation is available." We believe the explanation of end-use is relevant and pertinent and that in view of the limited number of *large* direct sales to which the requirement is applicable, no undue burden will be placed upon applicants in determining the proposed end use.

Objection was made to the added requirement in Exhibit N (§ 157.14(a)(16)) for a system-wide statement of revenues and expenses for the last year preceding the proposed service as well as incremental statements of revenues and expenses for each of the first three full years of operation. While the new information may be to some extent duplicative, filing of the information in the form requested will aid materially in the analysis of the larger projects. It should be noted that the existing limitation—that the information is required only where the revenues and expenses are significantly affected by the new project—is retained in the paragraph.

One other proposal, the amendment to Exhibit J, *Conversion to natural gas*, 157.14(a)(12), requires specific mention. We have modified the amendment so as to limit the applicability of the Exhibit to previously unserved communities and large industrial customers. Although the notice did not propose a comparable amendment to the Exhibit J required in connection with applications filed by local distributors pursuant to section 7(a) of the Natural Gas Act (§ 156.5(a)(11)), we are now amending that subsection in a similar fashion. The amendment does not require the submission of any additional information—in fact, preparation of the Exhibit has been simplified.

Upon consideration of the entire record in this proceeding which includes the notice of proposed rulemaking and all the comments, views and data filed in response thereto, *the Commission further finds:*

(1) Adoption and promulgation of the statement of general policy and the amendments to the Regulations Under the Natural Gas Act are necessary and appropriate to the administration of the Natural Gas Act.

(2) For the reasons heretofore expressed, good cause exists for the adoption herein of the amendments to § 156.5(a)(11) without giving the prior notice provided for by section 4 of the Administrative Procedure Act.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 7, 15 and 16 thereof (52 Stat. 824, 829, 830; 56 Stat. 83, 84; 15 U.S.C. 717f, 717n, 717o), *orders:*

(A) Parts 2, 156, 157 and 250 of the Commission's Rules and Regulations, Chapter I of Title 18 of the Code of Federal Regulations are amended in the following respects: [Omitted in printing—see 29 F.R. 4875].

(B) The amendments adopted herein shall become effective on May 1, 1964.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.

ORDER DENYING MOTION TO REOPEN PROCEEDINGS FOR ADDITIONAL EVIDENCE

(Issued March 31, 1964)

On February 21, 1964, Placid Oil Company, Hassie Hunt Trust, H. L. Hunt and Hunt Oil Company (Movants) jointly filed, together with their exceptions to the examiner's decision, a motion to reopen this proceeding for the receipt of evidence rejected by the examiner and for new evidence which, they allege, has become available since the record was closed. Movants allege that the evidence rejected by the examiner is relevant and material and "absolutely essential to the determination of the appropriate price under Section 7." They allege that the new evidence, consisting of group composite cost of service exhibits, should be considered in determining the price issue in this proceeding and that the exhibits have probative value and are relevant and material to the issue of whether the proposed prices are required by the public convenience and necessity.

We have reviewed both the motion, in which the materials which would constitute this "new evidence" have been summarized, and the exceptions concomitantly filed by Movants, in which the rejected evidence has been both summarized and analyzed. We conclude that evidence of this kind is not relevant in producer certificate cases where the initial price should be determined by reference to the "in line" price in the area. *Skelly Oil Company*, 28 FPC 401, 410–412, on appeal *P.S.C. of New York* v. *F.P.C.*, 329 F. 2d, 242. Decided January 23, 1964; CADC, No. 17582, *et al.; Placid Oil Company*, 30 FPC 283, Opinion No. 398, issued July 17, 1963, and Opinion No. 398–A, issued September 11, 1963, 30 FPC 682; *Texaco Seaboard, Inc.*, Opinion No. 383, 29 FPC 593, 595; *United Gas Pipe Line Co.*, 30 FPC 329, Opinion No. 399, issued July 17, 1963 at p. 332; *California Oil Company* v. *F.P.C.*, 315 F. 2d 677 (CA 10); *The Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 677 (CADC).

The Commission orders:

The motion to reopen the proceedings in Docket No. G-13221, *et al.* for additional evidence submitted by Placid Oil Company, Hassie Hunt Trust, H. L. Hunt and Hunt Oil Company is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black

HOPE NATURAL GAS COMPANY, DOCKET NO. CP64-119; MISSISSIPPI RIVER FUEL CORPORATION, DOCKET NO. CP64-133

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, ACCEPTING RATE SCHEDULES, AND APPROVING SETTLEMENT OFFERS

(Issued April 2, 1964)

On November 27, 1963, Hope Natural Gas Company (Hope) filed in Docket No. CP64-119, and on December 9, 1963, Mississippi River Fuel Corporation (Mississippi River) filed in Docket No. CP64-133, their respective applications pursuant to Section 7(c) of the Natural Gas Act, for certificates of public convenience and necessity authorizing the sale and delivery of natural gas in interstate commerce to Texas Gas Transmission Corporation from acreage in the Lake Palourde Field in St. Mary and St. Martin Parishes, Louisiana, and for the construction and operation of such facilities as may be subject to the jurisdiction of the Commission necessary for such sales, all as more fully set forth in the applications on file with the Commission.

The estimated cost of the proposed facilities is $52,636.00 and will be defrayed jointly by Hope and Mississippi River out of their current funds.

Hope and Mississippi River are successors to interests in leasehold rights in a portion of lands and leases in the Lake Palourde Field, St. Mary and St. Martin Parishes, Louisiana, acquired by Mississippi River from Wm. T. Burton Industries, Inc. under a Farmout Agreement dated May 4, 1962, as amended May 14, 1962. Production from a completed well on the Farmout Acreage is presently being delivered to Texas Gas Transmission Corporation and being sold under the currently effective terms of Burton's FPC Gas Rate Schedule No. 2. Initial deliveries were commenced by Burton in March, 1960, under Burton's contract with Texas Gas Transmission Corporation dated November 20, 1959, for which temporary authorization was granted by the Commission in Docket No. G-20243 (consolidated with *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*,) and permanent certification is presently pending.

Hope and Mississippi River proposes each in its own right to sell natural gas to Texas Gas in accordance with the terms of the currently effective Burton rate schedule, to be superseded by Hope's Rate Schedule No. IP-19 and Mississippi River's Rate Schedule No. 23, being the Gas Purchase contract dated November 20, 1959, between Burton and Texas Gas, as ratified and adopted by Hope and Mississippi, and concurrently filed as a special rate schedule. The price for the natural gas so sold will be 20.625 cents per Mcf at 15.025 psia as proposed by Hope and Mississippi River in an Offer of Settlement, as supplemented, filed by Hope on November 29, 1963, and Mississippi River on December 12, 1963, in their respective dockets.

The proposed settlement, as supplemented, effects a reduction in the total initial price of 21.75 cents per Mcf (inclusive of severance taxes and dehydration charges) to 20.625 cents per Mcf (inclusive of reimbursement for Louisiana state taxes) to be effective as of the date of initial delivery; a moratorium on future rate changes until March 31, 1968; and an extension of make-up period for prepaid gas for a minimum of four years.

Hope and Mississippi River further agree that the settlement rate will be subject to prospective adjustment, either up or down depending upon the outcome of the proceedings in Docket No. AR61-2, *et al.*, subject to an allowance for an adjustment to meet any future tax levy to the extent of one-half thereof, if contractual provision is made for reimbursement.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on March 26, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Hope Natural Gas Company, a West Virginia corporation having its principal place of business in Clarksburg, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 27, 1943, in Docket No. G-290 (3 FPC 994).

(2) Applicant, Mississippi River Fuel Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 1, 1944, in Docket No. G-291 (4 FPC 535).

(3) The sales of natural gas hereinbefore described, as more fully described in the applications of Hope and Mississippi River, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales by Hope and Mississippi River, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sales of natural gas by Hope and Mississippi River, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates therefor should be issued as hereinbefore ordered and conditioned.

(5) Hope and Mississippi River are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Hope and Mississippi River complying with the conditions of this order and all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(7) It is appropriate in the administration of the Natural Gas Act, and in the public interest to (a) accept for filing Hope's Rate Schedule No. IP-19, inclusive of Original Sheets Nos. 281 through 315 to its FPC Gas Tariff, First Revised Volume No. 2, and Mississippi River's Rate Schedule No. 23, inclusive of Original Sheets Nos. 2 through 36 to its FPC Gas Tariff, Original Volume No. 3, to become effective on the date of the issuance of this order, on the condition that within 15 days thereafter Hope and Mississippi River file revisions

to such rate schedules, so as to reflect the Settlement Rates referred to in the Settlement Offers filed in these proceedings, and (b) approve the Offer of Settlement filed by Hope on November 29, 1963, in Docket No. CP64-119, and filed by Mississippi River on December 12, 1963, in Docket No. CP64-133, as supplemented by their joint letter of January 3, 1964, providing, among other things, for a reduction of the initial contract price to a level of 20.625 cents per Mcf, inclusive of tax reimbursement, for a moratorium on future rate changes until March 31, 1968, and for the extension of make-up provisions for prepaid gas for a minimum of four years, on the condition that Hope and Mississippi River make refund on amounts paid for gas at rates above the settlement rate from the date of initial delivery to the settlement date, together wih interest thereon at the rate of seven (7) percent per annum, said refunds to be passed on by Texas Gas pursuant to its Settlement Agreement in Docket No. RP61-15.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to Hope and Mississippi River authorizing the sales of natural gas to Texas Gas Transmission Corporation, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sales, as more fully set forth in their respective applications and exhibits filed in these proceedings, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Hope and Mississippi River complying with the conditions of this order and all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) Hope's Rate Schedule No. IP-19, inclusive of Original Sheets Nos. 281 through 315 to its FPC Gas Tariff, First Revised Volume No. 2, and Mississippi River's Rate Schedule No. 23, inclusive of Original Sheets Nos. 2 through 36 to its FPC Gas Tariff, Original Volume No. 3, are hereby accepted for filing effective on the date of the issuance of this order, on the condition that Hope and Mississippi River file revisions thereto within 15 days of the issuance of this order so as to reflect the settlement rates referred to in the Settlement Offer and letter supplement thereto filed by Hope and Mississippi River in these proceedings.

(D) The proposed Settlement Offer filed by Hope on November 29, 1963, and Mississippi River on December 12, 1963, as supplement by their joint letter of January 3, 1964, be and the same are hereby approved and made effective subject to the terms and conditions of this order.

(E) Hope and Mississippi River shall within six months after date of this order make refunds to Texas Gas of amounts paid for gas at rates above the settlement rate from the date of initial delivery to the settlement date, together with interest thereon at the rate of 7 percent per annum, said refunds to be passed on by Texas Gas pursuant to the terms of its Settlement Agreement in Docket No. RP61-15. Hope and Mississippi River shall report to the Commission, in writing, the amount of refund made to Texas Gas, showing separately the amount of principal and interest so paid, and the bases used for such determination, together with releases from Texas Gas showing receipt of the refunds, in conformity with the terms and conditions of this order.

(F) This order is without prejudice to any findings or orders which have been or may hereafter be issued by this Commission in any proceeding now pending or hereafter instituted by or against Hope and Mississippi River.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. E-7155

ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued April 2, 1964)

Montana-Dakota Utilities Co. (Applicant), a corporation organized under the laws of the State of Delaware, and qualified to do business in the States of Minnesota, Montana, North Dakota, South Dakota and Wyoming, with its principal business office at Minneapolis, Minnesota, filed an application on March 3, 1964, for authorization, pursuant to Section 204 of the Federal Power Act, to issue (within the meaning of the Federal Power Act) 2,354,738 shares of Common Stock, par value $15 per share, by changing its presently outstanding $5 par value Common Shares into the same number of shares of Common Stock of par value $15 per share.

The increase in par value will be effected by a credit of $23,547,380 to Common Capital Stock. Applicant states this credit will be offset by debits of $20,125,483 to Premium on Common Stock and $3,421,897 to Unappropriated Earned Surplus.

According to the Applicant the increase in par value will be accomplished by an amendment to the Certificate of Incorporation, approved by an affirmative vote of a majority of the outstanding shares in accordance with the General Corporation Law of Delaware. The Applicant states that no additional stock will be issued and also no new certificates for outstanding shares will be issued. The application states that the purpose of the proposed amendment is to effect a more balanced capital structure, which in the opinion of the Applicant's Board of Directors is desirable, by transferring to Common Stock the entire balance in the Premium on Common Stock Account and an additional amount of the Earned Surplus Account sufficient to increase the Common Stock account to $15 per share.

Written notice of the application has been given to the Minnesota Railroad and Warehouse Commission, Montana Board of Railroad Commissioners, North Dakota Public Service Commission, South Dakota Public Utilities Commission, Wyoming Public Service Commission, and to the Governors of each of those States. Notice has also been given by publication in the Federal Register on March 17, 1964 (29 F.R. 3453), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before March 30, 1964, with the Federal Power Commission, Washington, D.C., 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued April 26, 1962, *Montana-Dakota Utilities Co.*, Docket No. E-7027, 27 FPC 844.

(2) The proposed change in par value of the outstanding shares of Applicant's Common Stock, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a state under the laws of which the security issue here involved is regulated by a state commission within the meaning of Section 204(f) of the Act; and the proposed issuance of securi-

ties is, therefore, not exempt by virtue of that section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Common Stock as described above is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a (a) (1) thereof.

(5) The proposed issuance of Common Stock, as hereinafter authorized, will be for a lawful object within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(6) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of 2,354,738 shares of Common Stock par value $15 per share, upon the terms and conditions and for the purposes specified in the application, as described above, is hereby authorized, subject to the provisions of this order.

(B) The proposed issuance of Common Stock is hereby exempted from the competitive bidding requirements of Section 34.1(a), (b), and (c) of the Commission's Regulations Under the Federal Power Act.

(C) This authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates, or determinations of cost, or any other matter whatsoever which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NORTHWESTERN PUBLIC SERVICE COMPANY, DOCKET NO. E-7148

ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued April 2, 1964)

Northwestern Public Service Company (Applicant), incorporated under the laws of the State of Delaware and qualified to do business in the States of South Dakota and Nebraska, with its principal place of business in Huron, South Dakota, filed an application on February 7, 1964, and an amendment thereto on March 12, 1964, pursuant to Section 204 of the Federal Power Act, authorizing the issuance of 945,897 shares of Common Stock par value of $7 per share to accomplish a reclassification and a split of Common Stock. The reclassification and split will be carried out by an amendment to the Applicant's Certificate of Incorporation.

The Applicant presently has outstanding 709,423 shares of Common Stock with a par value of $3 per share. Applicant proposes to reclassify its Common Stock, to increase the number of authorized shares from 800,000 to 1,500,000 shares and to change the par value of the presently outstanding 709,423 shares from $3 to $7 per share and then to split its presently outstanding Common shares on a four-for-three basis. This will require the issuance of an additional

236,474 common shares of par value $7 per share for a total of 945,897 shares of Common Stock outstanding, all to have a par value of $7 per share.

The additional shares of Common Stock issuable in connection with the stock split will become issued and outstanding shares of Common Stock immediately upon the proposed amendment to the Certificate of Incorporation becoming effective. The certificates evidencing the presently outstanding shares of Common Stock will *ipso facto* represent a like number of shares of Common Stock of the par value of $7 per share. Certificates evidencing the additional 236,474 shares of Common Stock to be outstanding after the split will be issued shortly after the effective date of the amendment. No fractional shares will be issued. Through the use of nontransferable and nonnegotiable order forms, whereby shareholders will appoint the Northern Trust Company, Chicago, Illinois, as agent, the agent will make all purchases and sales of fractional share interests on behalf of shareholders whether by offset or otherwise on the basis of the prevailing market price of the Company's Common Stock determined by the agent in its discretion. The stockholder will pay the cost of any fractional share interest purchased by him. The other costs and expenses of the agent will be paid by the Company.

According to the Applicant, the proposed amendment to the Applicant's Certificate of Incorporation will be submitted to the vote of Common Stockholders at the Annual Meeting thereof to be held on April 21, 1964. If approved by the holders of a majority of the outstanding shares of Common Stock and if the necessary regulatory authorizations have been obtained, the proposed amendment will become effective upon the filing and recording of a Certificate of Amendment of Certificate of Incorporation in accordance with Delaware law on or about April 22, 1964.

According to the Applicant, such increase in number of outstanding shares and the consequent proportionate reduction in the market price per share will make such Common Stock more available to the average investor and thus, to the benefit of the Applicant and its stockholders, improve the marketability of the Common Stock.

Written notice of the application has been given to the Nebraska State Railway Commission and the South Dakota Public Utilities Commission and to the Governors of those States. Notice of the application also was published in the Federal Register on February 21, 1964 (29 F.R. 2661), stating that any person desiring to be heard or to make any protest with reference to said application should on or before March 12, 1964, file with the Federal Power Commission, Washington, D.C., 20426, petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued September 19, 1958, *In the Matter of Northwestern Public Service Company*, Docket No. E-6838 (20 FPC 373).

(2) The proposed issuance of 945,897 shares of Common Stock, par value $7 per share to holders of Applicant's presently outstanding Common Stock will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) The proposed issuance of Common Stock as described above is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulation under the Federal Power Act by reason of paragraph 34.1a(a)(1) thereof.

(4) The proposed issuance of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Common Stock, upon the terms and conditions and for the purposes specified in the application, as described above, is hereby authorized, subject to the provisions of this order.

(B) The proposed issuance of Common Stock is hereby exempted from the competitive bidding requirements of Section 34.1a (b) and (c) of the Commission's Regulations under the Federal Power Act.

(C) This authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

RESERVE OIL AND GAS CO., ET AL., DOCKET NO. G-4720, ET AL.; CREEK OIL COMPANY, INC., DOCKET NO. CI64-457; CUMBERLAND NATURAL GAS COMPANY, INC., DOCKET NO. G-18740

ORDER GRANTING AND MODIFYING TEMPORARY CERTIFICATES AND DENYING INTERVENTION

(Issued April 2, 1964)

On October 16, 1963, Creek Oil Company, Inc. (Creek) filed in Docket No. CI64-457 an application pursuant to Section 7(c) of the Natural Gas (Act) for a certificate of public convenience and necessity and requesting temporary authority to sell and deliver natural gas produced in the White Plains area in Hopkins County, Kentucky, to Cumberland Natural Gas Company, Incorporated (Cumberland) at a price of 15.0 cents per Mcf at 15.025 psia, all as more fully set forth in the application herein.

The subject sale will be made pursuant to a gas sales contract dated August 21, 1963, between Creek and Cumberland which is hereby designated as Creek Oil Company FPC Gas Rate Schedule No. 2.

In a related filing, made October 24, 1963, Cumberland amended its application in Docket No. G-18740[1] to request authority to construct and operate approximately one mile of 4-inch gathering pipeline in Hopkins County, Kentucky, in order to connect its existing gathering facilities with Creek's wells from which the sales proposed in Creek's application in Docket No. CI64-457 are to be made. On July 2, 1959, temporary authorization was granted to Cumberland in Docket No. G-18740 to sell natural gas to Texas Gas Transmission Corporation (Texas Gas) at a point adjacent to Texas Gas' 10-inch pipeline near Mortonville, Hopkins County, Kentucky, under Cumberland's FPC Gas Rate Schedule No. 1. This gas is sold at a price of 21.0 cents per Mcf at 15.025 psia. Due notice of Creek's application in Docket No. CI64–457 has been given by publication in the Federal Register on October 26, 1963 (*Reserve Oil and Gas Co., et al.*, Docket No. G–4720, *et al.*, 28 F.R. 11493).

---

[1] Originally filed on June 8, 1959.

On November 14, 1963, Tartan Oil Company (Tartan) filed a petition to intervene in that docket alleging that it produces gas from the same gas pool or field as proposed by Creek. Tartan further alleges that reserves in the field will be exhausted at an early date, the pressure in the field would be reduced, and excessive and uneconomic drainage of the field may result, thereby preventing Tartan from realizing "* * * the full normal level of production from its wells and its equitable share of those reserves * * *."

Even if it might otherwise be entitled to intervene, Tartan would have no such right here: its petition to intervene was filed after the expiration of the time prescribed in our notice published in the Federal Register on October 26, 1963, and no good reason for the delay in filing has been shown. But, in any event, Tartan has not demonstrated any basis for intervention. Its contentions in effect are that this Commission should perform the functions of prorating takes and adjusting correlative private rights of producers within a field; matters which it seems to us should be decided by the Commonwealth of Kentucky, but which the Commonwealth has not chosen to include with the powers delegated to its appropriate conservation agency (See Kentucky Revised Statutes, Section 353.720). Accordingly, we will deny the petition to intervene.

In support of its request for temporary authority under Section 157.28(c)(2) of the Regulations, Creek alleges that such authorization is necessary to prevent it from suffering the economic hardship of delay.

In accordance with the above we shall grant the temporary certificates requested by Creek and Cumberland and shall deny Tartan's petition to intervene in Docket No. CI64–457.

The Commission further finds:

(1) Creek Oil Company, Inc., and Cumberland Natural Gas Company, Inc., are natural gas companies within the meaning of the Natural Gas Act, and are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sale of natural gas by Creek to Cumberland is subject to the jurisdiction of the Commission, and such sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Based upon the allegations in the applications to invoke Section 157.28 of the Commission's Regulations under The Natural Gas Act, the Commission finds that an emergency exists, within the meaning of the Act.

The Commission orders:

(A) Temporary certificate is hereby granted to Creek Oil Company, Inc., to render the sales proposed in its application filed in Docket No. CI64–457.

(B) The Gas Purchase Contract between Cumberland and Creek dated August 21, 1963, filed as Exhibit B to Creek's application in Docket No. CI64–457 is hereby designated as Creek Oil Company, Incorporated, FPC Gas Rate Schedule No. 2.

(C) The initial rates provided for in Creek FPC Gas Rate Schedule No. 2 shall remain in effect until changed by the Commission in an order issued in these proceedings.

(D) The temporary certificate with the conditions attached shall be accepted as issued, within 30 days herefrom by written acceptance (original and five copies) made by a responsible official of the company. If reconsideration of such temporary certificate is sought, service hereunder shall not be started. If service is commenced under this temporary certificate, the conditions attached shall be effective and the service may not be discontinued without permission of the Commission issued pursuant to the provisions of the Natural Gas Act.

(E) The related proposed rate schedule will be considered accepted for filing upon acceptance of the temporary certificate, as conditioned above, to be effective on the date of initial delivery subject to the provisions of Section 154.94(c) and 154.101 of the Commission's Regulations under the Natural Gas Act.

(F) Creek shall advise the Commission of the date of commencement of deliveries under its rate schedules by making reference in its communication to the rate schedules.

(G) If service is not commenced within 90 days from the date of this temporary certificate, then such temporary certificate shall be void and of no effect.

(H) The issuance of this temporary certificate and the acceptance of the rate schedule are without prejudice to such final disposition of the applications for permanent certificates as the record in the hearing on such applications may require, or to any action which the Commission might take in any subsequent proceeding involving Creek under Sections 4 or 5 of the Natural Gas Act.

(I) The temporary certificate previously granted to Cumberland Natural Gas Company, Inc., in Docket No. G–18740 is hereby amended to permit the construction and operation of approximately one mile of 4-inch gathering pipeline in Hopkins County, Kentucky, as more fully described in the amendment to the application in Docket No. G–18740 filed October 24, 1963.

(J) Within ten days after the facilities authorized in Docket No. G–18740 have been constructed and placed in operation, Cumberland shall file with the Commission in writing and under oath an original and four conformed copies of a notice of the date of completion of construction.

(K) The petition to intervene in Docket No. CI64–457 filed by Tartan Oil Company is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP64–158

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 2, 1964)

On January 9, 1964, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP64–158 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12-month period commencing May 30, 1964, and the operation of miscellaneous field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers in the general area of Applicant's existing transmission system, said construction not to exceed a maximum total cost of $3,000,000, with no single project to exceed a cost of $500,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally co-extensive with said system.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 26, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found in the Presiding Examiners' decision in Docket No. G-855 (7 FPC 213), affirmed by the Commission in its order issued April 2, 1948.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within (60) days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing May 30, 1964, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Gas Transmission Corporation, to construct during the 12-month period commencing May 30, 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing May 30, 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

WISCONSIN POWER & LIGHT COMPANY, DOCKET NO. CP64-161

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 2, 1964)

On January 21, 1964, Wisconsin Power & Light Company (Applicant) filed in Docket No. CP64-161 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) to extend its facilities and establish physical connection of its system with facilities proposed to be constructed by Applicant at Campbellsport and to sell and deliver natural gas to Applicant for resale and distribution in the Village of Campbellsport, Wisconsin, all as more fully set forth in the application on file with the Commission and open to public inspection.

Applicant proposes to construct and operate a regulator station and a distribution system in the Village of Campbellsport at an estimated cost of $199,128.

The application shows the estimated annual and peak day requirements of Applicant in Mcf at 14.73 psia to be as follows:

	First year	Second year	Third year
Annual (Mcf)	35,172	62,327	84,009
Peak day (Mcf)	187	373	444

Applicant has received appropriate authorization from the Village of Campbellsport and the Public Service Commission of Wisconsin to construct facilities and to engage in the business of gas distribution.

On January 30, 1964, Michigan Wisconsin filed its answer to the subject application stating that it had no objection to the granting thereof. The estimated cost of Michigan Wisconsin's proposed construction is $56,000 for 2.7 miles of 4-inch pipeline.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on March 3, 1964, (29 F.R. 2917). No protest or petition to intervene in opposition to the granting of the application has been filed.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company"

within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 30, 1946, in Docket No. G-669 (5 FPC 953).

(2) Applicant, Wisconsin Power & Light Company, is a public utility duly organized and existing under the laws of the State of Wisconsin and is authorized to engage in the business of distributing and selling natural gas within said State.

(3) It is necessary and desirable in the public interest that Michigan Wisconsin be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 444 Mcf of natural gas per day to Applicant, as set forth in the application in this proceeding, and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Michigan Wisconsin within one year from the date of issuance of this order.

(5) The requirement that Michigan Wisconsin serve Applicant, as proposed, will not place any undue burden upon Michigan Wisconsin nor impair its ability to render adequate service to its existing customer.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company be and is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 444 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully set forth in the application, in this proceeding.

(B) Applicant shall be prepared to receive natural gas from Michigan Wisconsin within one year from date of issuance of this order.

(C) Michigan Wisconsin shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

ALABAMA-TENNESSEE NATURAL GAS COMPANY, DOCKET NO. G-5471, ET AL.

ORDER GRANTING REHEARING FOR FURTHER CONSIDERATION

(Issued April 3, 1964)

On February 3, 1964, the Commission issued Opinion No. 417 in the above-entitled proceeding, 31 FPC 208. On March 4, 1964, requests for rehearing were filed by Alabama-Tennessee Natural Gas Company and by two of the interested persons[1] permitted to participate as *amici curiae* in this proceeding. Since the statutory period under Section 19(a) of the Natural Gas Act for action on such applications is insufficient to permit a timely and proper disposition of these pleadings, it is necessary and appropriate to grant rehearing for the purpose of enabling fuller consideration of the arguments and allegations adduced.

The Commission orders:

Rehearing in this proceeding is hereby granted for the sole purpose of such further consideration of the aforementioned pending applications.

[1] Independent Natural Gas Association of America and the Public Utilities Commission of the State of California.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP64-151

FINDINGS AND ORDER AFTER STATUTORY HEARING AUTHORIZING ABANDONMENT

(Issued April 3, 1964)

On January 2, 1964, as supplemented on March 9, 1964, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP64-151 an application pursuant to Section 7(b) of the Natural Gas Act for authority to abandon by sale to J. C. Daniels approximately 35.5 miles of 10- to 20-inch pipeline in Gray and Wheeler Counties, Texas, all as more fully set forth in the application, as supplemented.

Applicant and J. C. Daniels have entered into an agreement, dated December 6, 1963, for the sale by Applicant of the above-described pipelines as well as Applicant's Twitty, Pitsch and Kellerville Compressor Stations located along said lines.[1] The subject facilities comprise the westernmost end of the so-called Main Line System of the former Consolidated Gas Utilities Corporation which facilities Applicant was authorized to acquire and operate by Commission order issued July 27, 1960, in Docket No. CP60-79.

Applicant states that the pipelines herein proposed to be abandoned have for a period of time in excess of two years ceased to be utilized for the purpose for which they were built and formerly used, namely, transmission of gas supply; and, further, that their only present use is to supply eight residential rural customers. Applicant states that J. C. Daniels has agreed to continue natural gas service to the eight rural customers without change in rates or conditions of service for the time being. The application indicates that J. C. Daniels proposes to use the subject facilities in a gasoline plant operation in Texas.

Pursuant to the agreement of December 6, 1963, Applicant will sell said facilities to J. C. Daniels for approximately $410,400. Additionally the total original cost of said facilities is estimated at $1,327,881 with a provision for accumulated depreciation for a like amount of $1,327,881.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 2, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement, and exhibits, submitted in support of the authorization herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G-252 (3 FPC 910).

(2) The facilities to be abandoned, as heretofore described, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

---

[1] By Commission order issued December 2, 1963, 30 FPC 1385, in Docket No. CP63-352, Applicant was authorized to abandon, among other facilities, the Twitty Pitsch and Kellerville Compressor Stations.

(3) Such abandonment by Applicant, as heretofore described, is permitted by the public convenience and necessity and an order authorizing and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, be and the same is hereby granted.

(B) Applicant shall advise the Commission of the date of the abandonment within 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

BATEX, INC., ET AL., DOCKET NOS. G–19656 AND RI60–364[1]

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING REFUNDS, AND TERMINATING PROCEEDINGS

(Issued April 3, 1964)

On August 21, 1963, Batex, Inc. (Batex) filed an Offer of Settlement[2] relating to its jurisdictional sales of natural gas under its FPC Gas Rate Schedule No. 1 to Tennessee Gas Transmission Company (Tennessee) from Rincon Field, Starr County, Texas (Railroad Commission District No. 4).[3] Batex's FPC Gas Rate Schedule No. 1 is involved in the above-designated rate suspension proceedings.

The following table sets forth the data pertinent to the suspension proceedings involved herein.

Docket No.	Rate schedule No.	Supp. No.	Effective rate	Date effective subject to refund
G–19656	1	4	15.09520	4/15/60
RI60–364	1	5	17.24347	12/14/60

In its Offer of Settlement Batex proposes a settlement rate at the applicable area increased rate level of 14.0¢ per mcf, and agrees to refund, with interest at 7%, all amounts collected in excess of such settlement rate. As of May 1, 1963, refunds would approximate $2,400 exclusive of interest. No objections to the proposed settlement have been received from any interested party.

Since the proposed settlement rate of 14.0¢ per Mcf is acceptable under the provisions of the *Commission's Statement of General Policy No. 61–1*,[4] as amended, for the jurisdictional sales of natural gas from Railroad Commission District No. 4, it is believed that the public interest will be best served by accepting Batex's proposed settlement offer.

---

[1] Both proceedings are consolidated with the Area Rate Proceedings in Docket No. AR64–2, *et al.*

[2] Although Batex filed this offer in the certificate docket, Docket No. CI63–1501, wherein it obtained authorization to make the sales involved here, the proposed settlement has been construed to be applicable to the instant rate proceedings.

[3] Pursuant to the Commission's order issued February 25, 1964 in Docket No. CI63–1501 permission was granted for abandonment by Batex of the subject sale, and Batex's FPC Gas Rate Schedule No. 1 was cancelled.

[4] Issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.56).

The Commission finds:

The proposed settlement on the basis described herein, as more fully set forth in the Offer of Settlement filed by Batex on August 21, 1963, is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act and should be approved by the Commission and made effective as hereinafter ordered.

The Commission orders:

(A) The proposed Offer of Settlement filed by Batex with the Commission on August 21, 1963, is hereby approved in accordance with the provisions of this order.

(B) Within 30 days from the issuance of this order, Batex shall refund to Tennessee all amounts collected in the above-designated proceedings in excess of the settlement rate prescribed herein, together with simple interest at the rate of 7% per annum computed to the date of refund. Batex shall bear all costs incidental to the making of such refunds.

(C) Within 45 days from the date of issuance of this order, Batex shall report to the Commission in writing the details of its calculations resulting in refunds ordered pursuant to paragraph (B) above, together with a copy of a release from Tennessee.

(D) Upon full compliance by Batex with the terms and provisions of this order, the Section 4(e) proceedings in Docket Nos. G-19656 and RI60-364 shall be deemed terminated, and severed from Docket No. AR61-2, *et al.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CAROLINA PIPELINE COMPANY, COMPLAINANT v. SOUTHERN NATURAL GAS COMPANY, RESPONDENT, DOCKET NO. RP63-4

ORDER DENYING MOTION TO REOPEN

(Issued April 3, 1964)

On March 3, 1964, Carolina Pipeline Company filed a motion to reopen the above-entitled proceeding for the purpose of introducing evidence relating to alleged incidents of discrimination by Southern Natural Gas Company which Carolina says took place in February, 1964. Answers to the motion were filed by Southern Natural Gas Company, South Carolina Natural Gas Company and the Atlanta Gas Light Company.

The initial decision in this proceeding was issued by the Examiner on October 3, 1963, and our Opinion No. 423 affirming that decision was issued on March 30, 1964, 31 FPC 705. Thus, it appears that any matters not disposed of in Opinion No. 423 which Carolina believes are a basis for a further complaint against Southern should be the subject of a new complaint rather than a vehicle for reopening and extending a case in which a final decision has been issued after a full hearing and on a complete record. See *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 236 F. 2d 606 (CA3, 1956).

The Commission orders:

For the above stated reason the motion to reopen this proceeding filed by Carolina Pipeline Company is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CITY OF GREENSBORO, GEORGIA, DOCKET NO. CP64–126; CITY OF UNION POINT, GEORGIA, DOCKET NO. CP64–127

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 3, 1964)

On December 3, 1963, City of Greensboro and City of Union Point, Georgia, (Applicants) filed in Docket Nos. CP64–126 and CP64–127 respectively their application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Transcontinental Gas Pipe Line Corporation (Transco) to establish physical connection of its facilities with those proposed to be constructed by Applicants and to sell and deliver natural gas to them in volumes as hereinafter stated for resale and distribution.

Applicants will construct and operate a jointly owned transmission pipeline approximately 40 miles in length. Each Applicant will construct and operate its own distribution system. Several small communities along the transmission line will also be served.

The daily and annual requirements of the respective Applicants in Mcf at 14.73 psia are estimated as follows:

Year of service	Peak day			Annual		
	Greensboro	Union Point	Total	Greensboro	Union Point	Total
1	749	529	1,278	84,216	75,394	159,610
2	1,036	946	1,982	105,278	91,437	196,715
3	1,324	963	2,287	127,614	108,758	136,372

The estimated cost of the respective municipal projects which includes each Applicant's share of the 40-mile line above-mentioned is as follows: for Greensboro $507,000 and for Union Point $409,500.

Applicants state that financial arrangements are to be made for the sale of 30 year revenue bonds at 5% interest to cover the costs of the projects.

On January 9, 1964, Transco filed an answer stating that it had no objection to providing the proposed service and the point of connection.

Due notice of the filing of the applications and opportunity for hearing thereon have been given by publication in the Federal Register on March 11, 1964 (29 F.R. 3249). No protest or petition to intervene in opposition to the granting of the applications has been filed in this proceeding.

The Commission finds:

(1) Transcontinental Gas Pipe Line Corporation a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 23, 1948, in Docket No. G–1143 (7 FPC 145).

(2) Applicants, City of Greensboro and City of Union Point, are municipalities organized under the laws of the State of Georgia and are legally authorized to engage in the local distribution of natural gas.

(3) It is necessary and desirable in the public interest to direct Transcontinental Gas Pipe Line Corporation to establish physical connection of its gas

transmission facilities with the facilities to be constructed by the Applicants and to sell and deliver to Applicants their daily and annual requirements of natural gas as hereinbefore set forth and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicants' being prepared to receive natural gas from Transco, as proposed, within one year from the date of issuance of this order, and upon Applicants' receiving approval of their projects from the Georgia Public Service Commission.

(5) The requirement that Transco serve Applicants as proposed will not place any undue burden upon Transco nor impair its ability to render adequate service

The Commission orders:

(A) Transcontinental Gas Pipe Line Corporation be and hereby is directed to establish physical connection of its transmission facilities with the proposed facilities to be constructed by Applicants as hereinbefore described and to sell and deliver to Applicants up to 2,287 Mcf daily of natural gas as hereinbefore set forth.

(B) Transco shall report to the Commission in writing the date of commencement of service to Applicants.

(C) This order is hereby conditioned upon the approval of Applicants' projects proposed herein by the Georgia Public Utilities Commission and upon Applicants' being ready to receive natural gas from Transco, as proposed, within one year from the date on which this order is issued.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PACIFIC NORTHWEST POWER COMPANY, PROJECT NO. 2243; WASHINGTON PUBLIC POWER SUPPLY SYSTEM, PROJECT NO. 2273

ORDER GRANTING REHEARING FOR PURPOSE OF GIVING FURTHER CONSIDERATION

(Issued April 3, 1964)

Applications for rehearing of the Commission's order issued February 5, 1964, 31 FPC 247, in the above-entitled proceedings were filed on March 6, 1964, by Washington Public Power Supply System (WPPSS), the Department of Conservation of the State of Washington, and the Secretary of the Interior.

WPPSS and the Secretary of the Interior also filed motions for stay of the Commission's order, and in addition the Secretary of the Interior also included a petition to have the record reopened in his filing. Pacific Northwest Power Company (PNPC) on March 16, 1964, filed motions to strike the March 6 filings of WPPSS and the Secretary of the Interior. PNPC also filed an answer to the motions for stay of the Commission's order on March 17, 1964.

WPPSS filed an answer to PNPC's motion to strike on March 23, 1964. The Secretary of the Interior filed his answer to PNPC's motions to strike on March 25, 1964, and on March 26, 1964, the Secretary filed a motion to strike material from PNPC's motion to strike or in the alternative to reopen the record.

The Commission finds:

In order to afford additional time for consideration of the matters set forth in the said applications, it is appropriate in the administration of the Federal Power Act that rehearing be granted.

The Commission orders:

Rehearing is granted for the purpose of further considering the issues raised by the said applications of WPPSS, the Department of Conservation of the State of Washington, and the Secretary of the Interior.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PHILLIPS PETROLEUM COMPANY, DOCKET NOS. G–11217, G–14115*, G–18417*, G–18418*, G–13734*, G–15314*, G–15315*, G–18206*, G–18207* AND G–18215*

ORDER ACCEPTING FOR FILING PROPOSED DECREASED RATES SUBJECT TO FURTHER COMMISSION ORDER, AND REQUIRING REFUNDS

(Issued April 3, 1964)**

On February 28, 1964, Phillips Petroleum Company (Phillips) tendered for filing a document purporting to show the decreased rates that Phillips is contractually entitled to under the spiral escalation clauses and favored nation clauses[1] contained in the rate schedules involved in the above-entitled suspension proceedings for various locked-in periods and setting forth the refund obligation amounting to $4,093,934.47, exclusive of interest, that would be applicable in light thereof. In connection therewith Phillips on March 16, 1964 filed notices of change reflecting the decreased rates as set forth in the appendix attached hereto. Phillips' spiral escalation rates are related to rate increases filed by El Paso Natural Gas Company (El Paso), the purchaser herein, in Docket Nos. G–4769, G–12948, and G–17929. By order issued December 4, 1963, 30 FPC 1400, settlement rates were approved for El Paso in the above dockets. Phillips' proposed rate reductions thus reflect the present contractual effect on its rates of the El Paso settlement.

Phillips also states that on February 24, 1964, it tendered to El Paso a refund check, computed as indicated above, which El Paso refused to accept. Phillips takes the position that its tender of refund to El Paso terminated the running of interest in these proceedings. In answer to Phillips' contention, El Paso claims that the determination of proper rates and refunds as to jurisdictional sales is within the province of this Commission, particularly when the rights of third parties may be involved because of El Paso's flow through refund obligations with respect to supplier refunds emanating from the El Paso settlement order. El Paso also states that it cannot agree that the proposed refunds are based on "proper contractual rates", as requested by Phillips.

Prior to the above tender, Phillips filed a motion on January 30, 1964, requesting the Commission to terminate as of February 1, 1964, the further running of interest on any refunds which Phillips may be required to make in the above-entitled proceedings. In support thereof, Phillips stated that the amount of rate reduction required for its rate schedules was dependent upon information from El Paso as to the specific application of the El Paso settlement order to El Paso's various rates, which El Paso had at that time not yet forwarded to Phillips. In answer to Phillips' motion, El Paso advised that it was diligently engaged in compiling the necessary information, and that such information would be available in the near future. As a matter of fact, El Paso did furnish the needed information to Phillips, and this formed the basis for Phillips' instant request. In light of subsequent events as set forth above, we consider Phillips' motion of January 30 to be moot, or, in any event, to be without merit.

We have examined the document tendered by Phillips on February 28, 1964, as well as the notices of change relating thereto and find that Phillips has correctly computed its contract rates based on El Paso's settlement rates, at least insofar as such determination can be made at the present time. We therefore consider it appropriate to order Phillips to make refunds with interest to the date of refund of the difference between the lower contractual rates to which Phillips is entitled at the present time and the higher rates which it filed for in the instant proceedings and collected subject to refund. We are vested with sole authority to require refunds with interest under Section 4(e) and in the absence of a Commission order to that effect, the buyer is under no obligation to accept a refund payment from a producer. There is thus no justification here for accepting Phillips' contention that their interest obligation has terminated.

---

*These proceedings are consolidated in Docket No. AR61–1, *et al.*

**Rehearing denied, 31 FPC 1524. Remanded, *Phillips Petroleum Co.* v. *F.P.C.*, 349 F. 2d 535 (CA10–1965).

[1] The favored-nation rates involved here are based on favored-nation rates of other producers which were triggered by the Phillips' spiral escalation rates also involved in this case.

While the rates set forth in Phillips' filing are properly computed in terms of the contract as of the effective date of El Paso's settlement standing alone, these rates are subject to further reduction as a contractual matter for the periods involved here. Under the terms of the El Paso settlement, El Paso is obliged to flow through to its purchasers any and all refunds plus interest that it may receive from its suppliers as a result of pending Section 4(e) proceedings. The net effect is that El Paso's settlement rates, and consequently Phillips' spirally-determined rates, would be further reduced to the extent that El Paso receives refunds from its suppliers applicable to the relevant periods to which El Paso's settlement rates apply.[2] Since Phillips' rates pursuant to the spiral escalation clauses contained in their contracts are based on El Paso's rates, any further reduction in El Paso's settlement rates will cause a corresponding reduction in Phillips' rates. We do not now decide the extent, if any, to which the refunds by Phillips computed now will themselves necessitate an additional reduction of Phillips' rates pursuant to the spiral escalation clauses.

Since further refunds may be required as a contractual matter in each docket, we shall not terminate the Phillips' Section 4 proceedings at the present time. We also note that with the exception of Docket No. G-11217, Phillips' rates are subject to a determination as to their justness and reasonableness under Section 4(e) of the Act, independent of any contractual justification therefor. (We indicated in Opinion No. 338, 24 FPC 537 at 577, 578 that the only matter left open in Docket No. G-11217 was the contractual issue.)

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to accept the notices of change listed in the Appendix hereof as of the dates indicated therein subject to further order of the Commission with respect thereto in the above-entitled proceedings and to require refunds as hereinafter ordered.

The Commission orders:

(A) The notices of change designated in the Appendix hereof are accepted for filing as of the dates shown therein subject to further order of the Commission in the above-entitled proceedings with respect thereto.

(B) Within 90 days from the date of issuance of this order Phillips shall refund to El Paso in the above-entitled proceedings all amounts collected subject to refund in excess of the decreased rates shown in the Appendix hereof, together with simple interest at the applicable rate specified in each docket from the date of receipt of such amounts by Phillips to the date of refund.

(C) Within 120 days from the date of issuance of this order Phillips shall report to the Commission in writing the details of its calculations resulting in refunds ordered pursuant to paragraph (B) above, together with a copy of a release from El Paso with respect to such refunds.

---

[2] Similarly Phillips' favored-nation rates may be subject to further reduction.

UNION PRODUCING COMPANY (OPERATOR), ET AL., DOCKET NO. G–18354

ORDER AFFIRMING RULING OF PRESIDING EXAMINER

(Issued April 3, 1964)

On January 9, 1964, we issued Opinion No. 414, 31 FPC 41 and accompanying order, in Docket No. G–13811, *et al.*, in which, *inter alia*, we remanded the proceedings in Docket No. G–18354 to the examiner for further hearing and decision upon certain matters.[1] In Opinion No. 414 we stated that we were remanding the proceedings ". . . to be certain of using current and accurate figures . . ." in determining the matters specified as the subject of the remanded proceedings (p. 44). Again, we stated that a more current test year than the year 1958, which was used by all parties in the initial proceedings, be used in the remanded proceedings (*ibid*, pp. 47 and 51).

On February 19, 1964, a prehearing conference was held, in accordance with Section 1.18 of the Rules of Practice and Procedure, and as a result thereof, the Presiding Examiner issued, on February 25, 1964, an order in which he directed all parties to the proceeding to use the calendar year 1963 as the test period in presenting cost of service testimony and evidence.[2] In accordance with Section 1.18(d) of the Rules, certain parties to the proceeding filed their appeals to the ruling of the examiner in regard to the test period.[3]

Subsequent to the issuance of the order of the presiding examiner, on March 6, 1964, 31 FPC 503, we issued Opinion No. 414–A for the purpose of clarifying the issue to be determined in the remanded proceeding in Docket No. G–18354. We stated that the issue is the cost which United Gas Pipe Line Company (United), a wholly owned subsidiary of Union's parent, the United Gas Corporation, should properly include in its cost of service for purchases from Union.[4] We again stated that the propriety of payments by United to Union for gas were to be determined on the basis of a current test year.

On March 12, 1964, the presiding examiner referred the appeals from his ruling to the Commission. The basis for each of the appeals from the examiner's ruling in regard to the test year to be used in the remanded proceeding is that such a test period does not coincide with the test period used in United's rate proceeding, Docket No. RP63–1, which is now pending before the Commission on exceptions to the initial decision of the presiding examiner issued June 17, 1963. In the United proceeding, a test period of twelve months, ending March 31, 1962, adjusted to November 30, 1962, was used by all of the parties presenting cost of service testimony and evidence.[5] Appellants herein contend that the test period to be used by the parties in the remanded Union proceeding must be contemporaneous with that used in the United proceeding, or, in the alternative, the calendar year 1962 must be used, so that the sales volume and the costs related thereto in the test periods will be the same, and because they believe a disparity will prolong final determination in each of the proceedings.

---

[1] Docket No. G–18354 concerns a general rate investigation of Union Producing Company, initiated by order issued April 29, 1959, 21 FPC 607.

[2] The ruling of the examiner notes that: "Union states its records have been closed for the calendar year 1963 and are, therefore, available for a cost of service study." The staff of the Commission agreed with Union to use the calendar year 1963 as the test period.

[3] Appeals were filed by Memphis Light, Gas and Water Division; Mississippi Valley Gas Company; Willmut Gas and Oil Company; United Gas Improvement Company and Philadelphia Electric Company.

[4] Docket No. RP63–1, a proceeding under Section 4 of the Act, concerns a proposed increased rate of United made effective, subject to refund, on January 1, 1963.

[5] The staff, however, presented testimony and evidence relating to 1963 adjustments to United's cost of service. See pages 8–11 of the examiner's decision in RP63–1, issued June 17, 1963.

We have considered the appeals filed to the examiner's ruling in regard to the test year to be used by all parties in presenting testimony and evidence regarding Union's cost of service, and the transcript of the prehearing conference held on March 10, 1964, wherein the question of the proper test period was again discussed subsequent to the filing of the appeals herein.

In view of the fact that the primary purpose of the hearing is to determine the appropriate purchase gas costs of United for a more recent test year and thereafter, and because Union has stated its records for 1963 are closed and available, we find that the ruling of the presiding examiner should be sustained. Accordingly, the appeals therefrom are denied, and all parties hereto shall use the calendar year 1963 as the test period in preparing any cost of service study to be initially introduced.

The Commission orders:

The ruling, issued on February 25, 1964, by the presiding examiner herein, in accordance with Sections 1.18(d) and 1.20(j) of the Rules of Practice and Procedure, directing the parties hereto to use the calendar year 1963 as the test period in cost of service testimony and evidence to be presented, is hereby sustained, and each of the appeals filed herein from said ruling is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CHIPPEWA AND FLAMBEAU IMPROVEMENT COMPANY

ORDER APPROVING HEADWATER BENEFITS ARRANGEMENT

(Issued April 6, 1964)

On September 13, 1963, the Chippewa and Flambeau Improvement Company (Company), with principal offices at Eau Claire, Wisconsin, requested approval of a method of compensating it for headwater benefits from its developments on the Chippewa and Flambeau Rivers. Section 13.1 of the Regulations under the Federal Power Act provides for review and approval of headwater benefit arrangements in lieu of a headwater benefit determination under subsection 10(f) of the Federal Power Act (16 U.S.C. 803(f)).

The Company's four storage reservoirs—Rest Lake, Moose Lake, Chippewa Reservoir,[1] and Flambeau Reservoir—regulate the streamflow at fifteen downstream hydroelectric projects. These are owned by five corporations: Lake Superior District Power Company, Northern States Power Company, Kansas City Star Company, Cornell Paperboard Products Company, and Dairyland Power Co-operative. The Company is also owned by these corporations. They make payments to it for headwater benefits according to Laws of Wisconsin

---

[1] The Company leases the Chippewa Reservoir, Project No. 108, from the Northern States Power Company. The license originally was issued to the Wisconsin-Minnesota Light and Power Company on August 5, 1921.

1911, ch. 640, as amended, Laws of Wisconsin 1913, ch. 759, and Laws of Wisconsin 1921, ch. 399, which is the Company's enabling act. Section 4 reads:

> [The Company] shall . . . be entitled to charge . . . reasonable and uniform tolls . . ., but not exceeding in the aggregate of all its revenues sufficient to pay all reasonable costs of operation and maintenance including rent paid for leased properties and a net annual return on cash capital actually paid in on the stock subscriptions to the grantee. Such net annual return shall be reasonable and just and shall be determined by the railroad commission of Wisconsin in the manner that rates are determined for public utilities . . . .

Between June 10, 1920, when the Federal Water Power Act (Part I of the Federal Power Act since 1935) was approved and December 31, 1962, the Company's owners or their predecessors have been assessed as follows:

Corporation	Period	Assessments
Flambeau Paper Co.	7/1/20–12/31/47	$552,440.62
Kansas City Star	1/1/48–12/31/62	416,903.52
Lake Superior District Power (Chicago)	7/1/23– 6/30/26	8,101.72
Lake Superior District Power (Ashland, Wis.)	7/1/26–12/31/62	748,792.54
Great Western Paper Co.	7/1/20– 6/30/28	37,012.56
Great Western & Lake Superior District Power	7/1/28– 6/30/51	122,815.21
Dairyland Power Coop. (leased plants)	7/1/51–12/31/62	130,165.61
Cornell Wood Products Co.	7/1/20–12/31/62	677,702.23
Eau Claire Dells Improvement Co.	7/1/20– 6/30/59	846,423.91
Wisconsin-Minnesota Light & Power	7/1/20–12/31/23	46,083.89
Northern States Power	1/1/24–12/31/62	5,398,766.43
Dairyland Power Coop. (Flambeau Hydro.)	1/1/51–12/31/62	278,914.92
Total		9,264,123.16

For the most recent period—January 1, 1963, through June 30, 1963—the owners have been assessed as follows:

Cornell Paperboard Products	$9,041.17
Dairyland Power Cooperative	17,553.44
Kansas City Star Co.	13,732.55
Lake Superior District Power Co.	8,829.22
Northern States Power Co.	92,753.48
Total	141,909.86

The Commission finds:

The aforesaid assessments from July 1, 1920 through June 30, 1963 are reasonable compensation to the Chippewa and Flambeau Improvement Company for headwater benefits from its developments on the Chippewa and Flambeau Rivers.

The Commission orders:

The aforesaid assessments from July 1, 1920 through June 30, 1963 are approved under section 13.1 of the Regulations under the Federal Power Act in lieu of a headwater benefit determination under subsection 10(f) of the Federal Power Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

THE DETROIT EDISON COMPANY, DOCKET NO. E-6515

ORDER AUTHORIZING TRANSMISSION OF ELECTRIC ENERGY TO CANADA AND SUPERSEDING PREVIOUS AUTHORIZATION

(Issued April 6, 1964)

The Detroit Edison Company (Applicant), a corporation organized and existing under the laws of the State of New York, and qualified to do business as a foreign corporation in the State of Michigan, with its principal place of business in Detroit, Michigan, on February 14, 1964, filed an application for authorization, pursuant to Section 202(e) of the Federal Power Act, for an increase in the amount of electric energy which it is currently authorized to export from the United States to Canada.

By order issued December 17, 1956, 16 FPC 1348, in the above-entitled matter, Applicant was authorized to transmit to the Hydro-Electric Power Commission of Ontario (Hydro), a maximum of 500,000,000 kilowatt-hours of electric energy per year at a maximum rate of transmission of 375,000 kilovolt-amperes by means of a 120,000 volt overhead line crossing the Detroit River between Detroit, Michigan, and Windsor, Ontario, and a 115,000 volt overhead line crossing the St. Clair River between Marysville, Michigan, and Sarnia, Ontario. Applicant presently seeks authorization to increase to 1,000,000,000 kilowatt-hours the maximum amount of electric energy to be exported to Hydro annually at a maximum transmission rate of not to exceed 600,000 kilovolt-amperes over the above transmission facilities, which are the subject of a Permit, pursuant to Executive Order No. 10485, signed by the Chairman of the Federal Power Commission on October 12, 1953, Docket No. E-6516.

The increased amount of energy which Applicant seeks to export will be transmitted in accordance with an interconnection agreement between Applicant and Hydro, pursuant to which the current exportation of energy is being carried on. Under the terms of that agreement, Applicant and Hydro exchange surplus power and energy in excess of their respective load requirements at rates therein set forth with no obligation on the part of either contracting party to buy or sell such surplus power and energy at any time.

Applicant states that the use of the additional energy, proposed to be exported, is primarily to avoid any shortage of supply of electric energy within the area served by Hydro, caused by unusual conditions, such as defects or failure of generating or transmitting equipment, reductions of generating capability caused by low water or because of ice jams in the Niagara Gorge. Applicant further reports that it and Hydro have conducted tests which show that the two transmission lines connecting the respective systems can carry a total of approximately 600,000 kilovolt-amperes under short-time emergency conditions.

Written notice of the application has been given to the Public Service Commission of Michigan, and to the Governor of that State. Notice of the filing of the application has been given by publication in the Federal Register on February 26, 1964 (29 F.R. 2713), stating that any person desiring to be heard or to make any protest with reference to the application, should on or before March 10, 1964, file with the Federal Power Commission, Washington, D.C., 20426, a petition or protest in accordance with the Commission's Rules of Practice and Procedure. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission orders:

(A) Applicant be and it hereby is authorized to transmit electric energy from the United States to Canada, in accordance with the terms and conditions set forth in the application and subject to the provisions of this order.

(B) The maximum amount of electric energy which Applicant is hereby authorized to transmit from the United States to Canada is 1,000,000,000 kilowatt-hours annually, at a maximum transmission rate of not to exceed 600,000 kilovolt-amperes; such energy to be transmitted over the facilities referred to above, which are covered by the aforementioned Permit, pursuant to Executive Order No. 10485 signed by the Chairman of the Federal Power Commission on October 12, 1953, Docket No. E–6515.

(C) The authorization herein granted may be modified from time to time or terminated by further order of the Commission, but in no event shall such authorization extend beyond the date of termination or expiration of the Permit referred to in Paragraph (B) above.

(D) Applicant shall conduct all operations, pursuant to the authorization herein granted, in accordance with the provisions of the Federal Power Act and pertinent rules and regulations or orders issued by the Commission.

(E) Applicant shall install and maintain adequate metering equipment to measure the flow of all electric energy transmitted from the United States to Canada, pursuant to the authority herein granted; shall make, keep and preserve full and complete records with respect to the movement of such energy; and shall furnish in triplicate, reports annually, on or before February 15, showing for each month of the preceding calendar year, the kilowatt-hour flow, as set forth in the aforementioned agreement with Hydro, which shall be in such form as to show the gross kilowatt-hours of electric energy received and delivered, the maximum kilowatts of transmission, and the consideration therefor.

(F) This authorization to transmit electric energy from the United States to Canada shall not be transferable or assignable, but in the event of the involuntary transfer of facilities used for such transmission by operation of law (including such transfers to receivers, trustees or purchasers under foreclosure or judicial sale), shall continue in effect temporarily for a reasonable time thereafter, pending the making of an application for permanent authorization and decision thereon, provided notice is promptly given in writing to the Commission, accompanied by a statement that the physical facts relating to sufficiency of supply, rates, and nature of use remain substantially the same as before the transfer.

(G) This authorization shall be without prejudice to the authority of any State or State regulatory commission for the exercise of any lawful authority vested in the State or State regulatory commission over Applicant.

(H) This authorization is without prejudice to the authority of this Commission, or any other regulatory body, with respect to rates, service accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(I) The authorization herein granted shall supersede in all respects that heretofore granted by the aforementioned Commission order issued December 17, 1956.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

GILCREASE OIL COMPANY, DOCKET NO. G-16862

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDING

(Issued April 6, 1964)

On February 3, 1964, Gilcrease Oil Company (Gilcrease) submitted an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves a proposed increased rate for sales of natural gas made to Tennessee Gas Transmission Company (TGT) by Gilcrease. The offer relates to sales made under Supplement No. 5 to Gilcrease's FPC Gas Rate Schedule No. 1 in Wharton County, Texas (Texas R.R. Com. District #3). The proposed increased rate was suspended by order of the Commission for the statutory period, and was made effective by Gilcrease on June 1, 1959.

Under the terms of the offer, Gilcrease proposes to eliminate the favored-nation and price redetermination provisions from the rate schedule and to establish a 15¢ per Mcf rate for the subject sale. Gilcrease's annual revenues will be decreased about $853 from the presently effective rates. No protests or objections have been filed to the offer.

Gilcrease, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in excess of the settlement rate. The estimated total dollars to be refunded approximates $7,770, exclusive of interest.

The proposed settlement is consistent with the provisions of the *Second Amendment to the Commission's Statement of General Policy No. 61-1*, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Gilcrease's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases to cover future tax increases. Nor, shall our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Gilcrease's rate and rate schedule.

The Commission finds:

The proposed settlement by Gilcrease of the above-designated proceedings on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Gilcrease on February 3, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Gilcrease on February 3, 1964, is hereby approved in accordance with the provisions of this order.

(B) Gilcrease shall file, within 30 days from the date of issuance of this order, notice of change in rate providing for the 15¢ per Mcf rate specified in its offer of settlement, and executed contractual amendment to its FPC Gas Rate Schedule No. 1 eliminating the favored-nation and price redetermination provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Gilcrease shall refund to TGT to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate with simple interest thereon, making account for proper charges, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination, together with a release from TGT.

(D) Upon notification by the Secretary of the Commission that Gilcrease has complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65 psia, specified in its offer of settlement shall be effective as of the date of issuance of this order, the above designated proceedings shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64–2 without further order of the Commission.

(E) The acceptance by the Commission of Gilcrease's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Gilcrease, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64–101; EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64–139

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 6, 1964)

On November 1, 1963, Northern Natural Gas Company (Northern) filed in Docket No. CP64–101, and on December 13, 1963, El Paso Natural Gas Company (El Paso) filed in Docket No. CP64–139, their respective applications, pursuant to Section 7(c) of the Natural Gas Act, for certificates of public convenience and necessity authorizing the transportation and exchange of 100,000 Mcf daily of natural gas, subject to the jurisdiction of the Commission, all as more fully set forth in the applications on file with the Commission.

Northern and El Paso are parties to an agreement entitled "1963 Services Agreement" covering the exchange of up to 525,000 Mcf of natural gas daily, which agreement has been amended by an agreement dated October 4, 1963, providing for the exchange of an additional 100,000 Mcf daily, of which 50,000 Mcf will be on a firm basis, and 50,000 Mcf will be on a best effort basis.[1]

Northern proposes to construct and operate approximately 16.9 miles of 30-inch loop line between El Paso's Dumas Compressor Station and Northern's Sunray Compressor Station, and approximately 20.4 miles of 30-inch loop line north of the Sunray Station, in order to receive the increased firm volumes of up to 575,000 Mcf daily; no additional facilities being proposed for the best efforts gas.

---

[1] Northern pays El Paso 2¢ per Mcf on all volumes except for 50,000 Mcf delivered in Beaver County, Oklahoma, and Ochiltree County, Texas.

The cost of Northern's proposed facilities is estimated to be $3,777,000 which will be defrayed from cash on hand, reserve accruals and retained earnings.

El Paso proposes to construct and operate approximately 33.2 miles of 20-inch pipeline looping on a portion of its existing 24-inch Dumas line, a new 5400 Hp Compressor Station located on the Dumas line, two (2) new packaged field compressor stations consisting of 220 and 125 Hp units, respectively, and additional metering and communication facilities.

The cost of El Paso's proposed facilities is estimated to be $3,994,000 which will be defrayed from current working funds, supplemented as necessary by short-term bank loans.

At the present time Northern delivers gas to El Paso principally at El Paso's Plains Compressor Station located in Yoakum County, Texas, and a small volume of gas is delivered into El Paso's Plains-to-Dumas pipeline, from the Prentice Gasoline Plant also in Yoakum County, Texas. El Paso returns equal volumes of gas to Northern principally at a point of interconnection at the outlet of El Paso's Dumas Compressor Station located in Moore County, Texas. In addition thereto a total of 50,000 Mcf daily may be delivered by El Paso at a point in Beaver County, Oklahoma, and several points in Ochiltree County, Texas. El Paso also delivers for the account of Northern, certain volumes of gas to Pioneer Natural Gas Company from its Plains-to-Dumas pipeline.

Northern proposes to deliver an additional 100,000 Mcf daily on a firm and best efforts basis to El Paso at El Paso's Plains Compressor Station, and in exchange therefor El Paso proposes to deliver equal volumes to Northern at El Paso's Dumas Compressor Station.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on April 2, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(3) The proposed exchange and delivery of natural gas between Northern and El Paso, the construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the applications and exhibits in these proceedings, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed exchange and delivery of natural gas, construction and operation of facilities and transportation of natural gas are required

by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Northern and El Paso are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Northern's and El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to Northern and El Paso in these proceedings, authorizing the exchange and delivery of natural gas, the construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the applications and exhibits filed in these proceedings, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above, and the rights granted thereunder are hereby conditioned upon Northern's and El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be constructed and placed in operation within 6 months from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PUBLIC SERVICE COMPANY OF INDIANA, INC., PROJECT NO. 2359

ORDER ISSUING PRELIMINARY PERMIT AND DENYING PETITION TO INTERVENE

(Issued April 6, 1964)

Application was filed on April 16, 1963 by Public Service Company of Indiana, Inc. (Applicant) of Plainfield, Indiana, for a preliminary permit under Section 4(f) of the Federal Power Act (Act) for proposed Brookville Pumped Storage Project No. 2359 to be located on East Fork Whitewater River in the vicinity of Brookville, in Franklin County, Indiana, which would affect the Corps of Engineers' proposed Brookville Flood Control Reservoir by using the latter as the lower reservoir.

Applicant requests the period of any preliminary permit issued be for a period of 36 months since the Corps' flood control reservoir is still in the planning stage and the results of Applicant's investigations will be influenced by the reservoir levels and capacities established by the Corps.

The Secretary of the Army and the Chief of Engineers, in commenting on the application, recommended that any studies undertaken by Applicant under the preliminary permit should be coordinated with those of the District Engineer, U.S. Army Engineer District, Louisville, Kentucky, in order to permit evaluation of any effects on the authorized and incidental functions of the Corps' reservoir. No objection was made to issuance of a preliminary permit.

The Department of the Interior, in commenting on the application, recommended, for inclusion in any permit issued, conditions in the interest of the Department.

The Department of Health, Education, and Welfare, although invited to comment on the application, has not done so to date.

The Division of Water Resources, Department of Conservation, State of Indiana, expressed its desire to be supplied with any information relating to the effect of the project on recreation.

The Indiana Flood Control and Water Resources Commission filed a petition to intervene in this proceeding stating that while the State of Indiana has no objection to the granting of a preliminary permit for the project, it desires to notify the Federal Power Commission of the nature and extent of the State's interest in the project, being water supply storage and recreation, and to request that the State be afforded a proper opportunity for the coordination and protection of its interests in the course of the investigation and studies of Applicant.

Since a preliminary permit does not authorize construction of a project, we do not believe intervention at this time is necessary to protect any rights the State of Indiana or its agencies may have. Should an application for license be filed for the construction of Project No. 2359, the petitioner would be afforded an opportunity to intervene on that application.

The Whitewater Valley Citizens Committee has protested that a preliminary permit for Project No. 2359 should not be granted until it has been determined that the U.S. Corps of Engineers' afore-mentioned Brookville Reservoir is to become a reality. The latter project is opposed by the protestant. Since the permit will not authorize construction of the project and is unrelated to consummation of the Brookville Reservoir by the Corps, the protest does not state grounds for rejection or postponement of the permit.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Indiana.

(2) Public notice of the application has been given as required by the Act.

(3) The proposed project will utilize surplus water from a Government dam.

(4) The proposed project would consist of: an artificial upper reservoir of about 7,350 acre-feet storage capacity located on high ground east of the proposed Brookville Flood Control Reservoir of the Corps of Engineers; a penstock; a powerhouse, adjacent to the Brookville Reservoir (which will serve as the lower reservoir) having a total of about 240,000 kilowatts in reversible pump-turbine generating units.

(5) Grant of the permit would facilitate the making of the requisite plans for the proposed project described in finding (4) above and securing the other data and performing the other acts required by Section 9 of the Federal Power Act.

(6) The proposed project is of sufficient apparent merit to justify giving the Applicant a permit which would maintain its priority of application for a period of three years from the effective date of the permit.

The Commission orders:

(A) A preliminary permit is hereby issued to Public Service Company of Indiana, Inc., (hereinafter referred to as the Permitee) for a period of 36 months, effective as of January 1, 1964, for the sole purpose of maintaining priority of application for license for Project No. 2359, to be located on the East Fork Whitewater River, in the vicinity of Brookville, in Franklin County, Indiana, and affecting a Government dam, subject to the terms and conditions of the Act, which are incorporated by reference as a part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) This permit is subject to the terms and conditions set forth in Form P-1, entitled "Terms and Conditions of Preliminary Permit" (16 FPC 1303–1305), which terms and conditions (designated as Articles 1 through 8) are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. The Permittee shall submit at the close of each six-month period from the effective date of this permit to the Regional Engineer, Federal Power Commission, Chicago, Illinois, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period and of the work contemplated under this permit for the ensuing period.

Article 10. The Permittee shall, during the period of project planning, coordinate its studies with the District Engineer, Corps of Engineers, U.S. Army Engineer District, Louisville, Kentucky, in order to permit evaluation of any effects on the authorized and incidental functions of the Brookville Reservoir.

Article 11. The Permittee shall, during the period of project planning, cooperate with the United States Fish and Wildlife Service and the Indiana Department of Conservation, Division of Fish and Game, for the purpose of planning and designing adequate conservation measures to mitigate and compensate for the loss of or damage to existing fish and wildlife resources and to develop and improve these resources where practicable.

Article 12. The Permittee shall, during the period of project planning, consult with the National Park Service and the appropriate department or agency of the State of Indiana to determine the extent of any archeological survey and salvage that may be necessary.

Article 13. The Permittee shall, during the period of project planning, cooperate with the Division of Water Resources, Department of Conservation, State of Indiana, and the Indiana Flood Control and Water Resources Commission in order that adequate consideration can be given to the water supply storage and recreation interests of the respective agencies.

Article 14. The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

(C) The afore-mentioned petition to intervene filed by the Indiana Flood Control and Water Resources Commission is hereby denied without prejudice to the right of the petitioner to file such a petition in the event an application for license is filed for Project No. 2359.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgment of the acceptance of this preliminary permit, it shall be signed for the Permittee and returned to the Commission within 60 days from the date of issuance of this order.

OPINION NO. 424

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-26; WARRIOR RIVER NATURAL GAS DISTRICT, DOCKET NO. CP63-70; GULF OIL CORPORATION, DOCKET NO. CI63-123; AND HUMBLE OIL & REFINING COMPANY, DOCKET NO. CI63-129

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 6, 1964)*

Syllabus

1. Record is inadequate to establish with reasonable certainty that Warrior River distribution project can be financed or that markets necessary for economic feasibility are available. P. 792.
2. Southern's need for additional main line capacity is fully supported by the record. P. 793.
3. Commission *rejects* allegations of coal interest that there is ample capacity on Southern's system to meet estimated firm market requirements through 1965-1966 season, or that approval of increase would place Commission in position of allowing expansion in capacity to enable continuation of interruptible sales without interruption. P. 793.
4. Evidence here is inadequate to predicate any definitive ruling on appropriateness of 90 percent rachet in determination of billing demand in Southern's CD and CDL rate schedules. P. 794.
5. There is no reason at this stage to make any findings as to propriety of manner in which Southern presented its market evidence—deficiencies, if any, are not such as would warrant remand. P. 794.
6. Contention that Southeast Georgia extension be denied on ground of excess capacity or that construction therof be made conditional upon substitution of smaller diameter pipe, is *rejected*. P. 795.
7. Since proposed industrial sale to Brunswick accounts for more than 15 percent of branch line's revenues, written agreement therefor should be secured by distributor—lacking this, affected customers should agree to make contributions in accordance with *Northern Natural* formula. P. 796.
8. It is not Commission's function to bar pipeline from extending natural gas service to unserved area solely on ground that expected third year revenues may not quite measure up to return allowed on existing system operations—extension of branch lines is to be encouraged provided no undue burden is placed on existing customers. P. 796.
9. It is in the public interest to grant limited term certificates to producer-applicants, as modified by offer of settlement and herein. Pp. 797, 798.
10. Commission *issues* certificates of public convenience and necessity under Section 7(c) of the Natural Gas Act; *denies* application for order under Section 7(a) of the Act.

William S. Tarver and *Hugh J. Morgan, Jr.* for Southern Natural Gas Company.

M. Campor O'Neal for the Warrior River Natural Gas District, *City of Vidalia* Georgia and South Georgia Natural Gas Company.

John E. Thomason and *Arthur F. Whitt* for the Gulf Oil Corporation.

William H. Holloway, Jesse H. Foster, Jr., Bernard A. Foster, Jr. and *Sherman S. Poland* for the Humble Oil & Refining Company.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

Ross, *Commissioner:*

This consolidated proceeding is before the Commission on exceptions to an initial decision issued by the presiding examiner on October 24, 1963. The proceeding primarily involves an application by Southern Natural Gas Company (Southern) in Docket No. CP63-26 for a certificate of public convenience and necessity under Section 7 of the Natural Gas Act for a major expansion of its pipeline facilities to be effected at a cost of $23,213,853. Included in this total is the sum of $8,076,991 for the construction of a new branch line to extend from a point near its Ocmulgee compressor station on Southern's main South Line in the vicinity of the city of Macon in central Georgia, to Brunswick on the southeast coast, a distance of some 175 miles. This line would bring natural gas to 36 communities in an area not presently served by any pipeline, perhaps the largest area in the southeastern states which remains without natural gas service. The only new resale customer proposed to be supplied directly by Southern is the city of Vidalia, Georgia; as to the others the gas would be sold to Atlanta Gas Light Company (Atlanta) at eleven delivery points to be established on the extension and Atlanta will construct lateral lines and operate natural-gas systems within each of the communities. To this extent the southeast Georgia project is a joint undertaking by Southern and Atlanta. The remainder of Southern's proposal involves the permanent certification of additional main line compressor facilities to bring its third-year daily design delivery capacity up from 1,420,000 Mcf to 1,515,000 Mcf, an increase of 95,000 Mcf per day, the looping and reinforcement of certain existing supply laterals, installation of minor measuring facilities and line taps, and a substantial addition to its South Louisiana gas supply facilities. There was also consolidated an application by the towns of Parrish and Oakman, Alabama, joining together as the Warrior River Natural Gas District, for an order under Section 7(a) directing Southern to initiate a new service. Finally, the proceeding includes applications for limited certificates by Gulf Oil Corporation and Humble Oil & Refining Company to sell a specific volume of 1.25 trillion cubic feet of gas to be produced from offshore West Delta Block 27 Field, Plaquemines Parish, Louisiana, to

Southern over an approximate 22-year period. As originally proposed the sales would have commenced at a total initial price of 21.25 cents per Mcf, thereafter to escalate at the rate of 2 cents each four years during the contract period.

The presiding examiner would grant a certificate to Southern substantially in accordance with the terms requested in the application and without condition. In sum, he found that the operations and extensions of facilities as proposed meet fully the standard set by Section 7, including the demonstration of adequate gas supply and markets, and that the facilities are reasonable and feasible from the standpoints of cost, design, financing and pipeline economics. He denied, *inter alia*, petitions by Carolina Pipeline Company, the Coal Interests,[1] and Southern Propane Company for rejection of the application for authorization to construct the southeast Georgia extension as well as a further request by the latter two interveners that construction of the line, if certificated, be conditioned on obtaining firm contracts from Atlanta's proposed large volume industrial interruptible customers. He also refused to adopt conditions suggested by staff counsel regarding the type of market evidence to be required of Southern in future certificate cases and calling for an evaluation of the 90 percent rachet provision in the definition of billing demand in Southern's tariff. The application by Warrior River in Docket No. CP63-70 was denied in the initial decision for the reason that the project there proposed had not been shown to be capable of financing or economically feasible. On the producer applications the examiner would grant the request by applicants that the certificates provide for their expiration and abandonment of the sale on delivery of the total volume specified in the contracts. No exceptions have been taken to the conclusion that certificates as so limited should be issued. The examiner's allowance of one cent per Mcf over the previously determined in-line prices in South Louisiana of 20 cents per Mcf for production subject to the state severance tax and 18.5 cents per Mcf for gas produced within the Federal domain because of claimed "premium features" included in the contracts was excepted to by the Public Service Commission of the State of New York, Long Island Lighting Company, and our staff.

Exceptions in addition to those indicated have been filed by the other above-named interveners, Carolina Pipeline, Coal Interests, and Southern Propane, and jointly by the producers. Replies to the exceptions, as provided in Section 1.31(a) of the Rules of Practice and Procedure, have been submitted by Southern, Atlanta, and jointly by the producers. As subsequently brought out, the portion of the initial decision relating to the initial price at which certificates should be issued to the producers and the exceptions addressed thereto have been rendered moot through the filing of a settlement offer by Gulf and Humble reducing the initial price proposed to be charged Southern for this production. No opposition to the settlement has developed and the proposal is accepted herein.

On February 4, 1964, after the submittal of exceptions, a petition was filed by Southern Propane to reopen the proceedings for the receipt into evidence of certain letters, copies of which were attached, allegedly having material bearing upon the determination of the economic feasibility of the southeast Georgia extension, specifically the amount of gas which had been estimated would be sold by Atlanta to industrial customers. Answers to the petition were filed by staff counsel, Carolina Pipeline, Southern and Atlanta. In addition Southern filed a reply contending that the "answer" of Carolina Pipeline should be rejected as an impermissible filing under Sections 1.9(a) and 1.33(a)(2) of the Rules of Practice and Procedure. These matters are discussed further at *infra*, p. 795 of this Opinion.

---

[1] Fuels Research Council, Inc., National Coal Association, Inc., and United Mine Workers of America.

A complete description of the proposed projects, the services intended to be provided, estimated costs and other pertinent data are contained in the initial decision and need not be repeated here, except to the extent necessary to determine the exceptions.

No exceptions have been filed to the denial without prejudice of the application by Warrior River in Docket No. CP63-70. We agree with the examiner that the evidence presented in this record is inadequate to establish with reasonable certainty that the distribution project can be financed or that the markets necessary for economic feasibility are available. The deficiencies are clearly highlighted in the initial decision. The disposition of the application made therein will be adopted as the decision of the Commission.

The primary issues brought out in the exceptions, insofar as they relate to the application by Southern, are as follows:

1. Does Southern need the additional main line capacity in order to meet its firm gas requirements?

2. Should the Commission, in the certificate order to be issued in this case, provide for a future proceeding to evaluate the continued propriety of the 90 percent rachet provision in the definition of billing demand in Southern's CD and CDL rate schedules?

3. Should the Commission, as a condition to the order issued herein, require that Southern, in future certificate cases, submit market evidence in a form different from that presented in this case?

4. Has the construction and operation of the southeast Georgia extension, as proposed by Southern, been shown to be economically feasible and otherwise required by the public convenience and necessity?

The Coal Interests alone raise the first issue, staff raises the second and third, and the last is raised by Carolina Pipeline, the Coal Interests, and Southern Propane.

Upon our review of the record we find that we are generally in agreement with the determinations made by the examiner in the matters of adequacy of gas supply, financing, and reasonableness of the proposed facilities in cost and design. We believe, however, that certain modifications of the decision are necessary in regard to markets and to the economic feasibility of the southeast Georgia extension as effected by the lack of firm industrial contracts. The specific details of the evidence and the validity of the findings made on these points are discussed, to the extent necessary, in the ensuing coverage of the issues on which the exceptions have been taken.

The exceptions submitted by Carolina Pipeline include a request for oral argument before the Commission. We conclude that no useful purpose would be served by such argument and that the request should be denied.

Increase in Main Line Capacity

The Coal Interests do not contest the examiner's finding that the record shows an estimated increase of 109,024 Mcf in Southern's firm peak-day market requirements for the 1965-1966 heating season over 1962-1963 firm requirements of 1,406,918 Mcf,[2] which increase would utilize the entire 95,000 Mcf per day proposed addition[3] to the system design delivery capacity. They allege, however, that Southern can meet all the indicated increase in firm requirements without any increase in main line capacity. This contention is based on the fact that on December 12, 13, and 14, 1962, when its most recent peak-days of record occurred, Southern sold 94,000 Mcf, 97,000 Mcf, and 133,000 Mcf, respectively, to direct industrial interruptible customers. These sales, they argue, could have been curtailed if needed to meet firm requirements and can be terminated in the future and the capacity so utilized diverted to supply the expected increase in firm resale requirements.

---

[2] With a present system-wide design daily delivery capacity of 1,420,000 Mcf, Southern currently has only 13,082 Mcf of excess capacity over existing firm requirements.

[3] Including 29,933 Mcf as the estimated firm third-year peak-day contract demand requirement on the southeast Georgia extension.

The examiner rejected the argument that the sales to interruptible customers on the three days noted demonstrated that Southern had ample unobligated daily capacity which could be used to make additional firm sales. As he noted, the evidence shows that 99 percent of Southern's system-wide delivery capacity is contractually obligated to meet its firm requirements and that, by its tariff, it must be prepared to supply the contract demands and maximum delivery obligations for which its customers have contracted without curtailment. The operation of the 90 percent rachet in Southern's CD and CDL schedules, the examiner found, caused Southern's customers to reduce their takes on these days, to the extent they could do so, to 90 percent of their contract demand in order to minimize payments under the billing demand provision.[4] As a result of this restriction in takes by the contract demand customers, and with some withdrawal from line-pack on December 14, Southern had the gas available for industrial sales. However, while Southern had capacity on its system in excess of *actual* firm peak-day sales, and used the excess to provide direct industrial interruptible service, the evidence effectively demonstrates that this excess was nothing Southern was entitled to rely upon, even assuming that the 90 percent rachet provision of its tariff were to continue in force.

In our opinion the examiner's determination with regard to Southern's need for the additional main line capacity is fully supported by the record and should be adopted. In past Southern expansions the Commission has approved programs providing for first-year capacity well in excess of existing contract requirements and, most recently,[5] substantially in excess of its estimated third-year daily delivery obligations. In each instance the firm contract demand has built up within a short time to utilize almost the entire increased design capacity. A comparison of the average estimated increase of 36,341 Mcf in firm peak-day market requirements for 1963–1964, 1964–1965, and 1965–1966 with actual experience of Southern in the preceding 10-year period, where the firm contract daily delivery obligation increased at an average rate of 71,159 Mcf in each season, indicates little basis for concluding that any overbuilding of capacity will result from approval of the proposed addition to main line facilities. Contrary to the allegations of the Coal Interests, we are unable to conclude that there is ample capacity on Southern's system to meet its estimated firm market requirements through the 1965–1966 season (to say nothing of later periods) or that approval of the increase would place the Commission in the position of allowing an expansion in pipeline capacity to enable the continuation of interruptible sales without interruption.

---

[4] The manner of operation of this provision is spelled out in greater detail in the initial decision.

[5] *South Georgia Natural Gas Company, et al.,* Docket No. G–9892, *et al.,* Opinion No. 325, 22 FPC 211 (1959). The Commission there stated:

> Southern's system in its design and operations differs from many other pipeline systems; over the years as Southern's pipeline has grown, the excess capacity on its system has varied from a substantial amount to very little, due perhaps to the disparate character of its system and operations, among other facts. The amount of excess capacity resulting from its present proposals [57,000 Mcf] appears to be reasonably within the range it has experienced in the past. This amount may reasonably be expected to decline as the company's operations continue. [22 FPC at p. 215.]

Evaluation of 90 Percent Rachet

Staff has requested that, in issuing a certificate herein to Southern, we attach a condition that the appropriateness of the 90 percent rachet in the determination of billing demand be made an issue in Southern's next proceeding or in a separate proceeding. Staff contends that only in this way will it be possible to resolve the recurrent claim that there is built in excess capacity on Southern's system, including a determination whether its customers may, as suggested, be overestimating their actual requirements by 10 percent in order to keep from taking more than 90 percent of their contract demand on a limitation day. The examiner denied the requested condition on the ground that the validity of the tariff provision was not properly in issue in this certificate proceeding, and that adequate means are available to all parties for the initiation of such a proceeding.

The Commission's action in prescribing rates for Southern which continued the 90 percent rachet in effect without change was raised by Atlanta in Southern's last rate proceeding. However, because the issue was not presented until the oral argument before the Commission, rather than during the hearings, we concluded it could not be resolved there.[6] The evidence in this proceeding similarly is inadequate to predicate any definitive ruling on this provision. Nevertheless, sufficient question has been raised regarding the provision to warrant further inquiry. At the present time, our staff is conducting discussions with Southern looking toward elimination of the 90 percent rachet. In view of this fact, we consider it inappropriate to institute a new formal proceeding to explore this issue at this time.

Market Evidence

Staff also excepted to the examiner's refusal to require that Southern improve its market evidence in future certificate proceedings. We do not believe that such an admonition is appropriate. If Southern in the future files evidence in a manner inconsistent with our rules it can and should be rejected unless good cause is then shown for the deviation.[7] We see no reason why we should make any finding at this stage of the proceedings as to the propriety of the manner in which Southern presented its market evidence since the deficiencies, if any, are not such as would warrant remanding this proceeding for further hearings at this time.

Southeast Georgia Extension

The region through which the proposed extension will run is the last large area in Georgia without natural gas service. Only 6 of 61 cities in the state with populations in excess of 5,000 do not now have service. The proposed extension will make natural gas available to 5 of these, as well as to 31 smaller communities. As noted only the city of Vidalia will be supplied directly by Southern; distribution to and in the other cities and towns will be by Atlanta, which has obtained the necessary franchises and a certificate from the Georgia Public Service Commission to permit construction and operation of the intrastate facilities.

The two primary issues regarding the extension are (1) the capacity of the proposed line, and (2) whether the submission of firm contracts for any or all of the industrial sales proposed by Atlanta should be required as a condition to

---

[6] *Southern Natural Gas Company*, Docket Nos. G-20509 and RP60-15, Opinion No. 379-A, 29 FPC 779, 780-781 (1963).

[7] We do not mean to suggest that a requirement of our rules for supplying certain types of information can be ignored in the hope or expectation that other evidence presented at the hearing may lessen the need for the omitted material. To the extent that the examiner may have reached a different conclusion, we disagree.

Southern's certificate. In addition to opposing the extension *per se*, Carolina Pipeline, the Coal Interests, and Southern Propane contend that a line of lesser diameter than the approximately 174 miles of 12¾ inch O.D. pipeline which Southern proposes to build would be adequate to supply the needs of the area for the near future and that the proposed line is not economically feasible whereas a smaller capacity line might be. Based on the evidence presented in the hearing the examiner found that adoption of the recommendation for the smaller line would result in a curtailment of industrial sales by Atlanta through approximately 20 to 30 percent of the year. Atlanta's project, as presented, depends heavily for its own economic feasibility on the contemplated interruptible industrial sales, with 7,017,579 Mcf out of a third-year annual requirement of 8,809,319 Mcf being earmarked for such sales. In turn, the economic feasibility of the southeast Georgia extension hangs on the sales by Southern to Atlanta.[8] Thus, if Atlanta is restricted in its ability to supply the full estimated industrial needs of its customers, the feasibility of both projects will be seriously impaired. The examiner, with staff's concurrence, concluded that the line should be authorized as proposed in order to carry the full 55,399 Mcf third-year peak-day load.

Exceptions also were based on the fact that the maximum 82,230 Mcf per day through-put of the branch line may not be used for as much as 10 or 11 years, indicating a possible initial overbuilding of capacity. As the examiner finds, however, the smaller alternative line proposed by Carolina Pipeline would result in a saving in construction costs of only $1,369,932 as against an additional amount of at least $4,468,170 which Southern would be required to expend beginning in about the third year or shortly thereafter to bring the capacity up to the proposed line and serve the probable increased requirements in southeastern Georgia through the forthcoming years.

We have carefully and completely considered the arguments in opposition to certification of the southeast Georgia extension as proposed in the application and conclude that such contentions should be overruled for the reasons as herein stated and as more fully set out by the examiner. The record does not convince us that the extension should be denied on the ground of excess capacity or that the construction thereof should be made conditional upon the substitution of smaller diameter pipe. The exceptions addressed to these elements of the decision will be denied.

Although 80 percent of Atlanta's estimated third-year requirement consists of interruptible sales, it has no firm commitments from such customers. The Coal Interests and Southern Propane note specially that one intended customer, Brunswick Pulp and Paper Company, would account for over one-half of Atlanta's proposed industrial sales and another, The Semet-Solvay Division of Allied Chemical Corporation, for one-sixth of the interruptible requirement. They contend that firm contracts should be required for the industrial sales, at least those to Brunswick and Allied, and have excepted to the examiner's refusal to so order.

It was on this state of the record that the case was before us for decision. As earlier brought out, Southern Propane then sought to reopen the proceeding, pursuant to Section 1.33 (a) and (c) of the Rules of Practice and Procedure, in order to introduce into evidence letters from Brunswick and Allied bearing dates of January 29 and January 22, 1964, respectively. These letters, which are by their terms in apparent reply to certain unidentified communications addressed to each company by the Treasurer of Southern Propane,[9] allegedly prove that neither of these companies intends to purchase gas from Atlanta. Based on the statements contained in these letters, and because of the alleged dependence on the sales to Brunswick and Allied to show the line's economic feasibility, Southern Propane contends that the southeast Georgia extension cannot be found to be economically feasible.

---

[8] Out of total third-year revenues of $3,154,060, Atlanta is estimated to pay $3,074,430.

[9] The original interrogatories sent by Southern Propane were not attached.

Contrary to the averment of Southern Propane, it is our opinion that the letters do not "indicate clearly" that the sales will not be made. The letter from Brunswick is particularly vague and indefinite. But we do not need to consider the answers filed by Southern and Atlanta to these claims or otherwise attempt to resolve the dispute by further hearing since, for the reasons set forth below, we believe that a written agreement should be secured from Brunswick (but not Allied) that it will take gas from Atlanta and that, lacking this, the two customers who are to receive service from the new lateral should agree to make contributions in accordance with the *Northern Natural* formula.

We do not believe that it is the function of this Commission to bar a pipeline under our jurisdiction from extending natural gas service, and the benefits to be derived therefrom, to an area not presently being served solely on the ground that the revenues expected to be produced by the third year of operation may not quite measure up to the return the Commission has allowed on the existing system operations. Rather, the extension of branch lines for the purpose of filling in existing service areas is to be encouraged wherever and whenever possible, provided that no undue burden is placed on the existing customers. Construction of new facilities of the type herein applied for may, for a time, somewhat reduce the overall system-wide rate of return. But if there is reasonable assurance that the new line within a normal buildup period will not continue to operate in a deficit condition, the fact that the authorization by initially reducing overall company return may tend to defer or diminish a possible reduction in rates by the company to its existing customers does not, standing alone, constitute grounds for denial of the certificate.[10]

The examiner recognized from various past Commission decisions, including the recent *Northern Natural* case,[11] that firm industrial contracts normally have been required when needed by the pipeline applicant to obtain financing for its project and, also, where the specific large volume industrial sales contemplated "appear to have a strong bearing on the economic feasibility of the project and where there is reason to question whether in fact the sales will be made."[12] Interveners point out that the approval of the branch lines in the above-cited case was conditioned on the submission of contracts for those industrial sales individually accounting for more than 15 percent of the projected branch line's revenues. In this case the sale to Brunswick would supply 28 percent of Southern's gross revenue from the branch line while that to Allied accounts for less than 10 percent of branch line revenues. We think that our decision in *Northern* should be followed here, and that the examiner's departure therefrom based upon the general testimony as to the likelihood that the industrials would in fact take gas, has only resulted in the supplemental pleadings referred to above.

The examiner found that a substantial portion of the sales depend on Brunswick and Allied and, on this basis, concluded that such sales are necessary to the economic feasibility of Atlanta's project. It is not clear from the subsequent discussion whether he was saying that the sale to Allied, as distinct from the combined sales, is necessary to the economic feasibility of the project. To the extent he was we disagree. As brought out above the sale to Allied will supply less than 10 percent of the projected branch line revenues. In our opinion the test used in Opinion No. 404 in determining those industrial sales having such a strong bearing on the branch line's economic feasibility as to require a contract as a condition to certification is a reasonable and practical accommodation of the problem and is the proper test to be applied in this proceeding. The only sale in this category is the sale to Brunswick. Accordingly, we shall condition the certificate issued to Southern for the construction of the extension upon the submission of a contract with Brunswick Pulp and Paper Company for the purchase by it of the approximate third-year volume claimed in the record.[13] In the event this contract cannot be secured, we shall require in the alternative that the customers of Southern who are to purchase gas from the extension, namely Atlanta and Vidalia, make contributions in aid of construction in accordance with the formula set out in *Northern Natural Gas Company*, Opinion No. 324, 22 FPC 164, 172–173, 179 (D) (iii). Computations utilizing this formula reveal that contributions will be required of Atlanta in the amount of $959,716 and from Vidalia in the amount of $46,023, a total of $1,005,739. These computations are shown in the appendix to this Opinion. Since the figures are based on third-year estimated sales, they are, of course, subject to change as actual service commences.[14] In order to protect Atlanta and Vidalia from an unwarranted contribution in the event actual third-year sales equal or exceed those estimated, the attached order will provide for a refund of contributions should this eventuality occur.

[11] *Northern Natural Gas Company, et al.*, Docket No. CP62-85, *et al.*, Opinion No. 404, 30 FPC 859 at p. 864, issued September 30, 1963.

[12] *Ibid.*

Producer Applications

On January 28, 1964, again subsequent to the filing of exceptions and while the proceeding was under our consideration, an offer of settlement was filed jointly by Gulf and Humble in Docket Nos. CI63–123 and CI63–129. Applicants propose (1) a total initial rate of 20.625 cents per Mcf at 15.625 psia; (2) refund of the difference between 20.625 cents and 19.0 cents per Mcf, plus interest at 7 percent per year, collected for gas subsequently determined to have been produced from an area not within the taxing authority of the State of Louisiana; and (3) a 5-year moratorium on price changes commencing with the date of initial deliveries, except that rate change filings may be made within the period for (a) one-half of any additional taxes levied by Lousiana or the United States; (b) upward or downward adjustment prospectively to the applicable area rate ultimately determined in the South Louisiana area rate proceeding, Docket No. AR61–2, by an order no longer subject to judicial review; and (c) to the extent that the maximum statutory suspension period under Section 4(e) of the Act may be extended beyond five months or the Commission may be authorized to lengthen such suspension period. By letters filed January 31 and February 3, 1964, the New York Public Service Commission and Long Island Lighting Company, the only interveners active in the producers' dockets, stated that they do not oppose certification of the sale on the terms proposed in the settlement agreement.

---

[13] Atlanta has indicated that it is not customary in Georgia to file rate schedules until a gas supply has been obtained and the company is ready to begin service and that, for this reason, it cannot contract to sell gas to proposed interruptible customers at any given price. It contends that a contract with the necessary contingency clauses which this situation entails would have little utility. However, as brought out in the record, the proposed rate levels were presented to the Georgia Commission and were utilized by that agency in issuing a certificate. In our opinion, a signed agreement by Brunswick that it will enter into a contract to purchase the approximate third-year annual volume indicated by Atlanta at the appropriate rate upon Atlanta's readiness to begin service will be adequate for the purpose herein.

[14] In its answer to Southern Propane's petition, Atlanta states that the estimated sales to some industrial customers have already undergone substantial upward revision.

The provision for adjustments in price based on the outcome of the proceeding in Docket No. AR61-2 would limit such adjustments, if any, to preclude their effectiveness prior to the conclusion of judicial review of our final order. We cannot now commit the Commission to conditionally staying the effectiveness of its final order therein. This matter will be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

The settlement proposal, as so modified, conforms to the settlement pattern heretofore approved for many of the dockets severed from the proceeding in *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, and in which certificates have been issued. Acceptance of the settlement proposed herein likewise is in the public interest. Accordingly, we shall grant the request for the issuance of permanent certificates in accordance with the application as modified by the offer of settlement, as further modified in the preceding paragraph. The exceptions addressed to these applications are now moot and need not be considered.

The Commission further finds:

(1) Southern is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) Southern's proposed facilities hereinabove referred to, as more fully described in its application, will be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such facilities, together with the construction and operation thereof, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Gulf and Humble, independent producers of natural gas, are now, or upon initiation of the proposed sales to Southern will be, "natural-gas companies" within the meaning of the Natural Gas Act and are, or will be, engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(4) The sales of natural gas proposed by Gulf and Humble hereinabove referred to, as more fully described in their applications, are subject to the jurisdiction of the Commission and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Subject to the requirements of our order herein and the conditions attached to the certificates herein issued, Southern, Gulf, and Humble are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(6) The construction and operation of the facilities proposed by Southern, and the sales proposed by Gulf and Humble, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity upon the conditions hereinafter set forth, and certificates should be issued to each of them as ordered below.

(7) Issuance of a certificate to Southern, under the conditions hereinafter set forth, will not place an undue burden on it or its existing customers, nor impair its ability to render adequate service to existing customers.

(8) The application for an order under Section 7(a) filed by Warrior River Natural Gas District in Docket No. CP63-70 should be denied.

(9) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(10) Except as herein granted, the exceptions to the examiner's decision should be denied.

The Commission orders:

(A) A permanent certificate is hereby issued to Southern, upon the condition hereinafter set forth, for the construction and operation of the facilities proposed, as more fully described above and in its application.

(B) The certificate issued to Southern, to the extent it relates to the southeast Georgia extension, is conditioned upon the submission of an acceptable contract or precedent agreement with Brunswick Pulp and Paper Company providing for the purchase of an approximate third-year volume of 3,650,000 Mcf. In the alternative Southern shall receive, as contributions in aid of construction, $959,716 from Atlanta and $46,023 from the city of Vidalia.

(C) Three years and 60 days from the date of first rendering service from the southeast Georgia extension, Southern shall file with the Commission a statement showing the actual volumes delivered in the third year and associated revenues compared with the estimates presented in this proceeding. If actual sales equal or exceed those estimated, Southern shall also submit for the Commission's approval a plan for refunding any contributions made in aid of construction to conform to actual experience.

(D) Permanent certificates of public convenience and necessity are hereby issued to Gulf and Humble, upon the conditions hereinafter set forth, for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications.

(E) The certificates issued in paragraph (D) above are granted upon the condition that Gulf and Humble comply fully with the terms of the settlement proposal as herein modified, which settlement, as so modified, is expressly approved.

(F) The certificates issued in paragraph (D) above are hereby conditioned to limit the sales to Southern of natural gas by each applicant to such applicant's proportionate part of 1,250,000,000 Mcf of natural gas at 15.025 psia, based upon each applicant's proportionate part of the total gas reserves in the West Delta Block 27 Field, offshore Plaquemines parish, Louisiana, as provided in each producer applicant's gas sales agreement with Southern; and each producer applicant's respective certificate shall terminate and further sales to Southern by such applicant shall cease when such applicant shall have sold to Southern the volumes herein authorized to be sold.

(G) The grant of certificates herein, and approval of the settlement proposal in Docket Nos. CI63-123 and CI63-129, shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of the Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending by or against the respective applicants, particularly any proceeding under Section 5 of the Natural Gas Act.

(H) Each of the certificates herein issued shall be accepted in writing and under oath by the respective applicants within 30 days of the date of issuance of this order.

(I) The facilities authorized herein shall be constructed and placed in operation within one year from the date of issuance of this order.

(J) The certificates herein issued are not transferable and shall be effective only so long as the respective applicants continue the acts and operations hereby authorized in accordance with the Natural Gas Act and the applicable rules, regulations, and orders of the Commission.

(K) The general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), (d), and (e) of Section 157.20 of the Commission's Regulations shall attach to the certificate issued to Southern and to the exercise of the rights granted thereunder.

(L) The application of Warrior River Natural Gas District in Docket No. CP63-70 is denied, without prejudice.

(M) The motion for opportunity to present oral argument before the Commission is denied.

(N) Except as herein granted, the exceptions to the examiner's decision are denied.

(O) The petition by Southern Propane Company to reopen the proceeding, filed February 4, 1964, is denied.

(P) The examiner's decision, to the extent not inconsistent, is hereby adopted as part of this Opinion and Order.

APPENDIX

CONTRIBUTION REQUIRED FOR DOCKET No. CP63-26

(EXCLUDING SALE TO BRUNSWICK PULP AND PAPER COMPANY)

Cost of Branch Line	$7, 801, 470
Cost of Measuring Stations	275, 521
Total	8, 076, 991
Gross Revenues	2, 290, 105
Less Cost of Gas	−1, 112, 300
Net Revenues	1, 177, 805
Cost of Service	2, 466, 788
Less Cost of Gas	−1, 112, 300
Cost of Service on Branch Line	1, 354, 488
Less Cost of Service on Measuring Stations [1]	−55, 104
Total	1, 299, 384

Ratio that net revenues fall short of cost of service on branch line, less cost of service on measuring stations=$121,579÷$1,299,384=9.36%.

9.36% of Cost of Branch Line	$730, 218
100% of Cost of Measuring Stations	275, 521
Total Contribution Required	1, 005, 739

---

[1] Computed at 20% of cost of measuring stations.

VIII. Order 872

TAYLOR, *Presiding Examiner:* This is a consolidated proceeding under Section 7 of the Natural Gas Act, 52 Stat. 824 (1938), 15 U.S.C. Sec. 717(f). It involves related applications for certificates of public convenience and necessity by Southern Natural Gas Company (Southern), Gulf Oil Corporation (Gulf), and Humble Oil & Refining Company (Humble). Southern seeks permission under Section 7(c) of the Act to enlarge and extend its system substantially. Gulf and Humble seek authority under the same section to sell natural gas to Southern. Also involved is an application by the Warrior River Natural Gas District (Warrior River) for an order under Section 7(a) of the Act directing Southern to establish physical connection with the facilities of, and sell natural gas to, Warrior River.[1]

Southern is a "natural-gas company" as that phrase is used in Section 2 of the Act (52 Stat. 822 (1938) 15 U.S.C. Sec. 717(b)). It owns and operates an interstate pipeline system which extends from a point in Texas near the Louisiana border to Aiken, South Carolina. Included in the system are approximately 5,183 miles of pipe and 25 compressor stations. It now proposes to install about 258 miles of additional pipe, ten compressors in the existing stations, and certain other facilities having an estimated cost, as adjusted herein, of $23,213,853. Part of the project consists of constructing a new pipeline from the vicinity of Macon to Brunswick, Georgia, a distance of about 174 miles (hereinafter referred to as the "southeastern Georgia extension"). It would serve 36 communities in an area of Georgia presently unserved with natural gas and would require the construction of about 181 miles of pipeline and other facilities, including some seven miles of loop, at an estimated cost of $8,076,991. This section of the project evoked substantial controversy. The remaining project consists of (a) compressor and other facilities designed to increase the third-year design daily delivery capacity from 1,420,000 Mcf to 1,515,000 Mcf per day (an increase of 95,000 Mcf per day),[2] (b) looping facilities along six existing branch lines, (c) additions to its southern Louisiana gas supply facilities, and (d) measuring facilities and line taps to serve Section 7(a) applicants. Southern also requests authority (1) to inaugurate a two-year peaking gas service, and (2) to purchase, and operate on a permanent basis, an experimental compressor unit which was installed previously with Commission authority, all as more fully set forth hereinbelow.

The only new resale customer proposed to be supplied by Southern is the City of Vidalia, Georgia. Southern does, however, request authority to sell and deliver gas to Atlanta Gas Light Company at eleven new delivery points to be established on the proposed southeastern Georgia extension. In addition, it has no objection to the Commission's granting Warrior River's application, and certain other Section 7(a) applications not consolidated herein, provided the Commission determines that the proposed distribution projects are economically feasible. Appendix A, attached hereto and incorporated herein by reference, is a map of Southern's system. It indicates the facilities which Southern, and others, propose to construct. (It is a copy of Item A by reference, as revised to show all 36 communities to which service is proposed in southeastern Georgia.)

Southern does not request authority to sell and deliver specific quantities of gas to specified customers. Instead it intends to make available to presently authorized customers and to Vidalia, through the 1965-1966 winter, their full peak-day firm natural gas requirements as are evidenced by the contract demands or maximum delivery obligations fixed by their respective service agreements. This is consistent with the manner in which Southern has operated its system in the past under its FPC Tariff and Commission orders. *Southern Natural Gas Co.*, Docket No. G-1907, 12 FPC 516, 532, affirmed by the Commission, 12 FPC 550; *South Georgia Natural Gas Co.*, Docket No. G-14587, 22 FPC, 211, 215; and *City of Monticello, Georgia*, Docket No. CP63-156, order issued May 14, 1963, 29 FPC 912.

---

[1] Southern's application was filed in Docket No. CP63-26 on July 26, 1962, and supplemented on September 4, 1962, November 13, 1962, and April 19, 1963. Gulf's application was filed in Docket No. CI63-123 on July 26, 1962, and supplemented on January 8, 1963. Humble's was filed in Docket No. CI63-129 on July 27, 1962, and supplemented on January 8, 1963. Humble's was filed in Docket No. CI63-129 on July 27, 1962, and supplemented on January 17, 1963. Warrior River's application was filed in Docket No. CP63-70 on September 20, 1962.

[2] Unless otherwise stated, all volumes are shown at a pressure base of 14.73 psia.

Gulf and Humble (hereinafter sometimes referred to jointly as the Producers) are independent producers of natural gas and are natural-gas companies within the meaning of Section 2 of the Act. They request authority under Section 7(c) of the Act to sell to Southern in interstate commerce for resale, under separate contracts, their respective proportionate parts of a specific volume of 1.25 trillion cubic feet of natural gas at 15.025 psia. The gas is to be produced from leases in which they own interests in the West Delta Block 27 Field, Plaquemines Parish, Louisiana. The Producers request that the certificate issued to each of them shall authorize the termination of such sale when the aforesaid volume has been sold to Southern. The proposed initial price under the Gulf contract is 21.25 cents per Mcf at 15.025 psia, including tax reimbursement of 1.75 cents per Mcf. The proposed initial price under the Humble contract is also 21.25 cents per Mcf at 15.025 psia, but no provision is made for reimbursement of existing taxes.

Warrior River is a municipality as defined in Section 2 of the Act, and is incorporated in the State of Alabama with its principal place of business at Parrish, Alabama. It requests an order under Section 7(a) of the Act requiring Southern to establish physical connection of its transportation facilities with those of Warrior River, and to sell natural gas to it for distribution in the towns of Parrish and Oakman, Alabama and the territory surrounding such municipalities.

The described applications were consolidated for hearing by notice issued by the Secretary dated February 8, 1963. The same notice also consolidated a Section 7(a) application filed by the Chattahoochee Valley Gas District (Valley Gas), in Docket No. CP63-163. Because the latter application was interdependent upon other applications which had not been filed with the Commission, it was severed from this consolidated proceeding by notice issued by the Secretary dated March 4, 1963.

By order dated March 7, 1963, fourteen parties were permitted to intervene in this proceeding to the extent of their asserted rights and interests as set forth in their petitions.[8] All parties except Alabama Gas entered appearances.

The hearing was convened on March 11, 1963, and was concluded on April 29, 1963, after 25 actual hearing days.

Southern was permitted, without objection, to amend its Exhibit P, Part (i), attached to the application (Item G, by reference) by substituting sheets 4 and 5 thereof. The amendment resulted from conferences between Southern and

---

[8] Alabama Gas Corporation (Alabama Gas); Carolina Pipeline Company (Carolina); Fuels Research Council, Inc., National Coal Association, Inc., and United Mine Workers of America (Coal Interests); Long Island Lighting Company (Long Island Lighting); Mississippi Valley Gas Company (Mississippi Valley); Public Service Commission of the State of New York (PSC of New York); South Carolina Natural Gas Company (South Carolina Natural); Atlanta Gas Light Company (Atlanta); South Atlantic Gas Company (South Atlantic Gas); Southern Propane Company (Southern Propane); South Georgia Natural Gas Company (South Georgia Natural); and the City of Vidalia (Vidalia). The last five intervened only in Docket No. CP63-26. Long Island Lighting intervened in all but Docket No. CP63-70.

Staff and was filed on April 9, 1963, as Supplement No. 3 to the application. It changes certain language to show specifically that the purchaser of the peaking service is one who has entered previously into an agreement with Southern for greater contract demands for one or more of the winters 1963–1964, 1964–1965 and 1965–1966, than were entered into for the winter of 1962–1963.

On May 6, 1963, after the conclusion of the hearing, Southern filed an Application for Temporary Authority pursuant to Section 7(c) of the Act for a temporary certificate to construct and operate a portion of the facilities requested herein. The application was granted by letter order dated August 5, 1963. Among other things, it authorized Southern to construct facilities (1) to increase its system delivery capacity by approximately 40,000 Mcf per day to supply the firm requirements of its customers for the 1963–64 heating season, (2) to reinforce its supply system in southern Louisiana, and (3) to reinforce certain lateral lines to permit delivery of increased quantities of gas to present customers.[8](a) Appendix B, attached hereto and incorporated herein by reference, shows the location, cost and other details concerning all the facilities proposed by Southern. The specific facilities authorized by the temporary certificate are designated by an asterisk on sheets one through four of the said Appendix. The certificate included the following condition:

> This temporary certificate is issued on the condition that after the installation of the facilities herein authorized, and during the period of effectiveness of the temporary certificate, the total deliveries of gas sold on an interruptible basis and the volumes delivered to resale customers in excess of contract demands shall not exceed the maximum volumes delivered on any day during the months of November 1962 through February 1963.

Initial, answering, reply, and supplemental reply briefs were filed by various parties. Since Staff's position was not set forth at the hearing, Carolina was permitted to file a supplemental reply brief. Southern, Atlanta, Southern Propane, and the Coal Interests responded to such brief. The Coal Interests, Southern Propane, and Carolina, opposed the granting of all or part of Southern's application. Long Island Lighting and the PSC of New York opposed the granting of the Producers' applications at the proposed initial price. Carolina, a customer of Southern, proposed a substantial modification to Southern's design for the southeastern Georgia extension.

Of the remaining interveners, all but the City of Vidalia are now customers of Southern and support the applications in which they intervened. Evidence concerning the need of the proposed customers in southeastern Georgia for natural gas was presented jointly by Southern and Atlanta, and by Vidalia, on its own behalf. Vidalia's petition requested, among other things, an allocation of natural gas from Southern for sale and distribution by the City. Southern requests the authority to commence such service.

Southern, Gulf, Humble, Warrior River, and Vidalia put in direct cases. All but the latter two put in a rebuttal case. Carolina put in a direct case designed to show, in general, that Southern proposes to overbuild the facilities for the southeastern Georgia area in advance of need and to the detriment of present rate-paying consumers. Staff introduced an exhibit consisting of a compilation of all contracts in the southern Louisiana area from June 7, 1954, through

---

[8](a) On October 11, 1963, Southern filed a Petition for Modification of only the peaking gas service provisions in the temporary certificate.

1962.[4] The evidence pertinent to Atlanta's position was introduced as part of Southern's case and was confined solely to matters relating to the proposed southeastern Georgia extension.

Staff recommended that Southern's application be granted subject to certain conditions subsequently discussed; that the Warrior River application be denied; and that the Producers' applications be granted subject to certain price conditions. In recommending that Southern's application be granted subject to certain conditions, Staff contends that:

> * * * the evidence presented raises serious questions regarding (a) the lack of realism inherent in the estimates of Southern's firm gas requirements, (b) the strong possibility that Southern's system presently has excess capacity which was constructed solely for the purpose of serving so-called interruptible customers and that the granting of Southern's application herein will perpetuate this objectionable practice, and (c) the obvious fact that Southern's proposed southeastern Georgia extension would be economically infeasible were it not for the apparent current profitability of Southern's existing system which will enable Southern to initiate service to the proposed southeastern Georgia communities and still enable Southern to earn—on a rolled-in, system-wide basis—in excess of the 6.24 percent rate of return which the Commission allowed Southern in *Southern Natural Gas Company*, Docket Nos. G–20509 and RP60–15, issued February 18, 1963, Opinion No. 379, 29 FPC 323. [Staff Brief, pp. 6, 7.]

The more specific contentions of the parties will be set forth in the text of this initial decision.

I. *Issues*

In reaching a decision concerning the applications filed by Southern, Gulf and Humble, the Examiner is called upon to determine whether or not they have established that they are able and willing to do the acts and to perform the services proposed in their respective applications and whether or not the proposed services, sales, operations, construction, extensions, and acquisitions are or will be required by the present or future public convenience and necessity.

A. Included in such a determination, insofar as Southern's application is concerned, are such elements as an adequate gas supply, adequate markets, facilities which are reasonable and feasible from the standpoint of cost and design, reasonable and feasible financing, and the economic feasibility of the projects. In this case, the primary subsidiary issues included within the foregoing elements are as follows:

(1) Does there already exist on Southern's system sufficient capacity to supply all of the firm needs of its existing customers in the winter of 1965–1966?

(2) On the proposed southeastern Georgia extension it is estimated that interruptible sales by the distributor (Atlanta) in the third year of operation will account for 7,017,579 Mcf of the total estimated sales of 8,809,319 Mcf, excluding peak shaving. Should firm commitments from any of the proposed interruptible customers be required?

(3) Since the capacity of the proposed southeastern Georgia extension is expected to be almost three times the third-year firm requirements of Atlanta and Vidalia, is the construction of the extension as proposed by Southern required by the public convenience and necessity?

---

[4] Such area is defined as that portion of the State of Louisiana lying south of the 31° parallel and including all areas, both state and federal, in the Gulf of Mexico off the shore of Louisiana.

(4) Are the facilities proposed by Southern for its system as fully expanded, and those for the southeastern Georgia extension separately, economically feasible?

B. The Gulf and Humble applications raise only the issue of whether the proposed initial price is or will be required by the public convenience and necessity. In a certificate proceeding, as here, such a determination may be based upon resolution of the following questions:[6]

(1) Does the application or evidence of record signal the existence of a situation that probably will not be in the public interest?

(a) Is the proposed price out of line?

(b) Will approval of the application result in a triggering of general price rises or an increase in Southern's existing rates by reason of favored-nation clauses or otherwise?

(2) If question No. B(1) is answered in the affirmative, does the present or future public convenience and necessity nevertheless require certification at the proposed initial price?

The issue under Section 7(a) of the Act is whether the project is necessary or desirable in the public interest. In this case the primary subsidiary issue is whether Warrior River has shown that its project probably can be financed and whether it is economically feasible.

II. *Gas Supply*

In General

No party has questioned the adequacy of Southern's long-term gas supply. Its gas reserve estimate and deliverability studies were for the 20-year period January 1, 1962, to January 1, 1982. The reserve-estimate study shows that the reserve-life index is 21 years. The deliverability study shows that Southern has a gas supply which is ample to meet fully each annual delivery requirement, including the proposed increased deliveries, for a period of 18 years from January 1, 1962. This more than meets the general 12-year deliverability life standard set by prior Commission decisions. See, among others, *Trunkline Gas Co.*, Opinion No. 321, 21 FPC 704, 708–709; *Northern Natural Gas Company*, Opinion No. 345, 25 FPC 1234. *Cf. Northern Natural Gas Company, et al.*, Docket No. CP62–85, *et al.*, Opinion No. 404, 30 FPC 859, issued September 30, 1963.

As of January 1, 1962, Southern's gas supply was estimated to consist of 11,413,837 MMcf in-place reserves, of which 9,083,801 MMcf are expected to be recoverable and 8,548,241 MMcf deliverable during the 20-year period January 1, 1962, to January 1, 1982. Such supply consists of gas available to Southern as of January 1, 1962, adjusted to include (1) the 1,275,034 MMcf of gas at 14.73 psia it expects to receive from Gulf and Humble and (2) the 25,000 Mcf per day at 14.9 psia it expects to purchase from United Gas Pipe Line Company at a point near Perryville, Louisiana, commencing about November 1, 1964, pursuant to order of the Commission in Docket No. CP63–241, dated June 12, 1963. This additional purchase will amount to 142,607 MMcf from November 1, 1964, the date of first delivery, to January 1, 1982.

Annual input requirements are expected to increase from 395,774 MMcf in 1962 to an estimated 438,568 MMcf in 1966, and thereafter are expected to remain constant through 1981, for a total annual input requirement of 8,660,814 MMcf.

---

[6] ***Atlantic Rfg. Co. v. Pub. Serv. Comm'n.* 360 U.S. 378 (1959); *United Gas Improvement Company v. Federal Power Comm'n.*, 283 F. 2d 817 (CA 9), certiorari denied, *sub nom. California Company v. United Gas Improvement Co.*, 365 U.S. 881.**

Annual deliverability would equal each annual input requirement from January 1, 1962, through December 31, 1979, a period of 18 years. In 1980 and 1981 there will be deficiencies of 9677 MMcf and 102,896 MMcf, respectively, resulting in a total annual deliverability of 8,548,241 MMcf, or 98.7 percent of the total 20-year requirement.

Southern's deliverability study was based upon the back-pressure method and, therefore, treated connected fields, including the new West Delta Block 27 Field, as depletion type fields in which deliverability will diminish as reservoir pressures decline with the exhaustion of reserves. Most of the fields are located in southern Louisiana. Many of them have exhibited effective pressure maintenance due to water drive. Accordingly, the assumption that Southern's south Louisiana fields were depletion type fields represents a conservative approach and, except as indicated below, increases the reliability of the study. (The reservoir computations concerning the West Delta Block 27 Field were made from data furnished by the Producers. Such data does not permit of a finding that the reservoirs in the said Field are waterdrive reservoirs.)

In addition, Southern's gas supply reserve study was supported by the so-called Davis Curve method. Southern does not rely upon the Davis Curve method, but included it at the request of the Staff. It was received in evidence as a means of comparison with the results of the back-pressure method. Both methods of estimating deliverability produced substantially identical results.

In its deliverability study Southern has shown estimates for the Lake St. John Field but none for the Cranfield Field. On its map (Appendix A), the Lake St. John Field is not shown to be attached to Southern's system. However, the sale of gas to Southern from the Lake St. John Field, as well as from Cranfield Field, was certificated by the Commission in Docket No. G–16680 in contemplation of the connection of the Lake St. John Field to Southern's system. The two fields constitute a single source of supply for Southern. On July 22, 1963, the Commission in Docket No. CP63–246 granted Southern authority to extend its system to the Lake St. John Field.

Gas Supply: The West Delta Block 27 Field

Southern's purchase of the West Delta Block 27 Field gas is the only purchase from independent producers proposed in support of Southern's system expansion. Southern has executed contracts with Gulf and Humble, dated June 22, 1962, and June 21, 1962, respectively, for the purchase of a total of 1,275,034 MMcf of pipeline quality gas (1,250,000 MMcf at 15.025 psia). Each contract was amended by letter agreements dated December 11, 1962. The gas is to be produced from the offshore field and delivered to Southern at a plant which is to be built by the Producers near Venice, in Plaquemines Parish, Louisiana. A detailed description of the West Delta Block 27 Field will be set forth in the Producer section of this decision. The contractual provisions and Southern's take-or-pay obligations will also be discussed therein. The Examiner finds that Southern has an adequate gas supply.

III. *Markets*

A. *Southern's System As Fully Expanded*

The aggregate requirements of Southern's existing and proposed customers are shown in Exhibit 1, and in Exhibit 26 for actual pipeline sales through 1962, and are summarized as follows (all figures are at 14.73 psia and are exclusive of company used and unaccounted for gas):

Actual	Winter peak day [1]	Year (actual)	Annual
1958–59	1,115,835	1959	335,890,000
1959–60	1,225,674	1960	356,471,000
1960–61	1,308,243	1961	364,776,000
1961–62	1,317,607	1962	384,426,099
(The following are estimated as of Nov. 26, 1962)			
1962–63	1,406,918	1963	383,475,000
1963–64	1,450,405	1964	397,300,000
1964–65	1,483,959	1965	412,396,000
1965–66	1,515,942	1966	423,500,000

[1] As used herein, "peak day" delivery obligation and "requirements" are synonymous with "contract demand" or "maximum delivery obligation" as those terms are used in Southern's tariff. Under its tariff (6th Revised, Volume No. 1) Southern must render firm service to, among others, customers who contract for a specific quantity (contract demand) and, at the buyer's option, to any buyer whose purchases have not exceeded 5,000 Mcf on any three consecutive days during the past 24-month period (maximum delivery obligation).

The above table shows that the cumulative increases in peak-day market requirements for 1963–1964, 1964–1965, and 1965–1966 are, respectively, 43,487 Mcf, 77,041 Mcf, and 109,024 Mcf. (Noncumulative increases for each of the said three-year periods are 43,487 Mcf, 33,554 Mcf, and 31,983 Mcf). The customers who are expected to account for such increases, and the amounts in Mcf, are summarized cumulatively as follows:

Type of customer	1963–1964	1964–1965	1965–1966
Resale jurisdictional	18,391	42,853	69,353
Firm direct	None	1,400	1,400
New customers proposed by Southern	19,072	25,634	29,933
Section 7 (a) and (c) applications [1]	6,024	7,154	8,338
	43,487	77,041	109,024

[1] Seven section 7(a) applications and one section 7(c) application make up these totals. Such applicants are:

(a) *Chattahoochee Valley Gas District*, Docket No. CP63–123. It requested a third-year allocation of 4,536 Mcf. It was severed from this proceeding and no new notice of hearing has been issued.

(b) *City of Dora, Ala.*, Docket No. CP63–269. It requested a third-year allocation of 956 Mcf. A "Notice of Application" was issued on Oct. 11, 1963.

(c) *City of Monticello, Ga.*, Docket No. CP63–156. Granted on Apr. 4, 1963.

(d) *City of Noxapater, Miss.*, Docket No. CP63–128. Granted on May 27, 1963.

(e) *City of Steele, Ala.*, Docket No. CP62–173. Granted on Sept. 6, 1962.

(f) *City of Temple, Ga.*, Docket No. CP63–122. Granted on Feb. 11, 1963.

(g) *Warrior River Natural Gas District*, Docket No. CP63–70. It requested a third-year allocation of 744 Mcf. The examiner finds the application should be denied.

(h) *City of Whitesburg, Ga.*, Docket No. CP63–55. This involved a section 7(c) application by Southern to construct the facilities necessary to deliver gas to Atlanta which proposed to construct and operate a distribution system in Whitesburg. Granted on Jan. 8, 1963.

These increases were based primarily upon information contained in market data forms which Southern sent to its customers to be completed and returned by them. The forms were transmitted by a letter setting forth the terms of a proposed precedent agreement. By returning a properly executed copy of the letter to Southern, each customer accepted the terms specified in the letter and agreed "to enter into a Service Agreement specifying in Exhibit A thereto, the contract demands indicated on the attached market data forms for the winters of 1963–1964, 1964–1965, and 1965–1966 . . . ." (Item E by reference, Part (v) — 3 and 4) such letters were sent to 104 resale customers. Seventy-one replies were received. Ten of the 71 replies were unacceptable to Southern because the estimates were not in accordance with the past experience of such customers. (Nine of the 10 were small municipally-owned projects. One was a nonjurisdictional customer.) No replies were received from 33 small municipally-owned projects. The 61 acceptable estimates were checked by Southern and found to be reasonable and attainable. Such estimates represent about 95 percent of the total 1965–1966 contract demands and maximum delivery obligations for the customers to whom requests were sent. Estimates for the 43 small customers which were not received, or which were not considered reasonable, were made by Southern.[8] Such estimates were based upon its past experience and knowledge of the indicated applicable trend of sales in the communities involved. Examination was made of actual sales, particularly for the past three years, and the trend was projected, giving consideration to experienced annual degree day deficiencies and minimum temperatures.

With respect to estimates of direct sales, letters were addressed to the larger direct customers requesting their estimates of requirements. Most of the replies received indicated that they expected their gas requirements would continue at the same rate as in 1961. Quantities for Southern Nitrogen Company reflect an increased requirement due to a plant enlargement. Sales to Alabama Power Company and South Carolina Generating Company were projected at the minimum annual quantities provided for in their present contracts. The remaining smaller users were projected at current rates of use.

Southern introduced into evidence a market data form for each resale-customer and a representative blank copy of the precedent agreement signed by each customer. Southern, however, in filing its application did not comply with Section 157.14(a)(11)(v) of the Commission's Regulations, which provides that each applicant accompany its application with a "Conformed copy of each contract for sale or transportation of natural gas by means of the proposed facilities." As a result of such noncompliance, and another matter stated below, Staff recommends that the granting of Southern's application be subject to certain conditions designed, as in *American Louisiana Pipe Line Co.*, 20 FPC 575, 602 to require Southern to improve its exhibits and testimony in future certificate proceedings so as to make them conform with the Commission's regulations.

The Commission expects market estimates to be based upon firm estimates, and not upon "letters of intent or the so-called pre-emptive rights of [a] tariff to establish marketability." *Michigan Wisconsin Pipe Line Co.*, 24 FPC 177, 179. *Cf. Northern Natural Gas Co.*, 25 FPC 1234, 1244. The market evidence in Item E, which is summarized in Exhibit 1, is not based upon the type of evidence criticized in the *Michigan Wisconsin* case. The fact that a conformed copy of each contract was not filed might be a ground for refusing to accept the filing of the application. The lack of such data does not prevent the applicant from otherwise supporting these estimates. In this case, Southern's market witness reviewed the estimates and adequately explained the details concerning the market data. The Examiner finds that the market estimates in Item E and Exhibit 1 are supported by substantial evidence.

Although Staff agrees that the record supports the estimates in Exhibit 1, the contention is made that the Examiner should not consider, for any purpose, certain increased estimates testified to by Southern's witness without objection by any party. However, the testimony was not supported by any documentary evidence. The Staff's view is that since "Southern did not make the original precedent agreements a part of the record, there are no documents in the record which can be amended to reflect changes in the customers' increased requirements." (Staff Brief, p. 12.)

---

[8] Carolina had been attached to Southern's system about five months before Southern sent out the market data forms. No form was sent to Carolina. It did, however, phone its estimates to Southern.

The testimony concerning the increased quantities desired by Southern was later reflected in Exhibit No. 27. In the years 1963–1964, 1964–1965, and 1965–1966, the increases total 7692 Mcf, 7605 Mcf, and 10,160 Mcf, respectively. Precedent agreements have been entered into for such increases but, as in the case of the other estimates, no conformed copies were offered in evidence. The increased estimates are not, however, reflected in Southern's economic feasibility exhibits. The Examiner finds that the increased estimates have been supported adequately for the limited purpose of showing that there exists a market for such quantities which may be used to obviate the necessity of revising its revenue exhibits to reflect the elimination of the third year requests by the Chattahooche Valley Gas District (4536 Mcf), the Warrior River Natural Gas District (744 Mcf), and the City of Dora, Alabama (956 Mcf). The aforesaid increases of 10,160 Mcf will absorb the loss from these requests and leave a balance of 3924 Mcf. This latter quantity would be available in case any estimates proved to be excessive. If necessary, Southern will be able to serve increased quantities by minor changes in compressing facilities, which changes would increase its capacity about 11,000 Mcf per day. The Examiner finds that the imposition of conditions herein similar to those in *American Louisiana Pipe Line Co., supra*, as recommended by Staff, are not warranted.

1. *Construction Now For Capacity Needed In Three Years*

Prior to the 1963–1964 heating season, Southern proposes to construct all of the facilities which will produce the additional 95,000 Mcf of capacity. The "design daily delivery capacity" of Southern's entire system as of November 1, 1962, was 1,420,000 Mcf. The quoted phrase is used to express the continuing deliverability of the system during periods of winter peak demand. Such capacity is predicated on "the specific contract quantities located at the specific contract locations" and was, therefore, the total pipeline system sales requirement as of that date. (Tr. 659)[7] The proposed immediate increase in design capacity of 95,000 Mcf will raise the total sales requirement to 1,515,000 Mcf for the year 1963–1964. Since total pipeline system firm requirements in 1962–1963 were 1,406,918 Mcf, Southern now has 13,082 Mcf of excess design capacity. This excess, and the proposed 95,000 Mcf increase, will provide excess daily design delivery capacity of 108,082 Mcf beginning with the winter of 1963–1964.

As previously shown, the total increased requirements for the winters of 1963–1964 through 1965–1966, exclusive of the late increases, are 43,487 Mcf, 77,041 Mcf and 109,024 Mcf, respectively. Southern, therefore, will have available during the winters of 1963–1964 and 1964–1965 unused firm daily requirements of 64,595 Mcf and 31,041 Mcf, respectively. It proposes to sell such excess as peaking service gas, and now has firm contracts for 15,900 Mcf and 17,570 Mcf, respectively, as more fully developed hereinbelow.

As a result, Southern will have available, after allocation of the peaking service requirements, an excess in daily design delivery capacity in 1963–1964 and 1964–1965 of 48,695 Mcf and 13,471 Mcf, respectively, and a deficiency in 1965–1966 of 942 Mcf.

---

[7] The design daily delivery capacity of Southern's entire system was increased from 990,000 Mcf per day to 1,365,000 Mcf per day under authority of a certificate issued August 7, 1959 in Docket No. G–14587 (*South Georgia Natural Gas Company*, 22 FPC 211). Giving effect (a) to commencement of sales to Florida Gas Transmission Company at Franklinton, Louisiana, authorized by the Commission in Docket No. CP60–92, to several small distributors, and to Texas Eastern Transmission Corporation, and (b) to the construction of 14.4 miles of 20-inch pipeline as loops along the Gwinville-Pickens Line, authorized by the Commission in Docket No. CP61–206, such capacity became approximately 1,420,000 Mcf per day on November 1, 1962.

In the past, Southern has followed the practice of providing in each expansion program first-year capacity somewhat in excess of contracted requirements. It has found that the loads gradually build up so that the difference between the customers' first-year contract demand and the designed capacity is utilized. This has been done with Commission approval. *Southern Natural Gas Co.*, Docket No. G–1907, 12 FPC 516, 525–528, affirmed by the Commission, 12 FPC 550; *South Georgia Natural Gas Co.*, Docket No. G–14587, 22 FPC 222, 230–234, affirmed by the Commission, 22 FPC 211.

The following tabulation details the foregoing practice and also shows singular results for the three years in question herein:

Winter	Firm contract daily delivery obligations (Mcf)	Design capacity; (Mcf)	Percentage of excess of design capacity over firm daily delivery obligations
1951–52	585, 036	634, 000	8. 4
1952–53	695, 332	718, 000	3. 3
1953–54	819, 866	870, 000	6. 1
1954–55	880, 097	936, 000	6. 4
1955–56	971, 461	990, 000	1. 9
1956–57	985, 418	990, 000	. 5
1957–58	988, 762	990, 000	. 1
1958–59	1, 115, 835	1, 185, 000	6. 2
1959–60	1, 225, 674	1, 365, 000	11. 4
1960–61	1, 308, 243	1, 365, 000	4. 3
1961–62	1, 317, 607	1, 365, 000	3. 6
1962–63	1, 406, 918	1, 420, 000	. 9
1963–64	1, 450, 405	1, 515, 000	4. 5
1964–65	1, 483, 959	1, 515, 000	2. 1
1965–66	1, 515, 942	1, 515, 000	[1]

[1] No excess. As previously noted, approximately 11,000 Mcf of additional capacity could be provided by minor changes in compressing facilities if it is needed.

In *South Georgia Natural Gas Co., supra,* the Commission approved a capacity of 57,000 Mcf in excess of Southern's third-year contract daily obligations. As in that case, approval now of all the facilities necessary to deliver a third-year capacity of 95,000 Mcf is needed because Southern's system will benefit from having excess capacity available to meet emergencies, to provide flexibility of operations and to meet hourly demands. Also, the amount of excess capacity resulting from such immediate construction is "within the range it has experienced in the past," and "may reasonably be expected to decline as the company's operations continue." (22 FPC at 215).

As noted by Staff Counsel, however, neither the *South Georgia Natural Gas Co., supra,* nor *Southern Natural Gas Co., supra,* discusses the problem presented in this case. During three extremely cold days last winter Southern sold to its direct industrial interruptible customers quantities of gas which would be approximately sufficient to meet the expected third-year requirements of its proposed firm customers. As a result of this fact, the Coal Interests contend that Southern now has capacity to meet the expected firm contract demand and maximum delivery obligations of its customers; that Southern's proposed installation is not to meet firm loads but to supply the industrial interruptible market which could readily be supplied by other more abundant fuels; that the use of gas for such inferior purposes would result in replacing it with higher cost gas in the future; and that approval of Southern's application would amount to approval of the installation of facilities for mainline delivery capacity for interruptible service.

In support of their position that Southern now has capacity to meet the third-year estimated requirements of 95,000 Mcf, the Coal Interests show that on December 12, 13, and 14, 1962, when the temperature was well below the design temperature of 20° F, Southern sold approximately 94,000 Mcf, 97,000 Mcf, and 133,000 Mcf, respectively, for use by direct industrial interruptible customers. These sales could have been curtailed if needed to meet firm requirements. The point, therefore, is that such sales can be terminated in the future and the capacity used to serve the expected increase in customer requirements. The situation on the three days in question is shown by the following table (all figures in MMcf at 14.73 psia):

Date	Present authorized capacity	Total pipeline sales	Excess over authorized capacity	Excess over firm requirement of 1,406	Direct interruptible sales included in total	Total firm sales
Dec. 12, 1962	1,420	1,448	28	42	94	1,354
Dec. 13, 1962	1,420	1,394	(26)	(12)	97	1,296
Dec. 14, 1962	1,420	1,507	87	101	133	1,374

The problem posed by the availability of such capacity is completely different from that presented by building excess capacity in the first year to serve third-year contract demands and maximum delivery obligations. The aforesaid sales to direct interruptible customers were made possible primarily by the operation of a 90 percent ratchet provision in Southern's tariff. (On December 14 there was also some withdrawal from line storage.) In short, the Coal Interests' contentions are based upon the purported invalidity of the tariff provision. For the reasons subsequently stated, the Examiner finds that the Commission has recognized that interruptible sales are very important to the financial stability of Southern's system and has considered such fact in designing rates applicable to the system. Accordingly, any action which would have the effect of nullifying the operation of a valid tariff provision should only be taken after a hearing where the rate design of Southern's system was in issue.

2. *Southern's FPC Tariff*

As required by its tariff, Southern must be prepared at all times to deliver without curtailment the contract demands and maximum delivery obligations for which its customers have contracted. (See Section 2 of the CD, G and CDL Rate Schedules, 6th Revised Volume, No. 1, of Southern's FPC Gas Tariff.) All of such customers are located in approximately the same latitude in the southeastern section of the United States. As a result, there is not the variation in temperatures which is experienced by pipelines which run from south to north, traversing regions of disparate climates. In order, therefore, to be certain of meeting its legal obligations, Southern cannot assume or rely upon diversity in the incidence of peak requirements, but must provide pipeline system capacity equal to the sum of its contract obligations to deliver firm gas.

The 90 percent ratchet provision previously referred to is found in the definition of Billing Demand in Southern's rate schedules applicable to its "contract demand" and "contract demand limited" service (CD and CDL). In the CD rate schedules Billing Demand is defined as follows:

The greater of—

(1) 90% of the sum of the CONTRACT DEMANDS at all delivery points hereunder of PURCHASER, or

(2) the largest quantity of gas delivered to PURCHASER hereunder on any day during the 12 months period ending with the close of the current month on

which notice by COMPANY (given pursuant to Section 16.2 of the GENERAL TERMS AND CONDITIONS) to limit the taking of gas to CONTRACT DEMAND at all delivery points of PURCHASER hereunder was in effect for the entire day; however, in computing such largest quantity there shall be excluded quantities in excess of CONTRACT DEMAND delivered at any delivery point.

In view of the above provision concerning Billing Demand (and the provision in the CDL schedules is of similar effect), Southern's CD and CDL customers try to keep their purchases down to 90 percent of Contract Demand when they are given notice by Southern, pursuant to Section 16.2 of the General Terms and Conditions in the Tariff, to limit the taking of gas to Contract Demand for the entire day. This releases capacity which can be utilized for direct sales. All of Southern's customers were on continuous official notice to restrict their takes to contract quantities for the entire days of December 12 and 13. Upon the CD and CDL customers' cutting back to 90 percent of Contract Demand, a substantial amount of system capacity was made available for the sale of gas to direct interruptible customers.

Exhibit No. 27 shows that the total firm jurisdictional requirements of Southern's CD and CDL customers during the 1962–1963 winter totaled 1,274,109 Mcf. The direct interruptible sales on both December 12 and 13, when all customers were limited to contract demand for all of each of those days, were less than 10 percent of that amount. This shows that the capacity made available on such days by voluntary restriction of takes to 90 percent of contract demand, and withdrawal from line storage on December 14, accounted for the availability of capacity to make the indicated direct interruptible sales. December 14, 1962 was a Friday. The weather was moderating. In anticipation of the warmer weather to come and an expected reduction in requirements for industrial sales during the coming weekend, Southern's dispatchers released Southern's customers from the previously imposed restrictions to contract quantities at about 10:00 A.M., on December 14. This permitted the withdrawal from line storage (also called line pack) of 90,253 Mcf to serve direct interruptible customers.

The foregoing shows that for three days in December 1962 Southern had capacity on its system in excess of its actual firm-peak sales, and that Southern used this excess to provide direct industrial interruptible service. As demonstrated, however, Southern's tariff had the effect of permitting most of such sales. Approval of the instant application would, therefore, simply perpetuate the existing sales pattern and tariff provisions.

The Coal Interests, therefore, are in effect making an attack on a part of Southern's tariff which, if successful, would have a far-reaching effect on Southern's existing customers. *Cf. Granite City Steel Company* v. *F.P.C.*, 320 F. 2d 711 (CADC), No. 17150, decided May 23, 1963. Southern's recently approved rate design was accomplished in full recognition of the extensive reliance by Southern on interruptible sales made either directly or through its resale customers. See *Southern Natural Gas Company*, Opinion No. 379, 29 FPC 323, rehearing denied, April 19, 1963. The opinion in that case is replete with references to Southern's need for industrial sales. See pages 343–345, 348–350, 350–352, and 353–354 of the opinion. At page 348 of such opinion the Commission stated that:

> Southern serves an area of the United States which does not experience prolonged periods of cold weather, and consequently has a high percentage of sales for industrial use, either directly or through its resale customers, to balance its firm loads for domestic and commercial use. Approximately 50 percent of Southern's jurisdictional deliveries are for resale to industrial customers, with residential and commercial firm loads operating at about

30 percent annual load factor. Of its total system deliveries, approximately 25 percent is sold directly to industrial customers, the bulk of such sales being on an interruptible basis. Economic operation of Southern's system requires the maintenance of these industrial loads,[28] which have been built up on the basis of the rate patterns heretofore evolved through a series of rate settlements approved by the Commission.

In view of the considerable emphasis placed on industrial sales by the Commission, a denial of the application on the grounds urged by the Coal Interests would, in effect, cancel the tariff provision relied upon by Southern without a hearing directed to the rate problem. The Examiner concludes that Southern should be entitled to rely upon the 90 percent ratchet provision in its tariff unless the provision is canceled after a hearing specifically directed to such provision.

Staff recommends that the application be granted subject to the condition that the propriety of the 90 percent ratchet provision be made an issue in Southern's next certificate proceeding or in a separate proceeding. It states that ". . . only upon a full and complete record can the constant issue of 'excess capacity' on Southern's system be decided upon a record comprised of 'substantial evidence' ". (Staff Brief, p. 24) Since adequate means are available to Staff and all parties by which such a proceeding may be initiated, the order herein will not contain the requested condition.

B. *Two-Year Peaking Gas Service*

As shown hereinabove, Southern will have available during the winters of 1963–1964 and 1964–1965 unused firm daily requirements of 64,595 Mcf and 31,041 Mcf, respectively. (Such sums are exclusive of the increases in customers' requirements of 7,692 Mcf and 7,605 Mcf, respectively, which are not reflected in Southern's economic feasibility exhibits.) Southern requests permission to sell such capacity for peaking service use during such heating seasons. The sales would be in accordance with the Form of Service Agreement for Peaking Service attached to its Supplement No. 3 to its application and its proposed Rate Schedule PS. Staff recommends that Southern be permitted to institute such service.

The peaking service now has been contracted for by nine of Southern's jurisdictional customers, as follows:

Customer	Peaking demand in Mcf at 14.73 psia	
	Nov. 1, 1963–Oct. 31, 1964	Nov. 1, 1964–Oct. 31, 1965
Gas Light Co. of Columbus	4,000	5,000
Trussville	1,000	1,000
South Carolina Natural Gas Co.	5,000	5,000
Southeast Alabama Gas District	2,500	3,000
Warner Robins	600	620
Northwest Alabama Gas District	300	300
Cullman-Jefferson Counties Gas District	600	650
Vicksburg	1,000	1,000
Austell	900	1,000
Total	15,900	17,570

---

[28] The importance of industrial sales to Southern's system operations is heightened by the fact that Southern has no available underground storage facilities. Southern must therefore either market its minimum commitments for purchased gas or pay for gas not taken. During the test year Southern's total volume of purchased gas exceeded its minimum take-or-pay requirements by only 2.3 percent.

A new rate schedule is to be filed subsequently and denominated as Rate Schedule PS. This rate schedule provides a peaking service monthly demand charge of 60 cents per Mcf and a commodity charge of 25 cents per Mcf.

The peaking service rate is based on and is approximately equivalent to the unit cost of service. It will produce revenues of about $155,000 annually. The demand charge was designed to recover the fixed charges on the additional investment which makes the service possible. Such investment totals $4,677,725. The investment per Mcf in facilities to increase system delivery capacity by 95,000 Mcf daily is $49.24. Fixed charges were estimated at 15.5 percent of the investment, or $7.63 per year per Mcf. This is equivalent to 63.5 cents per month. The latter figure was rounded to 60 cents to arrive at the demand charge. Southern considers it essential that all of the fixed costs be recovered by the demand charge since there is no assurance of the delivery of any specified quantity of peaking service gas. The commodity charge was fixed at 25 cents to cover variable costs. This charge was slightly higher than Southern's highest purchased gas cost in south Louisiana (23.2 cents per Mcf), the difference of 1.8 cents being sufficient to cover the other variable costs related to the service. (The "other variable costs" are discussed in the economic feasibility section of this decision.)

The cost of manufacturing gas with peak shaving equipment ranges from $1.00 to $1.19 per Mcf, exclusive of fixed charges related to the investment in peak shaving plant. On an equivalent two-part rate basis to that used by Southern (60 cents demand, 25 cents commodity), Atlanta's peak shaving costs, expressed as demand and commodity components, would be 73 cents and $1.20 per Mcf, respectively. In addition, contract demand customers may purchase peaking gas on so-called limitation days and thereby avoid increased billing demands which otherwise would result if takes of gas could not be limited to 90 percent of contract demand.

The peaking gas service will be available to any CD customer who enters into an agreement with Southern for a contract demand for one or more of the winters of 1963–1964, 1964–1965, and 1965–1966 greater than its contract demand for the winter of 1962–1963.

The Examiner finds that the proposed peaking service constitutes a reasonable two-year use of the excess capacity referred to herein.

C. *Warrior River's Section 7(a) Application:*

The towns of Parrish and Oakman, Alabama, joined together and formed the Warrior River Natural Gas District to bring natural gas to them. Warrior River is a municipality as defined in Section 2 of the Natural Gas Act and is incorporated under the laws of the State of Alabama. Each town granted a franchise to Warrior River and the latter is authorized lawfully to engage in the local distribution of natural gas to the public and in the surrounding area. Oakman had a population in 1950 and 1960 of 1022 and 849, respectively. Parrish had a population in 1950 and 1960 of 757 and 1608, respectively.

Warrior River proposes (1) to construct a supply line connecting with Southern's existing lateral line near Cordova in Walker County, Alabama, and to extend this supply line to Parrish and then to Oakman, (2) to construct distribution systems in each of these towns, (3) to serve line tap customers along the transmission line, (4) to finance the cost of its project by the issuance of

$455,000 principal amount of its revenue bonds, and (5) to purchase from Southern the following annual and peak-day requirements:

	Annual requirements (Mcf)	Maximum daily requirements (Mcf)
First year	50,142	560
Second year	58,076	647
Third year	66,779	744

Southern has agreed to provide such service if the Commission determines that the distribution project is economically feasible. If Warrior River's application were approved, Southern would be required to install a tap, meter, and regulator at a cost of $11,319. It has included such costs as part of the total cost of facilities in its application herein. If all the facilities proposed in such application were approved, Southern would have sufficient capacity to supply the stated firm gas requirements of Warrior River through the 1965–1966 winter.

Staff recommends that Warrior River's application be denied

> . . . because there is no substantial evidence in the record upon which to base a conclusion that the markets necessary for economic feasibility are available. Also the staff cannot accept as satisfactory an engineering report which Warrior River's financing witness indicated is not 'good' enough for a determination regarding the issuance of bonds. [Footnote omitted; Staff Brief, p. 63.]

Warrior River asserts that although the report in question did contain certain sub-total errors, such errors did not affect the total estimate of potential customers and that the project is economically feasible when considered as a whole.

Southern is the most feasible source of supply for Warrior River. No undue burden would be placed upon Southern by approval of the project. There is also a public need for and there would be a public benefit from approval of natural-gas service to the public in Warrior River's gas district. The record, however, does not permit of a finding that the proposed project can be financed or that it is economically feasible. Accordingly, approval of the application is not necessary or desirable in the public interest.[8]

The required distribution facilities are estimated to cost $455,000 and are proposed to be financed through the sale of 30-year revenue bonds bearing interest at 5½ percent. The debt-coverage ratio, based on third-year sales and a 30-year amortization for the bond issue, would be 1.54. The 1.54 debt-coverage ratio was based upon an engineering report which contained certain material errors, as will be subsequently shown.

Warrior River entered into a contract with a fiscal agent to make arrangements to obtain the $455,000 by whatever legitimate means was necessary. There is no contract at this time to purchase the bonds which the District plans to issue. The fiscal agent's willingness to purchase the bonds was contingent, in part, upon receiving a supplemental report from the engineering witness for Warrior River.

The fiscal agent testified that the engineering report submitted in evidence herein was in the nature of a "preliminary report" and that he had not checked any of the figures therein to see if they were correct. He testified that he had glanced through the report but was not going to depend on it in deciding whether or buy or sell the bonds. In making his decision he would depend upon, among other things, his judgment of the growth potential of the area, which he believes to be good, and upon the supplemental report which will be rendered by the engineering witness in this case. If the Commission were to approve the application based upon the present report, construction bids then would be obtained and a house-to-house survey undertaken. They would then "knock on the doors, then we will find out how many customers we can get, and we will sign them up and make them put up a $5 or $10 deposit. That is very expensive and time-consuming." (Tr. 1531–1532)

---

[8] The criteria to be applied under Section 7(a)'s prescription of "necessary and desirable in the public interest" are set forth in *Panhandle Eastern Pipe Line Co., et al.*, 15 FPC 1421, 1425–1426.

As grounds for his opinion that the bonds could probably be sold, the witness also relied upon (1) his knowledge of the economics of the areas, including his opinion that the water customers in Oakman and Parrish were potential customers, (2) Alabama statutes to the effect that no principal had to be paid on the bonds for 10 years and that the amortization period might be extended to 40 years instead of 30,[9] and (3) certain conclusions in the engineering report, which are discussed hereinbelow. He also said that the bonds Warrior River proposed to issue were desirable because of their tax-free 5½ percent interest rate and that they would be purchased by wealthy individuals and insurance companies who would be more interested in getting interest on their money than in getting repayment of the principal.

The parties have not cited any case, and the Examiner knows of none, whereby the Commission has permitted the economic feasibility of a Section 7(a) project to be determined on the basis of a period greater than 30 years. Yet the fiscal agent proposes a period up to 40 years "if there is any question about [the project]." (Tr. 1515)

Since the fiscal agent did not rely upon a 30-year amortization schedule or upon the facts in the existing engineering report for his opinion that the bonds could be sold, his testimony that his firm "would buy" the bonds, or that the project "can be financed," does not support a finding that the bonds probably can be financed (Tr. 1509, 1512). It will now be shown that the report in evidence herein does not constitute substantial evidence of economic feasibility.

Obviously, the accuracy of any economic feasibility study depends upon the estimate of the number of customers which would attach to the natural-gas system. Although the financial witness presented by Warrior River did not check any of the figures in the engineering report, he relied upon the conclusion in the report of a 1.54 debt-coverage ratio in the third year and a 2.8 coverage in the 30th year. He also relied upon a statement to him by the engineering witness that the project could be financed for $500 a customer. The latter statement appears incorrect on its face because the third-year cost per customer is $597.11 ($455,000÷762 customers). As subsequently shown, the 1.54 debt-coverage ratio conclusion is not supported by this record.

Field surveys were made under the engineering witness' direction by two of his men in the summer of 1960. They were rechecked in the fall of 1961. As a result of these surveys, the number of actual buildings in the two towns was plotted on maps of the two communities. These maps were in evidence as Items R and S. The number of actual buildings along the transmission line between Southern's supply line and the town of Parrish, and between the town of Parrish and the town of Oakman, were also counted. The actual count of the number of buildings was reflected in Item Y, Sheet 1, in two columns designated as "residential" and "small commercial." During this survey, which was checked by the engineering witness, the number of potential customers was estimated. This estimate, insofar as the towns of Parrish and Oakman are concerned, was made by an on-the-spot examination and evaluation of the structures. In making the estimate of potential customers, they eliminated "those residences or buildings which we would call substandard (sic) or in our opinion just wouldn't use natural gas." (Tr. 1431–32) Insofar as the area along the transmission line was concerned, there was counted as potential customers only those houses which were considered to be within "economical reach" of the transmission line (Tr. 1470).

---

[9] The Alabama statute which permitted amortization over a 40-year period has been amended to permit amortization in 50 years. (Code of Ala., 1961 Cum. Supp., Title 37, Sec. 255(a)). The same section, however, provides that all revenue bonds ". . . shall be payable in annual installments, the first of which shall be payable no more than three (3) years after the date of such bonds . . . ." This provision casts doubt upon the witness' statement that under the Alabama statute no principal has to be paid on the bonds for 10 years.

The actual count of buildings and the estimated 10th-year-potential customers were shown on Sheets 1 and 10 of Item Y to be as follows:

Location	Residential		Small commercial	
	Actual	Potential	Actual	Potential
Transmission line between source of supply and Parrish	69	117	5	4
Transmission line between Parrish and Oakman	90		6	
Incorporate limits of Oakman	296	308	45	35
Incorporate limits of Parrish	519	500	54	51
	974	925	110	90

Staff brought out on cross-examination that the potential estimate of 308 customers for the town of Oakman was more than the actual number of buildings shown for the town. After the noon recess the engineering witness made additional calculations concerning this discrepancy and then stated as follows:

> Item Y, Page 10—in my opinion the difference between the residential customers shown in Oakman as 308 against Item Y, page one of the total of 296 and the figures shown for transmission service under Item Y, page 10, there is apparently a discrepancy between those.
>
> We have made some calculations during the noon hour, and, using the total of 925 potential residential customers shown on sheet one of Item Y to the total number of residential customers over the whole system, rounding out is 95 per cent. Taking that and applying it to the total residential customers on the transmission main and also to Parrish, it makes a change in both of those items on sheet 10, Item Y.
>
> In my opinion, that is where the error is. It still comes out to the same overall residential customers which, according to the count and calculation, is correct.
>
> Q. What would be the number of residential customers along the high pressure transmission line under your new allocation of customers?
>
> A. Taking the total on Item Y, sheet 1 of 15, adding the 69 and the 90 together, you come up with 195. 95 per cent of that, you come up with 143 residential customers. At Oakman we place it at 282.
>
> Q. Would you leave Parrish at the present 500 estimate?
>
> A. I would leave Parrish at the estimated 500, yes, sir. These figures are 282 and 143, and using 95 per cent we run over the totals; so we have rounded them off at 282 and 143 respectively for Oakman and the transmission main. It still adds up to the total potential of all customers of 1015. [Tr. 1464, 1465, 1466.][30]

It is obvious that the percentage figure used by the witness in making the corrections was not used by the witness in initially determining the number of 10th-year potential customers. As previously shown, the 10th-year potential customers were arrived at by observation and exclusion of those that were sub-standard or too far from the transmission line to be within economic reach. The 95 percent figure is the percentage relationship between total residential buildings (974) and the estimated potential customers (925). The use of this percentage to make an allocation of customers between the town of Oakman on the one hand, and the transmission line on the other hand, has no foundation. What the witness did was to eliminate houses from the city of Oakman without ascertaining whether or not they were sub-standard and, at the same time, adding houses to the transmission line without knowing whether or not they were within economic reach of the line.

---

[30] It should be observed that 95 percent of 159 (the 195 in the transcript is a typographical error) is 151 customers instead of 143 as stated by the witness. This matter was not brought out at the hearing or in briefs.

The Examiner finds, therefore, that there would be at least 26 less customers in the 10th year, and 19.5 in the third year. (The third-year customers were estimated at 75 percent of the 10th-year customers.) A recomputation of the debt-coverage ratio based upon, among other things, the lower number of 3rd-year customers, decreased purchase gas cost, Btu adjustments, and changes in construction cost, might show a debt-coverage ratio in the neighborhood of 1.5. On the basis of this record, however, such a finding cannot be made.

The conclusion herein renders it unnecessary to consider the validity of the witness' method of ascertaining those potential customers who would connect to the line in the third and tenth years.

The Examiner finds that Warrior River has not met its burden of proving by substantial evidence that the proposed project is economically feasible or that it can probably be financed. The following proposed findings by Warrior River are denied:

(1) It is necessary and desirable in the public interest to direct Southern to establish physical connection of its transportation facilities with the facilities which the District proposes to construct and operate and to sell and deliver up to 744 Mcf of natural gas per day for resale in the Towns of Parrish and Oakman and surrounding area, as more fully described in the application in this proceeding.

(2) The District should, within six months of date of this order, submit to this Commission proof of its ability to obtain the funds necessary for this project as proposed herein.

Warrior River's application should be denied. The denial, however, should be without prejudice to its making a future showing, if it is able to do so, of a project that is economically feasible and which can be financed. *Cf. South Georgia Natural Gas Company*, 22 FPC 211, 216.

D. *Southeastern Georgia Extension Separately* (*Distributors, Markets, and Related Matters*)

The proposed distributors in the southeastern Georgia area are Atlanta Gas Light Company (Atlanta) and the City of Vidalia, Georgia (Vidalia). Each intervened in this proceeding. Atlanta is a Georgia corporation and has been in business since 1856. Its operations are wholly intrastate and are limited to the retail distribution of natural gas. Atlanta supports Southern's application and urges that the Commission direct Southern to furnish to it the additional contract demands provided for in the precedent agreement dated May 30, 1962, as amended and supplemented (Item E, Part (v-1) and Exhibit 7).

Vidalia also entered into a precedent agreement with Southern (Item E, Part (v-2)) and desires an allocation of natural gas from Southern. It did not, however, file a Section 7(a) application but filed the material provided for in the proviso to Section 1.8(c) of the Commission's Rules of Practice and Procedure. Its request is to be judged under the requirements of Section 7(a) of the Act. *American Louisiana Pipe Line Company*, 16 FPC 897, 898. For the reasons hereinafter stated, the Examiner finds that the proposed southeastern

Georgia project is required by the public convenience and necessity, and that service to Vidalia is necessary and desirable in the public interest.

The contention by the Coal Interests and Southern Propane that Atlanta should be required to procure firm contracts from its proposed industrial interruptible customers is discussed in detail hereinbelow. For the reasons subsequently expressed, the Examiner finds that firm contracts are not required.

1. *Atlanta Gas Light Company*

In Georgia, Atlanta distributes natural gas to 76 cities located in 36 counties in the State. It also distributes propane-air gas to Waycross in Ware County, and to Brunswick in Glynn County, Georgia. All such distribution is pursuant to a certificate of public convenience and necessity issued by the Georgia Public Service Commission.

Atlanta, which is Southern's largest customer, receives approximately 87 percent of its natural-gas requirements from Southern under Southern's CD-3 rate schedule. Its contract demand on this schedule is 458,000 Mcf per day. The natural-gas supplies for Atlanta's service areas in Heard, Clarke, and Oconee Counties are obtained from Transcontinental Gas Pipe Line Corporation; and those for Lowndes County from South Georgia Natural Gas Company. The requirements of these areas are in no way involved in this proceeding and Atlanta does not seek any additional gas in this proceeding for such areas. Southern furnishes in whole or in part the natural-gas supply for the remainder of Atlanta's service areas.

The southeastern Georgia project is in substance a joint undertaking by Southern and Atlanta to provide natural-gas service for the first time to the Georgia coastal area near Brunswick and the towns and cities between Brunswick and Macon, Georgia.[11] This is the last remaining large area within the State of Georgia without natural-gas service. Only six of the 61 cities and towns in Georgia with a population in excess of 5,000 do not have natural-gas service. The proposed extension would provide service to five of them, including Vidalia, Brunswick, and Waycross, Georgia.

In this proceeding, Atlanta seeks an additional supply of natural gas from Southern in order to provide natural-gas service to Waycross, Brunswick, and 33 other communities. All of the 35 communities will be served from the pipeline which Southern proposes to construct. Gas will be delivered to Atlanta at 11 delivery points along this line.

The 35 communities are as follows:

Ailey
Alamo
Alma
Baxley
Blackshear
Brunswick
Cadwell
Chester
Danville
Darien
Dexter
Dudley
Eastman
Glennville
Glenwood
Hazlehurst
Helena
Hinesville
Jeffersonville
Jesup
Ludowici
Lumber City
Lyons
McRae
Milan
Montrose
Mt. Vernon
Odum
Patterson
Reidsville
Rentz
Screven
Soperton
Swainsboro
Waycross

---

[11] Brunswick is the industrial center for the entire area for both manufacturing and shipping, and can be expected to have the most rapid growth of any area to be supplied by the southeastern Georgia extension. When natural-gas service was extended to Savannah, Georgia in 1963, new industries were drawn to it. See *Southern Natural Gas Co.*, Docket No. G-1907, 12 FPC 550. With the availability of natural gas in Brunswick, new industries can reasonably be expected to be drawn to it.

Atlanta has obtained franchises from each of the 35 cities which permit it to build, own and operate natural-gas systems within the corporate limits of those cities. No conversions of customer's propane-air appliances in Brunswick and Waycross will be necessary in order to utilize natural gas.[12] Atlanta proposes to construct lateral lines to each of the communities from Southern's proposed Macon-Brunswick line, to build distribution systems in the 33 new towns, and to expand its present facilities in Waycross and Brunswick. The estimated cost of the laterals to be constructed by Atlanta is $4,002,633, and the estimated cost of the distribution systems and additions in Waycross and Brunswick is $4,778,201. The total cost for Atlanta's proposed new facilities is $8,780,834. Flow diagrams, detailed construction costs, and distribution maps of the lateral and distribution facilities proposed by Atlanta in the 35 towns were received in evidence. Atlanta's estimated third-year investment in the southeastern Georgia facilities is expected to be $9,815,047. The difference of $1,034,213 between such third-year investment and the estimated expenditures represents Atlanta's present investment in propane-air facilities in Brunswick and Waycross.

Atlanta applied to the Georgia Public Service Commission for amendment of an existing certificate to permit it to construct and operate the intrastate distribution facilities above described.[13] Public hearings were held before that body during October 1961 and September 1962. The same evidence introduced by Atlanta in the instant proceeding was before the Georgia Public Service Commission. The rate levels placed in evidence in this proceeding were also before the said Commission. They were not, however, filed formally because Atlanta was "not . . . in a position to hold [itself] out [to] serve any customer in the area." (Tr. 1933.) Upon such evidence, the Georgia Commission found that:

> Based upon the proposed level of rates presented by the Company and upon the present price of other sources of energy available in the area, it appears that the project will be entirely practical from an economical point of view [Exhibit 8, p. 6.]

On November 2, 1962, the Georgia Public Service Commission issued Atlanta an amended certificate as requested by it.

The Chairman of the Georgia Public Service Commission appeared in this proceeding as a witness and urged this Commission to grant Southern the necessary authority for service to the southeastern Georgia area. He stated, in part, that:

> I am personally familiar with the southeast Georgia area. We regulate other utilities which now serve there. The opinion of the Georgia Public Service Commission, which Commission has authorized me to appear here, is the same as that brought out by the public witnesses in the hearings which we conducted; namely, that natural gas is badly needed in the area; that it will benefit the citizens through lower rates and superior service; that it will aid in industrial growth. [Tr. 492.]

Atlanta presented detailed evidence concerning its firm market requirements in the southeastern Georgia area. In estimating the requirements of the 35 southeastern Georgia communities to be served by Atlanta, engineering crews first reviewed with representatives of the communities the level of rates which would be in effect if Atlanta constructed and operated a distribution system in the community. If the community was interested in natural gas service, engineering crews made a house count of the existing homes in the community and industrial engineers prepared a survey of the industrial plants in the community.

---

[12] Such appliances were converted to use either natural gas or 1350 Btu propane-air gas in 1953 and 1956, respectively. Since such conversions, Atlanta has distributed only 1350 Btu propane-air gas—so-called "interchange gas"—in these communities.

[13] The "existing" certificate was issued on November 17, 1961. Among other things, it permitted Atlanta to build a line from Savannah, Georgia, where Southern's line now terminates, southwest to Waycross, Georgia, serving Brunswick and certain intermediate points. The line was never built.

Having made the house count and industrial survey, Atlanta estimated the number of customers that it expected to attach the first, second, and third years of operation. Such estimates were based on the number of houses and industries actually existing in each town at the time of the house count and industrial survey. No consideration was given to any possible increase in population or growth of the community.

Potential customers were then assigned to the usual classifications, and summaries prepared for each community reflecting (1) the number of customers in each classification for the first three years of service, (2) the firm and interruptible requirements, both on an annual and peak-day basis, of customers in each classification, (3) total requirements of all customers, both on an annual and peak-day basis, and (4) that portion of such requirements which Atlanta expects to obtain from Southern and from liquefied petroleum gas.

Although its witness was cross-examined extensively, no significant question was raised regarding the validity of the firm estimates or the validity of the methods utilized in making such estimates. The Examiner finds that the firm estimates are reasonable and attainable. The estimates of interruptible industrial customers is a more troublesome matter and now will be discussed.

A summary of the classifications referred to above shows that Atlanta's peak-day requirements in 1964, 1965, and 1966 are estimated to be 19,711 Mcf, 25,340 Mcf, and 30,287 Mcf, respectively. The annual requirements for the same periods of time are estimated as 3,940,653 Mcf, 7,215,381 Mcf, and 8,824,434 Mcf. Liquefied petroleum gas will be used as peak shaving gas to supply 1,711 Mcf, 1,340 Mcf, and 2,287 Mcf of such requirements, respectively. The remainder of the needed supply will be procured from Southern pursuant to the terms of a precedent agreement dated May 30, 1962, as amended by letter agreement dated January 8, 1963. The agreement, as amended, provides for Southern to furnish Atlanta, at 11 delivery points on the new line, contract demand quantities of 18,000 Mcf, effective November 1, 1963, or as soon thereafter as the pipeline which Southern shall construct is placed in operation, 24,000 Mcf effective November 1, 1964, and 28,000 Mcf effective November 1, 1965.[14] Atlanta's annual requirements, less volumes to be supplied by peak shaving, are estimated as 3,932,098 Mcf, 7,208,681 Mcf, and 8,809,319 Mcf in 1964, 1965, and 1966, respectively. The third-year annual requirement consists of the following:

	Third-year annual (Mcf)
Interruptible industrial sales	7, 017, 579
Firm sales, including residential, small commercial, public authorities, company use, unaccounted for and firm industrial	1, 806, 855
Less volumes to be supplied by peak shaving	15, 115
Total to be purchased from Southern	8, 809, 319

---

[14] Exhibit "A" to the precedent agreement dated May 30, 1962, had provided for contract demands of 19,000 Mcf, 26,000 Mcf, and 30,000 Mcf, respectively, for the periods indicated above. The contract demands were reduced due to Vidalia's election to operate its own natural gas distribution system and Atlanta's decision to use liquefied petroleum gas to meet the peak-day requirements of nine additional southeastern Georgia communities added to its project.

Of the estimated total interruptible annual sales of 7,017,579 Mcf, all but 182,341 Mcf would be made to the following customers in the volumes shown below:

Industrial customer	*Third-year annual volumes (Mcf)*	*Now uses*
Brunswick Pulp & Paper Co	3,650,000	Oil.
Best Wall Gypsum Co	900,000	Oil.
Allied Chemical, Solvay Division	1,150,000	Oil.
Hercules Powder Co	270,000	Oil and propane.
Swainsboro Printing & Finishing Co	383,190	Oil.
Filtered Rosin Products Co	144,343	Oil and propane.
Georgia State Prison	107,705	Oil and propane.
Atlantic Coast Line Railroad	177,000	Oil.
Fort Stewart	53,000	Oil, propane, and coal.
Total	6,835,238	

Sales to all the industrial interruptible customers are expected to account for $2,526,328 of a total of $5,017,597 in revenue that Atlanta expects to receive in the third year from the proposed southeastern Georgia project.

Atlanta's estimates of industrial markets were based on industrial surveys, conversations between its industrial engineer and proposed customers, and Atlanta's experience in prior expansions in the State. The method employed by Atlanta in its industrial surveys was explained by its President as follows:

> * * * we have had an office in Brunswick for many, many years, going back beyond 1930, and we know these industries and these customers there. Our local people are in daily contact with them. We make an industrial survey, and it is a very complete study. We go into the customer's plant, check the equipment he has, his present fuel, his cost of handling that fuel, any changes that he is likely to make, any improvements in efficiency that we might make both from the sale of fuel and generally with engineering help, and we determine first what a breakeven point or if you like, how much the customer can afford to pay for gas, and then we determine if we can sell him gas at a rate less than that, a rate that would permit him to amortize any equipment over a short period of time and then save him some money. [Tr. 2015].

There is presently in operation in the area an interruptible industrial load of about 100,000,000 therms. Atlanta's experience indicates that it can be reasonably assured of from 30 to 40 percent of this load during the first year; 60 to 70 percent the second; and 70 to 80 percent the third year if the price of gas is competitive with other fuels. In recent conversions (that is, from manufactured to natural gas) at Athens, Augusta, and Valdosta, Georgia, Atlanta has achieved greater percentages.

Atlanta's *average* proposed third-year rate levels are as follows:

Classification of service:	*Average rate/cents/therm*
Residential	15.47
Commercial small	13.52
Industrial small	10.78
Public authorities	10.05
Industrial firm	6.50
Industrial interruptible	3.60

The steps in such proposed rate schedules are as follows:

Residential:		
4 therms or less per month	$1.50	minimum bill.
Next 11 therms used per month	.16	per therm.
Next 185 therms used per month	.13	per therm.
Over 200 therms used per month	.095	per therm.
All over 50 therms used per month for air conditioning	.07	per therm.
Commercial and small industrial:		
4 therms or less per month	1.50	minimum bill.
Next 11 therms used per month	.16	per therm.
Next 285 therms used per month	.13	per therm.
Next 300 therms used per month	.08	per therm.
Over 600 therms used per month	.07	per therm.
(Certain summer loads will be $0.06 per therm.)		
Large industrial:		
First 40,000 therms used per month	.04	per therm.
Over 40,000 therms used per month	.031	per therm.
(Both subject to a fuel adjustment clause.)		

These are the same rate levels presented by Atlanta in the proceedings before the Georgia Public Service Commission. The proposed residential, commercial small, and industrial small rate levels are now lower than those prevailing in Jacksonville, Florida; Charleston, South Carolina; and Savannah, Georgia. The proposed firm and interruptible industrial rate levels on the average would be about the same as those prevailing in Savannah, Georgia, which is about 70 miles from Brunswick.

The proposed firm and interruptible industrial rate levels will have a fuel price adjustment clause geared to the delivered price of sulphur free Bunker C oil (also called No. 6 oil) in the Brunswick area. Under this clause, the large industrial rate will be 10 percent less than the cost to the customer of Bunker C oil as fired. Stated differently, Atlanta's rate is designed to be 90 percent of the price of oil. Smaller industries will realize greater savings. The fuel adjustment clause is keyed to a base price of Bunker C oil of $2.15 per barrel. The current price is $2.35.

Atlanta's so-called "escape clause" becomes operative when it has dropped its price to the customer down to two cents above its cost of gas. Its present cost of gas from Southern for the commodity component is 23.67 cents per Mcf. The point where it would no longer reduce its price under the competitive clause formula would be 25.67 cents per Mcf, or 2.57 cents per therm. The present cost of a barrel of sulphur free Bunker C oil equal to 25.67 cents per Mcf is $1.64. Since the current price of said oil is $2.35 per barrel, the price would, therefore, have to decline from $2.35 to $1.64 per barrel before the price of gas would be so low that Atlanta would be unable to provide prospective industrial customers with savings in their fuel costs.

Exhibits showing competitive fuel data for Brunswick, Waycross, Jesup, and Swainsboro—the four largest cities in the area proposed to be served by Atlanta—were introduced in evidence. The exhibits show, and the Examiner finds, that the 3.1 cent per therm step in the proposed large industrial rate is less than the cost of each of the current competitive fuels in any of the cities involved.

As previously shown, at present the principal industrial fuel used by the proposed interruptible industrial customers is fuel oil. Oil burners may be converted to natural gas by the substitution of a "gas gun" for an "oil gun" (Tr.

2018). In the case of the Brunswick Pulp and Paper Company the gas gun substitution would cost about $25,000 each. Conversion to natural gas would result in a savings of at least 10 percent over the cost of present fuel. The savings to Brunswick Pulp and Paper Company would amount to about $150,000 a year over and above the cost of amortizing the conversion to natural gas.

The Examiner finds that Atlanta has designed its proposed rates so that they will be below the cost of the competing fuels now used by the proposed customers in an amount which will probably result in the customers buying natural gas from Atlanta when it is available. The fact that the price of oil per barrel would have to drop more than one-third of its present price before Atlanta would stop selling gas to the proposed industrial customers, supports the further findings, which is hereby made, that the price will probably remain competitive for the foreseeable future.

1(a) *Atlanta—Firm Industrial Contracts Not Required*

The Coal Interests and Southern Propane contend, among other things, that in the absence of firm commitments from Atlanta's proposed large industrial interruptible consumers this Commission cannot properly find that the proposed southeastern Georgia project is economically feasible. In support of this argument they cited numerous cases[15] and pointed out that there are no firm commitments whatsoever from any of the proposed interruptible customers even though such customers account for 79.5 percent of Atlanta's third-year total natural gas and propane requirements.[16] They show that there have been several proposals to bring gas to the southeastern Georgia area and that none of them was successful. The two most important are found in *Atlantic Gulf Gas Co.*, 10 FPC 79, 1018 (1951), and *South Georgia Natural Gas Co.*, Docket No. G–14587, 22 FPC 211, 230 (1959). The latter involved, in part, a proposal by Georgia Coastal Natural Gas Corporation to build a pipeline in the same southeastern Georgia area as here and for Southern to supply the gas. Critical reference was made to the failure of Atlanta to build a line from Southern's line near Savannah to Brunswick, although as previously shown the Georgia Public Service Commission authorized it to do so on November 17, 1961. Although the record is not free from ambiguity, the Examiner finds that a contributing cause to at least one of such failures was the inability of the Georgia Coastal Natural Gas Corporation to procure firm contracts from proposed interruptible customers. Reference is also made to the fact that one customer, the Brunswick Pulp and Paper Company, would account for over half of Atlanta's proposed interruptible requirements. Much stress is laid upon the fact that no witnesses from any of the proposed interruptible customers appeared to testify as to their willingness to utilize natural gas if it were to become available.

Staff cited and discussed numerous cases and concluded that firm contracts are not necessary in this case.[17]

---

[15] *General Gas Pipe Line Corp.*, 2 FPC 705, 708; *Northern Natural Gas Co.*, Docket No. G–17485, Opinion No. 324, 22 FPC 164; *Transcontinental Gas Pipe Line Corp.*, 20 FPC 264, 311, affirmed *sub nom. Lynchburg Gas Company* v. *Federal Power Commission*, 275 F. 2d 847 (CA 3, 1960); *Michigan Wisconsin Pipe Line Company*, Opinion No. 336, 24 FPC 177, 190; *Transcontinental Gas Pipe Line Corp.*, 27 FPC 859, 863, 872. Reference was also made to *Southern Natural Gas Company*, Docket No. CP61–187, 25 FPC 727, 728.

[16] 1966 total requirements of 8,824,434 Mcf (8,809,319 Mcf natural gas and 15,115 Mcf propane), of which 7,017,579 Mcf is for proposed interruptible customers.

[17] Such cases included the following: *Transcontinental Gas Pipe Line Corporation*, Opinion No. 302, 17 FPC 360; *Transcontinental Gas Pipe Line Corporation*, Opinion No. 315, 20 FPC 264; *Transcontinental Gas Pipe Line Corporation*, Opinion No. 315–A, 21 FPC 138, rehearing denied, 21 FPC 399, affirmed *sub nom. Lynchburg Gas Company* v. *Federal Power Commission*, 275 F. 2d 847.

An analysis of the various cases cited by the parties, and the recent case of *Northern Natural Gas Company, et al.*, Docket No. CP62–85, *et al.*, Opinion No. 404, 30 FPC 859, decided September 30, 1963, shows that firm contracts from industrial customers are usually required where they are needed in order for the company to obtain financing for the project. They are also generally required for sales to large volume industrial customers where the "contemplated sales appear to have a strong bearing on the economic feasibility of the project and there is reason to question whether in fact the sales will be made." (*Northern Natural, supra*, p. 864.), Atlanta's plan of financing has been arranged, is sound, and has not been questioned. The expenditures for the project will be financed in the same manner as its normal construction requirements—by cash generated from operations plus short-term bank loans which will be replaced by permanent financing. The precise type of permanent financing depends upon market conditions prevailing at the time of such financing.

Atlanta's credit is good. Its First Mortgage Bonds are rated A. On March 27, 1963, Atlanta sold 27 million dollars worth of bonds. They carried a coupon rate of 4⅜ percent and were offered to the public at 4.305 percent. The cost to the company was 4.3565 percent. The prospectus for the issue disclosed the existence of the proposed southeastern Georgia project involved herein. Approximately six million dollars of the proceeds of the bond issue will be used for construction. Atlanta's 1963 construction budget is some 11 million dollars. The bond proceeds are not necessarily earmarked for instant project; however, they will be used to repay bank loans that have been used for general construction.

Atlanta has an agreement with a group of Georgia banks presently in effect under which Atlanta can borrow up to $13,875,000 at the prime rate. Currently Atlanta is not indebted to these banks. Atlanta's net income for the calendar year 1962 was $3,978,478. The Examiner finds that firm contracts are not needed in order for Atlanta to obtain financing for the project.

In this case a substantial percentage of sales depends upon two customers, namely, Brunswick Pulp and Paper Company and Allied Chemical. The Examiner finds that on the record herein such sales are necessary to the economic feasibility of the project.[18] Nevertheless, firm contracts should not be required.

The general rule requiring a firm contract where one or two customers account for a substantial portion of the interruptible sales is not one to be applied in a vacuum. Each case must be decided on its own facts. The evidence is clear that the rates proposed by Atlanta, and which were before the Georgia Public Service Commission, are lower than the price of the competitive fuels now used by the proposed industrial customers. Also, it is clear that the said Commission will see that the rates remain competitive. The important question, then, is whether or not the record supports a finding that the proposed customers will be willing to buy gas at the proposed rates. The Examiner finds that they will.

---

[18] Atlanta contends that its project would be feasible if it made none of its proposed industrial sales. The Chairman of the Georgia Public Service Commission was of the opposite view (Tr. 498). Furthermore, a loss of all industrial sales would, under Southern's minimum bill provision, result in Atlanta's paying for 1,886,779 Mcf of gas which it could not take, thereby decreasing its rate of return. (28,000 Mcf/CD × 90% × 365 days × 40%, minus firm sales of 1,792,421 Mcf). The decreased rate of return, however, was not computed in the record. The record does not permit of a finding that Atlanta's project would be economically feasible if it failed to get all of its industrial load. Southern introduced figures showing that the loss by Atlanta of 50 percent of its industrial sales would reduce the 6.1 percent rate of return (subsequently computed for the southeastern Georgia extension separately on the basis of a 22.32 cents per Mcf gas cost) to 5.7 percent; and if 25 percent of such sales were lost the rate of return would be 5.9 percent. Even if such rates of return were satisfactory herein for Southern, the record does not permit of a finding that the project would be economically feasible for Atlanta if it were to lose such industrial sales.

The President of Atlanta testified without contradiction that the proposed industrial companies stated that they would buy gas from Atlanta if they could save money by doing so. Such testimony was sufficient to shift the burden of going forward to the Coal Interests and Southern Propane. Their cross examination revealed no facts which created any doubt in the Examiner's mind concerning the testimony. In this case, therefore, a written contract, or the appearance of the company officials, would amount to cumulative evidence because such evidence would establish only that the companies would take gas from Atlanta if it were priced competitively.

The Examiner has found previously that the gas will be priced competitively and can be expected to remain so for the foreseeable future. The proposed industrial customers have said they would use gas under such circumstances. No further evidence is needed. The Examiner finds (1) that there are reasonable grounds for anticipating that the industrial loads will be attached, and (2) that no firm contracts are required.

1(b) *Atlanta—Economic Feasibility*

Atlanta's projected sales and revenues for the first, second, and third years are as follows:

	1st year	2d year	3d year
Therm sales	39,406,530	72,153,810	[1] 88,241,680
Revenues	$2,444,801	$4,018,930	$5,017,597

[1] The third-year therm sales are based upon 8,809,319 Mcf of gas per year to be purchased from Southern, and 15,115 Mcf of gas per year to be supplied by liquefied petroleum gas.

Based upon the rates ordered by the Federal Power Commission in its Opinion No. 379, Southern's recent rate case, the estimated third-year return to Atlanta from the proposed facilities is 5.92 percent. Upon the basis of Southern's rates prior to such order, the comparable third-year rate of return was estimated to be 5.57 percent. Under the rates presently in effect pursuant to the order of the Commission dated March 7, 1963, the comparable third-year rate of return would be 5.77 percent.

As previously shown, the rate levels presented by Atlanta in this proceeding, as set forth hereinabove, were before the Georgia Public Service Commission. The rate schedule was not filed formally because Atlanta was not then in a position to hold itself out to serve any customer in the area. The Georgia Public Service Commission found the project economically feasible. In the certificate issued to Atlanta, it stated as follows:

> It appears that the Company will not have to rely solely upon its revenues from this system. However, it further appears that the Company will have to apply developmental rates for a reasonable period of time, and that it will expect to make some present reduction in rates in Brunswick and Waycross, and will increase the load in those two cities through conversion from manufactured to natural gas. Based upon the proposed level of rates presented by the Company and upon the present price of other sources of energy available in the area, it appears that the project will be entirely practical from the economic point of view. In the event the price of gas to the Company is increased at any time, the said rates could be adjusted to reflect reasonable increases in the cost of gas and still remain competitive.

> This, however, is not to be construed as approval of any specific rates, and before commencing service, the Company shall file schedules of its rates and charges as well as any industrial contracts. The Commission finds that the project as presented is economically feasible. [Exhibit 8, p. 6.]

Although Atlanta's rate of return in 1962 was about 6.26 percent, as computed from the figures in Exhibit No. 10, the Examiner finds that its project probably will be economically feasible. The Georgia Commission will consider Atlanta's system-wide operations as a whole, thereby providing that other consumers in Georgia shall pay the difference between any disproportionate rate of return which Atlanta may earn in southeastern Georgia as compared with the rate of return which the Georgia Commission may find is appropriate for the company as a whole. As a result, there is no question in this case of the ability of Atlanta to meet the interest payments on its bonded debt. *Cf. Transcontinental Gas Pipe Line Corporation*, 17 FPC 360.

One further matter: The Coal Interests contend that

> * * * if Southern's delivery capacity had been limited to its intended use, *i.e.*, firm sales, and if interruptible sales held to a minimum, the need today to buy higher cost gas to replace depleted reserves would not be as great. To authorize further expansion of pipeline facilities which would be used to promote interruptible usage manifestly would not be compatible with the public interest. [Brief, p. 11.]

The defect in this contention is that the Commission has recognized that interruptible sales are important to Southern's economic welfare and has designed rate provisions to foster such sales.

2. *City of Vidalia, Georgia*

Vidalia is a municipality as defined in Section 2 of the Natural Gas Act and is legally authorized to engage in the local distribution of natural gas to the public. It was incorporated as a town in 1894 and as a city in 1902. A new charter was issued in 1922. The population in 1950 and 1960 was 5,819 and 7,569, respectively. It is situated in a predominantly agricultural area and has good natural resources, labor supply, and climate. It is an active community and its population should continue to grow and develop in the foreseeable future.

In this proceeding Southern requests authority to sell and deliver gas to Vidalia from its proposed Macon-Brunswick line at or near Alma, Georgia. Vidalia, in turn, proposes (1) to construct, own and operate a municipal gas system consisting of a transmission line from Southern's proposed point of delivery and a distribution system within its corporate limits, and (2) to purchase gas from Southern in the following annual and maximum daily amounts:

Year of operation	Requirements in Mcf at 14.73 psia	
	Annual	Peak day
First	85,987	1,094
Second	110,873	1,395
Third	128,190	[1] 1,619

---

[1] Computations in various exhibits herein were based upon a third-year peak-day quantity of 1,933 Mcf, notwithstanding the aforesaid 1,619 figure. The former figure was furnished to Southern when it prepared its original exhibits. The decrease of 314 Mcf will not affect Southern's economic feasibility exhibits because the late customer requirements will supply quantities in excess of the decreases. Even if the decreases were not absorbed in any manner by new customers, the effect on Southern's operation in the third year would be *de minimis*.

The required distribution facilities are estimated to cost $730,000 and will be financed through the sale of 5½ percent revenue bonds payable solely from the net revenues of the system. They will mature in annual installments in each of the years 1966 to 1987. During the first three years of operation $27,800, $26,700 and $21,300, respectively, are reserved for the cost of service lines and conversions. In the fourth year, the debt service coverage will be 1.54. The debt coverage ratio in 1987 will be 1.57.

The Vice President and Manager of the municipal department of the investment firm of First Alabama Securities, Inc. testified that he had reviewed the pertinent exhibits herein and that based upon an analysis of such exhibits and current market conditions it was his opinion that the bonds proposed to be issued by Vidalia were marketable and that his firm would be willing to purchase them at par. He did not consider the third-year investment per customer of approximately $495 as being "out of line" for a construction project (Tr. 1293). His opinion concerning marketability and his willingness to purchase the bonds were not in any way based upon Vidalia's application to the Housing and Home Finance Agency for the purchase of the bonds by that Agency at a 3¾ percent interest rate. At the time Vidalia's case was presented at the hearing (March 20 and 21, 1963), such Agency had not taken final action on the Vidalia application. At page two of its reply brief Vidalia states that the Agency has agreed to purchase the bonds as aforesaid. Obviously, such statement cannot be considered, and has not been considered, in deciding this case.

An engineer experienced in making market surveys, and in designing and constructing municipally-owned and operated natural-gas systems, testified in support of Vidalia's application. In 1962 he conducted Vidalia's market survey. He also designed its distribution system. No party challenged his testimony, or any other aspect of Vidalia's case, in their briefs to the Examiner.

The market survey was divided into the following three parts; (1) the location of structures on the map, (2) a door-to-door canvass of residences to determine the types of fuels being used, fuel costs and the attitude of residents to proposed natural-gas service, and (3) a direct contact with and interview of representatives of all prospective commercial and industrial customers. Occupants of 74.9 percent of all residences were contacted and the representatives of 100 percent of the large commercial and industrial establishments were interviewed.

The fuel survey revealed that liquefied petroleum (LP) gas and fuel oil are the fuels most frequently used by residents for heating their homes and that LP gas and electricity are mainly used for cooking and water heating. For all practical purposes, no coal and very little wood is used as fuel. At the rates proposed to be charged by Vidalia for gas sold by its system, natural gas will be cheaper for the average residential and small and medium commercial customer than other fuels presently available.

Customers were classified according to uses of gas and the number in each classification was based upon the type of fuel now used by them and the experience of other systems now in operation. The requirements of each class of customers for each usage (cooking, water heating and space heating) were then determined. In estimating residential space heating requirements, weather conditions were studied, the degree day deficiency for each month of the heating season established, and the volumes of gas required to heat the home during each such month determined.

Requirements for each use of gas, determined as aforesaid, were then applied to the number of customers in each classification and the annual and peak-day requirements were tabulated. These requirements are reasonable and attainable.

Vidalia proposes to take gas service from Southern's New Brunswick lateral in the southeastern part of Wheeler County, Georgia, at its intersection with Bell's Ferry Landing Road and to construct approximately 21½ miles of 4½-inch O.D. lateral transmission line from that point northwest to Vidalia. The transmission line will be constructed along the right-of-way of state and county highways with the result that right-of-way costs will be kept to a minimum. The line as designed is adequate to deliver gas to the distribution system at not less than 25 pounds per square inch pressure. A flow diagram showing the conditions during initial operations and also the maximum capacities of the system was prepared. The transmission line is of adequate size and capacity to transport gas in volumes sufficient to meet the requirements of the distribution system over a 30-year period.

Vidalia also proposes to construct an intermediate pressure distribution system which will operate at a pressure between 15 to 30 pounds per square inch. The distribution system is designed to provide a minimum pressure of 5 to 10 pounds per square inch at the extremities of the system at the 30th year design load. The system so designed is adequate to provide natural-gas service to the city.

The estimated direct construction costs are $590,000. The difference between that sum and the total cost of $730,000 is for the payment of interest for a two-year period on the revenue bonds, fiscal and legal costs, operating capital, equipment and supplies, and customer conversions. The cost estimates are based on bids currently being received for comparable construction. The system can be constructed and placed in operation within the cost estimates set forth.

Included in the cost estimates are provisions for meters, valves, service lines, and assemblies for connecting 796 customers. Also included is an additional allowance of $19,950 to convert the customers' LP gas appliances for use for natural gas and modification of house piping if necessary.

Upon completion of the construction of the system by the construction contractor, the city will itself take over the work of adding new customers. It will cost the city about $100 per customer to add the service lines and other necessary equipment. The cost of the connections after the initial construction period will be provided for from the revenues of the system. As previously shown, certain revenues were allocated for this purpose during the first three years of operation. This results in an unsatisfactory debt-coverage ratio until the fourth year of operation. In this case such ratio is adequate and reasonable.

The Examiner finds that Southern is the most feasible source of supply for Vidalia; that there is a public need for and will be a public benefit from natural-gas service to Vidalia; that the project can be adequately financed and is economically feasible; that no undue burden will be placed upon Southern by approval of Vidalia's project; and that the project is necessary and desirable in the public interest.

IV. *Facilities and Their Costs*

The reasonableness of the cost of the proposed facilities, as set forth in Appendix B hereof, is not an issue in this proceeding. Furthermore, all parties agree that the facilities listed in Appendix B are adequate. Three parties, however, contend that the facilities are either not needed or are more than adequate.

The Coal Interests contend there is no need for any new facilities to meet the estimated increase in capacity of 95,000 Mcf per day because Southern now has an excess capacity of approximately such amount. The Examiner has found to the contrary. Other than for the southeastern Georgia extension, no party has raised any further objection to the construction of the proposed facilities. Carolina, the Coal Interests, and Southern Propane contend in effect that the pipeline for the southeastern Georgia extension should be of a smaller size. This contention is discussed in detail hereinbelow. For the reasons subsequently stated, the Examiner finds that the facilities and the cost thereof for the entire project, and the facilities and costs related to the southeastern Georgia extension separately, are adequate and reasonable and are or will be required by the public convenience and necessity.

A. *Facilities: Present System*

As shown on the map attached hereto as Appendix A, Southern's main transmission system consists of two lines, known as the North Line and the South Line, which are generally parallel to each other and approximately 80 miles apart. The North Line extends about 460 miles from the Monroe gas field in northeastern Louisiana to Atlanta, Georgia; the South Line extends about 504 miles from the Gwinville gas field in south-central Mississippi to Aiken, South Carolina. The North Line and the South Line are interconnected by three cross-connecting lines, known as the Gwinville-Pickens Line, the McConnell-Selma Line, and the Macon-Atlanta Line. Gas moves into the system through three supply systems; the Logansport-Perryville System, the Cranfield Field Line, and the South Louisiana Supply System. The South Louisiana Supply System extends approximately 68 miles south from the Gwinville gas field in south Mississippi to Southern's Franklinton compressor station near Franklinton, Louisiana. From Franklinton the supply system branches into two legs, the west leg extending in a southwesterly direction to the Duck Lake Receiving Station, and the east leg extending in a southeasterly direction to Southern's Olga Compressor Station in Plaquemines Parish, Louisiana. There are various laterals connecting these two lines to gas fields.

B. *Facilities and Costs: Southern's System as Fully Expanded*

In Appendix B hereof the facilities to be constructed are grouped in four categories as follows: (1) facilities proposed for the southeastern Georgia extension, (2) compressor horsepower required to increase main line capacity by 95,000 Mcf per day, (3) facilities required to increase the capacity of the south Louisiana supply system, and (4) facilities proposed for reinforcement of six lateral lines. In addition, a separate listing shows the measuring facilities and line taps which would be necessary if Southern were required to serve the Section 7(a) applicants listed in Appendix B. Of such applicants, only Warrior River's application is consolidated herein and, as previously shown, should be denied. Except for the Chattahoochee Valley Gas District and the City of Dora, Alabama, the remaining Section 7(a) applications have been granted. The towns of Eclectic, Alabama, and Buena Vista and Cave Springs, Georgia, which were originally listed in Southern's application, were eliminated by Southern from further consideration because they failed to proceed with their projects.

All of the increase in main line and supply system delivery capacity is to be achieved by the installation of additional compressing facilities in existing compressor stations as shown in Appendix B. The Rankin compressor station is on a connection between Southern's North and South Lines. The changes at this station are for the purpose of providing more economical operation of the station.

The additional horsepower to be added at the Enterprise station includes the 2,500 horsepower packaged gas turbine centrifugal compressor unit which was authorized on July 9, 1962, on an experimental basis in Docket No. CP62-191.

Testing was to be carried on jointly by Southern and the manufacturer's representative for a one-year period; and if performance were satisfactory, Southern would seek authorization from the Commission to acquire the unit. By order of the Commission dated January 4, 1963, Southern was given to and including March 9, 1963, within which to complete construction and place the unit in actual operation. It was placed in operation on February 4, 1963.

In its present application Southern requests authority to purchase the unit and operate it on a permanent basis. On the basis of about one month's operation of the unit, Southern is convinced that the unit "is going to do what it is said it will do." (Tr. 773) On the basis of the operation of this unit it has decided to go forward with five new ones. No party opposes this part of the application in Docket No. CP63-26. The Examiner finds that Southern should be permitted to purchase the unit and operate it on a permanent basis.

The reinforcement of the six lateral lines will require about 50 miles of pipeline loops, varying in outside diameter from 4½ inches to 12¾ inches.

Facilities for service to the southeastern Georgia area consists principally of 7.5 miles of 16-inch O.D. pipeline loop extending east along the main South Line from the Ocmulgee station and approximately 174 miles of 12¾ inch pipeline extending southeast, from the eastern end of the 16-inch loop, to Brunswick, Georgia.

The West Delta Block 27 Field gas is to be taken into Southern's system by means of a 22-inch O.D. pipeline extending southeast from the southern terminus of Southern's Lake Washington line approximately 27 miles to a point near Venice, Louisiana.

Southern also asks authority to construct and operate the river crossing, metering and regulating stations and other appurtenant facilities shown on Appendix B.

Except for the supply facilities and the Calera and Milledgeville branch line loops, which are needed solely to permit repairs of present lines and increase safety of operations, the facilities to be constructed were designed to increase the capacity of Southern's pipeline system to enable it to deliver quantities of gas approximately equal to Southern's maximum firm contract delivery obligations during the 1965–1966 winter. Construction of facilities to produce capacity which will enable Southern to meet customer requirements for three years in advance is, as previously shown, consistent with the policy which Southern has followed with the approval of the Commission.

The 1965–1966 contract demands and maximum delivery obligations also represent the winter peak-day requirements. When the application was filed such requirements were 1,513,813 Mcf. Subsequently, the requirements increased to 1,515,942 Mcf and an exhibit reflecting such increased requirements was received in evidence. Other pertinent exhibits were changed to reflect the increases. Southern was of the opinion, and the Examiner finds, that these changes in requirements were so slight as not to detract from the validity of the design of the system and its ability to meet the 1965–1966 winter-peak requirements.

As shown in the Market section hereof, late requests for increases in contract demands amount to 10,160 Mcf in 1965–1966. Such increases would bring the 1965–1966 peak-day firm requirements up to 1,526,102 Mcf per day. If necessary, this increase in capacity could be added within a relatively short time and at a low cost by supercharging and relocating one compressor engine and making minor piping and cylinder changes at another compressor station.

The additional compressor facilities proposed to be installed on the south Louisiana supply system are for the purpose of permitting the transportation to

Gwinville of the West Delta Block 27 gas, and also to permit Southern to take additional quantities of gas which are available from fields connected to the south Louisiana supply system. These compressing facilities have been designed so as to permit Southern to take from any field, to which its system is and will be connected, the maximum contract quantity. Southern is now in a position where the minimum takes required by its gas purchase contracts exceed system input requirements. As a result, it is necessary that the additional flexibility be achieved so as to permit the make-up of deficiencies in takes below minimum take obligations.

The system was designed to meet hourly requirements during the peak periods of the day as well as peak-day requirements. Peak-hour requirements exceed average hour requirements, particularly during the heating season, and Southern is obligated under its tariff to deliver gas at an hourly rate of up to six percent of the daily contract demand and maximum delivery obligation. Stated differently, Southern must provide capacity sufficient to supply 144 percent of the customers' daily contract delivery divided by 24 hours.[19] Peak-hour requirements for points at and west of the Reform station on the North Line, and at and west of the Enterprise station on the South Line, can be fully provided for by gas from line storage; but for points east of such stations some portions of such requirements on days of maximum demand must be provided for from line flow, as distinguished from line storage. All engines at the Reform station and at the Enterprise station will, therefore, be utilized at substantially full capacity on the design load day and will determine the through-put capacity of the North Line and South Line, respectively. However, the stations east of Reform and Enterprise have an apparent excess of compressor capacity for the design load day, but all of such capacity is needed to meet peak-hour requirements.

Southern's estimates of construction costs based on detailed studies sponsored by its Chief Engineer are set forth in Appendix B hereof.

Cost estimates of metering and regulating facilities, land and land rights, pipe laying, general construction and overhead and installation of gas driven reciprocating engines were based on Southern's past experience for similar work, adjusted when necessary to compensate for increased costs of materials and installation. Other cost estimates were based upon freight tariffs, manufacturers' prices, past experience and discussion with manufacturers' representatives. After the original exhibits were filed certain adjustments in the estimates were made.

Southern states that the net change in the cost of facilities covered by the application, taking into consideration the reduction in the cost of line pipe and the additions and eliminations of line taps and measuring stations, resulted in a net reduction in the cost of facilities shown on Item F of $257,294, and a cost of all facilities to be constructed of $23,156,453. To this cost, however, there must be added the sum of $57,400, which represents the cost of four additional measuring stations to be constructed on the southeastern Georgia extension. The adjusted total cost is $23,213,853.

All of the major facilities are to be constructed under contract. Some of the minor facilities such as measuring facilities and line taps may be installed with Southern's own forces. No contracts have been awarded for the work with the exception that the service of a surveying party has been contracted for in order to perform preliminary survey work on the southeastern Georgia extension.

All of the facilities to be installed will be operated as integral parts of Southern's system and construction is to be commenced within 30 days following the issuance of a certificate.

---

[19] Southern's Gas Tariff, Sixth Revised Volume No. 1, Sheet 43.

C. *Facilities and Their Costs: Southeastern Georgia Extension Separately*

Carolina, the Coal Interests, and Southern Propane contend that Southern's proposed line to supply the southeastern Georgia area should be of a lesser size than the 12¾ inch O.D. pipeline which Southern proposes to build. Affirmative evidence in support of the contention was introduced by Carolina, including flow diagrams based upon the smaller pipe size. In summary, Carolina's evidence purports to show (1) that a line extending southeast to Brunswick from near Macon, Georgia, would be adequate to supply the requirements for the southeastern Georgia area if constructed of part 10¾ inch and part 8⅝ inch O.D. pipe and (2) that Southern's proposed 12-inch line is not economically feasible whereas the smaller line might be economically feasible. The Examiner finds, for reasons subsequently stated, that the project would be economically feasible if the proposed 12-inch line were constructed.

The remaining contention, which was also placed in the form of a proposed finding, will now be considered. The 12-inch line would have a capacity of 82,230 Mcf per day when that quantity of gas is available from Southern's main South Line, or some 26,831 Mcf in excess of the third year total daily connected load on the line of 55,399 Mcf. The "total daily connected load" is the sum of Vidalia's third-year peak-day firm requirement of 1,933 Mcf and Atlanta's third-year peak-day firm requirement of 28,000 Mcf and the estimated interruptible requirement of 25,466 Mcf. This latter requirement is derived from Atlanta's estimate of third-year peak-day curtailments of interruptible customers.[30] The full 82,230 Mcf of capacity would not be required for 10 or 11 years. The problem, therefore, is to ascertain on the basis of the evidence of record what size pipeline would be adequate to deliver the volumes of gas which must be supplied to the southeastern Georgia area in order for the project to be economically feasible. Obviously, if the smaller line proposed by Carolina were adequate, it should be built in lieu of the 12-inch line.

1. *The Third-Year Requirement of 55,399 Mcf Per Day*

As subsequently shown, the finding that the southeastern Georgia extension is economically feasible on an incremental basis is predicated upon it producing operating revenues of at least $3,154,090 in the third year. To realize this sum, Southern must sell to Atlanta 8,809,319 Mcf of natural gas in the third year. In addition, the Examiner's prior finding that Atlanta's project is economically feasible is based upon third-year annual sales of 8,824,434 Mcf, consisting of 8,809,319 Mcf of natural gas and 15,115 Mcf of liquefied petroleum gas. Accordingly, the Examiner finds that in order for the pipe size in the southeastern Georgia area to be adequate it must be of a size which will supply at least the 8,809,319 Mcf of gas to Atlanta in the third year. Since transmission pipelines are designed on the basis of supplying a certain quantity of gas per day, the next question is to ascertain the Mcf per day upon which the pipeline design should be based. Southern's evidence in this respect was presented through its Chief Statistician and Planning Engineer, a man of some 32 years' experience in the involved area. He explained Southern's pipeline design policy as follows:

> Southern has designed lateral lines to have a capacity equal to the connected load so as to enable Southern to operate its system to its maximum capabilities as a whole, thereby achieving the highest possible system

---

[30] Southern's design witness testified, and the Examiner finds, ". . . that the peak day curtailments are the proper measure of the connected load of interruptible industrial customers which the branch line should be built to supply because they represent the daily volumes of gas which the interruptible customers would take if gas were available." (Tr. 2854)

> load factor, which has the effect of keeping unit costs down and decreasing the cost of service to Southern's customers.
>
> The reason for this policy is that by far the largest part of the investment in facilities to deliver gas to market excluding supply facilities consists of the investment in main line facilities. It is important since *Southern has no underground storage* available to it, to operate these main line facilities at the highest possible load factor so as to keep down unit costs. Therefore, we have found it most economical to build into the branch lines a capacity which will permit delivery of full interruptible requirements at all times when gas in excess of firm requirements is available in the main lines. If branch lines were sized to carry less than the full connected load to be served from them, there would be many times during the year when gas in excess of firm requirements would be available at the main line which could not be delivered to customers receiving service from branch lines. [Italics supplied; Tr. 2859–60.]

Based on this policy, it was his view the pipeline should be designed to carry both the firm peak-day contract demand requirements of Atlanta and Vidalia (29,933 Mcf), and the peak-day requirements of interruptible customers (25,466 Mcf), or a total of 55,399 Mcf per day. He further testified, however, that when the temperature is above 50 degrees there is less demand for gas for space heating and, as a result, there then ". . . can be expected to be an adequate supply of gas for all requirements." (Tr. 2855) Accordingly, if the temperature were always above 50 degrees in the area, which is not the case, the full annual quantities of 8,809,319 Mcf could be carried by a pipe line designed for the off-peak capacity of 41,589 Mcf per day.[21] (This off-peak capacity figure, and accompanying flow diagram, was presented by Southern in rebuttal to a somewhat similar exhibit introduced by Carolina. It was based upon one-half of the firm peak-day requirements, including peak shaving of 2,313 Mcf, or 16,123 Mcf plus the connected industrial load of 25,466 Mcf per day.)[22] The fact is, however, that on 65 to 100 days during a year the temperature is below 50 degrees and this would render it necessary to curtail the interruptible customers in some unspecified amount. The full 55,339 Mcf of capacity would not, of course, be needed on all such days. Southern estimates such use on "many days" and contends that the line must be designed to carry the full firm and connected loads (Tr. 3025). This contention is supported by the following testimony of its witness:

> Based upon 32 years of experience in estimating requirements in the southeastern section of the United States, it is my opinion that the daily deliveries in the third year on the Brunswick line will vary between 30,000 Mcf per day and about 56,000 Mcf per day, depending upon availability of gas at the main line, which as Mr. Little [Carolina's design witness] suggests, will be affected by weather on other parts of the system. From my experience, I know that there may be gas available in excess of firm requirements on any part of the system at any time when the temperature is between 20° and 50°. One of the reasons for the availability of gas on cold days in excess of firm requirements is that contract demand customers frequently reduce their takes to 90% of contract demand so as to avoid establishing

---

[21] At page 43 of its brief Staff stated that "[t]he assumption in Exhibit 30 of a daily requirement of 41,589 Mcf for southeastern Georgia for the third year seems reasonable and it has already been demonstrated that Southern has main-line capacity to supply such requirements if they are needed. Therefore, the staff feels that Southern has shown that its proposed 12-inch southeastern Georgia extension should be constructed or else the project should be completely denied."

[22] Exhibit 30 shows peak shaving to be 2,287 Mcf. The difference is *de minimus*.

> higher billing demands. Above 50° there can be expected to be an adequate supply of gas for all requirements. [Tr. 2855.]

Carolina's proposed pipe size is based upon off-peak requirements. It would transport one-half of the firm peak-day requirements, including peak shaving, and the *average* daily requirements for the interruptible customers. As a result of using an average, its peak-day interruptible requirements were estimated at 19,183 Mcf per day. Accordingly, Carolina's Exhibit No. 23 shows that when the temperature is 50 to 55 degrees, its design would meet peak-day requirements of only 35,206 Mcf per day.[38] (The maximum capability of Carolina's design was stated to be 48,000 Mcf. Such quantity, however, was based upon "a uniform percent growth over the entire system" and was "calculated on an average hourly basis." Tr. 2560, 2289–90.) Even if an off-peak design were proper, the use of average daily interruptible requirements as a basis upon which the market requirements of 8,809,319 Mcf annually could be delivered constitutes error. Obviously, as urged by Southern, in order for there to be an average of 19,183 Mcf per day there must be many days in which the required amount would be in excess of the average. Southern's design witness explained the matter as follows:

> The use of average requirements implies that each interruptible industrial customer will purchase the same quantity of gas on each day. This is directly contrary to the basic nature both of interruptible gas service from pipelines and the incurrence of gas requirements by industries. [Carolina's witness stated] that he expected that an industry such as Brunswick Pulp & Paper might run at a "fairly high load factor" of 80%. In my experience, this is an extremely high load factor and not generally to be expected. Many industries do not operate on some days during a month, and few, if any, industries will require exactly the same amount of gas every day on which they do operate. The requirements of many industries for gas vary markedly from month to month and from season to season. This is the rule rather than the exception. Therefore, there can reasonably be expected to be a wide range in daily gas requirements. Additionally, it is necessary for the pipeline company to curtail or interrupt service when sufficient gas is not available to supply the full requirements of both its firm and interruptible customers. Because of the fluctuating nature of interruptible gas service due to both of these factors, that is, the varying daily requirements of the customers and the varying daily quantities of gas available from the pipeline for delivery to them, *it is necessary to have capacity in the Southeast Georgia extension to deliver a maximum daily quantity very substantially in excess of the average daily quantity, if the projected annual quantity is to be delivered. Sound engineering requires that the design of a branch line such as the Southeast Georgia line have capacity to meet the full connected load on days when sufficient gas to supply that load is available from the main line.* [Italics supplied; Tr. 2851–52.]

Southern's design witness is a man with long experience in the natural-gas field. He has been employed by Southern, its predecessor corporation, and subsidiary companies, since October 1930. He served such companies in the capacity of engineer in the design of gas distribution systems in Alabama and Mississippi. Later he served as Chief Engineer and General Superintendent of Mississippi distribution properties and also as Vice President and Chief Operating Officer of properties in Mississippi. He has served as Chief Statistician and Planning Engineer of Southern since 1940. In such capacity he is charged with the responsibility of maintaining statistics on the growth of the system, the nature of the loads of the system, and of making estimates of trend and growth and forecasts of future requirements. He was cross-examined at great length. His answers on cross-examination demonstrated his intimate knowledge of pipeline design and of the present and future needs of the area in question for natural gas.

---

[38] In Exhibit 30 Southern estimated average interruptible requirements as 19,225 Mcf. Also, the total of the above 19,183 Mcf and 16,123 Mcf is 35,306 Mcf instead of the 35,206 Mcf shown above. Such differences are *de minimus*.

Carolina's design witness is, by comparison, relatively inexperienced in the field of pipeline design. Furthermore, he had no substantial knowledge of the present or future natural gas requirements in the area. In fact, he designed the pipeline for only third-year requirements because he had been instructed to do so. In addition, he had no experience concerning the requirements of the proposed interruptible customers in the area.

The opinion of Southern's witness is entitled to substantial weight, as opposed to the opinion of Carolina's witness. The Examiner finds that in order for the annual quantity of 8,809,319 Mcf to be delivered in the third year, the southeastern Georgia line must have sufficient capacity to meet the full firm and connected loads of 55,339 Mcf on days when sufficient gas to supply that load is available from the main line. This finding renders it unnecessary to comment in detail on Carolina's contention that the maximum capability of its design is 48,000 Mcf per day. It should be noted, however, that such contention was based upon an average growth of the communities along the line whereas, as previously shown, the predominant growth will occur in the Brunswick area. It is also unnecessary to discuss the fact that in order for the design as proposed by Carolina to deliver the off-peak quantities of 41,589 Mcf, an additional 21.83 miles of 8-inch pipe would have to be added at a point south from the Alamo tap on the extension (Exhibit 29, p. 4).

2. *Tenth-Year Capacity of 82,230 Mcf Per Day*

As previously shown, the southeastern Georgia extension will have a capacity of 82,230 Mcf of gas per day when gas is available from the main line. This amounts to 26,831 Mcf of capacity in excess of the firm peak-day requirements of 29,933 Mcf and the firm peak-day interruptible requirements of 25,466 Mcf. (The sum of the latter two figures constitutes the full firm and connected load of 55,339 Mcf referred to previously.) Atlanta's witness testified that the 82,230 Mcf capacity would not be used until the tenth or eleventh year. Carolina requests the Examiner to find that this capacity would not be used, or useful.

The fact that the 12-inch line will provide excess capacity of 26,831 Mcf which won't be used until the tenth or eleventh year does not require denial of the application since (1) the 12-inch line as proposed by Southern will be economically feasible based upon the market estimates which the Examiner has found to be reasonable, and (2) the alternative design proposed by Carolina (a) does not provide the capacity to serve the full firm and connected load in the third year of 55,339 Mcf and (b) cannot be made to do so in the third year at any saving to Southern.

The facilities designed by Carolina's witness could be constructed at a total cost of $6,707,059, as compared with Southern's cost estimate of $8,076,991 for its proposed facilities, a difference of $1,369,932. This difference is to be compared with the amount Southern would have to expend in the third year in order to serve the probable increased requirements in southeastern Georgia.

Southern's design engineer presented flow diagrams to show what facilities would be required to make Carolina's 10 and 8-inch line equivalent in capacity to the 12-inch line proposed by Southern. This could be done in either of three ways: (1) installing two compressor stations of 2,420 horsepower and 1,540 horsepower, respectively, plus 84.667 miles of 10-inch loop, all at an additional cost of $3,098,238 over the cost of the 12-inch line; (2) installing one compressor station of 2,420 horsepower and 110.241 miles of 10-inch loop, at an additional cost of $3,450,168 over the cost of the 12-inch line; and (3) looping the entire length of the 12-inch line with 140.196 miles of 10-inch loop and 33.254 miles of 8-inch loop, at an additional cost over the 12-inch line of $4,699,778. Since it would require a third-year investment of at least $4,468,170 by Southern to bring the capacity of the southeastern Georgia line up to the capacity of Southern's proposed 12-inch line, Carolina's proposal is unacceptable.

There remains for consideration the interest of competing fuel producers. The Coal Interests contend that a major part of such excess capacity would be used to supply future direct interruptible industrial customers of Southern where much of it will be wasted on inferior usages.[24] Since no direct sales are proposed herein, it would be sheer speculation to consider whether or not such sales, if proposed, would be for inferior usages. They also contend, in effect, that the issuance of a certificate in this case would have an adverse effect upon (1) competing fuel, transportation and related labor interests, and (2) the conservation of natural gas, citing *National Coal Ass'n. v. Federal Power Commission*, 191 F. 2d 462 (CADC). In particular, the Coal Interests contend at page 21 of their brief that:

> * * * if Southern is allowed to build this uneconomic pipeline with considerable excess capacity, large industries now using coal, such as Plant McManus at Brunswick, would be prime targets for dump sales at distress prices.

As previously shown, the extension will be economically feasible without any direct sales. Furthermore, there is no evidence upon which a finding can be based that Southern will make "dump sales at distress prices." Also, Southern would have to receive permission from this Commission before transporting gas for sale to any direct-interruptible customers. At that time the Commission would have ample opportunity to consider the competitive and conservation matters alluded to by the Coal Interests. In this connection, it could consider the fact that Southern and Atlanta recently lost sales to three plants of the Georgia Power Company as the result of competition from coal. Furthermore, the McManus plant at Brunswick, also a unit of the Georgia Power Company, recently converted from the use of oil to coal as a result of the competitive price of coal. The Examiner finds that the Coal Interests' contentions are not supported by the substantial evidence of record.

Southern Propane, as a competitor of Southern, takes the following position:

> * * * that it would be contrary to the basic requirements of the Natural Gas Act to permit extension of service into a new area, disrupting existing fuels and causing loss of markets where, on the face of it, the project proposed is clearly infeasible. More particularly, Propane Co. does not believe it to be in the public interest to authorize Southern to build a large pipeline into the southeast Georgia area in the absence of a showing that there is a market for the gas sought to be so transported and sold.

The Examiner has found that the project proposed herein is economically feasible. He has found further that there is a market for the gas sought to be transported and sold, and accordingly finds that the proposal would be in the public interest and is or will be required by the public convenience and necessity.

---

[24] They cite *Federal Power Commission v. Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1.

V. *Financing*

The estimated costs of all of the facilities to be constructed pursuant to Southern's application, as adjusted at the hearing, is $23,213,853. Southern intends to finance the construction in two steps. The first is to obtain short-term bank loans for the entire amount of funds required, less such portion of the sum as is available from funds on hand or from current operations during 1963. The second step is to obtain permanent financing to the extent of $16,000,000 when the proposed construction is completed, which Southern assumes to be in January 1964. Such sum would be provided from the proceeds of sale of an equivalent principal amount of first-mortgage bonds on the plan and additions thereto. The proceeds from the sale of the bonds would be used to pay off part of the bank loans. The balance of such loans, about $7,000,000, is expected to be paid off through ordinary cash-flow company funds. It is expected that $3,000,000 of the $7,000,000 of bank loans remaining after the issuance of the $16,000,000 first-mortgage bonds will be retired by 1966. Long-term bank loans would be arranged for the remaining $4,000,000.

No consent of any security holder is necessary to permit the issuance of the bonds. Southern must, however, meet the restrictions and conditions found in (1) the provisions of its 1948 First Mortgage Indenture, as supplemented, under which the bonds would be issued, and (2) the terms of an Indenture dated July 1, 1958, providing for the issuance of its 4½ percent Sinking Fund Debentures. The uncontroverted testimony shows that Southern's proposed plan of financing meets all such restrictions and conditions, and the Examiner so finds.

The bonds would bear 4¾ percent coupons. They would be offered to the public at a premium price. The premium is expected to reimburse Southern for its expenses connected with such financing. As a result, the bonds would be sold to the public at an effective interest rate of 4.64 percent.

The availability of the bank loans discussed herein is predicated upon informal verbal commitments from the principal banks with which Southern does business. This is the regular way that Southern arranges for its loans.

Upon consummation of the entire plan of financing in January 1964, and giving effect to (1) retirement of outstanding debt, other than convertible debentures, by sinking fund installments and serial maturities due in 1963, (2) conversion of all of the 4½ percent Convertible Debentures ($820,100 principal amount outstanding at December 31, 1962), and (3) the issuance of the $16,000,000 principal amount of First Mortgage Bonds and the obtaining of $7,000,000 of bank loans, Southern's resulting capitalization would be as follows:

	Principal amount	Percent of total
Long-term debt:		
First mortgage bonds	$126, 398, 000	47. 32
4½ percent sinking fund debentures	24, 750, 000	9. 27
Bank loans	7, 000, 000	2. 62
Unsecured obligations due serially	200, 000	. 07
Total long-term debt	158, 348, 000	59. 28
Common stock (5,003,185 shares of $7.50 par value) and surplus	108, 786, 972	40. 72
Total capitalization, exclusive of any change in earned surplus at Dec. 31, 1962	267, 134, 972	100. 00

At the end of the third full year of operation of all of the proposed facilities the equity and debt ratios, and average corporate interest rate on long term debt, for the system as fully expanded are expected to be:

Debt-Equity Ratio

Total proprietary capital	$118,740,000
Total long-term debt	128,525,000
Total capitalization	247,265,000
Equity ratio	48.02%
Debt ratio	51.98%

Interest Rate on Long-Term Debt

Long-term debt	$128,525,000
Interest on long-term debt (includes interest at 4¾ percent on the new securities)	5,855,000
Average corporate interest rate	4.56%

No party has questioned the feasibility or appropriateness of Southern's plan of financing. It is found that Southern has adequate financial resources to construct the facilities proposed and that the proposed financing will not render unsound its corporate financial structure.

VI. *Economic Feasibility*

A. *In General*

In Opinion No. 379 the Commission fixed 6.24 percent as a just and reasonable rate of return for Southern.[28] Carolina, Staff, the Coal Interests and Southern Propane contend that the estimated third-year operating results attributable to the new facilities, and separately to the southeastern Georgia extension, indicate that each standing alone would return less than 6.24 percent. They then conclude that the project would be economically infeasible. The rate of return from the entire system, however, after construction of all proposed facilities is estimated by Staff to be 7.05 percent, and by Southern as 7.1 percent, at the end of the third year of operation. Staff estimates that the third-year system-wide revenues will exceed by $2,676,000 Southern's cost of service computed at 6.24 percent. As a result, Staff considers the project economically feasible, even though it reached a different result by use of the incremental approach. It relied upon *Northern Natural Gas Company, et al.*, Opinion No. 324, 22 FPC 164, 171, rehearing denied, 22 FPC 523, affirmed in *Minneapolis Gas Company* v. *Federal Power Commission*, 278 F. 2d 870 (CADC), certiorari denied, 364 U.S. 891.

According to Carolina, approval of the project as recommended by Staff would result in the following burden on existing customers:

> Existing customers are none the less burdened by paying for uneconomic capacity through failure to receive the full measure of a justified reduction in rates, as they would be in paying increased rates because of uneconomic capacity. [Carolina Reply Brief, p. 4.]

Whether or not the rate of return expected at the end of the third year of system operation would call for a "justified reduction in rates" cannot be decided on the basis of this record. Even if such a reduction would be warranted, the substantial evidence of record does not support a finding that the burden referred to by Carolina would be an undue burden. Indeed, there is no specific contention to that effect by any party. Furthermore, it is a well-defined principle of law that some burden to existing customers is permitted. This is because the "various parts of a public utility's system need not and cannot be equally profitable." *Minneapolis Gas Company* v. *Federal Power Commission*, *supra*, at p. 871. This principle was enunciated after the court had considered the primary complaint before it, which, as here, was that the proposed new service would ". . . tend to keep up the rates which petitioners pay to [the pipeline company]." (278 F. 2d at 871)

---

[28] *Southern Natural Gas Company*, 29 FPC 323, rehearing denied, April 19, 1963, 29 FPC 779.

Clearly, the proposed project is economically feasible on a system-wide basis. Carolina, however, contends that "it would be error to ignore the various incremental cost of service studies, where available, in favor of an overall study of the expanded system alone." (Carolina Reply Brief, p. 3) It cites *Northern Natural Gas Company*, 25 FPC 1234 (1961), in support of its position. The Examiner has considered all such incremental studies very carefully and, for the detailed reasons set forth herein, finds (1) that the project is economically feasible when considered on the incremental bases used by Staff and Southern, and (2) that the incremental studies developed by Carolina are entitled to no weight in this case.

Southern proposes to finance the $23,213,853 project by $20,000,000 of debt financing. The income tax statutes encourage such debt financing by treating interest payments, but not dividends on stock, as deductible from gross income. In incremental cost of service studies, therefore, increased interest deductions result in lower income taxes, higher net revenues, and higher rates of return. The foregoing was reflected in Southern's incremental studies. By allocating the full interest deduction attributable (1) to the project, and (2) to the southeastern Georgia extension separately, Southern shows incremental rates of return of 7.26 and 6.9 percent, respectively. Staff, however, allocated to the project, and the southeastern Georgia extension separately, interest deductions computed on the basis of the third-year, system-wide, debt-equity ratio of 51.98 percent.[36] This resulted in respective third-year rates of return of 6.13 and 5.76 percent, and respective deficiencies in failing to recover the authorized 6.24 percent rate of return of $48,730 and $75,578.

Carolina's method had the effect of computing interest deductions on the basis of a debt-equity ratio of 45.01 percent. It submitted several computations and related findings and conclusions based upon its method. As subsequently shown, the Examiner finds that there is no substantial basis for the low interest deduction used by Carolina, the inclusion of main line and gas-supply costs, or the fuel costs as computed by it. Furthermore, Carolina's method is essentially the same as that disapproved by the Commission in *Kansas Nebraska Natural Gas Company, Inc.*, Docket No. CP62-215, Opinion No. 389, 29 FPC 1058, issued May 27, 1963. The requested findings and conclusions are denied.

In this case it is not necessary to decide between the method used by Southern in computing interest deductions and that used by Staff. Southern's incremental approach equals its authorized rate of return and provides some excess for use towards main line cost associated with the project. Staff's method results in a small deficiency. It would, however, make some contribution toward main line and gas-supply cost in the form of the interest deductions which were not allocated by it to the project on an incremental basis. The record does not support a finding that the small deficiency would constitute an undue burden.

---

[36] Southern's debt-equity ratio at the end of the period of construction will be 59.28 percent debt and 40.72 percent equity. At the end of the third year of operation the ratio would be 51.98 percent debt and 48.02 percent equity. These are within the range considered by the Commission to be reasonable. *Midwestern Gas Transmission Co., et al.*, 21 FPC 653, 656.

As previously shown, the only alleged burden to existing customers from approval of the project on a system-wide basis was the contention that the proposed new service would tend to keep up the rates which the existing customers now pay. The burden from Staff's incremental approach would be only $75,587 in the third year of operation. On the other hand, the southeastern Georgia extension will bring service to a new area. It will satisfy a public need without which the public will be inconvenienced. See *Kansas Pipe Line & Gas Company, et al.*, 2 FPC 29, 56. A balancing of the interests of the new and existing customers shows that the need by the public in the involved area outweighs any burden which might result to existing customers by approval of the instant application. For the foregoing reasons, as set forth in detail hereinbelow, and based upon the reliable, probative and substantial evidence of record, the Examiner finds that the new service is or will be required by the public convenience and necessity.

As an alternative to its first recommendation of approval, Staff stated that it would ". . . have no objections if the Examiner or the Commission, or both, conclude that cash contributions should be made by Atlanta Gas and Vidalia . . . ." (Staff Brief, p. 55) Such contributions would be in lieu of denial of service to the area or requiring the construction of Carolina's proposed 10- and 8-inch pipeline extension. This second recommendation was based upon the formula in *Kansas Nebraska Natural Gas Company, Inc., supra.* In its brief, Staff quoted that part of the case in which the Commission expressed a policy concerning contributions toward lateral construction. Staff set forth computations, which the Examiner finds are correct arithmetically, based upon the formula adopted by the Commission. They show that the total contribution to be made by Atlanta Gas and Vidalia, that is the total cost of the southeastern Georgia extension minus Southern's appropriate investment therein, would be $2,935,873. The allocation of such contribution as between Atlanta Gas and Vidalia would be as follows:

	Total revenues	Percent of total	Contribution to be made
Atlanta Gas Light Co.	$3,074,430	97.48	$2,861,889
City of Vidalia	79,630	2.52	73,984
Total	3,153,060	100.00	2,935,873

In the *Kansas-Nebraska* case the Commission upheld the applicant's insistence, over Staff's objections, that the cities contribute to the cost of the lateral construction. In the instant case Southern has not requested any such contribution and has arranged a feasible plan to finance the entire project. Furthermore, the estimated system rate of return is substantially in excess of Southern's authorized rate of return, contrary to the situation in the *Kansas-Nebraska* case. These are important distinctions.

Carolina's economic feasibility study concerning the southeastern Georgia extension takes the same form as that used by the Examiner in the *Kansas-Nebraska* case. Such presentation resulted in about the same total contribution but with different amounts for each city. It was not adopted by the Commission. In addition to the above distinctions, the subsequent comparison of the various economic feasibility studies shows that Carolina's method allocates interest deductions to the extension that are materially lower than those based upon the third-year system debt-equity ratio of 51.98 percent debt and 48.02 percent equity.

The Examiner finds that the formula expressed by the Commission in the *Kansas-Nebraska* case and the method used by Carolina are not applicable to Southern's project.

Southern and Staff presented 12 different rate of return computations using two different purchased gas costs.

They pertained to (1) the system-wide approach, (2) all the proposed facilities as a separate unit, and (3) the southeastern Georgia extension as a separate unit. Carolina's studies were in a different form and concerned the southeastern Georgia extension only. Southern's and Staff's computations are as follows:

System Gas Operations After Construction of the Proposed Facilities in 1966

	22.32¢ gas		20.9¢ gas	
	Southern	Staff	Southern	Staff
Operating revenues	$148,236,000	$148,236,000	$148,236,000	$148,236,000
Federal income taxes	6,024,000	6,126,000	9,153,000	9,254,000
Net operating revenues	13,135,000	13,033,000	15,886,000	15,785,000
Rate base	223,886,000	223,886,000	223,886,000	223,886,000
Rate of return	5.87%	5.82%	7.1%	7.05%

Attributable to Operation of the Proposed Facilities Only

	22.32¢ gas		20.9¢ gas	
	Southern	Staff	Southern	Staff
Operating revenues	$11,368,000	$11,368,000	$11,368,000	$11,368,000
Federal income taxes	(69,000)	168,660	212,410	450,620
Net operating revenues	1,289,000	1,051,340	1,537,590	1,299,380
Rate base	21,189,000	21,189,000	21,189,000	21,189,000
Rate of return	6.08%	4.96%	7.26%	6.13%

Attributable to Operation of the "Southeast Georgia Extension" Only

	22.32¢ gas		20.9¢ gas	
	Southern	Staff	Southern	Staff
Operating revenues	$3,154,060	$3,154,060	$3,154,060	$3,154,060
Federal income taxes	92,830	176,112	162,980	246,260
Net operating revenues	446,410	363,128	508,120	424,840
Rate base	7,375,131	7,375,131	7,375,131	7,375,131
Rate of return	6.1%	4.92%	6.9%	5.76%

The prior findings of economic feasibility were based upon the studies by Staff and Southern which used the 1963 average purchased gas cost of 20.9 cents per Mcf. Such gas cost would be 22.32 cents per Mcf in 1966 if all increases in gas purchase prices provided for by Southern's gas purchase contracts were filed as changes in rates by Southern's suppliers. Southern in its direct case used 22.32 cents per Mcf in its computations, in order to present the most unfavorable possible picture of the economics of the proposed project. Carolina in its affirmative case used the 20.9 cents per Mcf figure. Southern in its rebuttal case also used the lower figure. Staff advocates the use of the 20.9 cents per Mcf figure in calculating economic feasibility because, among other things, "even if Southern's cost of purchased gas does increase, this is a cost which Southern is entitled to recover regardless of whether it expands its system or retains the exact facilities it has today." (Staff Brief, p. 49)

The substantial evidence of record shows that under its existing contracts the 1966 average cost of purchased gas would be 22.32 cents. The producers with whom Southern has contracted have a right to file for such increases and for them to be effective after five months' suspension. To say that some future action of the Commission, such as an order in an area rate case, may result in a lower third year cost is to engage in speculation. The important fact is that if the producers file for rate increases Southern also would be entitled to file for rate increases, which increases also would be effective after five months' suspension. The Examiner finds that the average purchased gas cost of 20.9 cents per Mcf should be used in deciding whether the project is economically feasible.

The revenues, deductions, expenses and other figures used in this discussion of economic feasibility were presented through witnesses who were competent to, and did, withstand cross-examination concerning such matters. The record was developed fully and no party contends that any particular figure, except as shown subsequently herein, was in error.

B. *Economic Feasibility: Southeastern Georgia Extension Separately*

The contentions among the parties concerning the use of cost of service studies, and studies in the nature of cost of service studies, result from their respective interpretations of certain decisions of this Commission. The decisions concerned the necessity for customers' contribution toward the cost of constructing lateral facilities and the method to be used in ascertaining the amount of such contribution. Primarily, the following cases were discussed: *Northern Natural Gas Company, et al.*, Opinion No. 324, 22 FPC 164; *Northern Natural Gas Company*, Docket No. CP61-1, 25 FPC 540; *Northern Natural Gas Company, et al.*, Opinion No. 345, 25 FPC 1234; and *Michigan Wisconsin Pipe Line Co.*, Opinion No. 346, 24 FPC 177. However, none of these cases, nor the recent *Northern Natural* case, Opinion No. 404, *supra*, require customer contribution where a pipeline company (a) does not desire contribution, and (b) shows that construction without contribution would result in a substantially greater over-all rate of return than that allowed in its last rate case.

Carolina's Position

Carolina's basic position is that the southeastern Georgia extension is economically infeasible unless it "meet[s] the revenue required of it . . . to earn a return and pay taxes commensurate with the rest of Southern's system."[27] In support of such position it cites *Trunkline Gas Company*, 21 FPC 704 (1959), affirmed in *Battle Creek Gas Company* v. *Federal Power Commission*, 281 F. 2d 42 (CADC), and *Northern Natural Gas Company*, 25 FPC 1234 (1960). This view would require the denial of the proposed southeastern Georgia extension unless (1) the third year net revenues were equal to 6.24 percent of the net investment after income taxes, or (2) some condition were imposed to prevent the "new construction from *burdening* existing customers . . ."[28] (Underscoring supplied) Stated differently, Carolina contends that it and other existing customers are entitled to assurance that they will not have to bear any part of the cost of the proposed southeastern Georgia extension.

---

[27] Carolina's Initial Brief, p. 19.

[28] *Id*, at p. 47.

This view is not sanctioned by general public utility concepts. In fact, ". . . it would be impossible to regulate a utility or for a utility to engage in business if every segment of its business had to earn the same rate of return." *Northern Natural Gas Company*, 22 FPC 164, at 174.

The test is not whether the proposed construction places a "burden" on existing customers,[29] but whether it places on them an "undue burden." *Northern Natural Gas Company, supra*, at 174.

As previously shown, Southern and Staff presented 12 different rate of return figures. Carolina presented four separate studies, each using a 20.9 cents per Mcf figure, designed to show the amount Southern could invest in the southeastern Georgia extension and still earn a 6.24 percent rate of return. They are set forth in Appendix C to this decision in four columns. The respective columns purport to show the "warranted investment" by Southern in:

(1) The southeastern Georgia extension, *as proposed by Southern*, if the 1966 revenue from such extension is *not* required to carry any fixed charges in the new investment in main line and gas supply facilities;

(2) The alternate southeastern Georgia extension submitted by *Carolina Pipeline* if the 1966 revenue from such extension is *not* required to carry any fixed charges in the new investment in the main line and gas supply facilities;

(3) The southeastern Georgia extension, *as proposed by Southern*, if the 1966 revenues from such extension are required to carry a pro rata share of the fixed charges on the new investment in the main line and gas supply facilities; and

(4) *The alternate southeastern Georgia extension submitted by Carolina Pipeline*, if the 1966 revenue from such extension is required to carry a pro rata share of the fixed charges in the new investment in main line and gas supply facilities.

Carolina also submitted eight proposed findings and conclusions. The first two concerned pipe size and have been denied previously. The remainder relate to the above studies and suggested certificate conditions. They have been carefully considered and are denied for the reasons herein stated.

Staff prepared comprehensive cost of service studies concerning the economic feasibility of Southern's proposals in this proceeding and attached them as appendices to its brief. They have been previously summarized herein at pages 843-844 supra. Computations in several of the appendices utilized data which were in working papers furnished to the Staff by Southern and which are not part of the record in this proceeding. No party has objected to the use of such data by Staff.

Southern's feasibility studies were described as "revenue, expense, income and rate of return" studies, as distinguished from cost of service studies. It is contended, however, that they are in accordance with the decision of this Commission in *Northern Natural Gas Company*, Opinion No. 324, *supra*, because they set forth a statement of costs associated with the extension "together with the average cost of gas purchased and so-called 'out of pocket' main line costs which to [it] means the cost of compressor fuel gas, company use gas, and unaccounted-for gas." (Tr. 2885.) In its rebuttal case Southern introduced exhibits designed to show the differences between Carolina's study and Southern's position. Further studies based upon figures in the record were contained in its reply brief.

A discussion of the principal issues raised by the various studies follows a table prepared by the Examiner which compares the cost of service and related methods employed by Southern, Carolina, and Staff in regard to the southeastern

---

[29] *Id.* at p. 48.

Georgia extension only. The purpose of the comparison is to demonstrate that the basic difference in the studies prepared by all the parties relates to the Federal income tax figure. Each of the three methods shown is designed to secure a 6.24 percent rate of return and is based upon a purchased gas cost of 20.9 cents per Mcf. As previously stated, Carolina contends that the extension should carry a portion of the fixed charges of the new investment in main line and gas supply facilities. None is included in the comparison.

SOUTHERN NATURAL GAS CO., CP63-26

Comparison of Cost of Service Methods Employed by (1) Southern Natural Gas Co., (2) Carolina Pipeline Co., and (3) Staff, to Secure a 6.24 Percent Return (considering the southeastern Georgia extension only)

	(1) Southern Natural Gas exhibit 33, sheet 1	(2) Carolina exhibit 25, sheet 4	(3) Staff Branch—application "C" schedule 4, sheet 1
Operating revenues	$3,154,060	$3,154,045	$3,154,060
Cost of service:			
Cost of gas	1,875,150	1,875,148	1,875,150
Fuel	65,630	[1] 161,496	65,630

Effective debt ratio percent	98.53	45.01	51.98

[1] Called "other variable costs" by Carolina.

Interest Deductions and Federal Income Tax

In the foregoing tabulation the Examiner used the income tax figure of $286,470 as computed by the Staff. The income tax figures for Southern and Carolina of $108,511 and $351,056, respectively, were computed by the Examiner on the basis of securing a 6.24 percent rate of return. As a result of such computations, Southern shows a revenue excess of $102,381. Carolina's method as recomputed shows a revenue deficiency of $236,043. Staff's method shows a revenue deficiency in the amount of $75,578.

In computing income tax, Southern took as a deduction all of the interest on the bonds in the third year, namely, $331,360. The difference between tax and book depreciation of $33,390 was added to this interest to arrive at a total income deduction for Southern of $364,750.

Staff first computed the debt-equity ratio in the third year for Southern as 51.98 percent. Staff then took 51.98 percent of the net cost of facilities, multiplied that figure by the average interest rate, arriving at a deduction of $174,812. To this figure it added the depreciation difference of $33,390, thus arriving at a total deduction of $208,202.

In its computations, Carolina used 11 percent of net investment for return and income tax. In arriving at this figure it estimated fixed charges as 15.5 percent, which was the same percentage used by Southern in estimating fixed costs associated with the new peaking service. Carolina then separated the 15.5 percent figure into 3.5 percent for depreciation, one percent for taxes other than income taxes, and 11 percent for income taxes and return. Based upon a 6.24 percent rate of return, the tax amounts to $351,056. The interest deduction was computed by use of the formula shown in the footnote and amounts to $151,384.[30] This has the effect of raising the amount of taxes resulting in the large revenue deficiency. In other words, Carolina uses the deduction of $151,384, Southern uses $364,750, and Staff uses $208,202. The method used by Carolina results in an effective debt ratio lower than Southern's system-wide experience and obviously cannot be supported. As previously discussed, it is unnecessary in this decision to decide which of the other two interest deduction methods is correct. Carolina's error in including main line cost in its computations will now be shown.

Main-Line Costs

Carolina contends that Southern erred in failing to give effect to a pro rata portion of the fixed charges in investment on new facilities to be constructed on the existing main line.

Southern contends that all the main line system expansion proposed by it would be necessary even if the southeastern Georgia extension were not installed. It admitted, however, that if only the southeastern Georgia extension were to be constructed, and no provision made for the increased requirements of its other customers, it would need some main line facilities. Accordingly, some unspecified amount for main line facilities should be allocated to the southeastern Georgia extension.

Southern's system is an integrated system. No part of the proposed main line and gas supply facilities may be used solely to serve one customer or one particular group of customers. Accordingly, the cost associated with the addition to the gas supply and main line facilities of the integrated system cannot be regarded as being for the exclusive benefit of any one customer or one particular group of customers. The total cost of the integrated system, insofar as main line costs are concerned, should be borne by all the customers of the system, including the new customers on the southeastern Georgia extension. This view is consistent with the principles found in *Midwestern Gas Transmission Company, et al.*, 22 FPC 775, rehearing denied, 22 FPC 1157 (1959), and the recent *Northern Natural* case, Opinion No. 404, *supra*. In the latter opinion, the Commission stated as follows:

> . . : the cost of the additional compression facilities is an addition to mainline investment which benefits all mainline customers and cannot properly be used to measure the economic feasibility of the branchlines.

Carolina's method of allocating the costs of new main line facilities to the southeastern Georgia extension assumes that the extension will get the sole benefit of about one-third of the new main line facilities.[31] This allocation by

---

[30] .532 (return plus income tax minus deductions) = income tax.

[31] This ⅓ is computed by first arriving at a total figure for the cost of facilities of the south Louisiana supply system ($9,282,344) and additions to the south main line and Rankin compressor stations ($4,331,300) for a total cost of $13,613,644. From this total figure 2½ years depreciation is deducted, leaving a net investment of $12,422,449. Income taxes and return are said to be 11% of the net investment figure amounting to $1,366,469. The southeastern Georgia extension's share of this amount is then computed by multiplying such amount by a fraction with the numerator 30,000 Mcf and the denominator 95,000 Mcf, arriving at an income tax and return figure of $431,517 for the southeastern Georgia extension.

Carolina results in an inequitable share of the new main line facilities being allocated to the southeastern Georgia extension. Granted that the southeastern Georgia extension, along with the other customers of Southern, should bear some part of the cost of the new main line facilities, the computation of such amount would probably be on the basis of the ratio of 30,000 Mcf to the total of the peak-day Mcf requirements for the whole system, including southeastern Georgia. This would probably be a fraction with the numerator 30,000 and the denominator 1,516,000 Mcf. Since Southern's rates are designed, in part, upon the Mcf-mile method, this record does not permit a precise calculation of such costs. Obviously, the figure would be very small and would probably be offset by the factors previously discussed.

Other Variable Costs

Total sales attributable to the southeastern Georgia extension are 8,972,000 Mcf. Carolina multiplied this figure by 1.8 cents to arrive at a figure entitled "Other Variable Costs" of $161,496. The 1.8 figure was taken from Southern's breakdown of its peaking service rate of 15.5 percent for fixed charges. The peaking service rate was designed to recover the fixed charges associated with all the proposed facilities on the theory that insofar as the two-year excess supply of gas was concerned, the purchasers should pay for the gas as if the facilities had been built solely for them.

Carolina stated that it proved its figure of $161,496 by dividing the total cost of gas used for compressor station fuel for all the proposed facilities ($726,000) by the 1966 total pipeline sales attributable to all the proposed facilities, including the southeastern Georgia extension, of 36,299,000 Mcf. This produced a unit cost of two cents per Mcf which, when multipled by the total sales attributable to the southeastern Georgia extension (8,972,000 Mcf) resulted in the comparable figure of $179,445. In effect, therefore, Carolina's method assumes, contrary to fact, that all the compressor stations which necessitate the increased cost of fuel were built solely for the customers producing the new sales volume, including southeastern Georgia, and that the proposal should not be certificated unless such new customers bore all of the cost. As shown hereinabove, the economic feasibility of the southeastern Georgia extension is not predicated upon inclusion of such main line cost.

In the *Northern Natural Gas Company*, Opinion No. 324, *supra*, the Commission stated that an incremental cost study for a proposed extension should include a figure for compressor fuel, company use, and unaccounted-for gas. The largest component of these items is compressor fuel. Southern has computed a figure for compressor fuel and company-use gas on the southeastern Georgia extension by first ascertaining that its system-wide use of gas after the full proposed expansion would be 2.9 percent of annual pipeline sales. It applied this percentage figure to the estimated sales from the southeastern Georgia extension of 8,972,000 Mcf to arrive at a quantity of compressor fuel gas related to that sales figure of 260,188 Mcf. It then multiplied such figure by the average gas cost of 20.9 cents, arriving at the figure of $54,379. It similarly ascertained that unaccounted-for gas would be 0.6 percent of total annual pipeline sales. By similarly computing the charge for unaccounted-for gas and adding it to the cost of company use and compressor fuel gas, it arrived at the figure of $65,630.

Southern therefore has proceeded on the basis that since the compressor stations are all on the main line they will be used for the benefit of all customers and that all customers should bear a share of their cost. The Examiner finds that Southern's computation is proper.

VII. *Gulf and Humble's Joint Sale and Project*

The Producer's applications are based upon contracts with Southern for the onshore sale and delivery of gas produced from the offshore West Delta Block 27 Field, Plaquemines Parish, Louisiana. About 30 percent of the sales may be made from an area claimed to be under the taxing jurisdiction of the Federal Government. Delivery of gas processed to contract specifications will be made at Venice, Louisiana. Southern will construct 27 miles of pipeline in order to connect its present system to the delivery point at Venice.

Gulf's sale is under the terms of a 20-year contract dated June 22, 1962, and Humble's under a similar contract dated June 21, 1962. By letter agreements executed on December 11, 1962, two additional leases in the said field, subsequently acquired and owned jointly by Gulf and Humble, were included. The contracts by their terms will terminate prior to the 20-year term if before then Southern shall have "purchased and taken . . . an aggregate quantity equal to Seller's proportionate part . . . of 1,250,000,000 Mcf of gas . . . ."[32] Both Gulf and Humble request the issuance of a "limited certificate," that is, one which specifically authorizes each of them to make the sale of the described limited volume and "permit and authorize the termination of such sale when such volumes have been sold to Southern."[33] The contracts also provide that on one month's notice either party may cancel the agreement unless certificates as requested herein have been issued within 12 months of the respective contract dates. If, however, either the Producers or Southern are at that time continuing in a bona fide effort to obtain such certificates, no party may cancel the agreement until the expiration of 18 months from the contract dates.

Under the Gulf contract the proposed initial price is 21.25 cents per Mcf, including tax reimbursements of 1.75 cents per Mcf. The initial price under the Humble contract is also 21.25 cents per Mcf, but no provision is made for reimbursement of existing state taxes. The present State of Louisiana tax is 2.3 cents per Mcf. Both contracts provide that Southern must reimburse the Producers to the extent of three-fourths of any future taxes in excess of 2.3 cents per Mcf. If the tax reaches five cents per Mcf, certain protective provisions become operative. The contracts also provide for fixed price escalations of two cents per Mcf at the beginning of each successive four-year contract period.

No application for temporary authority to make any of the sales proposed herein has been filed.

The Examiner has found that Southern has a market for the gas to be purchased from the Producers. The initial price question is the only remaining issue. Gulf and Humble maintain that certificates without a price condition should be issued. Staff recommends that the applications be granted with the condition that Gulf and Humble be required to reduce their initial price to 20 cents per Mcf, inclusive of tax reimbursement. (The amount of tax reimbursement was not separately stated by Staff.) Staff recognizes that there is a dispute in regard to whether some of the sales are within the taxing jurisdiction of the State of Louisiana. Pending the resolution of this dispute, it recommends that the Producers be permitted to collect the full 20.00 cents per Mcf. It does not recommend, in this case, that escrow accounts be established to assure that refund monies would be available in the event it were determined that the contested area is outside of Louisiana's taxing authority.

---

[32] Article 10 of Exhibit B to Item QQ by reference. All gas quantities in this section of the decision are at 15.025 psia, unless otherwise stated.

[33] Item QQ, p. 7.

Long Island Lighting contends that it would be appropriate for the Examiner and the Commission to offer to the Producers their choice of either of two types of certificate conditions: (1) certificates requiring that the initial price be reduced to the "in-line" levels of 20 cents and 18.5 cents per Mcf, but leaving to Gulf and Humble the right to file up to the contract level of 21.25 cents per Mcf; or (2) certificates requiring that the initial price be reduced only to the premium levels of 20.625 cents and 19.0 cents per Mcf provided that Gulf and Humble agree to waive their right to file for any increase until the end of the fifth contract year. Certain settlements have been made recently which included the terms of the latter condition. Since the contracts already meet the southern Louisiana "make-up standard and contain the equivalent of a four-year moratorium," no conditions concerning such matters were suggested by Long Island Lighting. (Brief, p. 3).

The PSC of New York endorses Long Island Lighting's first proposal without reservation. It does not object to the second proposal but, on the other hand, does not affirmatively support such disposition. .

The Examiner, for the reasons subsequently stated, finds that the southern Louisiana "in-line" price at the time the contracts in question were executed was 20 cents per Mcf, inclusive of 1.5 cents per Mcf state tax reimbursement, and 18.5 cents per Mcf where the sale is not subject to state taxes. In addition, the Examiner finds that the present or future public convenience and necessity requires that to such "in-line" price there shall be added no more than the sum of one cent per Mcf for reimbursement to the Producers for the premium features in the contracts.

A. *The West Delta Block 27 Field*

The West Delta Block 27 Field is expected to develop into one of the country's major gas fields. It is about 65 to 70 miles southeast of the City of New Orleans, offshore Plaquemines Parish, Louisiana, on the west side of the Mississippi River Delta. The field is in lands submerged by the open waters of the Gulf of Mexico, the water ranging in depth from 20 to 30 feet, with an average depth of about 25 feet. It was formerly known as the West Delta Block 24 Field. The name was changed by the State of Louisiana to simplify its records and now includes all wells drilled in former Blocks 23, 24, 27, and 28.

Appendix D, attached hereto and incorporated herein by reference, is a copy of a map, introduced as Exhibit 11. It shows the field from which the gas covered by the Producers' amended contracts with Southern will be produced. It also shows the general location of the field with reference to land, the leases from which the gas will be produced, well locations, platform locations, and the approximate route of the separate condensate and gas lines from the platforms to the onshore delivery point near Venice, Louisiana. These matters are set forth in detail in the subsequent discussion of the premium, onshore delivery feature.

Approximately 70 percent of the field, as presently defined, is within the interim 3-mile limit, referred to as Zone 1. It is subject to the taxing jurisdiction of the State of Louisiana. The remaining part of the field is in Zone 2. It extends out into the Gulf of Mexico beyond the interim 3-mile limit and is part of the Outer Continental Shelf area (O.C.S.). It is one of the critical areas in dispute between the State and Federal government. Louisiana taxing jurisdiction may be extended to include it. In fact, if the seaward boundary of Louisiana is based upon the shoreline as it existed at West Delta in 1830 (the State's historic boundary), all of the existing wells in the field will be within the taxing jurisdiction of the State of Louisiana. The Producers are obligated to pay severance taxes to the State on gas produced from all or any part of the Zone 2 leases which are ultimately determined to be within the seaward limits of the State.

As shown on Appendix D, most of the leases are from the State of Louisiana and are located in Zone 1 waters. Three Zone 2 leases from the United States are included. It is presently contemplated that production necessary to fulfill contract commitments to Southern will come from wells located on State leases in Zone 1. However, if field unitization is not completed prior to the time deliveries of gas from the field commence, two or three Zone 2 wells will also be connected.

The leases within the field cover 14,588 gross acres and all are owned by Gulf and Humble. Of the nine separate tracts covered by the leases each of the Producers own 100 percent of the working interest in one tract, two tracts are owned 75 percent by Gulf and 25 percent by Humble, and the remaining five tracts are owned 50 percent by each. Gulf is the operator of the jointly-owned properties.

The initial test well drilled in the field was on State Lease No. 2,869, Well No. A–1, which was completed on June 20, 1957, at a total depth of 15,450 feet. At the time Southern's direct case was prepared, which was prior to March 11, 1963, there were 20 gas-well completions in the field and 17 sands or reservoirs had been proven productive at various depths ranging from 8,200 feet to 16,000 feet. The majority of the gas reserves are located at depths of 14,000 feet or below, with the largest reservoirs being found below 15,000 feet. Since Southern's preparation of its reserves Exhibit, another large and deeper sand has been discovered, the K–6–A Sand at 16,500 feet. Several more wells have been drilled.

The uncontradicted evidence establishes that the West Delta Block 27 Field reserves of Gulf and Humble are far in excess of those needed to deliver to Southern the total of the contract quantities of 1.25 trillion cubic feet. Although only that quantity is covered by the two contracts, Southern is given priority in purchases over all others to whom gas from the Field may be sold. Exhibit 2 and related testimony shows, on the basis of data and information furnished to Southern by Gulf, that reserves as of the time the exhibit was prepared were estimated to be 2,433,464 MMcf at 14.73 psia. Since it was not necessary to prove reserves exceeding the contract quantity, and because of pending lease sales for additional acreage, the Producers did not make available to Southern certain data showing even larger reserves. At the time of the hearing, Gulf's estimates showed that the field reserves now exceed five trillion cubic feet, and may prove to be far in excess of that amount after additional drilling is completed.

B. *The Contracts*

Negotiations for the sale of all the gas from the field were begun by Gulf in the fall of 1960 and by Humble in 1961. It was not until February 1962, however, that Gulf and Humble began the negotiations with Southern which culminated in the present contracts to sell a specific volume. These negotiations continued through the spring of 1962. As previously shown, the contracts and amendments thereto were executed in June and December 1962, respectively.

The Examiner finds that there is no corporate affiliation between Southern and either Gulf or Humble; that the separate contracts were arrived at as the result of arm's-length negotiations between Gulf and Humble on the one hand, and Southern on the other.

The volume of gas which each Producer will sell to Southern will be based upon its proportionate part of the total reserves in the field. The proportionate parts are to be initially determined at least 60 days before first deliveries under the contracts here involved are made. The contracts recognize that the Producers' reserves in the field exceed 1.25 trillion cubic feet and that the Producers are not agreeing to sell, and Southern does not intend or desire to purchase, more gas than that amount. They further recognize that the Producers anticipate making sales of gas to others, which gas is to be produced from their reserves in the field in excess of that necessary to meet their obligations to Southern. In addition, Southern agrees to such additional sales subject to the Producers' commitment to it as provided in the contracts.

The gas will be delivered at high pressures up to 1,100 psig and will be pipeline quality gas. Provisions concerning delivery to Southern are set forth in the discussion of the premium features contained in the contracts. The Examiner finds that Gulf and Humble are willing and able to make their proposed sales.

There are no favored-nation or price redetermination clauses in the contracts. The Examiner finds that payment of the contract price of 21.25 cents per Mcf would not trigger any favored-nation clauses or affect redetermination clauses in any contracts of Gulf, Humble or Southern.

The Producers contend that the contracts contain several unusual and significant features which will be beneficial to Southern and, ultimately, to its customers. Such features are (1) provisions for the sale of a fixed volume, (2) a deferred or slow build-up in deliveries to full contract quantities with wide swings in gas takes, (3) a 10-year make-up period for any volumes paid for but not taken, and (4) delivery to the purchaser onshore. Since these features have an important bearing upon the decision herein, they will be discussed in detail following a determination of the "in-line" price in June 1962 for southern Louisiana contracts. Before that determination may be made, however, certain contentions by the Producers must be considered.

C. *Producers' Contentions*

Gulf and Humble jointly contend (1) that the evidence demonstrates that the initial price of 21.25 cents per Mcf is not only the price required by the present and future public convenience and necessity, but is also "in line" when appropriate consideration is given to various matters, and (2) that the certificates issued to them should be limited to the combined total sale under both contracts of 1.25 trillion cubic feet of natural gas. No party has contested the request for a limited certificate. The Producers assert that the proposed initial price is the same price which the Commission has held to be in the "public interest" and the "in line" price for sales from the southern Louisiana area.[34] They also state that the evidence of historic trends and price, current market price, and the certificated sales in the area show that the proposed price is not only "in line" but well below the "in line" level of prices for other sales in the area. In addition, they allege that the special features previously listed are not ordinarily found in contracts in the area and that this emphasizes that the proposed sales are required by the present and future public convenience and necessity at the initial contract price.

The Producers also urge the Examiner to reconsider his ruling excluding Exhibit 13 and related testimony, and to admit such evidence into the record.

---

[34] *Statement of General Policy No. 61–1,* as amended (18 CFR, Chapter I, Part 2, Section 2.56), hereinafter sometimes referred to as the *Policy Statement.* Particular reference is made to the *Fourth Amendment to the Policy Statement,* October 31, 1961, 25 FPC 661.

The proffered evidenced related to underlying economic trends, changes in the underlying economic forces, and the supply, demand, drilling costs, and exploration activity in the area. Since the Examiner's ruling, the Commission has clearly stated that such material is of no value in this type proceeding. *Placid Oil Company, et al.*, Docket No. G-13183, *et al.*, Opinion No. 398, 30 FPC 283, issued July 17, 1963, rehearing denied, Opinion No. 398-A, issued September 11, 1963; *United Gas Pipe Line Company, et al.*, Docket No. CP60-36, *et al.*, Opinion No. 399, 30 FPC 329, issued July 17, 1963.

In support of their general position, the Producers, in addition to commenting on Staff's evidence and the Interveners' position, make several specific contentions in discussing the public convenience and necessity standard found in Section 7(e) of the Act. First, they contend that it is only in the event the evidence does not permit certifications at the proposed price that a different price level or "in line" price determination is to be reached. They state the matter as follows:

> There is no jurisdictional requirement that certificates can be issued *only* at "in line" prices. Certificates may be issued at the proposed price if supported by *all* factors affecting the public interest regardless of whether they are found to be "in line." The "in line" issue comes into play *only* if it is first determined that the public interest does not permit certification at the proposed price. [Underscoring in original; Initial Brief, p. 17.]

It is contended that *Atlantic Rfg. Co.* v. *Pub. Ser. Comm'n.*, 360 U.S. 378 (1959), the *CATCO* case, requires this order of determination. In the Examiner's view the interpretation placed upon the *CATCO* case by the court in *United Gas Improvement Company* v. *Federal Power Commission*, footnote 5, *supra*, controls the matter. In that case the court stated as follows:

> In the case before us the certificates were ordered to be issued in permanent form and without price conditions. In the light of Catco this was warranted insofar as prices are concerned only if the Commission found on substantial evidence (1) that the proposed initial rates were not "out of line" as the Supreme Court used those words, or that if "out of line" the public convenience and necessity of certifying at those rates had been established, and (2) that their approval would not result in a "triggering" of general price rises or an increase of the applicant's existing rates. [283 F. 2d at 821.]

The Producers next contend that in the Fourth Amendment to the Policy Statement the Commission found the area price of 21.25 cents per Mcf to be "in-line" and in the "public interest" and that, as a result, they were entitled to, and did, rely upon the said area price in agreeing to their contracts.[25] The Commission has never held that reliance on the *Policy Statement* would be a factor in determining the appropriate initial price. In *Skelly Oil Co. et al.*, 28 FPC 401, rehearing denied, 28 FPC 1065, decided after the execution of the instant contracts, the Commission expressed a caveat concerning such matter.

The evidence supports the finding, as contended by the Producers, that they entered into their contracts due to, among other things, reliance upon the price set forth in the *Fourth Amendment to the Policy Statement*. As a result of such reliance, they allege that they "agreed to sell an extremely large and valuable supply under disadvantageous and expensive conditions at a price much lower than that which has been paid and certificated for smaller, less valuable sales." (Initial Brief, p. 19)

---

[25] The Producers incorrectly state (Initial Brief, p. 17) that the Commission by the Fourth Amendment to the Policy Statement has determined the "in-line" price to be 21.25 cents per Mcf. That Amendment only announced that effective October 31, 1961, the Policy Statement "ceiling price level," not the "in-line" price, for initial sales in southern Louisiana, inclusive of state taxes, would be 21.25 cents per Mcf at 15.025 psia. Furthermore, the Commission has often stated that the ceiling prices in the Policy Statement are guideline price levels only. See, among others, *Texaco Seaboard, Inc., et al.*, Docket No. CI61-118, *et al.*, Opinion No. 383-A, 30 FPC 613, issued August 27, 1963; and *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, order issued April 2, 1963, 29 FPC 697.

The question of what detriment, if any, resulted to the Producers from such reliance is not an issue in this case.[36] The issue is whether or not the Fourth Amendment to the Policy Statement established a price which, in the absence of other evidence, was to be binding on the Commission and the public in contested cases. The reliance contention is, in effect, (1) a contention that the Policy Statement constitutes a prior determination by the Commission of the "in-line" price in the area, and (2) that such determination constitutes reliable, probative and substantial evidence which, in the absence of controlling evidence to the contrary, requires a similar determination and finding by the Examiner.

The evidence of record, and that available by official notice, shows that the Policy Statement, and amendments thereto, were issued without notice, hearing, or record. If the rule were as intended by the Producers, the Commission could by its *ex parte* action give legal sanction, with accompanying evidentiary weight, to prices which would affect parties without their consent or opportunity to be heard. To state the proposition is to demonstrate its fallacy. The Examiner finds that the ceiling prices in the Statement of General Policy and amendments thereto do not constitute reliable, probative and substantial evidence in this case.

The next question is whether or not the proposed initial price is "in-line" with other prices in the area. The Producers contend that the proposed initial price is "in-line" and that "insofar as there may be a price issue in this certificate proceeding" its price should be evaluated in the perspective of the historic pattern of market prices in southern Louisiana. (Initial Brief, p. 23) The Examiner will first determine the "in-line" price in the southern Louisiana area as of the date of the contracts and then will ascertain the amount in excess of such price which the parties should be permitted to recover, in accordance with this Commission's decision in the *Medina* case,[37] for premium features.

D. *Limited Certificate*

Section 7 (b) of the Act provides as follows:

> No natural-gas company shall abandon all or any portion of its facilities subject to the jurisdiction of the Commission, or any service rendered by means of such facilities, without the permission and approval of the Commission first had and obtained, after due hearing, and a finding by the Commission that the available supply of natural gas is depleted to the extent that the continuance of service is unwarranted, or that the present or future public convenience or necessity permit such abandonment.

As previously shown, the Producers desire a certificate which will authorize each of them to make the sale of the described limited volume and authorize the termination of such sale when such volumes have been sold. No party has objected to this request. It may be approved if legal, physical, financial or other factors are shown to exist upon which a finding can be based that the present or future public convenience or necessity permit the abandonment. *Sunray Mid-Continent Oil Co.* v. *Federal Power Com'n.*, 239 F. 2d 97 (CA10), reversed on other grounds, 353 U.S. 944. In another *Sunray* case the Supreme

---

[36] In this connection it is observed that at this time the gas reserves in question have not been dedicated in interstate commerce.

[37] *Medina Gathering Corporation, et al.*, Docket No. CP62–194, *et al.*, Opinion No. 397, 30 FPC 227, issued July 16, 1963.

Court concurred in this view. *Sunray Oil Co.* v. *F.P.C.*, 364 U.S. 137, 157.[38] The above factors are present in this case.

Gulf and Humble presented unchallenged testimony which set forth the reasons why they decided to sell Southern a specific volume of gas from the entire West Delta Block 27 Field, rather than confine the sales to gas reserves in some leases, or producing reservoirs, carved out of the field, and also why they desire certificates conditioned as to time. The reasons are compelling and require a finding, which is hereby made, that the present and future public convenience and necessity permit the issuance of certificates conditioned as to time. The reasons are summarized as follows: (1) the reserves in the field far exceed the 1.25 trillion cubic feet being purchased, (2) Southern did not desire to purchase more than 1.25 trillion cubic feet of gas from both Gulf and Humble, (3) Gulf and Humble desire to make additional sales of the excess reserves and need assurance that this may be done and that subsequent purchasers can be assured that the reserves in excess of the volumes sold to Southern are available to them, and (4) there was no practical way to carve out the specific volumes of gas needed by Southern by committing separate reservoirs or leases to the contracts. A satisfactory solution to the problems encountered could not be found because of several complicating factors. These factors included the variation in interest ownership of Gulf and Humble under the several separate leases in the field, variations in the location and extent of the many productive reservoirs in the field, and the fact that the lessor and royalty owner under five of the leases is the State of Louisiana and under three of the leases is the United States of America.

In each instance, where an attempt was made to confine the sale to Southern from particular leases, or particular reservoirs, one or more of the following difficulties were encountered: having too little or too much reserves, impairment of orderly development of the field, unjustifiable expenditures for drilling unnecessary and very expensive additional wells, possible reservoir damage, the risk of lease termination controversies and possible claims for payment of compensatory royalties. The matter of unnecessary drilling requires further comment. As a result of the necessity to drill wells in order to obviate rental payments, the Producers have already drilled wells in the fields at a high cost and could not, therefore, justify the failure to produce them. Also, committing to the contract only one or two reservoirs would have required unnecessary drilling of expensive wells. Existing wells vary in producing depths from 8,000 feet to over 16,000 feet and have cost from $200,000 to $1,542,000 to drill. Similar problems were encountered in considering whether gas reserves in certain of the leases, as distinguished from reservoirs, might be carved out and committed to the Southern contract. Drilling of additional wells on just a few leases necessary to develop contract deliverability thereon not only would have required additional expenditures, but would also have impaired the orderly development of the field from a conservation standpoint.

E. *In-line Price*

The Court of Appeals for the District of Columbia Circuit recently has defined the "line" as used in the *CATCO* case, *supra*.[39] At page 7 of its slip opinion it stated that "the line means the price at which similar sales, not suspect, were made under similar circumstances from the same area about the same time."

---

[38] For Commission cases see: *Humble Oil & Refining Co. et al.*, 19 FPC 89, 90; *Natural Gas Pipeline Company of America et al.*, 24 FPC 222, 229–230.

[39] *Atlantic Refining Company* v. *F.P.C.*, 316 F. 2d 677 (CADC), No. 17166, decided March 21, 1963.

The Commission recently issued two opinions concerning the "in-line" price in Southern Louisiana.[40] The contracts in the *United* case were dated December 22 and 28, 1959, and involved the sale of gas by Gulf Oil Corporation and Tidewater Oil Corporation from the Bastian Bay Field. It, like the West Delta Block 27 Field herein, is in Plaquemines Parish, Louisiana. The contracts in the *Placid* case were entered into during 1957 and 1958, and also involved the sale of gas, by various companies, from the Bastian Bay Field, albeit several parishes removed.

Since the two contracts in this case also involve the sale of gas from the southern Louisiana area, the opinions in the *United* and *Placid* cases are particularly relevant. At page 289 of the opinion in the latter case the Commission, in determining the 1957 and 1958 "in-line" price, stated as follows:

> In Opinion No. 351, we recognized that in the years from 1957 through 1959 a number of contracts were executed in the range between 20 and 23 cents, although observing that "even in those years there were many contracts around 18 cents and below and a scattering below 15 cents." It must also be noted, however, that many of the contracts referred to in that Opinion as having initial prices of 20 cents or more are the very same sales which are involved in the instant proceeding. In formulating the price line applicable here, the producers would have us rely upon a presentation which, to a large extent, not only incorporates the complete number of contracts originally involved in this proceeding, but likewise includes the *CATCO* contracts, and all at the original contract prices. The decision of the Ninth Circuit remanding one of the dockets involved in this proceeding,[1] which was followed by other courts in setting aside other orders of the Commission granting certificates for sales from Southern Louisiana at prices of 21.4 cents and above,[2] has made it clear that sales which are under Commission or court review are not legally relevant for purposes of determining an in-line price. *The same decision also makes plain that like prices in the same area, even though themselves not under review, are equally suspect and "ought not to be relied upon in fixing a line except upon evidence and findings to the effect that they are not subject to the same infirmities which are under test in the pending proceedings."*[3] We agree with the finding by the examiner that the record does not show that the 1957–1958 "suspect like prices" at levels above 18.5 cents were not subject to the same infirmities which produced the *CATCO* reversal. It is our opinion, therefore, that the post-*CATCO* field price statistics relied upon by the producers to support their contract prices provide no valid basis for determination of a proper price line in the Southern Louisiana area. For the reasons set out herein and in the initial decision, we conclude that 18.5 cents per Mcf, exclusive of tax reimbursement, is the proper public interest initial price applicable to the instant sales. [Italic supplied.]

In making an "in-line" determination as of December 1959, the Commission in the *United* case made the following pertinent comments at page 333 of its opinion:

---

[40] *United Gas Pipe Line Company, et al.*, Docket No. CP60–36, *et al.*, Opinion No. 399, 30 FPC 329, issued July 17, 1963; and *Placid Oil Company, et al.*, Docket No. G–13183, *et al.*, Opinion No. 398, 30 FPC 283, issued July 17, 1963, rehearing denied, Opinion No. 398–A, issued September 11, 1963, 30 FPC 682.

While our determination does not involve much of the material apparently considered by the examiner, our ultimate conclusion is the same, namely that the permanent certificates issued to Gulf and Tidewater should be conditioned to a base initial price of 18.5 cents per Mcf. Exhibit No. 19, and the testimony of the introducing witness clearly and convincingly establishes that the contract "in-line" price during 1958 and 1959 in the southern Louisiana area, considering all applicable contracts not containing suspect prices within the criterion initially spelled out in *U.G.I.* v. *F.P.C.*, 283 F. 2d 817, 824 and implemented by us in our *Skelly* and *Placid* decisions, was 18.5 cents per Mcf exclusive of tax reimbursement. We shall, therefore, require that the rate schedules filed by Gulf and Tidewater be amended to substitute this price in place of the 22.5-cent price provided in the contracts. In conformity with our decisions in *CATCO* and *Placid*, we shall permit Gulf and Tidewater to collect an additional 1.5 cents per Mcf for partial reimbursement of the Louisiana severance tax.[41]

Staff Exhibit No. 22, Schedule 2–G through 2–I, as summarized in Schedule 2 of the Producers' Exhibit No. 28, shows the distribution of the initial rates for sales under contracts dated in 1960–62 which have been permanently certificated as of January 21, 1963. Such sales are as follows:

Initial rate adjusted for current tax reimbursement (a)	Initial base rate (b)	Number of sales (c)	1961 sales volume (Mcf) (d)	Percent of total volume (e)
(Cents per Mcf at 15.025)				
10.5	9.00	1	186,000	0.67
10.75	9.00	1	960,000	3.44
12.5	12.50	1	684,534	2.45
14.25	12.50	1	257,297	.92
15.8007	14.0807	5	953,975	3.41
16.25	14.5	2	425,403	1.52
18.0	16.5	1	28,800	.10
18.3	16.8	1	91,972	.33
18.5	17.0	1	409,428	1.47
18.75	17.00	4	1,752,478	6.27
19.5	18.0	12	2,474,897	8.86
19.75	18.25	4	800,014	2.86
19.9	18.4	5	2,027,246	7.26
20.375	18.5	4	487,739	1.75
20.75	19.0	1	135,156	.48
21.75	20.0	2	1,499,282	5.37
23.25	21.5	2	14,763,907	52.85
Total		48	27,938,218	100.00

The two sales at the initial base rate of 21.5 cents per Mcf, which account for 52.85 percent of the total volume during the period in question, were entered into pursuant to contracts dated January 22 and 27, 1960. They were certificated by the Commission in *Trunkline Gas Company, et al.*, 24 FPC 1020 (1960).

Since the contracts entered into through 1959 have been held to be affected by the erroneous *CATCO* price of 21.4 cents per Mcf, and since this record shows that no pertinent fact occurred during the 30 days between the contract dates in the *United* case and those in the *Trunkline* case, the permissible inference is that the *Trunkline* contracts were also affected by the *CATCO* price. Insofar as shown on this record, they are subject to the same infirmities which were under test and ultimately proved fatal in the *CATCO* litigation. The Examiner finds that they must be regarded as suspect, and may not be used to establish a proper price line in the area. Of the remaining sales, the total of those at 18.4 and 18.5 cents constitute the greatest volume moving in interstate commerce. Based upon the foregoing, and the evidence of record in this case, the Examiner finds that the proper price line in the southern Louisiana area in June 1962 was 18.5 cents per Mcf, adjusted to 20 cents where tax reimbursements are applicable.

---

[41] The *Skelly* case referred to is *Skelly Oil Company*, 28 FPC 401, rehearing denied, 28 FPC 1065.

In this case, however, the "in-line" price is not the price required by the public convenience and necessity. This is because the subject contracts have special features not found in the contracts which were used to establish the foregoing "in-line" price.

As previously shown, the instant contracts contain four special features, namely, (1) large and specific volume of gas supply, (2) ten year make-up provision, (3) slow build-up in contract quantities, and (4) on-shore delivery to Southern. Only the last two are objectively measurable. They show that a total of one cent per Mcf should be added to the "in-line" price of 18.5 cents per Mcf.

F. *Premium Features*

Staff "feels that the advantages to [Southern] are no greater than the advantages to Gulf and Humble and therefore [it] is not willing to grant that Gulf and Humble are entitled to any more money per Mcf for gas sold under the contracts in this proceeding than other producers are entitled to receive in southern Louisiana." (Staff Brief, p. 66) After referring to various matters, which will be described subsequently, Staff states as follows:

> The staff does not point out these facts to discount that a ten-year make-up period is desirable or to imply that it is not helpful to the pipeline to be able to schedule taking large volumes of gas over a four-year period. These facts are only mentioned to show that there are some beneficial aspects to the contracts to be enjoyed by Gulf and Humble as well as Southern. [Staff Brief, p. 66.]

In considering the respective advantages and disadvantages to the Producers and Southern, the contracts must be compared with the contracts in the southern Louisiana area which have been used to find the "in-line" price of 18.5 cents per Mcf. When so considered it is the Examiner's view, for the reasons stated hereinbelow, that the contract provisions here are more advantageous to Southern and its customers, the ratepayers, in an "objectively measurable" amount. *Medina Gathering Corporation, supra*, footnote 37. In that case the Commission provided for consideration of special features in a contract.[43]

---

[43] At pages 231 and 232 of its opinion it stated as follows:

> Moreover, we need also to consider certain claims by the producers that their contracts give Medina the benefit of certain premium features. We agree entirely with the Examiner that the alleged option of Medina to acquire storage rights in the wells upon cessation of production does not justify a bonus above the "in line" price since the prevailing practice in the area is to include an option to acquire storage rights as part of the contract package. * * * The Examiner was of the view that it was unnecessary to resolve this and other questions surrounding the alleged premium feature since the claim could more appropriately be raised in defense of the justness and reasonableness of any increased rate that the producers might file. We believe, however, that a consistent application of the "in line" comparison requires that we give consideration at the stage of certification to any additional feature of the proposed sale which is of objectively measurable value. In this case we think it is sufficient to say that permitting the producers to maintain the existing contract escalations will, in our judgment, more than amply provide for whatever additional market value the six-months peaking feature gives these contracts over and above the prevailing forms of contract in the area.

1. *Large and Specific Volume of Gas Supplies*

The contracts herein commit for delivery and sale to Southern the extremely large volume of 1.25 trillion cubic feet of natural gas over the contract periods. They also provide for Southern to take-or-pay-for the following minimum volumes until it has purchased the total fixed volume of 1.25 trillion cubic feet:

Minimum take (Mcf/Day)	Period involved	Days	Billion cubic feet
40,000	11-1-63—12-1-64	395	15.8 (1st yr.)
60,000	12-1-64—12-1-65	365	21.9 (2d yr.)
100,000	12-1-65—12-1-66	365	36.5 (3d yr.)
Totals		1,125	74.2
171,025 *	12-1-66 and thereafter		

* $\frac{1,250-74.2}{8,000-1,125}=\frac{11,758}{6,875}=$171,025 Mcf per day, as computed pursuant to Article 4, Section 1, of the contracts.

The Producers contend that acquiring large volumes at one point will save Southern an undetermined sum in present investment and future expense in connecting the gas, compared to the cost of acquiring a similar gas supply from several smaller sources. The provision for the commitment of a fixed quantity of gas is unusual. Most southern Louisiana sales commit to the contracts all of the gas which may underlie the leases subject to the contracts and provide for a daily contract quantity in terms of a ratio to reserves. In such cases ultimate development and additional discoveries may increase or decrease the purchaser's daily take obligations. In this case, however, it is probable that ultimate development would, under the usual type contract, increase Southern's daily take obligations. As a consequence, the Producers contend that contracts here are advantageous to Southern because (1) its minimum and maximum take obligations are fixed throughout the contract life, and (2) it is provided assurance that supplies in the specified quantities will be available but that it will not have to take more than the specified quantities.

Staff agrees that Southern is benefited by obtaining a large and specific supply of gas on the two contracts. It also agrees that Southern is benefited by the slow build-up provisions subsequently discussed. It contends, however, that such benefits are offset by the fact that the Producers have an immediate sale for the gas and thereby eliminate lease-rental fees. Staff states the point as follows:

> For example, the Producers stress the fact that they are obligated to be actively drilling wells on each of the leases involved in order to keep from paying annual rental fees of up to $1,515,500 and that they have already drilled more wells in West Delta Block 27 Field than are required to make deliveries to Southern just to avoid paying these rentals (Tr. 312-313; 453-454). Thus, the gradual buildup in volumes [as shown above] is preferable to paying large rental fees. [Staff Brief, pp. 64-65.]

Producers contend, and the Examiner finds, that the evidence as to large delay rental payments was presented to show, among other things, why it was necessary to drill the initial well on each lease the first year of the term, and does not mean that once production is established by a successful well, such rental payments continue. Royalties, however, must be paid. It is not clear from this record whether or not the royalties would have to equal the rentals (Tr. 1579).

Long Island Lighting states that the large and specific volume feature of the contract provides no basis for a premium price. It contends that the large volume feature is already accounted for in the determination of the price line,[43] and that "the specific volumetric dedication is not shown to be an item of special value to the pipeline or special cost to the Producers." (Brief, pp. 16–17)

The Examiner finds that the record supports the following contentions made by the Producers in their Reply Brief at pages 23 and 24:

> By having this total of 1.25 trillion cubic feet available at one point onshore, Southern can take large volumes into its system at low cost with a minimum extension of its existing pipeline (Tr. 73). It is saved substantial investment and expense compared to such costs as would be involved if it were required to build facilities sufficient to obtain a similar supply from several smaller sources (Tr. 304). * * * The evidence also shows that the fixed commitment of the specific quantity of gas (1.25 trillion cubic feet) has the definite advantage to the buyer of providing assurance that supplies in the specified quantities will be available, without risk to the buyer that its minimum and maximum takes may be increased, a risk which exists in the typical contract where the quantity is specified in terms of a ratio to reserves * * *. [Tr. 74, 361–362.]

The undisputed evidence of record shows that in the natural-gas industry large volumes of gas sell for higher prices than smaller volumes of gas. The Examiner finds that the dedication of the large and specific volumes of gas by the Producers results in an advantage to Southern. Some benefit may also result to Gulf and Humble from the fact of early production with the resultant decrease in rental payments. This record, however, does not permit of (1) an objective measurement of the value of either such benefit, or (2) a finding that the benefit to Gulf and Humble is more than the benefit accruing to Southern from the large and specific volumes feature of the contracts.

As subsequently shown, the loss resulting to the Producers from permitting Southern to build up its minimum takes over a three-year period can be objectively measured. The general allegation that this specific loss is also offset by an immediate sale for the gas does not meet the burden of going forward with evidence to show the extent of such offset, if any.

2. *Slow Build-up in Contract Quantities*

As shown in Exhibit 4 and the gas supply section of this decision, Southern probably will be able to make up all its present minimum take deficiencies, which are substantial, by the end of 1965 even though it is purchasing large quantities of gas from the Producers herein.

Exhibit 4, as previously summarized, shows that at the end of the 1965 contract year the cumulative make-up is expected to equal exactly the cumulative deficiency of 16,198 MMcf. The major reason why Southern was able to contract for the specific volume of 1.25 trillion cubic feet, and yet not show a deficiency in takes at the end of 1965, was due to the slow build-up features in the Producers' contracts. Under the slow build-up provisions Southern must still take the full 1.25 trillion cubic feet, but may take the gas in the following quantities: 40,000 Mcf per day through November 1964; 60,000 Mcf per day to December 1, 1965; 100,000 Mcf per day until December 1, 1966; and 171,025 Mcf per day each day thereafter.[44]

---

[43] This contention is based upon the testimony quoted in *United Gas Improvement Co.* v. *Federal Power Commission*, 290 F. 2d 133, at 136 (CA5, 1961), certiorari denied, 368 U.S. 823. It was not made a part of this record and the witness was not available for cross-examination. No weight is accorded such testimony in this proceeding.

[44] The contracts also permit Southern wide swings in takes to meet its varying requirements. The Producers are required to have available a deliverability of 150 percent of the minimum take requirements, or 256,537 Mcf per day the fourth year and thereafter, while Southern may in any particular month make purchases of only 1/24 of the minimum annual take (Tr. 1560).

The minimum take obligations in the first three years would be much greater under the usual type contract. The usual contracts in the southern Louisiana area provide for daily contract quantities based upon a ratio of production to reserves, in cubic feet, of 1-to-7300 for a 20-year period or 1-to-8000 for a 22-year period.[45] If Gulf and Humble had insisted upon the usual type contract, that is, the type of contract upon which the "in-line" price is based, Southern's take-or-pay position at the end of the 1965 contract year would be intolerable. Under a 1-to-8,000 ratio minimum take in each year, Southern would have been required to purchase a minimum of 156,250 Mcf per day in each year until it had taken the full 1.25 trillion cubic feet. In the first year, therefore, it would be taking 116,250 Mcf per day more than the presently required 40,000 Mcf; in the second year 96,250 Mcf more; and in the third year 56,250 Mcf per day more. (In each year after the third year it would be taking 14,775 Mcf less than the present contract quantities.)[46] The additional first, second, and third year annual excess quantities which Southern would be required to take would be, respectively, 42,431,250 Mcf, 35,131,250 Mcf, and 20,531,250 Mcf. On a cumulative basis such annual quantities would be 42,431,250 Mcf, 77,562,500 Mcf, and 98,093,750 Mcf, respectively. At 18.5 cents per Mcf, the prepayments in each of the years would be, respectively, $7,849,781, $6,499,281, and $3,798,281, for a total of $18,147,343. Obviously, Southern could not place itself in such a minimum-take position. A different arrangement was required. The new method results in a benefit to Southern's customers and a detriment to the Producers.

In computing the benefit to Southern from the slow build-up provisions it must be remembered that the usual southern Louisana contracts contain a make-up period for less than the 10-year period in the instant contracts. Under the usual type contract, therefore, and in view of its 1962 deficiency in takes of 12,091 MMcf at 14.73 psia, Southern probably would lose its right to take a large part of the gas previously paid for.[47] The consumers would bear the full burden of such loss. Since Southern might be able to cut back in takes from some of the fields, the precise amount of the loss cannot be estimated. This record, however, supports a finding that the benefit to the consumers by not having such loss is at least as great as the detriment to the Producers, which will now be computed.

The effect of granting to Southern the right to take substantially less gas during the first three years, compared to what it would have to take under constant deliveries at a 1-to-8000 rate throughout the contract period, will be to decrease the present worth of future revenues under the contracts, at a 10 and 12 percent discount rate, by $9,500,000 and $10,400,000, respectively. These amounts are based on the contract gas price, including escalations, and are equivalent to approximately 0.8 cent per Mcf over the life of the contracts. If no price escalations are considered, the present worth of future gross revenues, at the same discount rates, would be decreased $10,700,000 and $11,300,000, respectively, or approximately 0.9 cent per Mcf. Using identical contract prices, the cumulative gross revenues under the contracts herein would not equal those received under ordinary take provisions until the nineteenth year, assuming price escalations, and not until the twenty-second year, assuming no escalation.

The "present worth of future money" theory has been recognized as a valid proposition by the United States Supreme Court. In *Ches. Ohio Ry.* v. *Kelly*,

---

[45] The contract is drafted to provide a theoretical depletion time of 22 years (Tr. 1581).

[46] The effect of Southern's being required to take more than the usual contract quantity after the third year will be discussed subsequently herein.

[47] In computing its minimum take position at the end of the contract year 1965, Southern has given consideration to its own production. For each field from which it has production, either 100 percent owned or otherwise, it set aside a minimum take in each year in order not to suffer drainage or loss to the other producer-owner in the field.

241 U.S. 485, 489, it succinctly stated the matter as follows: "It is self-evident that a given sum of money in hand is worth more than a like sum of money payable in the future."

Although the *Kelly* case involved the payment of money to an individual, in the Examiner's view the proposition is equally applicable to the payment of money to a corporation. In this case, the "present worth of future money" theory is based upon the proposition that if the Producers had sold to Southern the 1.25 trillion cubic feet of gas in accordance with the usual contract terms in southern Louisana, the minimum take per day to Southern would be about 156,250 Mcf. At the request of Southern, the Producers did not do this. Instead, they agreed that Southern could take the 1.25 trillion cubic feet of gas in the manner previously stated. As a result, the Producers will have to hold available in the first three years 42,431,250 Mcf, 35,131,250 Mcf, and 20,531,250 Mcf of gas, respectively.[48] During the first three years, therefore, the Producers will receive less money than they would have received for the gas if they had insisted upon Southern's agreeing to the usual contract terms.

The failure to receive money in the first three years results, as previously shown, in a loss of approximately 0.8 cent per Mcf over the life of the contracts. The discount factors used in the arithmetical computation were 10 and 12 percent. The 10 percent figure is the return on common equity, as distinguished from the overall rate of return, which the Examiner allowed in Gulf's recent rate case.[49] The 12 percent was a similar return allowed in the *Phillips* case.[50] A return on equity is proper because the operation "can be considered as being financed entirely from equity capital." (Tr. 1646) The foregoing computation of the present worth of future revenues has not been challenged by any party insofar as the arithmetical computation, or the use of allowances for return on equity, is concerned.

The Examiner knows of no certificate case where the discount factor has been utilized by the Commission. In the *CATCO* case, however, it refused to permit the use of the discount factor where it was applied to a sum which had been arrived at by the use of speculative evidence. Also see the Examiner's decision in *Cities Service Company, et al.*, Docket No. G–16563, *et al.*, adopted by the commission in *Jake L. Hamon, et al.*, Docket No. G–16747, *et al.*, order issued June 11, 1963. The figures here, however, are not based upon the speculative evidence.

Certain subsidiary contentions concerning the slow build-up feature remain to be considered.

Staff contends that the gradual build-up in volumes previously indicated is preferable to paying large rental fees. This contention has been discussed and disposed of previously in connection with the advantage to Southern of large and specific volumes.

Long Island Lighting makes the following contentions at pages 15 and 16 of its brief:

> As to the slow build-up, it is, of course, not unusual under the ordinary contract for volumes to increase substantially after the first few years

---

[48] Article 2, Section 2 of the respective contracts makes it clear that the Producers must hold such gas available for Southern. It cannot, therefore, sell such gas and then in the years subsequent to the third year replace it from other reserves or sources. This point was not raised by any of the parties. Staff, however, in another context, stated that "there is nothing that Gulf and Humble can do with this [1.25 trillion cubic feet of] gas but hold it in reserve for Southern until such time as Southern can use it." (Staff Brief, p. 66).

[49] *Gulf Oil Corporation, et al.*, Docket No. G–9520, *et al.*, Initial Decision (not in bound volume), issued September 24, 1962, at pp. 58 and 59 and Settlement Order issued April 25, 1963, 29 FPC 837.

[50] *Phillips Petroleum Company*, 24 FPC 537.

under the reserve-redetermination provisions as reserves are proven up; the producers brief (p. 8) forthrightly concedes as much. Hence, the slow-build-up with the definite commitments does little more than make certain what usually happens under the normal contract provisions. Moreover, the 0.8¢ reduction contemplated by the witness Henry, employing at 10% discount factor, represents approximately the same reduction in value that would accrue if deliveries were delayed eight months beyond the contemplated initial date (*i.e.*, all deliveries pushed back eight months); since the in-line level includes the impact of sales to "paper pipelines" (Proposed new pipelines not in operation at the time the contracts are executed), it already includes a delay factor of probably more than eight months (see Tr. 1648). Finally, if a premium based on a discount factor of 10% is to be added to the in-line price for slow build-up, then this "special" feature is of no value whatsoever—it would be better for the pipeline and its customers if the pipeline were required to "take or pay" at the normal levels and were to include the volumes paid for but not taken as prepayments at a 6% return.

These three contentions will be considered seriatim.

The decision herein must be based upon a comparison of the instant contracts with the normal-type contracts in the area. Under the latter-type contracts the minimum-take formula (1-to-8000 or 1-to-7300) is applied initially to the quantity of reserves the parties estimate to be in the field committed under the contracts. Producers are paid on the basis of such quantities until reserve-redeterminations are made, usually several years later. Such redeterminations do not retroactively affect the sum of money received by the Producers in the first few years. *In comparison*, the Producers in this case have agreed to sell gas in accordance with the desires of the buyer, as distinguished from the usual formula. The results flowing from this difference have been previously set out.

The position of Long Island Lighting that the .8 cent per Mcf reduction in present worth represents approximately the same reduction in value that would accrue if deliveries were delayed eight months beyond the contemplated initial date, overlooks the fact that the revenue used as a basis to compute the present worth figure is not considered until after deliveries start. This is succinctly illustrated by the following colloquy between counsel for Long Island Lighting and the witness for Gulf:

> Q. Are you aware, also that there have been time lags between date of initial delivery caused by delays due to contested hearings over the initial price issue?
>
> A. Yes, I am aware that there has [*sic*] been delays between the date of contract and the date of initial delivery, but now that is not what we are talking about here.
>
> Q. I appreciate that. [Tr. 1648.]

Long Island Lighting's last contention was that it would be better for the pipeline and its customers if the pipeline were required to "take-or-pay" at the normal levels and were to include the volumes paid for but not taken as prepayments at a 6 percent return in its next rate case. As applied to the instant situation, the contention means that Southern should have contracted to take the same daily quantity per day[81] for each of the first three years even though it could only use a small portion of such quantity; to pay for such gas; and then include such prepayments in its rate base in its next rate case.

---

[81] If the contract had provided for the usual 1-to-8,000 ratio minimum-take in each year, Southern would have been required to purchase a minimum of 156,250 Mcf per day in each contract year. Thus, in the first year it would be taking 116,250 Mcf per day more than the presently required 40,000 Mcf; in the second year 96,250 Mcf per day more; in the third year 56,250 Mcf per day more; and in each year thereafter 14,775 Mcf per day less.

Long Island Lighting did not support this contention by any reference to evidence in this case. Furthermore, it overlooks the fact that the usual contracts have only a two or three year make-up period. Southern, therefore, might not be able to take the gas for which it had previously paid.

As shown in footnote 51, *supra*, Southern will be taking less than the average minimum takes in the first three years and more than such average in later years. This fact was the subject of cross-examination of a Producer witness. An attempt was made to show that the high rate of minimum takes over the last 17 years of the contract would help compensate the Producers for the slow build-up in the first three years. The Examiner finds that such increased takes in the later years of the contract will not compensate Gulf and Humble for the slow build-up in the first three years.

Staff makes the further point that the slow build-up does not warrant special consideration because there is nothing Gulf and Humble can do with this volume of gas but hold it until such time as Southern can use it. This contention is not supported by the evidence. It is true that the Producers must reserve for Southern 1.25 trillion cubic feet of gas. However, by permitting Southern to take the gas in smaller quantities during the first three years, and larger quantities in the last 17 years, the Producers have deviated from the general type contract in the area to the advantage of Southern. This deviation will reduce the present worth of contract revenues by 9.5 million dollars.

The Examiner finds (1) that by the lower initial delivery rate discussed hereinabove the Producers' revenues and return on their large investment in these properties will be minimized and delayed, (2) that the resultant detriment is approximately .8 cents per Mcf, (3) that such detriment would not result under the southern Louisiana contracts which have been used to establish the "in-line" price in the area, and (4) that the public convenience and necessity requires that approximately .8 cents per Mcf be added to the "in-line" price of 18.5 cents per Mcf for this specific premium feature.

3. *Ten-Year Make-up Provision and Take-Or-Pay-For Obligations*

Southern has been granted a ten-year period in which it may take or "make-up" gas which it may have paid for but not taken. This provision does not act to extend the term of the contract. It is unusually favorable to the purchaser because most recent southern Louisiana contracts provide for only one, two, or three years.[53] Very few southern Louisiana sales agreements include provisions which are equally favorable to the buyer. Considered together, the practical effect of the slow build-up and ten-year make-up provisions is to provide Southern with a supply tailored to its near future supply requirements and to permit it probably to cure any minimum take deficiencies, which it may have elsewhere on its system, by the end of 1965.

The undisputed evidence shows, and the Examiner finds, that even with the purchase of the West Delta Block 27 Field gas from Gulf and Humble, and the increase in purchases from United shown in the Gas Supply section of this decision, Southern will probably be able to make up all of its minimum take deficiencies by the end of 1965. Exhibit No. 4, sponsored by Southern's Superintendent of Gas Control, reflects this in detail. It is summarized as follows at 14.73 psia:

---

[53] A number of recent contracts, as a result of settlements in certificate proceedings, have been amended to provide extensions in the make-up periods to four years.

	Contract year ending					
	1960	1961	1962	1963	1964	1965
Cumulative deficiency	372	4,546	16,164	16,198	16,198	16,198
Less cumulative makeup			3,418	9,011	15,891	16,198
Net deficiency	372	4,546	12,746	7,187	307	0

The 12,746 MMcf deficiency shown for the contract year ending in 1962 was in part, estimated. Southern's Annual Report for 1962 shows that at the end of the calendar year 1962 it had made $2,502,901 in prepayments for 12,090,886 Mcf, at 14.73 psia, deficiencies in gas takes. The Report also shows that of the 19 fields where deficiencies exist, all but three of the pertinent contracts require that the deficiencies be made up by December 1964.

Among other things, Exhibit 4 shows that by the end of 1964 Southern will have made up all but 307 MMcf of the minimum take deficiencies theretofore incurred. This 307 MMcf would exist at the Montegut Field. However, takes from the said Field scheduled for the calendar year 1965 are 1134 MMcf in excess of the minimum take for the year, thereby making up the 307 MMcf deficiency. As shown in the Facilities Section herein, the ability of Southern to make up its present deficiencies depends, in part, upon the installation of certain proposed compressors.

As previously shown, Southern must begin purchasing 171,025 Mcf per day on December 1, 1966. Due to the many variables involved, Southern made no calculations designed to determine its take-or-pay position after such date. Although the record does not permit of a finding concerning such position, the following factors should materially assist Southern in maintaining a favorable take-or-pay position after 1965: (1) it may use its own production to minimize deficiencies, (2) the ten-year make-up period, (3) fixed minimum and maximum take obligations throughout the term of the contract, and (4) the wide swings in takes.

Staff's contention that the benefit to Southern from the ten-year make-up period is more than offset by the fact that in the fourth year Southern has to take-or-pay-for a minimum volume of 171,125 Mcf per day has been discussed previously. It is not supported by the record.

It is undisputed that the ten-year make-up provision in the contract will be of benefit to Southern. The record, however, does not permit of an objective measurement of such benefit by itself.

4. *Onshore Delivery to Southern*

The contracts provide that at their expense the Producers are to deliver pipeline quality gas at a central onshore delivery point. As a result, Southern will thus not be required, as is customarily the case with offshore production, to build gathering lines to the offshore platforms.[58] The Examiner finds that the provisions for onshore delivery represent a significant saving to the buyer, which inures to the consumer. The facts concerning the physical arrangement will now be set forth.

The map attached hereto as Appendix D shows, among other things, the West Delta Block 27 Field, its general location with reference to land, and the contract delivery point. The area included within the hatchmarks are the leases in the field. The location of the various leases included in the area, the ownership therein, and the completed and uncompleted wells are identified. The wells in SL-3528 and SL-3529, which are shown as wells not yet drilled, were being completed at the time of the hearing.

---

[58] In the *CATCO* case, *supra,* the pipeline buyer was required by the terms of the agreement to build a line to the offshore platform. A study of the contracts entered into since then shows that in most of them the buyer is to build the pipeline. There is no substantial contention to the contrary.

The map shows the location of the two platforms which will be installed by Gulf, at the expense of Humble and Gulf, to meet contract delivery requirements to Southern. It also shows the approximate route of the separate condensate and gas lines from the platform to the Venice facilities, which facilities will be installed at the delivery point of gas to Southern. These lines and facilities will be constructed, maintained and operated at the Producers' expense. The two platforms will be permanent installations. One will accommodate the hazardous equipment that contains fires. The other will connect to the wells and will contain the production and dehydration facilities. The platforms will be about 150 to 200 feet apart and are sized so that additional production equipment can be installed in order to accommodate the total ultimate volumes to be delivered under Southern's contracts. Prior to commencing deliveries to any other purchaser, additional platforms will have to be installed. Individual flow lines will be laid from each well completion to the production platform, at which point separation of any liquid hydrocarbons will be done at a pressure of 1400 psig. The gas will be dehydrated to contract specifications at this point and will enter the 20-inch pipeline going to the Venice facilities. The liquid condensate, also called liquefied gas, will move through a separate 12-inch line to the same facilities.[54] Certain oil wells are now producing. The oil is carried to shore by a small pipeline. It does not go to Venice.

The gas pipeline from the production platform to the delivery facilities at Venice will be constructed out of 20-inch O.D. x .406 wall thickness, 85.01# per foot, grade x-52 line pipe. It will be approximately 11.15 miles long and will have an inlet pressure of 1400 psig and an outlet pressure of 1150 psig. Delivery to Southern will be at pressures up to 1100 psig. The pipe will be coated and wrapped, and a concrete sheath will be used to give further protection and additional weight to the line, which will be buried approximately 10 feet below the water bottom. Cathodic protection will be provided. Automatic line control equipment will also be provided. It is estimated that this gas line will cost approximately $1,700,000 and will have a capacity of approximately 500,000 Mcf per day at 15.025 psia. For the fourth year Southern will have use of 256,537 Mcf per day, or about 54 percent of the line's capacity. An additional 20-inch gas line probably will be installed when sales are made from this field in excess of the line's capacity to other buyers.

Initially, the plant at Venice will have a 10,000-barrel tank for the storage of the liquid condensate. It will also have automatic custody transfer facilities, separators, and flash vessels, along with heaters and a condensate stabilizer.

The separators are vessels that will be installed on the 20-inch line for removal of any hydrocarbons that may condense out in the line between the platform and the shore installation. The transfer facilities and flash vessels are associated with the 12-inch line.

The transfer facilities are the automatic custody transfer facilities that are utilized to transfer liquids from a storage tank to a pipeline automatically and meter the volume of liquids automatically. The flash vessels will be incorporated with the condensate stabilization equipment which will allow the condensate to be flashed from, for practical purposes, around 1400 pounds to atmospheric pressure. The hydrocarbon vapors made available by this process will then be taken and compressed and delivered to Southern after being dehydrated and further treated.

---

[54] No claim is made for any expense associated with the 12-inch line.

The Venice plant site will cover approximately 50 acres. The facilities discussed herein will occupy about 15 acres and will cost about $150,000. A gas processing plant for removal of liquefiable hydrocarbons from the gas stream is presently being designed and will be installed at this site. To permit deliveries to commence prior to this installation, a separator will be installed between the gas line from offshore and Southern's facilities.

The cost of the operation of the facilities which the Producers will furnish in making deliveries of gas to Southern as aforesaid was expressed as a range of costs because of several variables. Annual operating and maintenance expense for the 20-inch gas line, that is, actual out-of-pocket costs, has been estimated at from $115,000 to $155,000. The major reason for this difference is due to the cost assigned for major repairs. In addition, the unit costs will vary depending on the volumes of gas delivered. Here there will not be a build-up to full contract quantities under the Southern contract until the fourth year. Subsequently, there will be excess capacity in the 20-inch line over that needed to meet a maximum deliverability of 256,000 Mcf per day to Southern. The cost will also vary depending on the provision for return on the investment.

The costs were expressed in three main divisions.

I.

The first assumes that only Southern gas will be delivered during the first four years. It allocates all operation and maintenance expenses, and the full return, to Southern's operations. Such costs are estimated to be:

Return	First 4 years	Life of contract
0	.58¢ to .69¢ [1]	(Not applicable.)
12 percent	1.13¢ to 1.25	

[1] The first figure (.58¢) results from use of the lower operating and maintenance cost of $115,000. The second figure (.69¢) results from the use of the $150,000 figure.

II.

The second division assumes that no gas other than that being sold to Southern flows through the line. It allocates all the operation and maintenance expense to Southern. Depreciation and return on investment, however, are allocated on the basis of the ratio of maximum Southern deliverability requirements of 256,000 Mcf per day to total capacity of 500,000 Mcf per day. As so allocated, the estimated per Mcf cost would be:

Return	First 4 years	Life of contract
0	.46¢ to .58¢.	.27¢ to .34¢.
12 percent	.75¢ to .87¢.	.37¢ to .44¢.

III.

The third division assumes that additional sales are being made through the line so that it is delivering at capacity. It allocates investment, depreciation, and operating and maintenance costs on the basis of capacity. Under this method, the estimated per Mcf cost for the Southern deliveries would be:

Return	First 4 years	Life of contract
0	.16¢ to .19¢	.16¢ to .19¢.
12 percent	.31¢ to .35¢	.25¢ to .28¢.

The above cost estimates include only the costs of the 20-inch gas line to the Venice facilities delivery point. Specifically, they do not include the cost of flow lines to the platforms, platform costs, or any of the costs of the Venice facilities. In short, no gathering costs are included. *Cf. Standard Oil Company of California, et al.*, 27 FPC 1153, rehearing denied, 28 FPC 292, affirmed *sub. nom. California Oil Company, Western Div. v. Federal Power Commission*, 315 F. 2d 652 (CA 10).

The costs, as expressed arithmetically by the Producers, were not challenged by any party.

Staff makes the following contentions at page 65 of its brief:

> Even when Southern is taking the maximum amount it is permitted to purchase under its contracts, Southern will not utilize more than 54 percent of the capacity of the 20-inch line. Consequently, the producers will have to enter into additional contracts with other pipelines before the entire capacity of the 20-inch line can be used (Tr. 1623). Furthermore, while Gulf and Humble will receive gross revenues from the liquids they extract from the gas [at the Venice plant], Southern's witnesses testified that Southern's revenues would be reduced by about $133,000 in the third year after Southern begins to purchase gas from Gulf and Humble because of the extraction of liquids from the gas stream prior to delivery of gas to Southern. [Tr. 1015; Exh. 6, Schedule 8, Sheet 1.]

The gas which is to be delivered by the Producers will have a Btu content of not less than 1000 per cubic foot. After delivery, Southern will commingle such gas with gas purchased from other suppliers having a higher Btu content. As a result, the commingled gas would be diluted "to such an extent that it wouldn't be feasible for [Southern] to process the total quantity of gas that we would have to remove the liquids." (Tr. 598) This accounts for the reduction in revenues referred to by Staff. Furthermore, the said reduction in revenues would probably be offset because the liquids remaining in the gas will be sold by Southern as additional Btu. This is clearly stated by Southern's witness at page 596 of the transcript, as follows:

> There would be less gas processed, that is true, but in turn there would be a reduction in the liquids recovered, but the liquids which we are recovering now will remain in the gas as Btu and go on to the market, and [we] will probably get just as much money or more out of them there than if we had extracted them as Btu.

Long Island Lighting and the PSC of New York make the following contentions:

> The most important of these [special contract] features is the onshore delivery, which at a 6% return represents a cost of between 0.20¢ and 0.24¢ per Mcf (Tr. 326, lines 15–16). It is by no means clear, however, that this cost to Gulf and Humble represents a saving to Southern, which would be the only basis for permitting a premium price. Southern's system map [Appendix A hereof] indicates that the line from the Block 27 platform to the Venice delivery point runs not *toward* Southern's existing

> facilities but *away* from them in an easterly direction, and that it will be necessary for Southern to construct $3.4 million of line in a southeasterly direction in order to pick up the gas at Venice. No explanation is offered in the record for this strange state of affairs (see, e.g., Tr. 1645–46); indeed, the record is entirely consistent with the theory that the gas is being transported from the Block 27 platform to Venice largely, if not exclusively, for the benefit of the producers rather than for the benefit of Southern. (Underscoring in original) (Long Island Lighting Brief, pp. 14–15)

Aside from the use of six or 12 percent return, the above contention is, in effect, a contention that some point closer to Southern's existing facilities should have been chosen for the onshore delivery point. There is no substantial evidence in this record which will permit of such a finding. In fact, the evidence is to the contrary. Gulf's witness on this subject was asked on cross-examination whether the Venice delivery point was "the nearest point to the platform that would be suitable for this type of a facility." (Tr. 1646) He answered "Yes, I believe it would be." (Tr. 1646)

The six percent return figure apparently was derived by averaging the amounts shown hereinabove. By similarly averaging the figures the Examiner finds a cost of between 0.205 cent and 0.235 cent per Mcf. Since Gulf's return on equity has been shown to be ten percent, and since Humble's return on equity was not shown, the Examiner will use the ten percent figure even though the Commission allowed a 12 percent return in the *Phillips* case. Such a return represents a cost of between 0.235 cent to 0.265 cent per Mcf under the third allocation division hereinabove. The average of these two figures is 0.25 cent per Mcf.

The Examiner finds (1) that the cost to the Producers, over the life of the contract, for deliverying the gas to Southern probably will be about 0.25 cent per Mcf, (2) that it would cost Southern at least this much to provide other arrangements to accept delivery of the gas, and (3) that the public convenience and necessity requires that about 0.25 cent per Mcf be added to the "in-line" price of 18.5 cents per Mcf for this specific premium feature.

G. *Tax Reimbursement*

Gulf's proposed initial price of 21.25 cents per Mcf is stated to include tax reimbursement of 1.75 cents per Mcf on all sales to Southern. Humble's proposed initial price is the same as Gulf's. Its contract did not, however, provide that a portion of such sum was for tax reimbursement. Both contracts have been considered as "equivalent" by the parties (Tr. 358), and will be so considered by the Examiner. As previously shown, each Producer shall be entitled to charge a total of 19.5 cents per Mcf. Two questions remain: (1) the tax reimbursement which each Producer will be permitted to charge, and (2) the matter of tax reimbursement from the disputed area.

In the *CATCO* case, *supra*, the Commission concluded that the "in-line" price for 1956 contracts would be not in excess of 18.5 cents per Mcf, where State severance tax did not apply, and 20 cents per Mcf where such tax did apply. In the *Placid* and *United* cases, *supra*, the Commission found that a tax reimbursement of 1.5 cents per Mcf should be permitted for contracts executed through 1959. The Examiner finds that the evidence in this record fails to establish that a tax reimbursement greater than 1.5 cents per Mcf is warranted.

As previously stated, approximately 70 percent of the West Delta Block 27 Field, as now defined, is within the interim three-mile limit and therefore subject to the tax jurisdiction of the State of Louisiana. The remaining part of the field extends out into the Gulf of Mexico beyond the interim three-mile limit into what is called the Outer Continental Shelf. The pertinent area is known as Zone 2. It is one of the critical areas in dispute between the State and Federal Government, and Louisiana jurisdiction may be extended to include it. The Producers are obliged to pay severance taxes to the State on gas produced from all or any part of the Zone 2 leases which are ultimately determined to be within the seaward limits of the State.

Staff makes the following recommendations in regard to tax reimbursement at page 73 of its brief:

> Those sales of gas from the Zone 2 leases in the West Delta Block 27 Field[10] should be expressly conditioned so that it should ultimately be determined that the Louisiana state tax is inapplicable to that area, then the producers shall refund to Southern that part of the total revenues which represents the applicable tax portion of the initial sale price.
>
> [10] As Gulf and Humble point out, there is a dispute whether some sales from Zone 2 are within the taxing jurisdiction of the State of Louisiana. Pending the resolution of this dispute, it is recommended that the producers be permitted to collect the full 20.00 cents per Mcf. It would not appear necessary, in this case, that escrow accounts be established to assure that refund monies would be available in the event it were determined that the contested area is outside of Louisiana's taxing authority.

The Examiner finds that by agreement with the State of Louisiana the Producers must make retroactive payments of severence tax to the extent that any part of the production from Zone 2 is ultimately determined to be subject to Louisiana's taxing jurisdiction. In this case the establishment of an elaborate escrow plan to meet these retroactive obligations is not warranted. *Cf. Socony Mobil Oil Company, Inc., et al.*, 28 FPC 357. However, since the Producers will have the use of this money they should be required to pay interest at seven percent per annum on any amounts refunded pursuant to the attached Order.

Additional Findings and Conclusions

Upon consideration of the whole record, and as supported by and in accordance with the reliable, probative and substantial evidence, it is further found and concluded that:

(1) Southern is a natural-gas company within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order, among others, issued October 6, 1942, *In the Matter of Southern Natural Gas Company*, Docket No. G-296, 3 FPC 822.

(2) The facilities which Southern proposes to construct and operate, as described in its application in Docket No. CP63-26, as amended and supplemented, will be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation of such facilities are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The facilities referred to in paragraph (2) are adequate and appropriate to render the service which Southern proposes, and which Southern is hereinafter authorized to provide.

(4) Southern is able and willing properly to do the acts and to make the sales and to perform the services proposed by it in Docket No. CP63-26, as amended and supplemented, and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the facilities, the sales in interstate commerce for resale, and the permanent acquisition of the 2,500 horsepower

packaged gas turbine centrifugal compressor unit, as proposed by Southern in its application, as amended and supplemented, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Each of the Producer applicants, Gulf Oil Corporation, a Pennsylvania corporation, and Humble Oil & Refining Company, a Delaware corporation, in their proposed sales will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and, therefore, each will be a "natural-gas company" within the meaning of the Natural Gas Act upon the commencement of the service proposed in their respective applications, as amended and supplemented.

(7) The sales of natural gas by the Producer applicants to Southern hereinbefore described, as more fully described in their respective applications and amendments thereto, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales by the respective Producer applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(8) The respective Producer applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(9) The sales of natural gas by the respective Producer applicants to Southern, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(10) The public convenience and necessity requires that certificates issued to the respective Producer applicants should be conditioned to limit their sales to those specific volumes of natural gas which they have contracted to sell to Southern as more fully set forth in their respective applications, as amended and supplemented.

(11) It is necessary and appropriate in the administration of the Natural Gas Act (a) that the initial price charged by the respective Producer applicants for the sales proposed in their certificate applications in this proceeding be not greater than a base price of 18.5 cents per Mcf at 15.025 psia, plus no more than 1.0 cents for the premium features in the contracts, and also plus 1.5 cents for state-tax reimbursement on all sales, including the sales from areas where both the State of Louisiana and the Federal government claim to have tax jurisdiction, and (b) that the respective Producer applicants be required to refund to Southern, with interest at seven (7) percent per annum, the state-tax portion collected from each sale from any area which is adjudicated finally not to be subject to the taxing authority of the State of Louisiana.

(12) Warrior River is a municipal entity organized under the laws of the State of Alabama and is legally authorized to construct, own and operate a natural gas distribution system in the communities of Oakman and Parish, Alabama.

(13) Warrior River has failed to prove that it is necessary and desirable in the public interest that the Commission, by order, direct Southern to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Warrior River, and to sell and deliver natural gas to Warrior River for resale and distribution in the communities of Oakman and Parrish, Alabama.

(14) The conditions hereinafter ordered are required by the public convenience and necessity.

ORDER

Wherefore, it is ordered, subject to review by the Commission on appeal, or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) A certificate of public convenience and necessity be, and hereby is, issued in Docket No. CP63-26 to Southern Natural Gas Company to construct and operate the facilities, to make the sales in interstate commerce for resale, and to acquire permanently the 2,500 H.P. packaged gas turbine centrifugal compressor unit authorized on an experimental basis in Docket No. CP62-191, all as hereinbefore set forth and as more fully described in its application as amended and supplemented, and its exhibits and record herein, for the transportation and sale of natural gas for resale as therein set forth, upon conditions hereinafter ordered.

(B) Certificates of public convenience and necessity be, and hereby are, issued in Docket No. CI63-123 to Gulf Oil Corporation, and in Docket No. CI63-129 to Humble Oil & Refining Company, upon the terms and conditions of this order, authorizing the sales by the respective Producer applicants of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sales, all as hereinabove set forth and as more fully described in their respective applications, as amended and supplemented.

(C) The application of Warrior River Natural Gas District in Docket No. CP63-70 be, and the same is, hereby denied, without prejudice.

(D) The respective certificates granted in paragraph (B) above are hereby conditioned to limit the sales to Southern of natural gas by each applicant to such applicant's proportionate part of 1,250,000,000 Mcf of natural gas at 15.025 psia, based upon each applicant's proportionate part of the total gas reserves in the West Delta Block 27 Field, offshore Plaquemines Parish, Louisiana, as provided in each Producer applicant's gas sales agreement with Southern; and each Producer applicant's respective certificate shall terminate and further sales to Southern by such applicant shall cease when such applicant shall have sold to Southern the volumes herein authorized to be sold.

(E) The respective certificates granted in paragraph (B) above are hereby further conditioned so that the base price under each of the contracts involved in such applications from the date of initial service thereunder, shall be, until lawfully changed in the manner provided by the Natural Gas Act, not greater than 18.5 cents per Mcf, at 15.025 psia, except that the applicants are authorized to make the following additional charges: (1) no more than 1.0 cents per Mcf for the premium features in the respective contracts, as described in the text of this Initial Decision, and (2) no more than 1.5 cents per Mcf for reimbursement for (a) existing State taxes, and (b) those contingent upon the outcome of the described dispute between the Federal government and the State of Louisiana, on gas produced from any part of the West Delta Block 27 Field, *provided however*, that if it is adjudicated finally that all or any portion of such Field is not subject to the taxing authority of the State of Louisiana, the respective Producer applicants shall refund to the pipeline purchaser, with interest at seven (7) percent per annum all sums previously collected from such purchaser for reimbursement for State taxes, the payment of which by the Producers was contingent upon a final adjudication that the area was subject to the taxing authority of the State of Louisiana.

(F) The certificates issued herein, as conditioned, are not transferable and shall be effective only so long as the respective applicants continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(G) Each of the certificates issued herein shall be deemed accepted and in full force and effect unless refused in writing, and under oath, by the respective applicants within 30 days of the effective date of the final Order herein.

(H) The facilities authorized herein shall be constructed and placed in actual operation within one year from the effective date of the final Order herein.

(I) The grant of the certificates issued herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Commission's Regulations thereunder requiring the filing of rate schedules for the service hereunder (18 CFR 154), and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the respective applicants. Further, the action taken in these proceedings shall not foreclose or prejudice any further proceedings relating to the operation of any price or related provision in the gas purchase contracts herein involved.

(J) The general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d), and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.20) shall attach to the certificate issued to Southern and to the exercise of the rights granted thereunder.

DYER JUSTICE TAYLOR,
Presiding Examiner

APPENDIX B

Southern Natural Gas Co., et al., Docket No. CP63-26, et al.

FACILITIES FOR WHICH SOUTHERN SEEKS CERTIFICATE AUTHORIZATION (ITEM F)

A. Southeastern Georgia Extension

Pipelines (all sizes are "O.D.")	*Estimated cost*
Construct 7.5 miles of 16-inch line east of Ocmulgee Station to Highway 129 Gate	$439, 230
Construct 173.35 miles of 12¾-inch line in southeastern direction toward Brunswick	7, 343, 670
Construct two Ocmulgee River crossings near Macon, each about 600 feet long	134, 410
Construct two Ocmulgee River crossings near Hazlehurst, each about 1,500 feet long	155, 960
(Less reduction in cost of pipe, Tr. 152)	−271, 800
Total pipelines	7, 801, 470

Measuring Facilities

Southeast Georgia check station	20, 273
Jeffersonville	13, 641
Eastman lateral	23, 787
Alamo lateral	26, 599
Hazlehurst lateral	16, 436
Baxley lateral	23, 771
Jessup-Waycross lateral	27, 046
Brunswick and Darien	45, 957
Vidalia	20, 611
Danville, Dexter, Montrose, Dudley, and Odum (Tr. 154; 950)	57, 400
Total measuring facilities	275, 521
Total cost of southeastern Georgia extension	8, 076, 991

— LEGEND —

Note: The Following Information Not Shown On This Exhibit Is Shown On Exhibit G:
Size Of Existing Pipelines,
Location And Designation Of Points Of Connection Of Existing Facilities With Main Line Industrial Customers, Gas Pipelines And Distribution Systems, Showing Towns And Communities Served.

▬	Facilities Proposed In This Application
▭	Facilities Proposed By Others
═	Pipelines Of Others
●	Gas Fields

B. Compressor Horsepower Required to Increase Main Line Capacity by 95,000 Mcf Per Day (All except Rankin are on the "South Line")

	Total horsepower	*Estimated cost*
*Enterprise, Miss., station, install 2,500 horsepower[1] and add 3,360 horsepower by turbocharging six existing engines	5, 860	$759, 200
*Gallion, Ala., station, install 2,500 horsepower and add 2,800 horsepower by turbocharging five existing engines	5, 300	878, 500
*Elmore, Ala., station, install 5,000 horsepower	5, 000	798, 400
*Ellerslie, Ga., station, install 5,000 horsepower	5, 000	825, 200
*Ocmulgee, Ga., station, install 3,600 horsepower	3, 600	835, 000
Rankin, Miss., station, add 700 horsepower by supercharging and changing cylinders on two engines (this station is located on an interconnection between Southern's "North Line" and its "South Line")	700	235, 000
Total additional compression proposed to increase main-line capacity by 95,000 Mcf	25, 460	4, 331, 300

C. Facilities Required to Increase Capacity of South Louisiana Supply System

Pipelines and Measuring Facilities

	Estimated cost
Construct 27 miles of 22-inch line from the southern terminus of its main line system connecting the Lake Washington Field, to a point near Venice, La., to enable it to connect the West Delta Block 27 Field gas which it has contracted to purchase from Gulf and Humble	$3, 406, 250
Venice receiving station measuring facility	75, 594

Incremental Compressor Horsepower Required

	Total horsepower	
Olga, La., station install 1,650 horsepower	1, 650	$829, 900
*Toca, La., station install 10,000 horsepower	10, 000	3, 360, 900
White Castle, La., station install 1,100 horsepower	1, 100	332, 900
*Franklinton, La., station install 2,500 horsepower	2, 500	438, 000
*Gwinville, Miss., station install 5,000 horsepower	5, 000	838, 800
Total additional compression proposed to increase capacity of South Louisiana Supply System	20, 250	5, 800, 500
Total estimated cost of increasing capacity of South Louisiana Supply System		9, 282, 344

---

[1] Southern now requests permanent authorization of this 2,500 horsepower gas turbine unit which was previously authorized July 9, 1962, on an experimental basis only in Docket No. CP62-191 (Item VV; Tr. 838).

*An "asterisk" before an item indicates that Southern has received temporary authority to construct the facility. (See letter-order dated August 5, 1963, in Docket No. CP63-26.)

D. Facilities Proposed for Reinforcement of Six Lateral Lines (all pipe size in "O.D.")

	Estimated cost
*Vicksburg, Miss., lateral construct 2.85 miles of 6⅝-inch loop	$78, 430
*Pickens, Miss., lateral construct 8.115 miles of 4½-inch loop	149, 700
*Columbus, Miss., lateral construct 8.926 miles of 6⅝-inch loop	212, 230
Calera, Ala., lateral construct 10.646 miles of 12¾-inch loop	415, 030
Cordova, Ala., lateral construct 12.79 miles of 6⅝-inch loop and two Warrior River crossings on the Cordova lateral, each about 940 feet long	360, 560
*Milledgeville, Ga., lateral construct 6.31 miles of 8⅝-inch loop	180, 370
(Less reduction in cost of pipe, Tr. 152)	−35, 900
Total cost of lateral pipeline reinforcement	1, 360, 420

E. Measuring Facilities and Line Taps Required to Serve Applicants Pursuant to Section 7 (a) of the Natural Gas Act

	Estimated Cost
Chattahoochee Valley Gas District	$21, 962
Dora and Sumiton, Ala	11, 319
Steele, Ala	9, 548
Warrior River Natural Gas District	11, 309
Monticello, Ga	17, 360
Noxapater, Mississippi, and Temple and Whitesburg, Ga. (Tr. 154)	91, 300
Total cost of measuring facilities and line taps for applicants pursuant to section 7 (a)	162, 798
Estimated total cost of all facilities for which Southern seeks a certificate in Docket No. CP63–26	[2] 23, 213, 853

---

[2] Southern states on page 4 of its brief that the "* * * Total estimated cost of the entire project is $23,156,453. (Tr. 154)." This figure is incorrect in the amount of $57,400 because of the failure of Southern to add the cost of four additional measuring stations to be constructed on the southeastern Georgia extension. (See Tr. 950, lines 6 through 18.)

---

[1] For this figure Staff and Southern showed $65,630 and called it "compressor fuel company use and unaccounted for."

[2] 11 percent of third year net investment in main line and gas supply system costs allocated to the Southeastern Georgia Extension.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP64-148

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 6, 1964)

On December 26, 1963, Transwestern Pipeline Company (Applicant) filed in Docket No. CP64-148 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain pipeline tap valves and the sale and delivery of natural gas to Great Plains Gas Company (Great Plains) at points on Applicant's existing pipeline system in Dallam, Sherman, Hansford, Ochiltree, Lipscomb, Moore, Hutchinson and Hemphill Counties, Texas, all as more fully set forth in the application.

The application shows that Great Plains will resell the subject gas to approximately 180 right-of-way customers in the vicinity of Applicant's pipeline system in the above-mentioned Texas counties. The customers to be served by Great Plains are unconnected grantors of easements and rights-of-way for Applicant's system who have reserved gas service rights from Applicant and such other consumers in said above-mentioned Texas counties as Applicant and Great Plains may from time to time agree to serve. The application shows further that the gas sold to customers will be for irrigational and domestic use.

Applicant will sell to Great Plains pursuant to a service agreement, dated November 4, 1963.

The estimated cost of the taps to be installed is as follows:

Size Tap	*Total cost*
1 inch	$350
2 inch	750
3 inch	870
4 inch	1,025

Applicant states that Great Plains will reimburse it for all necessary material and installation costs.

The third year estimated annual and maximum daily deliveries to Great Plains are 611,602 Mcf and 1,675 Mcf, respectively.

By letter, dated February 7, 1964, Applicant was issued a temporary certificate authorizing the subject proposals.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 2, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 10, 1959, in Docket No. G-14871, *et al.* (22 FPC 391).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale

of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(6) Annual reports should be filed by Applicant giving the total number of taps installed and a description of the tap as to size, cost and annual volumes delivered at each tap.

(7) The volume of gas delivered and sold to Great Plains by Applicant should be limited to maximum daily and annual volumes of 1,675 Mcf and 612,000 Mcf, respectively.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transwestern Pipeline Company, to construct and operate the proposed facilities and to transport and sell natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(C) Annual reports shall be filed by Applicant giving the total number of taps installed and a description of the tap as to size, cost and annual volumes delivered at each tap.

(D) The volume of gas delivered and sold to Great Plains by Applicant is hereby limited to maximum daily and annual volumes of 1,675 Mcf and 612,000 Mcf, respectively.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

UNITED FUEL GAS COMPANY, DOCKET NOS. G-2451 AND G-5475

ORDER ACCEPTING PROPOSED SERVICE AGREEMENTS AND TERMINATING PROCEEDING

(Issued April 6, 1964)

On January 10, 1964, the Columbia Gas System filed a letter in the above-styled proceeding advising the Commission that, as a result of extended negotiations, a subsidiary, Ohio Valley Gas Company (Ohio Valley), has acquired Portsmouth Gas Company (Portsmouth), and has succeeded to the rights and obligations of Portsmouth, including the latter's right to purchase gas from the

United Fuel Gas Company (United Fuel). The letter states that it may be regarded "as authority to consider" as moot the remand of Case No. 15528 in the United States Court of Appeals for the District of Columbia. That case arose from the Commission's issuance of an order on May 11, 1956, in Docket Nos. G-2451 and G-5475, authorizing the use of a contract demand form of rate by United Fuel.

Portsmouth, one of United Fuel's customers, filed a petition in the Court of Appeals seeking review of the order and contesting United Fuel's substitution, pursuant to that order, of a long term contract demand in lieu of the existing annually-ascertained maximum-day demand. The petition resulted in a decision by the Court of Appeals on June 25, 1957, remanding the matter to the Commission to provide a more complete record of fact and background relating to the contract between Portsmouth and United Fuel. Thereafter, extended negotiations and discussions were held seeking to arrive at a stipulation of facts to be presented in the remanded hearing. Those discussions evolved into negotiations for purchase of Portsmouth's facilities and operations by the Columbia Gas System, resulting in the acquisition referred to above. Portsmouth, during the aforementioned negotiations, did not execute a service agreement with United Fuel, but continued its purchases of natural gas from United Fuel under the latter's CD rate schedules.

On January 28, 1964, United Fuel filed a superseding service agreement, which reflects the acquisition of Portsmouth's facilities by Ohio Valley and provides for a contract demand equivalent to the total of the existing demands for both Ohio Valley and Portsmouth. Portsmouth's delivery point is incorporated with Ohio Valley's other delivery points, and the term of the contract is extended to January 1, 1984, with service to be furnished under United Fuel's FPC Gas Rate Schedule CDS-1, presently in effect subject to refund in Docket No. G-20270. The proposed service agreement provides no other changes.

United Fuel requests waiver of the notice requirements under the Commission's Rules of Practice and Procedure in order to permit the filing to become effective on January 1, 1964, the effective date of the acquisition.

The Commission finds:

(1) It is appropriate under the circumstances that United Fuel's proposed superseding agreement with Ohio Valley, filed January 28, 1964, be allowed to become effective on January 1, 1964.

(2) It is further appropriate that the remanded proceedings styled by the Commission as Docket Nos. G-2451 and G-5475 be terminated as moot.

The Commission orders:

(A) United Fuel Gas Company's superseding service agreement with Ohio Valley Gas Company filed January 28, 1964, is hereby accepted for filing to become effective January 1, 1964.

(B) The proceedings in Docket Nos. G-2451 and G-5475 are hereby terminated as moot.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

W. W. HARVEY AND W. C. SOJOURNER, DOCKET NO. CI62-1470

ORDER POSTPONING ACTION ON REQUEST FOR PARTIAL WITHDRAWAL OF APPLICATION

(Issued April 7, 1964)

On June 7, 1962, W. W. Harvey and W. C. Sojourner (Applicants) filed an application in Docket No. CI62-1470 for a certificate of public convenience and necessity, pursuant to Section 7 of the Natural Gas Act, to sell natural gas to Oklahoma Illinois Gas Pipeline Company (Oklahoma Illinois) from acreage dedicated under the terms of a contract filed concurrently therewith. Said application was, by Commission order of October 15, 1962, consolidated with sundry other applications in the proceedings in Natural Gas Pipeline Company of America, *et al.*, Docket No. CP62-243, *et al.* Hearings thereon were commenced on February 26, 1963 and concluded October 15, 1963. These applications are now awaiting initial decision by the presiding examiner.

By letter of January 17, 1964, Applicants gave notice to Oklahoma Illinois that they were removing certain leases from under the terms of their contract pursuant to provisions contained therein. On February 24, 1964, Oklahoma Illinois filed, in the Federal District Court in Fort Worth, Texas, a civil action seeking a declaratory judgment determining that the Applicants do not have a right to withdraw committed leases at this time.

On February 24, 1964, Applicants filed, pursuant to the Commission's Rules of Practice and Procedure, Sec. 1.11(d), a notice of partial withdrawal of their application. However, that section specifically provides that where a hearing has commenced, withdrawal of an application can only be had upon express permission of the Commission.

We are fully cognizant of the fact that it is not within our province to determine the legal issues presented in the private controversy between Applicants and Oklahoma Illinois. Postponement of action on Applicants' notice of withdrawal, as we shall hereinafter order, does not reflect any intention on our part to pass upon the merits of the private controversy, or to alter the legal rights of either party to the controversy. On the contrary, it is our purpose not to do so. Although we recognize fully that we cannot require a natural gas producer to seek or accept a certificate of public convenience and necessity, the Applicants have nevertheless not shown that they would be prejudiced in any way if their application were to remain on file as originally filed.

As the United States Court of Appeals for the District of Columbia Circuit has stated: "through their private interest they represent a factor affecting the public interest, even though their private interest considered alone is not for Commission determination." And, with respect to the "private controversy": "The court in determining what relief, if any should be accorded * * * might well be influenced by the Commission's decision respecting" withdrawal of the application. See *Granik* v. *Federal Communications Commission*, 234 F. 2d 682, 684–685 (1956). Also cited in *American Louisiana Pipe Line Co., et al.*, Docket No. G–10396, *et al.*, 17 FPC 22, 23 (1957).

The Commission finds:

It is appropriate and in the public interest that no action be taken at this time on the request for partial withdrawal of the application in Docket No. CI62–1470.

The Commission orders:

Action on the request for partial withdrawal filed by the Applicants in Docket No. CI62–1470 is hereby postponed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

MURCHISON BROS. & DENIUS, DOCKET NO. G-17355

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDING

(Issued April 7, 1964)

On February 7, 1964, Murchison Bros. & Denius (Murchison) submitted an offer of settlement in the proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Tennessee Gas Transmission Company (TGT) by Murchison. The offer relates to sales made under Supplement No. 6 to Murchison's FPC Gas Rate Schedule No. 1 in Victoria County, Texas (Texas R.R. Com. District #2). The proposed increased rate was suspended by order of the Commission for the statutory period, and was made effective by Murchison on July 10, 1959.

Under the terms of the offer, Murchison proposed to eliminate the favored-nation and price redetermination provisions from the rate schedule and to establish a 14.6¢ per Mcf rate for the subject sale with future periodic price escalations consistent with the Second Amendment. Murchison's annual revenues will be decreased about $1,406 from the presently effective rates. No protests or objections have been filed to the offer.

Murchison, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in excess of the settlement rate. The estimated total dollars to be refunded approximates $7,433, exclusive of interest.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's *Statement of General Policy No. 61-1*, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Murchison's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future periodic rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Murchison's rate and rate schedue.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Murchison on February 7, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Murchison on February 7, 1964, is hereby approved in accordance with the provisions of this order.

(B) Murchison shall file, within 30 days from the date of issuance of this order, notice of change in rate providing for the 14.6¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 1 eliminating the favored-nation, and price redetermination provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Murchison shall refund to TGT to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate with simple interest at 6% per annum and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination, together with a release from TGT.

(D) Upon notification by the Secretary of the Commission that Murchison has complied with the terms and conditions of the order, the rate and charge of 14.6¢ per Mcf at 14.65 psia, specified in its offer of settlement, shall be effective as of the date of issuance of this order, the above designated proceedings shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

(E) The acceptance by the Commission of Murchison's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Murchison, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

RIO BRAVO OIL COMPANY, DOCKET NOS. G-20060 AND RI60-330

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued April 7, 1964)

On February 10, 1964, Rio Bravo Oil Company (Rio) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Tennessee Gas Transmission Company (TGT) by Rio. The offer relates to sales made under Supplement Nos. 3 and 4 to Rio's FPC Gas Rate Schedule No. 2 in Hidalgo County, Texas (Texas R.R. Com. District #4). Each of the proposed increased rates were suspended by order of the Commission for the statutory period, and were made effective by Rio on April 15 and October 15, 1960.

Under the terms of the offer, Rio proposes to eliminate the favored-nation and price redetermination provisions from the rate schedule and to establish a 14.6¢ per Mcf rate for the subject sale. Rio's annual revenues will be decreased about $740 from the presently effective rates. No protests or objections have been filed to the offer.

Rio, in its offer, proposed to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in excess of the settlement rate. The estimated total dollars to be refunded approximates $2,740, exclusive of interest.

The proposed settlement is consistent with the provisions of the *Second Amendment to the Commission's Statement of General Policy No. 61-1*, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Rio's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future periodic rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Rio's rate and rate schedule.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Rio on February 10, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Rio February 10, 1964, is hereby approved in accordance with the provisions of this order.

(B) Rio shall file, within 30 days from the date of issuance of this order, notice of change in rate providing for the 14.6¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 4 eliminating the favored-nation and price redetermination provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Rio shall refund to TGT to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate with simple interest at the rate of 6% per annum, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination, together with a release from TGT.

(D) Upon notification by the Secretary of the Commission that Rio has complied with the terms and conditions of the order, the rate and charge of 14.6¢ per Mcf at 14.65 psia, specified in its offer of settlement, shall be effective as of the date of issuance of this order, the above designated proceedings shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

(E) The acceptance by the Commission of Rio's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Rio, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SABINE RIVER AUTHORITY OF TEXAS AND SABINE RIVER AUTHORITY, STATE OF LOUISIANA, PROJECT NO. 2305

ORDER APPROVING PERIOD OF CONTRACT FOR SALE OF POWER AFTER EXPIRATION OF LICENSE

(Issued April 7, 1964)

On March 13, 1964, the Sabine River Authority of Texas and the Sabine River Authority, State of Louisiana (Applicants), joint licensees for the Toledo Bend project, Project No. 2305, on the Sabine River, filed application for approval, under Section 22 of the Federal Power Act (16 U.S.C. 815), of the period of a proposed contract to sell project power beyond the period of the license. The Commission gave public notice of the application on March 16, 1964. No protests or petitions to intervene were received.

Applicants propose to execute a contract to sell all power produced at the Toledo Bend project to the Gulf States Utilities Company, Central Louisiana Electric Company, Inc., and Louisiana Power and Light Company. The proposed contract shall terminate on the fiftieth anniversary of the beginning of production of full power or on April 30, 2018, whichever is first. The license for the Toledo Bend project, issued on October 14, 1963, 30 FPC 1009, effective from October 1, 1963, is for a period of fifty years, expiring on September 30, 2013. Thus, Applicants request approval of a period of a contract for sale of power for a maximum of about four and a half years beyond the termination of the license. Applicants state that since it is not expected that full power production will be achieved before May 1, 1968, the contract in all probability will not terminate until the maximum period.

The estimated cost of the Toledo Bend project is $60,000,000. Half of this sum is to be advanced in equal amounts by the States of Texas and Louisiana. The remaining half is to be raised by the sale of revenue bonds. The financing of the Toledo Bend project substantially depends upon the execution of the proposed fifty-year hydroelectric power sales agreement.

Since Applicants are agencies of the States of Texas and Louisiana, the Toledo Bend project, according to section 3 of the Act of August 15, 1953, as amended on July 31, 1959 (16 U.S.C. 828), may not be taken over by the United States under the provisions of Section 14 of the Federal Power Act upon expiration of its license.

The Commission finds:

It is appropriate and in the public interest in administering the Federal Power Act that the Commission approve the period of a contract between the Sabine River Authority of Texas and the Sabine River Authority, State of Louisiana, on the one hand and the Gulf States Utilities Company, Central Louisiana Electric Company, Inc., and Louisiana Power and Light Company on the other for sale of power from the Toledo Bend project, Project No. 2305, from September 30, 2013, when the license expires, until the fiftieth anniversary of the beginning of production of full power or April 30, 2018, whichever occurs first.

The Commission orders:

(A) The period of the proposed contract between the Sabine River Authority of Texas and the Sabine River Authority, State of Louisiana, on the one hand

and the Gulf States Utilities Company, Central Louisiana Electric Company, Inc., and Louisiana Power and Light Company on the other for sale of power from the Toledo Bend project, Project No. 2305, from September 30, 2013, when the license expires, until the fiftieth anniversary of the beginning of production of full power or April 30, 2018, whichever occurs first, is hereby approved.

(B) This authorization is without prejudice to the authority of this Commission, or any other regulatory body, with respect to rates service accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; CONTINENTAL OIL COMPANY (OPERATOR), ET AL., DOCKET NO. CI61-586

ORDER GRANTING MOTION TO FILE SUPPLEMENTAL EXCEPTIONS AND DENYING MOTION TO STRIKE ERRATA NOTICE IN PART

(Issued April 7, 1964)

On March 13, 1964, the presiding examiner issued an errata notice to the initial decision which had been issued on January 14, 1964, 32 FPC 254 at p. 279, in the above-captioned matters.

The effect of one of the corrections was to change the initial price allowed by the presiding examiner in Docket No. CI61-586, in Appendix I to his decision, from 19.9¢ per Mcf to 18.7¢ per Mcf.

On March 19, 1964, after the time for filing exceptions and replies thereto had expired, Continental Oil Company (Continental) filed (1) a motion to strike the errata notice insofar as it applied to Docket No. CI61-586, contending that the change was not of a formal or mechanical nature, and (2) a motion to file supplemental exceptions, contending that the errata notice was the first indication of a price condition. The supplemental exceptions accompanied the motion to file them.

The presiding examiner apparently was of the view that the change was of a formal or mechanical nature because in the body of this very complex decision he had stated that the certificate to be issued in Docket No. CI61-586 would be conditioned to an initial price of 18.7¢ per Mcf (*supra*, p. 313). Under the circumstances, the correction of the Appendix by way of errata notice was proper, and the motion to strike it will be denied.

As noted above, Continental was on notice by the examiner's decision that his intention was to condition the certificate in Docket No. CI61-586 as he did by way of the errata notice, in view of the conflict between the body of the decision and the Appendices. However, since no party will be prejudiced, we shall grant the motion to file supplemental exceptions and accept them for filing at this time. We point out that we are not herein passing on the merits of the examiner's decision or Continental's supplemental exceptions thereto.

The Commission orders:

(A) The motion to strike errata notice in part, filed in the above-captioned matters on March 19, 1964, by Continental Oil Company is hereby denied.

(B) The motion to file supplemental exceptions filed in the above-captioned matters on March 19, 1964, by Continental Oil Company is hereby granted and the supplemental exceptions which accompanied said motion are hereby accepted for filing.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

VERMONT ELECTRIC COOPERATIVE, INC., PROJECT NO. 2152; CENTRAL VERMONT PUBLIC SERVICE CORPORATION, PROJECT NO. 2205

ORDER PERMITTING WITHDRAWAL OF APPLICATION FOR PROJECT NO. 2152

(Issued April 7, 1964)

By Commission order issued January 20, 1964, the matters involved and issues presented by conflicting applications for license by Vermont Electric Cooperative, Inc. (Cooperative) and Central Vermont Public Service Corporation (Corporation) were consolidated for hearing. At a prehearing conference held on February 4, 1964, pursuant to the above order, the Cooperative stated its intention to request withdrawal of its application and its intervention with respect to the Corporation's application.

On February 28, 1964, the Cooperative filed a notice of withdrawal of its application for license for Project No. 2152 and its intervention in respect to the Corporation's application for license for Project No. 2205. In view of the availability of power at lower cost, the Cooperative requested that the Commission approve the withdrawal.

The Commission orders:

Permission for withdrawal of the application for license for Project No. 2152 and the aforesaid intervention in respect to Project No. 2205 is hereby granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

AREA RATE PROCEEDING, ET AL., DOCKET NO. AR61-2, ET AL.; AREA RATE PROCEEDING, ET AL., AR64-2, ET AL.; UNION PRODUCING COMPANY (OPERATOR), ET AL., G-18354, ET AL.

ORDER SEVERING AND CONSOLIDATING PROCEEDINGS

(Issued April 8, 1964)

By Opinion No. 414-A, issued on March 6, 1964, 31 FPC 503, we held that the rates for all sales of natural gas by Union Producing Company (Union) to its pipeline affiliate, United Gas Pipe Line Company (United) would be in issue in the Section 5(a) proceeding in Docket No. G-18354 which by Opinion No. 414 we remanded for further hearing on limited issues. We also held that Union's rates for sales to non-affiliated pipeline purchasers would be determined in the appropriate area rate proceedings.

There are presently consolidated with the proceedings in Docket Nos. AR61-2 and AR64-2 certain Section 4(e) proceedings involving certain sales by Union to United. It is appropriate that these proceedings be severed from the area proceedings and consolidated with Union's Section 5(a) proceeding in Docket No. G-18354 together with other Section 4(e) proceedings for sales to United not now consolidated with either proceeding. By the instant severance and consolidation Union's rates for sales to its affiliate, United, will be determined in the Docket No. G-18354 proceeding and its rates for sales to nonaffiliates will be determined in the appropriate area proceeding.

The Commission orders:

The proceeding in Docket No. G-20204 is hereby severed from the proceedings in Docket No. AR61-2, *et al.*, and the proceedings in Docket Nos. RI60-54 and RI63-85 are hereby severed from the proceedings in Docket No. AR64-2, *et al.*, and together with the proceedings in Docket Nos. G-18689, G-20085, G-20431, RI63-28, RI63-256, RI63-257, RI63-300, and RI64-276, are hereby consolidated with the proceeding in Docket No. G-18354.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

AREA RATE PROCEEDING, ET AL. (HUGOTON-ANADARKO AREA), DOCKET NO. AR64-1, ET AL.

ORDER PERMITTING INTERVENTIONS

(Issued April 8, 1964)

Pursuant to the Commission's order instituting these proceedings, 30 FPC 1354, issued November 27, 1963, timely petitions and notices to intervene were filed on or before January 2, 1964, except where noted, by the persons named in the following intervener categories:

I. The following state commissions filed notices of intervention under Section 1.8 of our Rules of Practice and Procedure:

Public Service Commission of Wisconsin.
Michigan Public Service Commission.
Iowa State Commerce Commission.
State Corporation Commission of the State of Kansas.
The People of the State of California and the Public Utilities Commission of the State of California.
Georgia Public Service Commission.[1]
The Public Utilities Commission of the State of Colorado.[2]

II. State, county, and municipal governmental bodies filing petitions to intervene:

State of Texas.
State of Minnesota.
State of Wisconsin.
City of Minneapolis, Minnesota.
City and County of Denver, Colorado.
Municipal Group of Kansas Cities of Altamont, Atchison, Beloit, Chanute, Cherryvale, Countryside, Downs, Erie, Fairway, Girard, Grenola, Howard, Iola, Kansas City, Leawood, Lenexa, Melvern, Meriden, Mission Woods, Neodesha, Osage City, Perry, Pittsburg, Prairie Village, and Topeka; and

[8] The petition to intervene was filed on January 3, 1964.

On January 30, 1964, the Secretary of the Commission sent to all respondents a list of the names and addresses of those who had filed notices and petitions of intervention. Concurrently, the Commission issued an order providing for, among other things, the filing of answers to the petitions to intervene. The only answer received, filed by the Sun Oil Company on March 2, 1964, opposes the intervention petitions filed by (1) the Philadelphia Gas Works Division of the United Gas Improvement Company (P.G.W.) and (2) the Berkshire Gas Company, *et al.* (Forty-one New England Distributors).

Basic to Sun's opposition is the circumstance that none of these petitioners receive natural gas produced in the Hugoton-Anadarko area for distribution in their market areas and therefore cannot be aggrieved by any order issuing from these rate proceedings. However, the distributors contend that rates for natural gas produced in one region of the country can have a direct and marked effect upon the demands placed upon that produced in regions from which interstate pipelines serving them draw their natural gas supplies. Therefore, the petitioners assert, the proper scope of ratemaking in these proceedings is not, or should not be, confined to local pricing area considerations, but instead should encompass relevant factors of a nationwide character, *e.g.*, location value of reserves vis-a-vis market, and the impact of rates established for one area upon the rate structures of other areas.

We are satisfied that during the developmental period of area ratemaking the Commission should have available to it all the relevant evidence bearing upon the evolution of principles involved in the establishment of just and reasonable area rates. We shall therefore, in the exercise of our discretion under Section 15(a) of the Natural Gas Act, permit the intervention of P.G.W. and the New England Distributors in these proceedings. We recognize that this disposition may be considered to be inconsistent with our denial of a similar P.G.W. intervention petition, in orders issued in the *Permian Basin* case[9] prior to the commencement of any area rate hearings. Further experience has demonstrated that this determination unnecessarily deprived the Commission of the active participation of groups which, from past performance, can be counted on to make substantial contributions towards solving the complex problems inherent in area ratemaking, and that permitting their intervention should not materially delay the proceeding.

The intervention pleadings that were untimely filed fall into two groups (1) those noticed by the Secretary on January 30, 1964, and (2) those filed after January 30, 1964, and which have not been called to the parties' attention. In the first group we have those of the City of Waukegan, Illinois, San Diego Gas & Electric Company; Northern Indiana Public Service Company, and Michigan Wisconsin Pipe Line Company. Those in the second group include the Georgia Public Service Commission; County of Wayne, Michigan; City of Saint Paul, Minnesota; and The Public Utilities Commission of the State of Colorado.

Except for the Georgia Public Service Commission, all of the petitioners are located in areas served with natural gas produced from the Hugoton-Anadarko area and are affected by rates fixed for such natural gas. None of the pleadings in the first group are opposed and there is no reason to suppose that any of the petitions in the second group would be opposed or that any useful purpose would be achieved by delaying positive action thereon. Accordingly, on the basis of the representations set forth in the intervention pleadings filed in both groups good cause exists to accept these late filings to permit all of petitioners, the Georgia Public Service Commission, and The Public Utilities Commission of the State of Colorado to participate.

---

[9] See *Area Rate Proceeding, et al.*, Docket No. AR61–1, *et al.*, "Order Permitting and Denying Interventions," issued May 31, 1961, and "Order on Rehearing Permitting and Denying Intervention," issued July 26, 1961.

The Commission orders:

Subject to the rules and regulations of the Commission, all the petitioners and State Commissions named hereinabove are permitted to intervene in these consolidated proceedings and to participate on a joint or individual basis. *Provided, however,* that the participation of such interveners shall be limited to matters affecting asserted rights and interests specifically set forth by said petitioners in their petitions and *Provided, further,* that the admission of said petitioners as interveners shall not be construed as recognition by the Commission that they might be aggrieved because of any order or orders of the Commission entered in this proceeding.

Before Commissioner: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

DELHI-TAYLOR OIL CORPORATION, DOCKET NO. G-20429; MAYFAIR MINERALS, INC., DOCKET NO. G-20430

ORDER ACCEPTING OFFER OF SETTLEMENT REQUIRING FILING OF CONTRACT AMENDMENTS, AND TERMINATING PROCEEDING

(Issued April 8, 1964)

On February 25, 1964, Delhi-Taylor Oil Corporation and Mayfair Minerals, Inc. (D & M) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Trunkline Gas Company (Trunkline) by D & M. The offer relates to sales made under Supplement No. 6 to D & M's FPC Gas Rate Schedules No. 1 in Hidalgo County, Texas (Texas R.R. Com. District #4). Each of the proposed increased rates of 14.55861¢ per Mcf was suspended by order of the Commission for the statutory period, and was made effective by D & M on June 1, 1960, in the above dockets.

Under the terms of the offer, D & M propose to eliminate the favored-nation and price redetermination provisions from each of the rate schedules and to establish a 14.55861¢[1] per Mcf rate for the subject sales. No protests or objections have been filed to the offer.

The proposed settlement is consistent with the provisions of the *Second Amendment to the Commission's Statement of General Policy No. 61-1,* issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of D & M's offer of settlement shall not be construed as approval of any future rate increases that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving D & M's rates and rate schedules.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by D & M on February 25, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

---

[1] Rate is inclusive of tax reimbursement and 0.25¢ dehydration allowance paid by buyer.

The Commission orders:

(A) The offer of settlement filed with the Commission by D & M February 25, 1964, is hereby approved in accordance with the provisions of this order.

(B) D & M shall file, within 30 days from the date of issuance of this order, executed contractual amendments to each of its FPC Gas Rate Schedules No. 1 eliminating the favored-nation and price redetermination provisions therefrom. The contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Upon notification by the Secretary of the Commission that D & M have each complied with the terms and conditions of the order, the rate and charge of 14.55861¢ per Mcf at 14.65 psia, specified in its offer of settlement shall be effective as of the date of issuance of this order, the above-designed proceedings shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64–2 without further order of the Commission.

(D) The acceptance by the Commission of D & M's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against D & M, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman: L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

OLEN F. FEATHERSTONE

ORDER DENYING MOTION FOR PERMISSION TO WITHDRAW RATE FILING

(Issued April 8, 1964)

On November 18, 1963, Olen F. Featherstone (Featherstone) filed a motion requesting that it be permitted to withdraw the notice of change proposing an increased rate of 13.0¢ per Mcf at 15.025 psia, designated as Supplement No. 1 to its FPC Gas Rate Schedule No. 1, for the jurisdictional sale of natural gas to El Paso Natural Gas Company (El Paso) from the Bisti Field, San Juan County, New Mexico (San Juan Basin), which was accepted for filing effective as of December 25, 1961. Featherstone contends that the initial rate for the instant sale was incorrectly established at 12¢ per Mcf when properly it should have been 13¢ per Mcf. Featherstone's motion thus raises the question as to what was the proper rate for sales made by Featherstone during the period from January 8, 1960, the date of initial delivery to December 25, 1961, the date the 13¢ increased rate became effective.

On January 26, 1959, Featherstone filed an application for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act proposing therein an initial rate of 12.0¢ per Mcf at 15.025 psia.[1] A certificate was issued to Featherstone by order issued June 19, 1959, in Docket No. G–17642 pursuant to the shortened procedure under Section 157.11(b) of the

---

[1] The contract between Featherstone and El Paso, executed on July 21, 1958, provided for an initial rate of 12.0¢ per Mcf with a periodic increase to 13.0¢ per Mcf as of January 1, 1959.

Commission's Rules of Practice and Procedure. On October 23, 1961, Featherstone tendered a rate schedule for the instant sale together with a billing statement purporting to reflect an initial rate of 13.0¢. On November 24, 1961, Featherstone, in response to a request from the Secretary of the Commission, dated November 13, 1961, submitted a notice of change proposing an increase in rate from 12.0¢ to 13.0¢[2] and a revised billing statement reflecting a 12.0¢ initial rate. By letter order issued December 20, 1961, the rate schedule was accepted for filing to be effective on the date of initial delivery (January 8, 1960), and the notice of change to 13.0¢ per Mcf, designated as Supplement No. 1 to Featherstone's FPC Gas Rate Schedule No. 1, was accepted for filing to be effective as of December 25, 1961.

Featherstone's motion represents an untimely attempt to have us reverse the Secretary's action of November 13, 1961, in which he refused to accept the billing statement tendered by Featherstone purporting to show an initial rate of 13.0¢ per Mcf. Featherstone does not assert in his motion any justification for the two year delay in filing the motion. For this reason alone the motion properly would be subject to rejection. In any event, we also think the motion is without merit. Featherstone in its certificate application requested an initial rate of 12.0¢ per Mcf, despite the fact that at the time of filing its application it was entitled contractually to a 13.0¢ rate. Featherstone did not at any time seek to amend its certificate application to request a higher initial rate. It cannot reasonably be argued that the Commission authorized an initial rate higher than the one sought by applicant, even assuming *arguendo* that the Commission had the power to do so if it desired. See *Sunray DX Oil Company*, Docket No. RI63-60, order issued December 5, 1963, 30 FPC 1418. In view of the foregoing, we find that 12.0¢ per Mcf was the proper initial rate. Accordingly, we shall deny Featherstone's motion.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder, to deny Featherstone's motion for permission to withdraw Supplement No. 1 to Featherstone's FPC Gas Rate Schedule No. 1.

The Commission orders:

The motion filed by Featherstone on November 18, 1963, for permission to withdraw Supplement No. 1 to Featherstone's FPC Gas Rate Schedule No. 1 is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

FOSTER PETROLEUM CORPORATION, DOCKET NOS. RI64-17 AND RI64-24

ORDER DENYING ALTERNATIVE REQUEST

(Issued April 8, 1964)

On August 12, 1963, Foster Petroleum Corporation (Foster) filed motions for reconsideration of the Commission's suspension orders issued July 12, 1963, in

---

[2] On October 23, 1963, Featherstone tendered for filing a notice of change to 14.0577¢ per Mcf at 15.025 psia. The proposed increased rate, designated as Supplement No. 2 to Featherstone's FPC Gas Rate Schedule No. 1, was suspended by order issued November 20, 1963, in Docket No. RI64-306. The proceeding in Docket No. RI64-306 is not involved here.

Docket Nos. RI64-17 and RI64-24, requesting that the Commission vacate such orders. By order issued herein on September 9, 1963, we denied these motions for the reasons set forth in that order. However, in its motions, Foster suggested, as an alternative plea, that if the Commission did not permit Foster to charge and collect the subject increased rates without suspension, Foster would be willing to file increased rates of 10.0¢ per Mcf for sour gas and 10.5¢ per Mcf for sweet gas, if such rates would be accepted without suspension. No action was taken with respect to the alternative plea in our September 9 order, and it is now before us for our consideration.

The suspension order issued in Docket No. RI64-17 involves proposed increases in rates from 7.2 to 11.0¢ per Mcf for sales of sour gas by Foster to Phillips Petroleum Company (Phillips) from Panhandle Field, Moore County, Texas (Railroad District No. 10). The proposed increased rates[1] were suspended until December 15, 1963, and thereafter until such further time as they are made effective in the manner prescribed in the Natural Gas Act.

The suspension order in Docket No. RI64-24 involves proposed increases in rates from 7.2¢ per Mcf to 10.5¢ per Mcf for sales of sour gas by Foster to Phillips from Panhandle Field, Moore County, Texas (Railroad District No. 10). The proposed increased rates[2] were suspended until July 16, 1963, and thereafter until such further time as they are made effective in the manner prescribed in the Natural Gas Act.

As indicated in our order of September 9, the cost per Mcf to Phillips of gathering and processing Foster's nonpipeline quality gas must be taken into consideration in determining the proper rate level for Foster's sales to Phillips. In view of the fact that Phillips' resale rates are under suspension and appropriate cost evidence has not been submitted, we cannot approve Foster's alternative plea.

The Commission orders:

The alternative pleas set forth in Foster Petroleum Corporation's August 12, 1963 motions for reconsideration of the Commission's orders issued July 12, 1963, in the proceedings in Docket Nos. RI64-17 and RI64-24 are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

HOLLANDSWORTH AND TRAVIS (OPERATOR), ET AL., DOCKET NOS. RI61-493 AND RI64-641

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE AND CONTRACT AMENDMENTS, AND TERMINATING PROCEEDINGS

(Issued April 8, 1964)

On February 6, 1964, Hollandsworth and Travis (Operator), *et al.* (H&T) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Mississippi River Fuel Corporation (MRF) by H&T. The offer relates to sales made under H&T's FPC

---

[1] The increased rate filings were designated as Supplement Nos. 1 to Foster's FPC Gas Rate Schedule Nos. 1, 5, 6, 8, 9, 10 and 12.

[2] The proposed increased rates were designated as Supplement Nos. 1 to Foster's FPC Gas Rate Schedule Nos. 14 and 15, respectively.

Gas Rate Schedule Nos. 2 and 3 in Harrison County, Texas (Texas R.R. Com. District #6). Proposed increased rates of 14.8892¢ per Mcf for the instant sales were suspended in Docket No. RI61-493, and subsequently made effective subject to refund as of October 23, 1961. Later proposed increased rates of 15.1440¢ per Mcf were suspended by order of the Commission in Docket No. RI64-641 until August 16, 1964.[1]

Under the terms of the offer, H&T proposes to eliminate the favored-nation, redetermination and the present periodic escalation provisions from its rate schedules, and to establish a 15¢ per Mcf rate for the subject sales.[2] No protests or objections have been filed to the offer.

The proposed settlement is consistent with the provisions of the *Second Amendment to the Commission's Statement of General Policy No. 61-1*, issued December 20, 1960, 24 FPC 1107, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of H&T's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases as provided in its offer of settlement. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving H&T's rates and rate schedules.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by H&T on February 6, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by H&T February 6, 1964, is hereby approved in accordance with the provisions of this order.

(B) H&T shall file, within 30 days from the date of issuance of this order, notices of change in rate providing for the 15¢ per Mcf rates specified in its offer of settlement, and executed contractual amendments to its FPC Rate Schedule Nos. 2 and 3, eliminating the favored-nation price redetermination, and the present periodic escalation provisions therefrom. The notices of change and contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Upon notification by the Secretary of the Commission that H&T has complied with the terms and conditions of this order, the rates and charges of 15¢ per Mcf at 14.65 psia, specified in its offer of settlement, shall be effective as of the date of issuance of this order, and the above designated proceedings shall be deemed terminated.

(D) The notice of change filed on March 17, 1964, pertaining to Supplement No. 19 to H&T's FPC Gas Rate Schedule No. 2 is hereby considered withdrawn.

(E) The acceptance by the Commission of H&T's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against H&T including area rate or other similar proceedings.

---

[1] Additionally, H&T filed on March 17, 1964, a notice of change proposing an increased rate of 15.1440¢ applicable to acreage referred to in Supplement No. 19 to its Gas Rate Schedule No. 2.

[2] The 15¢ rate includes a dehydration allowance paid by buyer to seller for delivery of dehydrated gas.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MERCED IRRIGATION DISTRICT, PROJECT NO. 2179

ORDER ISSUING LICENSE (MAJOR)

(Issued April 8, 1964)

Application was filed on August 4, 1958, and amended on February 21, 1963, by Merced Irrigation District (Applicant) of Merced, California, for a license under Section 4(e) of the Federal Power Act (Act) for proposed Project No. 2179, to be known as the Exchequer Hydro-Electric Development, to be located on Merced River, County of Mariposa, California, and affecting public lands of the United States.

The proposed project, which would consist of an enlargement of Applicant's existing licensed Exchequer Project No. 88 and the Exchequer Afterbay Development, is to be used primarily for irrigation, flood control and power. Applicant proposes to finance Project No. 2179 with a contribution from the United States for flood control benefits to be provided and the issuance of revenue bonds based upon a proposed long-term power sales contract with Pacific Gas & Electric Company (Pacific) which has expressed its willingness to negotiate such a contract. Pacific is currently purchasing the power output from Applicant's Project No. 88.

As proposed in the amended application for license, the existing Exchequer concrete gravity arch dam will be raised 155 feet to a total height of 480 feet by placement of a rolled rock fill with a reinforced concrete facing abutting the downstream side of the existing dam. The total reservoir storage would be increased from 281,200 acre feet to 1,010,000 acre feet and the reservoir area would be increased from 2,600 acre feet to 6,900 acre feet at elevation 865 feet. A middle dyke and a gated spillway will be located on the right abutment about 0.7 miles from the dam. An 18-foot diversion and power tunnel about 1,200 feet long will be in the right abutment. The existing powerhouse of Project No. 88 with a capacity of 25,000 kilowatts will be abandoned and a new powerhouse will be constructed just downstream from the toe of the enlarged dam containing two generating units, each with a turbine capacity of 63,100 horsepower connected to a generator rated at 44,500 kva. The installed capacity will be 80,000 kilowatts. Provision is being made in the powerhouse for a third future unit.

The afterbay development, which will be located about 6 miles downstream from the Exchequer dam, will consist of a dam comprised of a 76-foot high concrete gravity gated spillway section, a power intake section and two rockfill abutment sections; a reservoir with a storage capacity of 8,750 acre feet at normal maximum water surface elevation 400 feet; and a powerhouse integral with the dam containing one generating unit with a turbine capacity of 11,050 horsepower connected to a generator rated at 7,800 kva at 0.9 power factor. The installed capacity will be 7,000 kilowatts.

The annual value of power from the project, both at-site and downstream at Pacific's Project No. 1355, is estimated by Commission staff at $2,400,000 based on alternate steam with private financing. The annual cost of the project is estimated by the staff at $1,953,000 based on 4 percent cost of money to Applicant.

The original plan of development presented by Applicant in its application for license provided for the construction of Bagby development upstream from the Exchequer development the enlargement of the Exchequer development, and the construction of the Snelling development downstream from the Exchequer development. However, as recited above, Applicant now proposes an initial development to comprise the enlargement of the existing Exchequer development and an afterbay development as a temporary substitute for the Snelling development. Applicant advises that its estimate of power value and power output from Bagby and Snelling indicates that income from such power output would not presently support the required expenditure for that ultimate development. We are herein providing that at such time as a more complete development becomes economically feasible, the afterbay development would not preclude a more comprehensive development of the reach of river involved.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, have recommended for inclusion in any license for the project, a special condition in the interest of flood control.

The Department of the Interior, in reporting on the application, has recommended for inclusion in any license for the project certain conditions in the interests of the Department.

The Department of Fish and Game, State of California, in reporting on the application, advised it had entered into an agreement with Applicant for the protection of fish and wildlife.

The Commission finds:

(1) Applicant is a "municipality" as defined in the Federal Power Act, and has submitted satisfactory evidence of its compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license for the project.

(2) The proposed project will affect lands of the United States.

(3) Public notice of the filing of the application has been given as required by the Act. There are no protests or conflicting applications before the Commission.

(4) The proposed project will not affect a Government dam.

(5) The issuance of a license for the project will not interfere or be inconsistent with the purposes for which any reservation was created or acquired.

(6) The project is best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(7) The issuance of a license for the project will not affect the development of any water resources for public purposes which should be undertaken by the United States.

(8) The installed horsepower capacity of the proposed project for the purpose of computing the capacity component of the administrative annual charge is 116,000 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(9) The amount of annual charges to be paid under the license for the use, occupancy and enjoyment of lands of the United States by the project shall be determined at a later date as hereinafter provided.

(10) The electrical facilities referred to in paragraph (B) below, which were included in the application for license, are parts of the project within

the meaning of Section 3(11) of the Act and should be included in the license for the project.

(11) The exhibits designated and described in paragraph (B) below, which were filed as part of the application for license, conform to the Commission's rules and regulations, and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Merced Irrigation District (Licensee) of Merced, California, under Section 4(e) of the Act for a period of 50 years, effective as of March 1, 1964, for the construction, operation and maintenance of Project No. 2179 on the Merced River, California, and affecting lands of the United States; subject to the terms and conditions of the Act which is incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act; provided, however, that the Licensee shall surrender its license for Project No. 88 within 30 days after such project becomes inoperative during the construction of Project No. 2179.

(B) Project No. 2179 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined and/or interest in such lands necessary or appropriate for the purpose of the project, whether such lands or interest therein are owned or held by the applicant or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the amended application for license, and which are designated and described as follows:

Exhibit	FPC No.	Showing	Exhibit	FPC No.	Showing
J	2179-24	General map.	K—Continued	2179-27	Project area.
				2179-28	Do.
K	2179-25	Project area.		2179-29	Do.
	2179-26	Do.		2179-30	Do.

(ii) All project works consisting principally of:

Exchequer Development, an enlargement of applicant's existing Exchequer development (FPC Project No. 88) would consist of: a 480 foot high rock fill dam with reinforced concrete facing abutting the downstream side of the existing concrete dam, with a crest length of 1,200 feet; an auxiliary rock fill dike with crest length of 1,200 feet at elevation 881 feet varying in height to 56 feet about ½ mile north of the dam; a gated spillway about 4,500 feet northwest of the right abutment; a reservoir with storage of 1,010,000 acre-feet and area of 6,900 acres at maximum water surface elevation 865 feet; two 10-foot steel penstocks leading to a powerhouse containing two 63,100-horsepower turbines connected to two 40,000-kilowatt generators with minimum provisions for a future unit; substation; and appurtenant mechanical facilities;

Exchequer Afterbay Development, would be approximately 6 miles downstream from Exchequer, near the headwaters of Merced Falls reservoir owned by Pacific Gas & Electric Company (FPC Project No. 1335) and would be created by a 76 foot high concrete gravity dam with rock fill wing dams at each end; a gated spillway would be located in the concrete gravity section; a reservoir with storage of 8,750 acre-feet at maximum water surface elevation 400 feet; one 22-foot steel penstock leading to a powerhouse containing one 11,050-horsepower turbine connected to a 7,000-kilowatt generator; substation; and appurtenant mechanical and electrical facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the amended application and which are designated and described as follows:

	2179-37	Dike & Spillway, Exchequer Development.			

Exhibit M: Comprised of two (2) pages, signed January 29, 1963, describing mechanical and electrical equipment for: "Works Covered by this Amended Application" and "Proposed Ultimate Development on Merced River".

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-2 (Revised February 1, 1964) entitled "Terms and Conditions for Unconstructed Major Project Affecting Lands of the United States" (31 FPC 528), which terms and conditions, designated as Articles 1 through 33, are attached hereto and made a part hereof except for Articles 6, 7, 18, 19 and 20 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 34. The Licensee shall commence construction of the project works within two years after the effective date of the license and shall thereafter in good faith and with due diligence prosecute such construction and shall complete construction of such works within three years thereafter.

Article 35. The Licensee shall, within one year following completion of the construction of the project file with the Commission revised Exhibits F and K showing final project boundary prepared in accordance with the Commission's rules and regulations.

Article 36. The Licensee shall submit in accordance with the Commission's rules and regulations, revised Exhibit L drawings for the project structures and Licensee shall not begin construction of the project works until the Commission approves the Exhibits.

Article 37. The right, power, and authority is reserved to the United States to construct or to the Commission to issue a license authorizing the construction, operation and maintenance of a hydroelectric project which will more completely utilize the water resources of the reach of the Merced River in which the afterbay development of Project No. 2179 is located.

Article 38. The acceptance of this license by the Licensee shall constitute its stipulation, consent and agreement made upon its own behalf and upon the

behalf of its successors and assigns for the benefit of the United States, or the person or persons hereinafter constructing, operating and maintaining such more complete development or his or their successors and assigns that said Licensee, its successors or assigns shall amend its license to eliminate the afterbay development of Project No. 2179 at such time as the afterbay development becomes inoperative by reason of inundation by such more complete development, that said Licensee, its successors or assigns shall not be entitled to any compensation for damages sustained by reason of inundation or destruction of the afterbay development; provided said Licensee, its successors or assigns shall be entitled to receive from said more complete development for the unexpired term of the license for Project No. 2179, an amount of electric capacity and energy equal to that generated by the afterbay development with compensation to the downstream developer in an amount equal to the cost to the licensee if the capacity and energy had been received from the afterbay development. In the event the licensee for Project No. 2179 and the owner of such more complete development should be unable to agree, the amount of capacity and energy which the licensee is entitled to receive, and the amount equal to the cost if it had been generated at the afterbay development, shall be determined by the Commission.

Article 39. **The Licensee shall enter into an agreement with the Department of the Army providing for the operation of the project for flood control in accordance with rules and regulations prescribed by the Secretary of the Army. A conformed copy of the agreement shall be filed with the Commission for its information and records prior to commencement of construction of project works.**

Article 40. **The Licensee shall provide minimum streamflow in the Merced River downstream from the project reservoirs in accordance with the following schedule:**

(a) Downstream from Exchequer Dam, a minimum flow of 25 cubic feet per second at all times.

(b) At Shaffer Bridge downstream from Exchequer Afterbay Dam, a minimum streamflow shall be maintained as follows:

Period	Normal year (c.f.s.)	Dry year [2]
June 1 through Oct. 15	25	15
Oct. 16 through Oct. 31	75	60
Nov. 1 through Dec. 31 [1]	100	75
Jan. 1 through May 31	75	60

[1] If the average streamflow maintained at Shaffer Bridge from November 1 through December 31 is greater than 150 cubic feet per second exclusive of flood spills and emergency releases, then the streamflows from January 1 through March 31 shall be maintained at 100 cubic feet per second or more.

(An emergency is defined as an occurrence usually of short duration, such as flood, mechanical, or operational failure which is beyond the control of the Licensee, and during which the Licensee shall not be required to observe the release schedules contained in the license stipulations.)

[2] A dry year is defined as a year when the forecasted April 1 through July 31 unimpaired runoff, as published in the May 1 bulletin of the California Department of Water Resources for the station, "inflow to Exchequer" is less than 450,000 acre-feet.

Article 41. **The Licensee shall, insofar as possible during the period November 1 through December 31, regulate the Merced River streamflow downstream from the Exchequer afterbay development between 100 and 200 cubic feet per second except during dry years when the streamflow shall be maintained between 75 and 150 cubic feet per second. Streamflow shall be measured at Shaffer Bridge.**

Article 42. **The Licensee shall operate the power plants so as to avoid rapid fluctuation of the Merced River. At Crocker-Huffman diversion, the Licensee shall, insofar as possible, restrict the rate of change of release** during any one-hour period to not more than double nor less than one-half the amount of release at the start of the change. The Licensee shall, during emergency periods, endeavor to make releases in a manner which will not be detrimental to fish.

Article 43. The Licensee shall make all releases at Exchequer Dam during the period, October 16 through December 31, from the outlets at or below elevation 485 feet insofar as physically possible.

Article 44. The Licensee shall maintain the water surface elevation of Exchequer Reservoir as high as possible from April through October and maintain a minimum pool of not less than 115,000 acre-feet in Exchequer Reservoir except for a drawdown as necessary to maintain previously recommended minimum streamflow.

Article 45. The Licensee shall cooperate with the Bureau of Sport Fisheries and Wildlife of the U.S. Fish and Wildlife Service to determine means of providing up to 15,000 acre-feet of project water and return flow waters to the Merced National Wildlife Refuge.

Article 46. The Licensee shall, prior to impounding water, dispose of all temporary structures, unused timber, brush, refuse, or other inflammable material resulting from the clearing of the land or from the construction and maintenance of the project works, and shall clear all lands in the reservoir areas up to normal water levels; except that all lands in the reservoir areas shall be cleared according to a plan to be prescribed by the Commission upon the recommendation of the California Department of Fish and Game and the Bureau of Sport Fisheries and Wildlife. The clearing of the lands and the disposal of the material shall be done with due diligence by Licensee and to the satisfaction of the authorized representative of the Commission.

Article 47. The Licensee shall, within one year from the effective date of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 48. The Licensee shall cooperate with the Central California Archeological Foundation, P.O. Box 5595, Sacramento, California, in the possible archeological survey and salvage and shall compensate for the expenses incurred but not to exceed a total of $6,000.

Article 49. The Licensee shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's regulations, in effect from time to time. The authorized installed capacity for such purposes is 116,000 horsepower.

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, an amount to be determined hereafter by the Commission.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act. and failure to file such an application shall constitute acceptance of this license. In acknowledgement of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. IT-5460

ORDER AUTHORIZING TRANSMISSION OF ELECTRIC ENERGY TO CANADA AND SUPERSEDING PREVIOUS AUTHORIZATION

(Issued April 8, 1964)

Montana-Dakota Utilities Co. (Applicant), incorporated under the laws of the State of Delaware and qualified to do business as a foreign corporation in the States of Minnesota, Montana, North Dakota, South Dakota, and Wyoming, with its principal place of business at Minneapolis, Minnesota, on January 29, 1964, filed an application for a supplemental order, pursuant to Section 202(e) of the Federal Power Act, authorizing an increase in the amounts of electric energy which Applicant is presently authorized to transmit from the United States to Canada.

By Commission order issued November 14, 1961, in the above docket (26 FPC 733), Applicant was authorized to transmit electric energy from the United States to Canada as follows:

At North Portal, Saskatchewan, an amount not to exceed 666,000 kilowatt-hours per annum at a maximum transmission rate of 230 kilowatts;

At Northgate, Saskatchewan, an amount not to exceed 60,600 kilowatt-hours per annum at a maximum transmission rate of 20 kilowatts;

At Elmore, Saskatchewan, an amount not to exceed 24,300 kilowatt-hours per annum at a maximum transmission rate of 10 kilowatts; and

At Marienthal, Saskatchewan, an amount not to exceed 28,700 kilowatt-hours per annum at a maximum transmission rate of 12 kilowatts.

Applicant now seeks authorization to transmit electric energy from the United States to Canada in the following amounts and at the following rates of transmission:

At North Portal, up to 800,000 kilowatt-hours per annum at a rate not to exceed 250 kilowatts;

At Northgate, up to 81,000 kilowatt-hours per annum at a rate not to exceed 30 kilowatts;

At Elmore, up to 43,000 kilowatt-hours per anum at a rate not to exceed 20 kilowatts;

At Marienthal, up to 42,000 kilowatt-hours per annum at a rate not to exceed 15 kilowatts.

The amounts of electric energy which Applicant proposes to export, like those amounts presently exported pursuant to the aforementioned authorization, are to be transmitted to Canada from points within the State of North Dakota over four 2.3 kilovolt lines which are covered by a Presidential Permit signed by the President of the United States on May 18, 1942, and released to Applicant concurrently with the issuance of Commission order issued July 21, 1942 (3 FPC 761), all in the above docket.

According to the Applicant, the increased amounts of power and energy will be used by Applicant to meet the expanding electric requirements of its retail customers in Canada.

Written notice of the application has been given to the Railroad and Warehouse Commission of Minnesota, the Board of Railroad Commissioners of Montana, the Public Service Commission of North Dakota, the Public Utilities Commission of South Dakota, and the Public Service Commission of Wyoming and to the Governor of each of those States. Notice of the application was also published in the Federal Register on February 15, 1964 (29 F.R. 2528), stating that any person desiring to be heard or to make any protest with reference to the application should on or before March 2, 1964, file with the Federal Power Commission, Washington, D.C., 20426, a petition or protest. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

The transmission of electric energy from the United States to Canada, as limited herein and as hereinafter authorized, will not impair the sufficiency of electric supply within the United States and will not impede or tend to impede the coordination in the public interest of facilities subject to the jurisdiction of the Commission.

The Commission orders:

(A) Applicant is hereby authorized to transmit electric energy from the United States to Canada in accordance with the terms and conditions set forth in the application and subject to the provisions of this order.

(B) The electric energy which Applicant is hereby authorized to transmit from the United States to Canada shall not exceed 800,000 kilowatt-hours per annum at a maximum transmission rate of 250 kilowatts at North Portal, Saskatchewan, 81,000 kilowatt-hours per annum at a maximum transmission rate of 30 kilowatts at Northgate, Saskatchewan, 43,000 kilowatt-hours per annum at a maximum transmission rate of 20 kilowatts at Elmore, Saskatchewan, and 42,000 kilowatt-hours per annum at a maximum transmission rate of 15 kilowatts at Marienthal, Saskatchewan. The energy which Applicant is hereby authorized to export shall be transmitted over the facilities specified in the Presidential Permit signed by the President of the United States on May 18, 1942, and released to Applicant on July 21, 1942, as referred to above.

(C) The authorization herein granted may be modified from time to time or terminated by further order of the Commission, but in no event shall such authorization extend beyond the date of termination or expiration of the Presidential Permit referred to in paragraph (B) above.

(D) Applicant shall conduct all operations pursuant to the authorization herein granted in accordance with the provisions of the Federal Power Act and pertinent rules, regulations or orders issued by the Commission.

(E) Applicant shall install and maintain adequate metering equipment to measure the flow of all electric energy transmitted from the United States to Canada pursuant to the authority herein granted; shall make, keep and preserve full and complete records with respect to the movement of such energy; and shall furnish to the Commission with respect to such transmission of energy, on or before February 15 of each year, reports in triplicate showing the kilowatt-hours delivered at each of the points herein authorized, the maximum kilowatts of transmission, and the consideration received therefor during each month of the preceding calendar year.

(F) This authorization to transmit electric energy from the United States to Canada shall not be transferable or assignable, but in the event of the involuntary transfer of facilities used for such transmission by operation of law (including such transfers to receivers, trustees, or purchasers under foreclosure or judicial sale), shall continue in effect temporarily for a reasonable time thereafter, pending the making of an application for permanent authorization and decision thereon, provided notice is promptly given in writing to the Commission accompanied by a statement that the physical facts relating to sufficiency of supply, rates, and nature of use remain substantially the same as before the transfer.

(G) This authorization shall be without prejudice to the authority of any State, State regulatory commission, or the Dominion of Canada for the exercise of any lawful authority vested in such State, State regulatory commission, or the Dominion of Canada over Applicant.

(H) This authorization is without prejudice to the authority of this Commission, or any other regulatory body, with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission, or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

(I) The authorization herein granted shall supersede that heretofore granted by Commission order issued November 14, 1961, referred to above.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 1962

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued April 8, 1964)

Pacific Gas & Electric Company, Licensee for Project No. 1962[1] filed with the Commission a statement, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for the period from July 1, 1951 through December 31, 1958, a net increase in the original cost of the project in the amount of $522,457.71, consisting of gross additions of $1,159,136.56, gross retirements of $386,758.52, and contributions in aid of construction in the credit amount of $249,920.33, resulting in a claimed total actual legitimate original cost of the project as of December 31, 1958 of $62,237,957.17.[2]

The Commission staff made a field examination of Licensee's books and records and other data for the purpose of ascertaining the correctness of the aforementioned claimed and recorded project cost changes for the period from July 1, 1951 through December 31, 1958.

Following that examination, the staff proposed certain adjustments, agreed to by representatives of Licensee, subject to Commission approval involving a reclassification of project costs in the amount of $801.74 within the project plant accounts, a reduction of $93,431.47, in the project claimed cost for the period, July 1, 1951 through December 31, 1958, and the accounting disposition thereof, with the resulting total actual legitimate original cost of the project as of December 31, 1958, being $62,144,525.70 as shown in the attached schedule.

---

[1] The project, located on the North Fork of Feather River in Butte and Plumas Counties, California, may be described generally as Licensee's Rock Creek-Cresta Project. The license, issued pursuant to Section 4(e) of the Federal Power Act, is for a period of 35 years, effective as of October 1, 1947.

[2] By order issued May 23, 1958 (19 FPC 803), the Commission determined the actual legitimate original cost of the project as of June 30, 1951, to be $61,715,499.46.

The detailed proposed adjustments to claimed costs are as follows:

Adjustment No.	*Description*	*Debit (credit)*
1	Adjust retirement and reinstallation of cranes	($72, 915. 76)
2	Nonproject plant	(4, 599. 60)
3	Adjust Licensee's tentative distributions of cost	(15, 916. 11)
4	Reclassification within project plants and detailed plant accounts	----------
	Total adjustments	(93, 431. 47)

The accounting disposition of the amounts involved in the proposed adjustments are shown by the following composite journal entry:

Account No.	*Title*	*Debit (credit)*
	Adjustments	
101	Electric plant in service—Project No. 1962	($93, 431. 47)
	Accounting Disposition	
101	Electric plant in service:	
	Project No. 619	222. 18
	Project No. 1988	(29, 581. 78)
	Nonproject	(3, 133. 63)
107	Construction work in progress—Electric	2, 051. 76
108	Accumulated provision for depreciation of electric plant in service:	
	Project No. 1962	102, 538. 52
	Nonproject	629. 66
121	Nonutility property	3, 271. 97
401	Operation expense	4, 583. 51
402	Maintenance expense	6, 582. 02
	Total disposition	93, 431. 47

Staff analysis of Licensee's provisions for project depreciation has not been completed and the staff recommends that the Commission defer for future consideration and determination the amount of accrued depreciation applicable to in-service project properties as of December 31, 1958.

Based upon the proposed adjustments, the staff recommends and Licensee concurs, that the Commission determine: (1) the net increase or change in the actual legitimate original cost of Project No. 1962 for the period from July 1, 1951 through December 31, 1958, to be $429,026.24, comprised of gross additions of $1,154,079.31, gross retirements of $475,132.74 and contributions in aid of construction in the credit amount of $249,920.33; and (2) the actual legitimate original cost of the project as of December 31, 1958, to be $62,144,525.70, classified by primary plant accounts as shown in the attached schedule.

By letter dated August 8, 1963 Licensee confirmed its agreement with respect to the proposed adjustments, accounting disposition, and resulting project costs.

The California Public Utilities Commission by letter of September 3, 1963 advised that it has no objections to the staff recommendations.

The Commission finds:

(1) The acceptance of the staff's recommendations by Licensee and by the California Public Utilities Commission, as set forth above, obviate the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting disposition, as proposed by the staff and agreed to by Licensee, are reasonable and appropriate for the purposes of the Federal Power Act, and, therefore, should be approved and directed as hereinafter provided.

(3) The net increase or change in the actual legitimate original cost of Project No. 1962 for the period from July 1, 1951 through December 31, 1958 is $429,026.24, comprised of gross additions of $1,154,079.31, gross retirements of $475,132.74, and contributions in aid of construction in the credit amount of $249,920.33; and the resulting actual legitimate original cost of the project as of December 31, 1958 is $62,144,525.70, classified by plants and by primary plant accounts as shown in the attached schedule.

(4) It is necessary and appropriate for the purposes of the Federal Power Act that the determination of the accrued depreciation applicable to in-service project properties of Project No. 1962 as of December 31, 1958 be reserved for future Commission consideration as hereinafter provided.

The Commission orders:

(A) The provision of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including the accounting disposition, as proposed by the staff and agreed to by Licensee, are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project plant accounts for Project No. 1962 showing the debit amount of $429,026.24 as the net increase or change in the actual legitimate original cost of the project for the period from July 1, 1951 through December 31, 1958 and the total debit balance of $62,144,525.70 as the actual legitimate original cost of the project as of December 31, 1958, all as more specifically shown in the attached schedule classified by plants and by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees effective prior to January 1, 1961.

(D) The matter of Commission determination of accrued depreciation applicable to in-service project properties of Project No. 1962 as of December 31, 1958, is hereby expressly reserved for future Commission consideration and decision.

(E) Licensee shall within 90 days from the issuance of this order file with the Commission certified copies of Licensee's adjusting journal entry showing compliance with this order; three copies of the journal entry to be submitted to the Secretary, Federal Power Commission, Washington, D.C., 20426, and two copies to be submitted to the Regional Accountant, Federal Power Commission, San Francisco, California, 94111.

TENNECO OIL COMPANY (OPERATOR), ET AL., DOCKET NO. G-13582

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, SEVERING AND TERMINATING PROCEEDING

(Issued April 8, 1964)

On January 9, 1964, Tenneco Oil Company (Tenneco) submitted an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves a proposed increased rate for a sale of natural gas made to United Gas Pipe Line Company (United) by Tenneco. The offer relates to a sale made under Supplement No. 9 to Tenneco's FPC Gas Rate Schedule No. 2 in San Patricio and Nueces Counties, Texas (Texas R.R. Com. District #4). The proposed increased rate was suspended by order of the Commission for the statutory period, and was made effective by Tenneco on April 1, 1958.

Under the terms of the offer, Tenneco proposes to eliminate the price redetermination provision from the rate schedule and to establish a 14.6¢ per Mcf rate for the subject sale. Tenneco's annual revenues will be decreased about $5,000 from the presently effective rates. No protests or objections have been filed to the offer.

Tenneco, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to United under the subject rate schedule in excess of the settlement rate. The estimated total dollars to be refunded approximates $45,000, exclusive of interest.

The proposed settlement is consistent with the provisions of the *Second Amendment to the Commission's Statement of General Policy No. 61-1*, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that our action herein shall not be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Tenneco's rate and rate schedule.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Tenneco on January 9, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Tenneco January 9, 1964, is hereby approved in accordance with the provisions of this order.

(B) Tenneco shall file, within 30 days from the date of issuance of this order, notice of change in rate providing for the 14.6¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 2 eliminating the price redeterminaton provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Tenneco shall refund to United to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate with simple interest, at 6% per annum, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination, together with a release from United.

(D) Upon notification by the Secretary of the Commission that Tenneco has complied with the terms and conditions of the order, the rate and charge of 14.6¢ per Mcf at 14.65 psia, specified in its offer of settlement shall be effective as of the date of issuance of this order, the above designated proceeding shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

(E) The acceptance by the Commission of Tenneco's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Tenneco, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 2105

ORDER AMENDING LICENSE AND TERMINATING PROCEEDINGS

(Issued April 9, 1964)

In the license issued to Pacific Gas & Electric Company for Project No. 2105 on January 24, 1955, provision was made in Article 26 for subsequent determination of water releases for the benefit of fish and recreation through agreement between the Licensee and "interested Federal and State of California agencies" on the basis of joint studies to be conducted by them.

After conclusion of joint studies and negotiations over a considerable period of time the Licensee and the interested Federal and State of California agencies were unable to agree on water releases. Since determination of such releases was necessary in order to complete project designs, and to comply with the construction schedule set forth in the license, on February 27, 1963 the Licensee filed an application for amendment of Article 26 to provide specific water releases.

Notice of the proposed amendment to Article 26 was given on April 3, 1963. By order of October 24, 1963 the matter was set for hearing. During the course of prehearing conferences additional tests, made possible by new construction, were conducted jointly by the Licensee, the Department of Fish and Game of the State of California, the Bureau of Sport Fisheries and Wildlife of the Department of the Interior and the Forestry Service of the Department of Agriculture.

Based upon the results of the additional studies, the Licensee, and the interested agencies were able to agree upon specific water releases, as originally contemplated by Article 26, on other related measures for the benefit of fish and wildlife and recreation. These measures, as agreed upon by the Licensee, and the interested agencies have been incorporated in a proposed revision of Article 26.

By a motion of March 23, 1964 addressed to the Presiding Examiner, Staff Counsel moved that Article 26 be amended according to the proposed revision and that the proceedings be terminated. This motion was joined by the Licensee, and the Department of Fish and Game of the State of California, by their filings of March 30, and April 1, 1964, respectively.

The Presiding Examiner certified this motion to the Commission for final action on March 24, 1964.

The Commission finds:

The agreement of the parties with respect to water releases and related matters is an agreement as contemplated by Article 26, and this Article should be amended as hereinafter provided, and the hearing should be terminated.

The Commission orders:

(A) Article 26 of the license for Project No. 2105 is amended to read as follows:

Article 26.

(a) The Licensee shall make available in North Fork Feather River below Almanor Dam a total of 25,000 acre feet of water each calendar year and, in addition, flushing flow water releases in an annual amount not to exceed 1,000 acre feet subject to cumulation to a total not to exceed 5,000 acre feet. Quantities shall be measured at gaging station NF-2 (Big Meadows Gage, also known as North Fork Feather River near Prattville, U.S.G.S. No. 11-3995) but any water spilled or released at Almanor Dam which exceeds the amount scheduled by more than the amount of the variation permitted in paragraph (c) following shall be excluded in computing the amount of acre feet made available hereunder.

(b) The Licensee shall make available in North Fork Feather River below Belden Diversion Dam a total of 64,000 acre feet of water each calendar year. Quantities shall be measured at gaging station NF-70 (below Belden Diversion Dam) but any water spilled or released at Belden Diversion Dam which exceeds the amount scheduled by more than the amount of the variation permitted in paragraph (c) following shall be excluded in computing the amount of acre feet made available hereunder.

(c) The quantities of water set forth in (a), with the exception of flushing flows, and (b) foregoing shall be made available in accordance with written flow schedules submitted by the California Department of Fish and Game, after consultation with the Bureau of Sport Fisheries and Wildlife and the U.S. Forest Service, to Licensee at least six months in advance and not more often than twice in any calendar year. A variation of 5 per cent for 5 cubic feet per second, whichever is the larger, from the scheduled rates of release shall be permitted to allow for inability to adjust gates precisely, and suitable adjustments within the variations set forth above in subsequent releases during the suceeding two months shall be made to offset the prior variations. In the event of the failure of the Department to provide a schedule for (a) or (b), Licensee shall make approximately uniform releases to provide in the stream the annual amounts specified. Flushing flows as set forth in (a) shall be released as requested upon 30 days notice but shall not be required at a time when the water would be wasted for power purposes because of a downstream plant of Licensee's being out of service.

(d) Licensee shall make available, to the extent requested by the Department, for fishery purposes on the North Fork Feather River between Almanor Dam and its confluence with the East Branch North Fork Feather River, the following:

(1) An amount not to exceed $75,000, or if the Department should elect not to require the construction of the rough fish barrier referred to in paragraph (h) below, an amount not to exceed $90,000, for the design, construction, and evaluation of capital improvements, including, but not limited to improvement of natural spawning areas, construction of artificial spawning channels, and improvement of resting and cover conditions.

(2) The funds made available pursuant to (1) above shall remain available for expenditure for a period not to exceed 15 years after the first year of operation of the project.

(3) Commencing with the completion of construction by the Department of the first of the capital improvements referred to in (1) above and thereafter during the license period, an annual amount not to exceed $500, subject to cumulation if not requested by the Department in whole or in part in any year or years in an amount not to exceed $3,000 for necessary repair and maintenance of the capital improvements referred to in (1) above.

(4) The funds made available pursuant to (1) and (3) above shall be paid to the California Department of Fish and Game within thirty (30) days following the submission of a statement of costs and expenses by said Department to Licensee, subject to audit by Licensee, for any and all costs and expenses incurred by said Department in performing the work for which said funds are available.

(e) Licensee shall, upon acceptance by the Federal Power Commission of article 26 as herein amended, cooperate with the California Department of Fish and Game, the Bureau of Sport Fisheries and Wildlife and the U.S. Forest Service in making preliminary survey plans of the North Fork Feather River from Belden Diversion Dam to Gansner Bar to determine work which can be done to improve the fish habitat and the aesthetic values in this reach of the river during or following construction.

(f) In cooperation with the Department, and during or immediately following construction of the project, Licensee shall confine the flow of water in North Fork Feather River to a single channel at those locations visible from the road between its confluence with the East Branch of the North Fork Feather River and Belden Diversion Dam where the stream presently divides into more than one channel at a flow of 75 cfs. Licensee shall do such other work in said portion of North Fork Feather River as found to be necessary or desirable and as may be mutually agreed upon by Licensee, the California Department of Fish and Game, the Bureau of Sport Fisheries and Wildlife and the U.S. Forest Service and which may include further channelization, relocation of gravels exposed by low flows and such other improvements of stream habitats as are found to be necessary or desirable; provided, however, that Licensee shall not be required to perform work under the provisions of this sentence if the cost thereof, when added to the cost of the work performed under the first sentence of this paragraph, would exceed $10,000.

(g) The Licensee shall cooperate with the California Department of Fish and Game in measures for control of rough fish in that portion of the North Fork Feather River between Almanor Dam and its confluence with the East Branch North Fork Feather River as follows:

(1) Subject to the total quantity limitations of (a) and (b) above, Licensee shall regulate the release of water from Almanor Dam and Belden Diversion Dam into North Fork Feather River as requested upon reasonable notice by the California Department of Fish and Game for the purpose of aiding and facilitating the eradication of rough fish;

(2) Licensee shall, within thirty (30) days following the submission of a statement of costs subject to audit by Licensee, reimburse the California Department of Fish and Game for its cost of chemicals used for such rough fish eradication;

(3) Licensee shall provide one-half of the personnel required to conduct such rough fish eradication. Personnel provided by Licensee shall work under the direction of said Department;

Provided that it shall be the responsibility of the California Department of Fish and Game to (a) direct and control such rough fish eradication operations in compliance with all federal and state legal requirements, and (b) to initiate and implement a rough fish control program in the North Fork Feather River between Belden Dam and its confluence with the East Branch North Fork Feather River and evaluate the effectiveness of said program within a five-year period following completion of the project.

(h) If after the termination of the rough fish control program and evaluation as specified in proviso (b) of (g) above, additional rough fish control measures are deemed necessary by the California Department of Fish and Game and concurred in by the Bureau of Sport Fisheries and Wildlife, and the U.S. Forest Service, Licensee shall design, construct, maintain, and replace in event of destruction a rough fish barrier on the North Fork Feather River between its confluence with the East Branch of the North Fork Feather River and the lower end of Gansner Bar. The barrier shall be of a design mutually acceptable to the Licensee and to the Department, the Bureau of Sport Fisheries and Wildlife and the U.S. Forest Service.

(i) Licensee shall, if requested by the Department and within thirty (30) days following the submission of a statement of costs subject to audit by Licensee, pay for the stocking of 5,000 pounds of trout per calendar year by the Department in the waters of the North Fork Feather River between its confluence with the East Branch North Fork Feather River and the Belden Diversion Dam. The cost to Licensee of such trout shall not exceed the then prevailing average cost to the Department for the production and distribution of 5,000 pounds of catchable trout. The size, numbers and species of trout to be planted, the frequency of planting, and the planting sites shall be as determined by the Department.

(j) Licensee shall permit without charge the use of any land and land rights owned by it in and along the North Fork Feather River between Almanor

Dam and the East Branch confluence, for fishery improvement and management purposes, where such use would not interefere with project purposes.

(B) The hearing set by order issued October 24, 1963 is terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

CARNEGIE NATURAL GAS COMPANY, DOCKET NO. CP64–157

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND ACCEPTING RELATED TARIFF REVISIONS FOR FILING

(Issued April 13, 1964)

On January 21, 1964, Carnegie Natural Gas Company (Applicant) filed in Docket No. CP64–157 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain connecting, regulating and measuring facilities used to deliver natural gas to The Manufacturers Light & Heat Company, under an exchange agreement, from Applicant's well No. 973 located in Green County, Pennsylvania.

Applicant states that gas production from the above described well, has declined to a point where it is no longer economically feasible to deliver gas from this source.

Applicant will continue to exchange gas at other points of connection with The Manufacturers Light & Heat Company under the terms of their exchange agreement.

No cessation or interruption of service to customers will result from the subject abandonment.

Concurrently with its abandonment application, Applicant filed Third Revised Sheet No. 47 to its FPC Gas Tariff, Original Volume No. 2, reflecting the deletion of the exchange point known as Thomas V. Mount Joy Farm, Cumberland Township, Greene County, Pennsylvania. Manufacturers filed Third Revised Sheet No. 16 to its FPC Gas Tariff, Original Volume No. 2, for the same purpose.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 10, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Carnegie Natural Gas Company, a Pennsylvania corporation having its principal place of business in Munhall, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 3, 1943, in Docket No. G–263 (3 FPC 1052).

(2) The facilities proposed to be abandoned as hereinbefore described, all as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and the abandonment thereof by Applicant is subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be permitted and approved as hereinafter ordered.

(4) The respective related tariff revisions should be accepted to become effective on the date of issuance of this order.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Carnegie Natural Gas Company, of the facilities hereinbefore described be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of said abandonment within 10 days thereof.

(C) The respective related tariff revisions filed by Applicant and by Manufacturers are hereby accepted to become effective on the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP64-81

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 13, 1964)

On October 1, 1963, Cities Service Gas Company (Applicant) filed in Docket No. CP64-81 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1964 and the operation of unspecified "budget-type" natural gas facilities to make miscellaneous temporary and permanent direct sales from Applicant's existing pipeline system.

On January 30, 1964, Applicant filed an amendment to the foregoing application in response to the Commission's letter dated January 15, 1964, which letter requested that the original application be supplemented by setting forth the specific proposed facilities for service to specific customers, if known. This amendment covers fourteen specific requests for facilities for rendering direct interruptible natural gas service to new industrial customers, consisting of (a) one line tap on a gathering line and (b) thirteen taps on transmission lines, with meter and regulating facilities for each point, all in Oklahoma, Kansas and Missouri, at an estimated total cost of $18,227.

Applicant sets forth in detail the fourteen specific projects showing the names of the proposed customers, the nature of the uses to which the gas will be put, the average rate per Mcf for each proposed sale, the estimated annual revenue from each sale, and a description and the estimated cost of the facilities proposed for each project. The subject gas will be used generally for irrigation, agricultural and small space heating purposes and will require an estimated total volume of 191,660 Mcf at 14.65 psia annually.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 10, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298 (4 FPC 479).

(2) The facilities hereinbefore described, as more fully described in the application, as amended, in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $18,227.

(7) The authorization hereinafter granted should be expressly conditioned to exclude the use of any of the gas sold pursuant thereto for boiler fuel.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct during the calendar year 1964 and to operate the proposed facilities hereinbefore described, as more fully described in the application, as amended, in this proceeding.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted by paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $18,227.

(D) The authorization granted by paragraph (A) above is hereby expressly conditioned to exclude the use of any of the gas sold pursuant thereto for boiler fuel.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63-205

FINDINGS AND ORDER DISMISSING APPLICATION AND ACCEPTING TARIFF SHEET FOR FILING

(Issued April 13, 1964)

On July 1, 1963, as supplemented on February 20, 1964, El Paso Natural Gas Company (El Paso) filed in Docket No. CP63-205 a motion to dismiss its application for a certificate of public convenience and necessity filed in this proceeding. Said application sought certificate authorization to exchange natural gas with Colorado Interstate Gas Company (Colorado) to enable Colorado to sell natural gas to Cabot Corporation (Cabot) to be used by Cabot in its carbon black operations, Panhandle Field, Texas. Colorado's application was filed in Docket No. CP63-197.

Because of the lean quality of El Paso's gas stream, Cabot was unable to utilize said gas. Consequently, Colorado entered into an alternative exchange arrangement which did not involve El Paso. Accordingly, Colorado amended its application in Docket No. CP63-197 reflecting the alternative arrangement. By Commission order issued December 24, 1963, in Docket No. CP63-197 such alternative arrangement was authorized.

On July 1, 1963, El Paso also filed First Revised Sheet No. 151 to its FPC Gas Tariff, Third Revised Volume No. 2. Said filing cancelled El Paso's Rate Schedule X-13. First Revised Sheet No. 151 supersedes and cancels Original Sheet Nos. 151-157, reserving Sheet Nos. 152-157 for future use.

The Commission finds:

(1) The application for a certificate of public convenience and necessity filed in Docket No. CP63-205 should be dismissed as moot.

(2) El Paso's First Revised Sheet No. 151 to its FPC Gas Tariff, Third Revised Volume No. 2, should be accepted for filing, effective August 1, 1963.

The Commission orders:

(A) The application for a certificate of public convenience and necessity filed in Docket No. CP63-205 be and the same is hereby dismissed as moot.

(B) El Paso's First Revised Sheet No. 151 to its FPC Gas Tariff, Third Revised Volume No. 2, is hereby accepted for filing, effective August 1, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

IOWA-ILLINOIS GAS & ELECTRIC COMPANY, DOCKET NO. CP64-123

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 13, 1964)

On November 29, 1963, as supplemented on January 29, and March 19, 1964, Iowa-Illinois Gas & Electric Company (Applicant) filed in Docket No. CP64-123 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas pipeline facilities in Johnson County, Iowa, all as more fully set forth in the application, as supplemented.

Applicant states that it distributes natural gas, among other areas, in the Cedar Rapids and Iowa City areas, Iowa, and that the gas supply for said areas is delivered to Applicant by Natural Gas Pipeline Company of America at a point on the latter's pipeline in Iowa. From this delivery point Applicant transports gas by means of two parallel 10-inch lines and an 11.3-mile 12-inch line partially looping said parallel lines. Applicant proposes herein to construct and operate 22 miles of 16-inch line which will be a continuation of and an extension of the 11.3 miles of loop line. The application indicates that the proposed line will increase the total design capacity of all of these lines from 3,830 Mcf per hour to 5,708 Mcf per hour.

Applicant states that the proposed line is necessary to provide additional peak hour capacity to meet its present requirements and for anticipated increased requirements of the Cedar Rapids and Iowa City areas.

The total cost of the proposed facilities is estimated to be $1,112,400, which cost will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 10, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplements and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Iowa-Illinois Gas & Electric Company, an Illinois corporation having its principal place of business in Davenport, Iowa, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 24, 1951, in Docket No. G-303 (10 FPC 691).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Iowa-Illinois Gas & Electric Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 9 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

THE MANUFACTURERS LIGHT & HEAT COMPANY, DOCKET NO. CP64–168

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 13, 1964)

On January 27, 1964, The Manufacturers Light & Heat Company (Applicant) filed in Docket No. CP64–168 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 8.14 miles of 26-inch gas transmission pipeline looping its existing 20-inch Line No. 1758 from a connection with its existing Adaline Compressor Station in Liberty District to a point in Cameron District, all in Marshall County, West Virginia, all as more fully described in the application on file herein.

The estimated cost of construction of the proposed facilities is $949,500.00 to be financed through the issuance and sale of promissory notes or common stock to The Columbia Gas System, Inc., Applicant's parent company.

Applicant states that the purpose of the proposed facilities is to meet the winter requirements of the Applicant's market area for the 1964–65 winter service.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 10, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Manufacturers Light & Heat Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G–593 (4 FPC 44).

(2) The facilities hereinbefore described are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission and the installation and operation thereof by Applicant are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, The Manufacturers Light & Heat Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within twelve months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP62-178

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 13, 1964)

Northern Natural Gas Company (Northern) filed on January 13, 1964, in Docket No. CP62-178, an application to amend the order of the Commission issued September 30, 1963, in the above docket which granted a certificate of public convenience and necessity to Northern authorizing among other things the installation of 4400 Hp at its Redfield Storage Field Station. Northern now seeks authorization to install three (3) 1000 Hp centrifugal compressor units in lieu of a remaining 2900 Hp authorized by the Commission's order of September 30, 1963, all as more fully set forth in the subject application to amend.

The application to amend shows that Northern initially proposed to turbocharge two existing compressor units so as to provide 1400 Hp, and to install two (2) additional 1500 Hp units. Northern now proposes the installation of smaller increments of horsepower which will permit the use of greater flexibility in meeting varying load conditions required for injection and withdrawal of storage gas.

The estimated cost of installing the three proposed 1000 Hp centrifugal compressor units is $641,000.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on March 7, 1964 (29 F.R. 3179). No protests or petition to intervene has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued September 30, 1963, in Docket No. CP62–178 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued September 30, 1963, in Docket No. CP62–178 be and the same is hereby amended so as to authorize Northern Natural Gas Company to install three (3) 1000 Hp centrifugal compressor units at its Redfield Storage Field Station in lieu of the remaining 2900 Hp of 4400 Hp compressor capacity authorized in said order.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64–170

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 13, 1964)

On January 29, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64–170 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 9.7 miles of 30-inch pipeline looping its present 24-inch Lirette to Napoleonville line in Assumption Parish, Louisiana.

The purpose of the proposed facility is to increase the capacity of the Lirette-Napoleonville line to meet the full requirements of the Napoleonville-Kosciusko line and a portion of the requirements of the South Louisiana-North Louisiana 30-inch line. The addition of the loop will increase the maximum capacity of that portion of the Lirette to Napoleonville line from 604,417 Mcf per day to 711,520 Mcf per day.

The estimated total cost of the proposed facilities is $1,705,320, to be financed from current working funds.

Construction is expected to be completed within twelve months from date of commencement.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 10, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company to construct and operate facilities for the transportation and sale of natural gas in interstate commerce as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, within twelve months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

AREA RATE PROCEEDING, ET AL. (TEXAS GULF COAST AREA), DOCKET NO. AR64-2, ET AL.

ORDER GRANTING PETITION TO CLARIFY DEFINITION OF TEXAS GULF COAST AREA

(Issued April 14, 1964)

On February 27, Shell Oil Company, *et al.*[1] filed a petition requesting the Commission to clarify what area is subject to the Texas Gulf Coast Area Rate Proceeding, or in the alternative to enlarge the area involved to include "all areas, both State and Federal, in the Gulf of Mexico off the shore of Texas".

Shell, *et al.* state that they are uncertain whether the Commission intended to include off-shore areas in its Texas Gulf Coast Area Rate Proceeding. They state that off-shore areas should be included. Shell, *et al.* point out that the Commission expressly included off-shore areas in our South Louisiana Area Rate Proceeding. (25 FPC 942)

We have always considered areas off the shore of Texas to be included in the related Texas Railroad District for rate review purposes, ***Socony Mobil Oil Company, Inc.***, 27 FPC 347; and we fully intended to consider Texas off-shore areas in our Texas Gulf Coast Area Rate Proceeding, although we did not specifically say so in our order of November 27, 1963, instituting the proceeding in Docket No. AR64-2. (30 FPC 1354)

---

[1] Socony Mobil Oil Company, Inc., Continental Oil Company, Texaco, Inc., Sinclair Oil & Gas Company, Gulf Oil Corporation, Atlantic Refining Company.

The Commission orders:

(A) Shell, *et al.'s* petition for clarification is hereby granted.

(B) The Texas Gulf Coast Area proceeding shall include consideration of Texas Railroad Commission District Nos. 2, 3 and 4, including all areas both State and Federal in the Gulf of Mexico off the shore of those Texas Railroad Commission Districts.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TENNECO CORPORATION, DOCKET NO. RI64-250

ORDER ACCEPTING OFFER OF SETTLEMENT AND TERMINATING PROCEEDING

(Issued April 14, 1964)

On February 6, 1964, Tenneco Corporation (Tenneco), through its successor in interest, Tenneco Oil Company, submitted pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure an Offer of Settlement in the above-designated proceeding, which relates to the jurisdictional sale of natural gas by Tenneco under its FPC Gas Rate Schedule No. 80 to Texas Eastern Transmission Corporation (Texas Eastern) from McMullen County, Texas (R. R. District No. 1). The increased rate of 13.8733¢ per Mcf at 14.65 psia, which is equivalent to 14.3733¢ per Mcf when the 0.5¢ per Mcf cost for dehydration and central point delivery is taken into consideration, was designated as Supplement No. 12, and was suspended by order issued October 30, 1963, until April 2, 1964, and thereafter until such further time as it is made effective in the manner prescribed by the Natural Gas Act.

In its Offer of Settlement Tenneco states that it has deleted from the subject contract (1) the present periodic price escalations, (2) the favored-nation clause, and (3) the price-redetermination provision, and has substituted therefor a provision providing for five-year periodic increases of 0.5¢ per Mcf beginning February 5, 1963.[1] No objection to the proposed settlement has been received from any interested party.

Since the proposed settlement rate is acceptable under the provisions of the ***Seventh Amendment to the Commission's Statement of General Policy No. 61-1*** (18 CFR, Chapter I, Part 2, Section 2.56) issued November 27, 1963, 30 FPC 1370, for the jurisdictional sale of natural gas in Texas Railroad Commission District No. 1, it appears that the public interest will best be served by accepting Tenneco's proposed settlement.

We desire to make it clear that acceptance of this Offer of Settlement shall not be construed as approval of any future increased rates proposed by Tenneco or its successor under the periodic escalation provisions and tax reimbursement provision contained in the instant rate schedule, and is without prejudice to any findings or orders of the Commission in any future proceedings, including area rate or similar proceedings involving Tenneco's rate and rate schedule or those of its successor.

---

[1] As part of Supplement No. 12, Tenneco filed an executed contract amendment negotiated with Texas Eastern providing for such changes.

The Commission finds:

The proposed settlement on the basis described herein, as more fully set forth in the Offer of Settlement filed by Tenneco on February 6, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act.

The Commission orders:

(A) The proposed Offer of Settlement filed by Tenneco with the Commission on February 6, 1964, is hereby approved in accordance with the provisions of this order.

(B) Supplement No. 12 to Tenneco Corporation FPC Gas Rate Schedule No. 80 is hereby made effective without obligation to refund as of the date of issuance of this order.

(C) The proceeding in Docket No. RI64-250 is hereby terminated.

(D) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending or hereafter instituted by or against Tenneco, including area rate and other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXACO INC., ET AL., DOCKET NO. G-15546, ET AL.[1]

ORDER REQUIRING PAYMENT OF REFUNDS[2]

(Issued April 14, 1964)

By order issued February 19, 1964, in the above-entitled proceedings we provided for refunds to Tennessee Gas Transmission Company (Tennessee) by the Respondents involved here of tax reimbursement amounts collected from Tennessee with respect to the additional one cent per Mcf Louisiana gas gathering tax which was declared unconstitutional. In view of the uncertainty whether Tennessee would flow through to its jurisdictional customers their proportionate share of the above refunds, we required the producers to retain the refunds due Tennessee in a separate account pending further order of this Commission.

By letter dated March 6, 1964, in response to the February 19 order, Tennessee informed us of its intention to pass on any refunds received herein to its customers, less out of pocket legal expenses incurred in the prosecution of this case. In view thereof, we believe it appropriate to require the producers to make refunds to Tennessee as hereinafter ordered.

One other matter remains to be disposed of in this case. A few of the producers who filed refund reports as required by paragraph (B) of our February 19 order have computed some interest on such refund amounts. This is not required under the terms of the February 19 order or the agreements and undertakings filed by the producers in these proceedings. The Commission's suspension orders herein provided for refunds if the tax was declared unconstitutional, but did not require the payment of interest thereon, because of the special type of rate increase involved, except to the extent that the producers received interest from the State of Louisiana on any tax amounts paid to the state. Since the producers here did not protest the tax payment to the state they were not entitled under state law to any refund, let alone interest hereon. Accordingly, they need pay no interest to Tennessee.[3]

---

[1] The proceedings involved here are listed in the appendix attached hereto. These proceedings represent only a portion of the approximately 400 proceedings disposed of by the March 5, 1962 order.

[2] This order does not provide for consolidation of the proceedings involved here, nor should it be so construed.

The Commission orders:

For the reasons set forth above, within 30 days of the date of issuance of this order the Respondents listed in the Appendix A attached hereto shall refund to Tennessee all amounts collected subject to refund in the above-entitled proceedings as computed in accordance with paragraph (B) of our February 19, 1964 order. Within 45 days of the date of this order each Respondent shall file with the Commission a copy of a release from Tennessee with respect to its refund.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; GENE M. WOODFIN, TRUSTEE FOR THE JEAN CURRY GLASSELL TRUST, DOCKET NO. CI63-885

ORDER SEVERING PROCEEDING, CONDITIONALLY APPROVING SETTLEMENT PROPOSAL AND CONDITIONALLY ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 14, 1964)

On February 4, 1964 Gene M. Woodfin, Trustee For The Jean Curry Glassell Trust (Woodfin) filed an offer of settlement and petition for issuance of certificate of public convenience and necessity in the above-entitled proceeding.

---

[3] The producers here were not required by our March 5, 1962 order to make refunds. They are therefore in a different position with respect to the payment of interest than those producers who were required in the March 5 order to make refunds, but who obtained a stay of that order from us. As a part of our stay order, we provided that they should pay 7% interest upon amounts to be refunded for the period commencing on the 91st day after issuance of the March 5 order. See, for instance, order issued April 26, 1962 in *Texaco Inc., et al.*, Docket No. G-15546, *et al.*

Woodfin's settlement proposal is similar to recent settlements conditionally approved by the Commission in the Union Texas Proceeding[1] and provides for the issuance of a certificate of public convenience and necessity at a rate of 20.625¢ per Mcf[2] for a sale of gas from the Chacahoula Field, Lafourche Parish, south Louisiana; a rate-increase moratorium through March 31, 1968 (subject to the usual exceptions); extension of the take-or-pay make-up period from 2 years to 4 years; refunds of all amounts above the settlement rate collected since the date of initial delivery.

No answers to Woodfin's petition and offer of settlement have been received.

We find this proposal, generally, to be in the public interest and shall approve it subject to the following reservations and conditions.

We shall require that interest on the amounts to be refunded accrue through the last day of the month in which the petition and offer were filed, February 29, 1964. This has been a requirement in all of our orders approving settlements arising out of the Union Texas proceeding.

In the context of the proposal, we interpret the term "delivered" as used in paragraph 1 of the proposal to include gas required to be taken during the moratorium period but paid for and not taken and our approval is conditioned upon such interpretation. Thus, prepayments, if any, shall be made during the moratorium period at a rate no higher than the rate in effect for gas physically delivered.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61-2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61-2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61-2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61-2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

In accordance with the above we shall sever this individual docket from the consolidated proceeding *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, and issue a certificate of public convenience and necessity in accordance with the application, settlement proposal and conditions of this order.[3]

The Commission finds:

(1) Gene M. Woodfin, Trustee For The Jean Curry Glassell Trust is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sale of natural gas is subject to the jurisdiction of the Commission, and such sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

---

[1] See orders issued August 7, 1963 (Humble Oil & Refining Company) and October 9, 1963 (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.) in *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*

[2] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[3] The hearings in the *Union Texas Petroleum, et al.*, consolidated proceeding concluded July 25, 1963 and the Examiner's Decision was issued on January 14, 1964. The matter is now before the Commission on exceptions to the Examiner's Decision.

(3) Woodfin is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, is required by the public convenience and necessity and is in the public interest upon the conditions set forth below, and a certificate should be issued as ordered below.

(5) The conditions attached to the certificate herein issued are required by the public convenience and necessity.

The Commission orders:

(A) The matters in Docket No. CI63–885 are hereby severed from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(B) A certificate of public convenience and necessity is hereby issued to Gene M. Woodfin, Trustee For The Jean Curry Glassell Trust, upon the conditions set forth herein authorizing the sale of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the application and settlement proposal herein.

(C) The certificate granted by paragraph (B) above, is granted upon the express condition that Woodfin comply fully with the terms of this order and the settlement proposal, as modified, which settlement is expressly approved, under the conditions of this order.

(D) Within 90 days from the date of issuance of this order, Woodfin shall refund to the pipeline purchaser the difference between the amounts collected for gas delivered since the date of initial delivery and the amount that would have been collected under the settlement rate for gas delivered since that time together with interest computed at a rate of 7 percent per annum, such interest to accrue through the last day of the month in which the settlement proposal was filed, February 29, 1964.

(E) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, Woodfin shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with a release from the purchaser showing receipt of the refunds in conformity with the settlement as approved.

(F) Upon full compliance of Woodfin with all the terms of this order and of the settlement proposal, Woodfin shall be relieved of any further refund obligations in this certificate proceeding and said proceeding shall terminate.

(G) The certificate herein issued is not transferable and shall be effective only so long as Woodfin continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificate herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94 (b) and the detailed submittal requirements of Part 154.94 (f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(I) The grant of certificate herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Woodfin, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, Woodfin, the Commission staff, or any affected party herein in any other proceeding.

OPINION NO. 417-A

ALABAMA-TENNESSEE NATURAL GAS COMPANY, DOCKET NO. G-5471, ET AL.

OPINION AND ORDER DENYING REHEARING AND STAY

(Issued April 15, 1964)

Syllabus

1. Applications for rehearing by persons not parties to proceeding, are not in order. P. 929.
2. Pipeline association members who are not respondents or interveners are not legally entitled to evidentiary hearing. P. 929.
3. Characterization of instant docket as a general rule-making proceeding is erroneous—precedents of wide application are customarily established in cases in which only single company is a party. P. 929.
4. Administrative agency may proceed by rule-making proceeding but is free to arrive at general principles in individual cases. P. 929.
5. Action in inviting participation of interested parties as *amici* to give opportunity for participation in decision on a precedent of possible industry-wide applicability does not mean Commission has committed error. P. 929.
6. Commission may take official notice of relevant and material facts in determining whether voluntary use of liberalized depreciation results in tax deferral or tax reduction. Pp. 929, 930.
7. *Opinion No. 417* leaves any pipeline not a party thereto, legally free to introduce evidence demonstrating inapplicability of determinations made there to its individual situation. P. 930.
8. There is no basis for contention that Commission exhausted its administrative discretion by initial decision to normalize rather than flow through tax benefits—flexibility to adjust to additional experience and changing conditions is basic to administrative process. P. 930.
9. Commission refutes argument that provision for future flow through and for zero return on accumulated deferred balances does not afford sufficient incentive for continued use of liberalized depreciation and thus not in accord with *Panhandle*. P. 931.
10. Contention that existing accumulations be flowed through to customers is rejected. P. 932.
11. Commission *denies* applications for rehearing and stay.
   Commissioner Woodward *dissenting*.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SWIDLER, *Chairman:*

Applications for rehearing of our "Opinion and Order on Proper Treatment of Liberalized Depreciation Tax Deductions", issued as Opinion No. 417 on February 3, 1964, were filed by Alabama-Tennessee Natural Gas Company (Alabama-Tennessee) and the Independent Natural Gas Association of America (INGAA) on March 4, 1964. These applicants urge that the Commission reconsider and vacate its decision, and terminate the instant proceeding. Alabama-Tennessee also seeks, as alternative relief, a stay pending judicial review. The People of the State of California and its Public Utilities Commission (California) filed an application for rehearing on March 5, 1964. California approves our determinations and objects only to the Commission's action with respect to accumulated deferred tax balances.

At the outset we note that neither INGAA nor California are parties to this proceeding and that Section 19(a) of the Natural Gas Act limits the right to apply for rehearing to those persons, States, municipalities or State Commissions who are aggrieved by an order issued in a proceeding to which they are parties. Thus, their applications for rehearing are not in order. Nevertheless, the Commission permitted all interested persons to participate as *amici curiae* in this proceeding on the question of the proper treatment in pipeline rate proceedings of liberalized depreciation deductions under Section 167 of the Internal Revenue Code, because of the importance and industry-wide implications of that policy determination. Accordingly, we shall discuss the contentions made in the applications for rehearing filed by INGAA and California without, however, granting them any other procedural rights not normally enjoyed by non-parties.

Alabama-Tennessee and INGAA contend that the Commission's decision herein was based on an insufficient record; on matters *de hors* the record; and on findings contrary to facts which could have been established if another opportunity to present pertinent evidence were afforded.

Alabama-Tennessee was afforded a full hearing on its rate increase filing which is the subject of this proceeding. An intervener in its rate proceeding timely and properly raised the liberalized depreciation issue and presented evidence in support of flow through. In our Order Denying Motion for Reconsideration, issued July 30, 1962, we have already considered and rejected Alabama-Tennessee's claim that its failure to submit evidence on this issue was excused or justified because the Company chose to rest its case on the Commission precedents which then favored normalization.

There is also no basis for the claim of INGAA that the pipeline members of that association who are not respondents or interveners in this proceeding are legally entitled to an evidentiary hearing. INGAA erroneously characterizes this docket as a general rule-making proceeding. While the liberalized depreciation issue in the case is of general interest, the case is solely a determination of just and reasonable rates for Alabama-Tennessee. Precedents of wide application are customarily established in cases in which only a single company is a party. An administrative agency may of course proceed by a rule-making proceeding but it certainly is free to arrive at general principles in individual cases. No question could have been raised concerning the propriety and legality of our procedures even if we had heard argument from only the parties in this case. Certainly our action in inviting the participation of other interested persons as *amici* to give them an opportunity to participate in the decision on a precedent of possible industry-wide applicability does not mean that the Commission has committed error. The position maintained by INGAA leads to the paradoxical result that a regulatory body may determine a policy of broad import and substantial impact in an individual proceeding without hearing from interested persons who are not parties to the case but is in error if it affords all persons who may be affected an opportunity to present their views as *amici* prior to final decision.

Alabama-Tennessee and INGAA have also objected to the Commission's action in officially noticing relevant and material facts for the purpose of determining whether a company's voluntary use of liberalized depreciation results in a tax deferral or a tax reduction. Our opinion advised all parties concerned that we had elected this course of action and adverted to Section 1.26(d) of the Rules of Practice and Procedure, which provides that whenever facts are officially noticed, ". . . any party shall, on timely request, be afforded an opportunity to show the contrary." Neither Alabama-Tennessee nor INGAA denied the truth or correctness of any of the facts noticed by the Commission, nor have they requested that official notice be taken of any controverting or mitigating facts.

The argument of the proponents of normalization raises no factual question but goes rather to our determination of law and policy that the tax consequences of liberalized depreciation must be measured with respect to the loss of tax depreciation deductions on the over-all properties used in rendering public service rather than on specific assets acquired within a single year. An evidentiary hearing of the type held in this case is not even required in such a determination (*Pan American Petroleum Corp.* v. *F.P.C.*, 322 F. 2d 999 (CADC, 1963); *Mississippi River Fuel Corp.* v. *F.P.C.*, 281 F. 2d 919 (CADC), certiorari denied, 365 U.S. 827; *cf. Cities of Lexington, et al.* v. *F.P.C.*, 295 F. 2d 109, 114 (CA4); *Interstate Power Co.* v. *F.P.C.*, 236 F. 2d 372, 385 (CA8), certiorari denied, 352 U.S. 967; *F.P.C.* v. *Transcontinental Gas Pipe Line Corp., et al.*, 365 U.S. 1 (1961); *Market Street Railroad Corp.* v. *Railroad Commission of California*, 324 U.S. 548, 560.)

INGAA's pleading questions the Commission's central conclusion that there will be no increase in taxes and no payback from the accumulated tax reserve when the plant balance grows or remains constant. We have considered INGAA's contentions and the two State commission decisions they cite[1] and find no substance in the argument or any support therefor in the cited cases, neither of which adopted INGAA's theory.

There can be no question as to the validity of our findings with respect to Alabama-Tennessee and other typical pipelines and our decision leaves any gas pipeline which has not been a party to this proceeding legally free to introduce evidence and testimony of exceptional situations demonstrating the inapplicability of the determinations made in Opinion No. 417 to its individual situation.[2]

Alabama-Tennessee and INGAA's argument that this Commission cannot now in light of its experience depart from its prior position that normalization is the proper rate treatment has been answered in Opinion No. 417. There is also no basis for the related contention that the Commission has exhausted its administrative discretion by its initial decision to normalize rather than flow through these tax benefits. Indeed, the flexibility thus to adjust to additional experience and changing conditions is basic to the administrative process. Other regulatory agencies have made this very change in policy in the light of new facts and greater knowledge and understanding of the implications of their original policy decisions and such action has been affirmed on judicial review.[3]

---

[1] *In Re Georgia Power* 36 PUR 3d 506, 509 (Georgia PSC 196). *In Re Consumers Power Co.* 38 PUR 3d 355, 363 (Mich. PSC 1961).

[2] We put aside as extraneous INGAA's claim that the Commission erred in concluding that flow through generally produces lower rates than does normalization. The contention is refuted in this case by the fact that our decision to require flow through results in a reduction of Alabama-Tennessee's rates.

[3] *Cincinnati Gas & Electric Co.*, 35 PUR 392 (Ohio PUC 1960); affirmed *Cincinnati Gas & Electric Co.* v. *Ohio PUC*, 173 Ohio 473, 184 NE 2d 84 (Sup. Ct., 1962); *Re Central Maine Power Co.*, 17 PUR 3d 452, 460–463 affirmed, *Central Maine Power Co.* v. *Maine PUC*, 136 A 2d 726 (Sup. Ct., 1957); *Re Public Service Co. of New Hampshire*, 18 PUR 3d 523 (NHPSC, 1957); *Hope Natural Gas Co.*, 23 PUR 3d 394, 405 (W. Va. PSC, 1958); *Re Tax Treatment of Accelerated Depreciation*, 33 PUR 3d 209 (Cal. PUC 1960).

Alabama-Tennessee and INGAA argue that provision for future flow through and for a zero return on accumulated deferred balances does not afford natural-gas pipelines sufficient incentive for the continued use of liberalized depreciation and thus is not in accord with the opinion of the Court of Appeals for the District of Columbia Circuit in *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 316 F. 2d 659, 662, 663 (CADC 1963), certiorari denied 375 U.S. 881.

This argument is not well taken for it misconceives the posture of the case before the court of appeals. The *Panhandle* decision was grounded on the assumption that liberalized depreciation results in a tax deferral, and that a return on the deferred tax funds which are temporarily available but must eventually be paid out in taxes is a necessary inducement to the gas companies to utilize liberalized depreciation.[4] As we pointed out in Opinion No. 417 experience has proven that this assumption is not valid and that such higher tax liabilities constitute a remote and improbable contingency. In these circumstances the lower rates made possible by flow through of the tax savings from liberalized depreciation will be a more effective stimulus to new investment than normalization and thus better achieve the ultimate Congressional purpose in authorizing the use of liberalized depreciation.

The *Panhandle* case does not hold to the contrary. It arose under the previous determination by this Commission, which we have shown was erroneous, that it must treat liberalized depreciation as a tax deferral. The earlier Commission ruling focused upon the effect of its use with respect to individual items of depreciable property and ignored the overall tax liabilities of the regulated company. In this context the Commission held, first in the *Northern Natural* case, 25 FPC 431, and then in *Panhandle*, that a 1½ percent return was appropriate as an inducement for the company to utilize liberalized depreciation. The Commission on rehearing before the Court in *Panhandle* pointed out that the *Alabama-Tennessee* case was then underway to review the basic question of whether flow through rather than normalization was the proper regulatory treatment for liberalized depreciation. The court in *Panhandle* made clear that it was not passing on the Commission's discretion to adopt a different treatment for liberalized depreciation, noting that the Commission had not used flow through in its decision in the case before it, and stating that "[w]e therefore intimate no opinion concerning the validity of the course proposed in the briefs and consider only the Commission's action under review" (316 F. 2d 661).

The alternative argument by Alabama-Tennessee and INGAA, that unless we allow a return on accumulated deferred taxes we will retroactively deprive the company of the alleged statutory incentive to the utilization of liberalized depreciation, is clearly without merit. Alabama-Tennessee has received the benefits of an interest-free loan (plus a 1½ percent return on reinvested funds) since it commenced using liberalized depreciation.[5] It now has the option of retaining the fund (pending the unlikely necessity of using it to offset actual increases in taxes) or submitting a proposal for flowing all or part of the fund to its customers by way of lower rates, which we have found should enhance its competitive position and make for greater expansion. Our action herein does not deprive Alabama-Tennessee of the advantages of using liberalized depreciation either retroactively or prospectively.

---

[4] But, as the court in *Panhandle* pointed out, there are "other advantages" to the use of liberalized depreciation even under such circumstances. It did not conclude that a return of 1½ percent, or any amount at all, was in fact necessary, but only that it would "not disturb" a determination by the Commission that it was appropriate "since these evaluations are within the expert competence of the Commission."

[5] Alabama-Tennessee argues that the funds standing to its credit in the deferred tax accounts are not consumer-contributed capital, in a legal sense, because customers do not acquire any legal or equitable interest in the assets or funds of a regulated company by paying their bills for service rendered. In support of this thesis, it cites *Board of Commissioners* v. *New York Telephone Co.*, 271 U.S. 23, 32 (1926). That case is not in point because the court was there dealing with general revenues received without restrictions as to their disposition. We are here concerned with revenues collected for a specific purpose and placed in a special account which restricted the use of these funds and prohibited their use for the payment of dividends, *cf. El Paso Natural Gas Co.* v. *F.P.C.*, 281 F. 2d 567, 573–574 (CA5, 1960).

California argues that since we have determined upon rate flow through for the future, we should also order the existing accumulations be flowed through to the consumer in the form of rate refunds or reductions. The present ratepayers no longer have to pay a return on the funds previously accumulated, and will receive the immediate benefit of the tax savings presently accruing to the company. Moreover, we have made clear that we will give Alabama-Tennessee, and other companies ordered to shift to flow through, the option of flowing through all or part of their accumulated funds pursuant to an approved plan which will insure that any reduction in the consumer-contributed capital fund will be reflected in lower rates to such consumers. The fact that the funds already accumulated will probably never be used for the tax repayment purpose for which they were originally collected does not mean that no provision whatever may be made for this contingency. Balancing all considerations the Commission decided that rather than to order the refund of these finds contributed by consumers it would permit Alabama-Tennessee to retain them in a special account. Permitting the company to retain these funds provides no reason or excuse, however, for allowing any element of return thereon. In this manner, full justice is done to the ratepayer while at the same time the company is afforded a margin of protection against the risk that it may at some time in the future be subjected to higher tax payments by reason of having taken liberalized depreciation.

Alabama-Tennessee has requested a stay of Opinion No. 417 and the accompanying order pending the final outcome of court litigation concerned with the validity of those administrative actions. The granting of a stay would irreparably injure jurisdictional gas consumers because Alabama-Tennessee has not offered to refund the excess revenues if we grant the stay and our decision is affirmed. Moreover, refunds are clearly not an adequate substitute for an immediate rate reduction (*F.P.C.* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145, 154–155, 1962). We are, therefore, constrained to reject the application for a stay.

Alabama-Tennessee correctly points out that since Opinion No. 360 mistakenly eliminated any return allowance upon its deferred tax balance, although the Commission intended to allow a 1.5 percent return thereon, there is no necessity for further action here in order to insure that it will not earn any return upon such consumer-contributed capital. As Finding Paragraph (7) of Opinion No. 417 states, we ordered that the amount of the funds in Account 282 during the applicable test year in Docket No. G–19984 be excluded from its recognized rate base in the belief that it had been allowed such a partial return. Accordingly, we are modifying the provisions of our order with respect to this matter. We adhere, however, to our prior conclusion that the deduction of amounts accumulated in the deferred tax accounts from the rate base is the proper method of accomplishing our objective of eliminating any return on such funds.

There is no substance to the argument advanced by INGAA and Alabama-Tennessee that our determination to deduct these accumulated deferred tax balances from the rate base must be supported without evidence that these funds have in fact been invested in operating facilities or working capital.

By definition, these dollars cannot be paid out as dividends under the restrictions imposed in Account 282, and the Commission has specifically found that they should be used to supply a portion of the company's capital requirements. (*Northern Natural Gas Co.,* 25 FPC 431 at 438, 441 (1961)). (We observe, also, that Alabama-Tennessee's pleading expressly admits that it has invested the tax deferrals in plant (p. 15).

The Commission orders:

(A) Except as discussed above, the applications for rehearing filed in this proceeding present no issues of fact or law which were not fully considered by the Commission, or which upon now being considered require any change or modification of Opinion No. 417, and the applications are hereby denied.

(B) Alabama-Tennessee's request for stay is hereby denied.

(C) Finding paragraph (7) of Opinion No. 417 is modified to read as follows:

(7) Upon re-examination of the present policy of permitting a specific return of 1.5 percent to be earned upon the portion of the rate base equivalent in amount to accumulated "deferred tax" funds in Account 282, we find that Alabama-Tennessee and other natural gas companies similarly situated are not entitled to any return upon such customer-contributed capital and that, in view of our prior action in Opinion No. 360 in inadvertently denying any such return, there is no need to exclude the amount of such funds in Account 282 during the applicable test year in Docket No. G–19984 from the recognized rate base herein.

Commissioner Woodward *dissenting* for the reasons set forth in his dissenting statement filed herewith.

Commissioners Woodward and O'Connor *would grant rehearing* for the reasons stated in their dissents to Opinion No. 417, issued February 3, 1964. [31 FPC 222 and 232.]

Woodward, Commissioner, *dissenting:*

On February 3, 1964, when the original Opinion and Order issued in this proceeding, I filed a dissenting statement in which I concluded, *inter alia,* that natural gas companies should not be permitted to earn a rate of return upon that portion of the rate base equivalent to the reserve for accumulated deferred taxes resulting from normalization and that such reserve should be excluded from the rate base.

While correctly recognizing the absence of any cash cost to a company acquiring tax deferral funds, my initial position did not accord equitable weight to that element of risk to which such funds are subjected in their use to create new plant while the company remains solely accountable for deferred taxes. This uncompensated risk is sufficient, in my view, to compel a company to revert to straight-line depreciation raising essential funds in the capital market, in which event the reimbursement of capital costs would cover the risk factor.

Authorities hold that whether a company should use liberalized or straight-line depreciation for tax purposes is a matter solely within management's discretion, not subject to compulsion or control by a regulatory agency.[1]

In order to achieve its objective, Congress provided incentives to the taxpayer sufficiently attractive not only to encourage him to utilize liberalized depreciation but also to invest the funds thereby made available in new plant. I am now convinced that effectuation of the intent of Congress requires allowance by the Commision of a return on the funds accumulated by tax normalization.

---

[1] *Central Hudson Gas & E. Co.,* 28 PUR 3d 317, 320 (N.Y.); *Niagara Mohawk Power Corp.,* 28 PUR 3d 171, 182 (N.Y.); *Hope Natural Gas Co.,* 23 PUR 3d 394, 400 (W. Va.); *Georgia Power Co.,* 36 PUR 506, 512 (Ga.); *Piedmont Natural Gas Co.,* 34 PUR 3d 1, 15 (N.C.).

As recognized by the Commission in the *Northern Natural Gas Company* case, 25 FPC at 438: "We must . . . reject the contention of our staff that the accrued deferred taxes should be included in the capital structure at zero percent interest. The treatment suggested by staff would deprive the company of any earnings from the accumulated deferred taxes and would have the same practical effect as though the amount of deferred taxes were excluded from the rate base. This would deprive the company of most of the benefits arising from use of liberalized depreciation". The Court of Appeals for the District of Columbia reached a similar conclusion in its *en banc* decision in the recent *Panhandle* case.[2]

The Commission must allow "a sufficient profit to provide incentive to initial investment".[3] The adequacy of incentive is, of necessity, an individualized determination. I favor the granting of a rate of return which will yield gross revenues (*i.e.*, cost to ratepayers) in the same amount as would result from raising private capital equivalent to a company's deferred tax reserves.

With the modification developed herein, my initial dissenting statement is equally applicable in the instant proceeding. Rehearing should be granted and Opinion No. 417 and Order, issued February 3, 1964, should be reversed and set aside.

TRUNKLINE GAS COMPANY v. THE SUPERIOR OIL COMPANY, DOCKET NO. RI64-273; THE SUPERIOR OIL COMPANY, DOCKET NOS. G-18168,[1] G-20435,[1] G-20577[2]

ORDER GRANTING IN PART AND DENYING IN PART MOTION FOR CLARIFICATION AND PETITION FOR REHEARING

(Issued April 15, 1964)*

On March 16, 1964, The Superior Oil Company (Superior) filed a motion for modification and clarification and a petition for rehearing of the Commission order issued March 9, 1964, in the above-entitled proceedings.[3] In that order we denied Trunkline Gas Company (Trunkline) the relief requested by it in a petition for declaratory order filed on October 25, 1963, as supplemented on November 13, 1963. We also required Trunkline to recompute any payments it had made to Superior which were computed on the basis of lower rates than those in effect subject to refund herein, and to pay Superior any additional amounts required on the basis of such recomputation. Trunkline had requested the Commission to determine the Superior favored-nation increases involved here to be unlawful. Trunkline also requested permission to pay Superior on the basis of the applicable increased rate ceilings set forth in the policy statement pending determination of Superior's just and reasonable rates.

In the instant motion Superior contends that Trunkline should be required to pay interest at 7% on any deficiency in payment and that Trunkline should also pay Superior for any damages it may have sustained because of Trunkline's failure properly to pay Superior for gas taken by it. In the alternative, Superior requests this Commission to hold that it lacks jurisdiction over these matters.

---

[1] Consolidated with the Area Rate Proceeding in Docket No. AR64-2, *et al.*

[2] Consolidated with the Area Rate Proceeding in Docket No. AR61-2, *et al.*

*Rehearing denied, 31 FPC 1511. See order on remand issued June 16, 1965, 33 FPC 1268.

[3] Trunkline on March 31, 1964, filed an untimely answer to Superior's motion.

Superior in its answer to Trunkline's petition for a declaratory order did not request that Trunkline be required to make up any deficient payments with interest. The question was thus not before us when we issued our March 9 order. It is clear, however, that we have authority to require the payment of interest in appropriate cases. See *Mississippi River Fuel Corp.* v. *F.P.C.*, 281 F. 2d 919; and *Texaco Inc.* v. *F.P.C.*, 290 F. 2d 149. In view of Trunkline's unilateral action of reducing payments without approval of this Commission and the fact that Superior is obligated to make refunds of the collected amounts if ultimately found unjust or unreasonable, we conclude that interest should be required on amounts withheld (those amounts properly payable but not tendered by Trunkline). We shall therefore modify our March 9 order to require Trunkline to pay interest on the withheld amounts at the same rate provided under Superior's refund obligations. We do not believe, however, that we have power under the Natural Gas Act to adjudicate any claim for additional damages that Superior may have suffered as a result of Trunkline's actions. Our action herein is therefore without prejudice to any private action in law or in equity that Superior may have against Trunkline.

The Commission orders:

(A) For the reasons set forth above, the order of March 9, 1964 in the above-entitled proceedings is hereby modified to require Trunkline to pay interest on the withheld amounts at the rate provided in Superior's undertakings in these dockets to the date of payment required in accordance with paragraph (C) of the March 9 order, and the time periods within which Trunkline shall comply with the provisions of paragraphs (C) and (D) of the March 9 order are hereby extended to 30 and 45 days, respectively, from the date of issuance of this order.

(B) Except to the extent provided in paragraph (A) hereof, Superior's motion and petition filed on March 16, 1964, are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

HUMBLE GAS TRANSMISSION COMPANY, DOCKET NO. CP64–163

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 16, 1964)

On January 23, 1964, Humble Gas Transmission Company (Applicant), filed in Docket No. CP64–163 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a measuring station in Adams County, Mississippi, for the sale of natural gas to Mississippi Gas Corporation for resale within a service area lying to the southeast of Natchez, Mississippi, all as more fully set forth in the application.

Third year peak day and annual requirements for gas are estimated to be 97 Mcf and 7,436 Mcf respectively. The proposed service will be rendered under Applicant's Rate Schedule G–1 of its FPC Gas Tariff, Original Volume No. 1.

The estimated total cost of the proposed facilities is $1,555, which cost will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 10, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Humble Gas Transmission Company, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 29, 1963, in Docket No. CP63-56 (29 FPC 162).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Humble Gas Transmission Company, to construct and operate the proposed facilities and to transport and sell natural gas as hereinbefore described, all as more fully described in the application, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP61-274

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 16, 1964)

Mississippi River Transmission Corporation (Mississippi River) filed on February 3, 1964, in Docket No. CP61-274, an application, and a supplement thereto on February 7, 1964, to amend the order of the Commission issued July 21, 1961, in the above docket (last amended December 18, 1963). The order to be amended granted Mississippi River a certificate of public convenience and necessity authorizing among other things the transportation of natural gas through its system to provide cushion or base storage gas to Storage Corporation (Storage) for the development of a natural gas storage project in the St. Jacob Field near St. Jacob, Illinois, and the construction and operation of certain facilities to enable the transportation to and the injection of natural gas into the storage reservoir, all as more fully set forth in the application and supplement on file with the Commission.

In the application to amend, as supplemented, Mississippi River seeks authorization: (1) to install and operate a 300 Hp field compressor unit and to defer the installation of a 550 Hp compressor unit previously authorized, (2) to increase the volume limitations imposed in the order of July 21, 1961, to a total of 6,000,000 Mcf for the field rather than 3,000,000 Mcf, and to permit the injection of 2,000,000 Mcf annually instead of 1,000,000 Mcf, and (3) to extend the time for installation of authorized facilities to March 31, 1965.

Due notice of the filing of the application to amend and supplement thereto and opportunity for hearing thereon has been given by publication in the Federal Register on March 26, 1964 (29 F.R. 3786). No protest or petition to intervene has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order, issued July 21, 1961, in Docket No. CP61-274 be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued July 21, 1961, in Docket No. CP61-274 be and the same is hereby further amended by authorizing Mississippi River: (1) to install and operate a 300 Hp field compressor unit and to defer the installation of the 550 Hp compressor unit previously authorized, (2) to increase the volume limitations imposed in said order of July 21, 1961, to a total of 6,000,000 Mcf for the field rather than 3,000,000 Mcf, and to permit the injection of 2,000,000 Mcf annually instead of 1,000,000 Mcf, and (3) to extend the time for installation of authorized facilities to March 31, 1965.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-173

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 16, 1964)

On February 3, 1964, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP64-173 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a new delivery point consisting of a tap and meter station on its existing transmission facilities in Muscatine County, Iowa, and the sale and delivery of natural gas to Iowa Southern Utilities Company (Iowa Southern) for resale and distribution by it in the Community of Letts, Iowa, all as more fully described in the application on file with the Commission.

Applicant proposes the new delivery point and sale of additional volumes of natural gas to Iowa Southern to meet the third-year peak day and annual volume requirements of the Community of Letts, estimated to be 212 Mcf and 21,004 Mcf, respectively. The proposed additional volumes of gas will not increase Iowa Southern's contract demand.

The estimated cost of the proposed facilities is $16,540, and will be defrayed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 10, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed construction and operation of facilities, and the sale and delivery of natural gas by Applicant to Iowa Southern as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The proposed construction and operation of facilities, and sale of natural gas by Applicant to Iowa Southern are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas

Act, and particularly the general terms and conditions set forth in paragraphs (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding authorizing the construction and operation of facilities and the sale and delivery of natural gas to Iowa Southern as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP62-307

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 16, 1964)

On February 17, 1964, Northern Natural Gas Company (Northern) filed in Docket No. CP62-307 an application to amend the order of the Commission issued March 18, 1963, 29 FPC 530, in said docket authorizing among other things the construction by March 18, 1964, of 1.5 miles of 6-inch to 12-inch pipeline and the installation of a 550 Hp compressor unit in order to test and develop the Vincent Underground Storage Field in Humboldt, Webster and Wright Counties, Iowa, at a total estimated cost of $209,600. Northern seeks, by the subject application to amend, authorization to extend the date for completion of construction from March 18, 1964, to December 31, 1964, to replace approximately 1,000 feet of 4-inch tie-over pipeline with 8-inch, and to install an additional 550 Hp compressor unit for the injection of gas in said Storage Field, all as more fully set forth in the application to amend on file with the Commission.

Northern states that the larger tie-over pipeline and the additional compressor unit are necessitated by a decrease in operating pressures and will not affect the total authorized volume of 5,000 MMcf for the testing and development of the Storage Field. The revised estimated total cost of facilities is $417,300.

Due notice of the filing of the application to amend and opportunity for hearing has been given by publication in the Federal Register on March 19, 1964 (29 F.R. 3551). No protest or petition to intervene has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order, issued March 18, 1963, in Docket No. CP62-307, granting Northern certain certificate authorizations be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued March 18, 1963, in Docket No. CP62-307 be and the same is hereby amended by authorizing Northern to replace approximately 1,000 feet of 4-inch tie-over pipeline with 8-inch pipeline, to install an additional 550 Hp compressor unit, and to extend the date for completion of facilities from March 18, 1964, to December 31, 1964, all as hereinbefore described and as set forth in the subject application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; OCEAN DRILLING & EXPLORATION COMPANY (OPERATOR), ET AL., DOCKET NOS. CI60-743, CI61-1469, CI61-1708

ORDER CONDITIONALLY APPROVING SETTLEMENT PROPOSAL AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 16, 1964)

On January 23, 1964, Ocean Drilling & Exploration Company (Odeco) filed an offer of settlement and petition requesting that the above-entitled Odeco dockets be severed from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.*, (hereinafter referred to as the Union Texas proceeding) and that certificates of public convenience and necessity be issued to Odeco in accordance with its applications and settlement proposal.

On January 31, 1964, the Commission staff filed an answer to Odeco's petition urging rejection of the settlement proposal and denial of the petition. Specifically, staff objected to the offer for its failure to provide for refunds of amounts collected by Odeco under its Rate Schedule No. 3 (Docket No. CI60-743) above that which would have been collected at the settlement rate proposed, 19¢ per Mcf.[1]

Staff argued that since the Commission approved the Humble Oil & Refining Company (Humble) settlement by order issued in these proceedings on August 7, 1963, it has approved the settlement of over one hundred additional dockets, and, with one exception, the settlements have provided for refunds of all amounts in excess of the settlement rates collected under temporary certificates which contained refund conditions. Staff contended that Odeco too should make refunds of excesses which it has collected under its Rate Schedule No. 3.

On February 17, 1964 the Philadelphia Gas Works Division of the United Gas Improvement Company (PGW) filed a letter with the Secretary indicating opposition to the settlement offer of Odeco. On February 28, 1964, Public Service Electric & Gas Company (PSE&G) filed a letter with the Secretary supporting the position of PGW.

On February 24, 1954, Odeco filed a supplement to its offer of settlement agreeing to make refunds which staff, in its answer, contended are required. Subsequent to the filing of Odeco's supplement, both PGW and PSE&G withdrew their opposition to Odeco's settlement offer.[2]

---

[1] All volumes expressed at 15.025 psia.

[2] The withdrawals of opposition were filed by PGM on March 25, 1964, and by PSE&G on April 1, 1964.

Odeco's settlement proposal, as now supplemented, is similar to recent settlements conditionally approved by the Commission in the Union Texas proceeding[3] and provides for the issuance of certificates of public convenience and necessity at a rate of 19¢ per Mcf for sales of gas from offshore south Louisiana under Odeco's FPC Gas Rate Schedule Nos. 3, 5 and 6; a rate-increase moratorium through March 31, 1968 (subject to the usual exceptions): extension of the take-or-pay make-up periods from 2 years to 4 years; refunds with interest to all amounts above the settlement rate collected since the dates of initial deliveries.

We find this proposal, as supplemented, to be in the public interest generally and shall approve it subject to the following reservations and conditions.

We shall require that interest on the amounts to be refunded accrue through the last day of the month in which the supplement to the petition and offer was filed, February 29, 1964. This has been a requirement in all of our orders approving settlements arising out of the Union Texas proceeding.

In the context of the proposal, we interpret the term "delivered" as used in paragraph 1 of the proposal to include gas required to be taken during the moratorium period but paid for and not taken and our approval is conditioned upon such interpretation. Thus, prepayments, if any, will be made during the moratorium period at a rate no higher than the rate in effect for gas physically delivered.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61-2, seek to anticipate in part the nature of our final determinations in this matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61-2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61-2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61-2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

The purchaser in each case is Transcontinental Gas Pipe Line Corporation (Transco). The refunds to be received as a result of the settlement of Docket Nos. CI60-745 and CI61-1469 will be passed on to Transco's customers. Transco will also adjust its rates to reflect the reduced gas purchase costs resulting from the settlement of these two dockets.

However, the flow through provisions of our order in the recent Transco rate settlement in Docket No. RP61-13[4] do not refer specifically to Docket No. CI61-1708. Therefore, in order to avoid a situation in which a pipeline obtains and keeps the benefits of refunds and reductions in gas purchase costs even though it may be, in the absence of such refunds and reductions in gas purchase costs, earning a reasonable rate of return on invested capital, we shall require Transco to report to the Commission the amount of refund and interest that it receives as a result of the settlement of this docket, the estimated annual reductions in purchased gas costs, the proposed disposition of the refunds and the proposed rate adjustments, if any, to reflect the reduction in gas purchase costs which result from the settlement of Docket No. CI61-1708. We shall require Transco to hold the refunds and amounts equal to the reductions in purchased gas costs which will accrue as a result of the settlement of Docket No. CI61-1708 in a special account subject to further orders of the Commission.

---

[3] See *e.g.* orders issued August 7, 1963 (Humble Oil & Refining Company) and October 9, 1963 (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.), in *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*

[4] *Transcontinental Gas Pipe Line Corporation*, Docket No. RP61-13, 27 FPC 187 (1962).

In accordance with the above we shall sever Docket Nos. CI60–745, CI61–1469 and CI61–1708 from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, and issue certificates of public convenience and necessity in accordance with the applications, settlement proposal, as supplemented, and conditions of this order.[5]

The Commission finds:

(1) Ocean Drilling & Exploration Company is a "natural-gas company" within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Odeco is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Transco be required to submit the report and account for the refunds, interest and purchased gas cost reductions as ordered below.

The Commission orders:

(A) The matters in Docket Nos. CI60–743, CI61–1469 and CI61–1708 are hereby severed from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(B) Certificates of public convenience and necessity are hereby issued to Ocean Drilling & Exploration Company upon the conditions set forth herein authorizing the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal, as supplemented, and this order, and for the construction and operation of any facilities described in the application and settlement proposal, as supplemented, herein.

(C) The certificates granted by paragraph (B) above, are granted upon the express condition that Odeco comply fully with the terms of this order and the settlement proposal, as supplemented, which settlement is expressly approved, under the conditions of this order.

(D) Within 90 days from the date of issuance of this order, Odeco shall refund to the pipeline purchaser the difference between the amounts collected for gas delivered since the dates of initial deliveries and the amounts that would have been collected under the settlement rate for gas delivered since such dates together with interest computed at a rate of 7 percent per annum, such interest to accrue through the last day of the month in which the supplement to the settlement proposal was filed, February 29, 1964.

---

[5] The hearings in the Union Texas Petroleum, *et al.*, consolidated proceeding, concluded July 25, 1963 and the Examiner's Decision was issued on January 14, 1964. The matter is now before the Commission on exception to the Examiner's Decision.

(E) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, Odeco shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with a release from the purchaser showing receipt of the refunds in conformity with the settlement as approved.

(F) Upon full compliance of Odeco with all the terms of this order and of the settlement proposal, as supplemented, Odeco shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(G) The certificates herein issued are not transferable and shall be effective only so long as Odeco continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94 (b) and the detailed submittal requirements of Part 154. 94 (f) are hereby waived insofar as they apply to the filing of reductions in rates as required by this order and the settlement proposal, as supplemented.

(I) The grant of certificates herein and approval of the settlement proposal, as supplemented, is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Odeco, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, Odeco, the Commission staff, or any affected party herein in any other proceeding.

(J) Within 15 days from the date of receipt of refunds and interests applicable to Docket No. CI61–1708 required by this order, Transco shall submit a report to the Commission and serve a copy on its jurisdictional customers and the various state utility commissions wherein it does business, setting forth the amount of refund and interest received, the estimated annual reduction, its proposed disposition of such refunds and its proposed rate adjustments to reflect the reduction in gas purchase costs which result from the settlement of Docket No. CI61–1708. Pending Commission action and further orders respecting such proposed disposition and adjustments, Transco shall hold in a special account such refunds and interest resulting from the settlement of Docket No. CI61–1708.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. G–12321

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 16, 1964)

United Gas Pipe Line Company (United Gas) filed an application on January 21, 1964, and a supplement thereto on February 10, 1964, to amend an order of the Commission issued September 10, 1957, which granted a certificate of public convenience and necessity authorizing among other things the sale up to 2500 Mcf of natural gas on a maximum day to Southern Pine Lumber Company (Southern Pine) at Diboll, Texas. The application to amend seeks authorization (a) to increase the total maximum day deliveries to 4100 Mcf and (b) rearrange the existing meter setting and to install two additional meters at an estimated net cost of $10,331, all as more fully set forth in the application to amend on file with the Commission.

Applicant states that the additional gas is required to meet the fuel and processing needs of a new plywood fabricating plant of Southern Pine and U.S. Plywood Corporation, to be operated by Southern Pine.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on March 7, 1964 (29 F.R. 3182). No protest or petition to intervene has been filed in the proceeding concerning the amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order, issued September 10, 1957, in Docket No. G–12321 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued September 10, 1957, in Docket No. G–12321 be and the same is hereby amended by authorizing United Gas Pipe Line Company to rearrange and install metering facilities as requested and to sell and deliver up to 4100 Mcf of natural gas on a maximum day to Southern Pine Lumber Company instead of 2500 Mcf as previously authorized, all as hereinbefore described, and as more fully set forth in the application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COMMISSION LETTER ORDER OF OCTOBER 30, 1963, DIRECTING RESPONSES TO TWO QUESTIONNAIRES:

(I) SUMMARY LISTS OF RESPONDENT'S (1) GAS AND OIL PRODUCTION AND (2) FIELD AND CYCLING PLANTS BY PRICING AREAS—YEAR 1962 AND

(II) COSTS AND STATISTICS PERTAINING TO OIL AND GAS PRODUCTION, EXPLORATION, GAS SYSTEMS, AND FIELD GASOLINE AND CYCLING PLANT OPERATIONS—YEAR 1962

ORDER MODIFYING LETTER ORDER AND DENYING PETITION FOR RELIEF FROM FURNISHING GASOLINE PROCESSING PLANT DATA

(Issued April 16, 1964)

On February 6, 1964, Union Oil Company of California filed a petition seeking to be relieved of a reporting requirement, imposed by Commission's questionnaire issued to gas producers on October 30, 1963, which directs the respondents to provide cost and operating data for field gasoline and cycling plants operated by them or plants in which they have an interest. Union Oil contends that the task is too burdensome for it to undertake (it estimates 885 man-days are required) and further, that all of the plants it is responsible for reporting are located entirely within the borders of the State of California and sell natural gas only in that State.[1]

The questionnaire is designed to measure continental United States and production area investments, costs and expenses, revenues, and operations related to the natural gas production and processing activities of all the natural gas companies designated as respondents to the questionnaire. We would expect these data principally to be used as evidence in an investigatory area rate proceeding in which just and reasonable rates will be fixed for natural gas sold in interstate commerce. In the Permian Basin and South Louisiana area rate proceedings the Commission secured gasoline plant data only for respondents' plants in the pricing area in question. Since gas produced in California is entirely consumed within that State it does not become subject to Commission jurisdiction and there is no present occasion to conduct an area price proceeding for California. It is desirable to reduce a respondent's reporting burden where it is possible to do so without adversely affecting the objectives of scheduled or future area rate proceedings. It does appear possible to dispense with detailed reporting of data where a respondent's plants are located in the State of California, thereby substantially easing Union's burden, although the Commission would not now be willing to forego detailed data for a plant which is located in one of its pricing areas but makes no jurisdictional sales. Moreover, the Commission desires that Union Oil supply certain of the summary data for its gasoline plant activities viewed as a separate department, rather than in an undifferentiated category "all other activities" as Union Oil proposes for certain items. The separate summary reporting of gasoline plant costs may facilitate analysis of certain continental U.S. costs, such as general corporate investments and expenses, departmental costs, and income tax costs. Accordingly, Union may limit its questionnaire processing plant response to the information required by the following parts of the questionnaire:

Schedule	Sheet(s)	Column(s)	Line(s)
K	1	(1), (2), (3), (4), (5), (6), (7), (10), (13)	07.
L	2	(1)	17 through 24, inclusive.
N	1	(1)	01 through 30, inclusive.
O	1	(1)	15 through 21, inclusive.
O	2	(1)	15 through 21, inclusive.
M	9	(1) through (16)	07.
M	10	(1) through (16)	07.

The Commission orders:

The petition of Union Oil Company of California, filed on February 6, 1964, seeking to be relieved of the requirement, contained in the above-entitled letter order and questionnaire II that its report data concerning its field gasoline and cycling plants located in California is denied, except to the extent relief is provided herein.

---

[1] In a separate report, Union Oil advised us that it is engaged in oil and gas production in 20 of the 26 producing areas described in the questionnaire instructions, pp. 1-5(a).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ORDER SEVERALLY DENYING APPLICATION FOR RECONSIDERATION OF ORDER MODIFYING OPINION NO. 412-A AND MOTION FOR STAY OF PRICE MORATORIUM

(Issued April 17, 1964)

On March 20, 1964, the above-listed producers filed an application for rehearing and reconsideration of our order issued February 24, 1964, in these proceedings.[1] Applicants request that we either delete the price moratorium ordered or, in the alternative, that we grant a stay thereof pending judicial review. In addition applicants protest our requirement that they execute and file an agreement and undertaking to comply with the refund requirement specified in Ordering Paragraph (D) of Opinion No. 412-A.

The price moratorium as here applied precludes the filing of all price increases in excess of 18 cents per Mcf for the sales in Districts No. 2 and 4 and 19 cents per Mcf in District No. 3 pending the issuance of a final decision in the Texas Gulf Coast Area Rate Proceeding, Docket No. AR64-2, or until January 1, 1968, whichever is earlier. In contesting the condition applicants argue that we have no authority to prevent producers from filing contractually authorized rate changes under Section 4. They also contend that there is no support for the conclusion that rate filings above the specified levels could have "a substantial price impact on other gas purchase contracts in the area under price redetermination clauses," claiming that many sales are being made to many pipelines at rates in excess of these levels in the areas at issue at the present time. Finally, applicants contend that the action of the Commission in prescribing the moratorium is contrary to their Constitutional rights, powers and privileges.

We have carefully considered the allegations contained in the application for rehearing. In our opinion, the moratorium previously imposed must be maintained if the consuming public is to be afforded the "complete, permanent and effective bond of protection from excessive rates and charges" which the Supreme Court has described as the purpose of the Natural Gas Act.[2] The price-conditioning technique there spelled out is the means of protecting the public interest by keeping gas at triggering prices from entering interstate commerce in the interim period until just and reasonable area rates are fixed. The purpose of the Section 7 condition on the initial price can be effectively frustrated if six months later the producer is free to increase his price to levels that will raise the level of price redetermination rates in the area. In such circumstances the *CATCO* command to "hold the line" would become almost impossible of fulfillment. The imposition of a moratorium on the certificate at the maximum price which, for the reasonable future, can be found to be consistent with the public interest is, we believe a practical method of meeting the Commission's obligation with fairness to both the producers and the public. The recent opinion of the Supreme Court in *F.P.C. v. H. L. Hunt, et al.*,[3] while not passing directly on the extent of our authority to condition permanent certificates, endorses the basic public interest reasons for our condition herein and expressly affirms our power to modify "contract provisions as a condition of the granting of a certificate." (slip op. p. 11)

---

[1] "Order Granting Application For Reconsideration and Modifying Opinion and Order."

[2] *Atlantic Ref. Co. v. P.S.C. of New York* (*CATCO*), 360 U.S. 378, 389.

As to the basis for the specific moratorium levels of 18 cents in District Nos. 2 and 4 and 19 cents in District No. 3 applied in these proceedings, our files of producer rate schedules together with records in previous cases[4] reveal that the three highest effective rates in District Nos. 2, 3, and 4, excluding Hunt's rates, are:[5]

District No. 2: 18.0¢/Mcf, Florida Gas Transmission Co.; 18.0¢/Mcf, Lone Star Gathering Co.; 18.0¢/Mcf, Natural Gas Pipeline Company of America.

District No. 3: 20.0¢/Mcf. Trunkline Gas Co.; 21.5¢/Mcf, Texas Electric Power Co.; 19.0¢/Mcf, Florida Gas Transmission Co.

District No. 4: 19.5¢/Mcf, Florida Power & Light Co.; 18.0¢/Mcf, South Texas Natural Gas Gathering Co.; 18.0¢/Mcf, Natural Gas Pipeline Company of America.

Natural Gas Pipeline Company of America, the purchaser here, has no two-party favored-nation clauses in its gas supply contracts which would be triggered by the instant sales. There are, moreover, no third-party favored-nation clauses in these areas. The purpose of our condition is to prevent the triggering effect on the numerous price redetermination clauses which do exist in the subject areas. Price redetermination clauses customarily provide for the rate to be redetermined on the basis of the highest prices to three different purchasers in a given area. While it is, of course, difficult to gauge with exact precision the adverse effect of permitting higher rates to go into effect here, any price above the lowest of the three highest prices in each area, as set forth above, would raise the redetermination level of rates of other producers in these areas having price redetermination clauses in their gas sales contracts. For this reason we have chosen the lowest of the three highest prices in each area as the price beyond which the producers in this case should not be permitted to go. In so acting, we are simply following the Supreme Court's admonition in *CATCO* to "hold the line."

Accordingly, the application for rehearing on the price moratorium will be denied. For the reasons set forth in the February 24, 1964, order the motion for stay of the moratorium also must be denied.

Applicants further contend that we erred in requiring them to execute an agreement to include interest at 7 percent per annum on all amounts refunded pursuant to Paragraph (D) of the Order accompanying Opinion No. 412-A. They allege that as the entire question of interest on the refund is being litigated, they should not be made to submit an express agreement at this time to include 7 percent interest on excess charges continued to be collected under our stay. The interest rate herein designated is the same as generally imposed for all funds collected subject to refund. The application for modification of the requirement is denied.

---

[3] No. 273, Oct. term 1963, 32 U.S.L. Week 4294 (March 30, 1964), 376 U.S. 515.

[4] Producers making intrastate sales are not required to have rate schedules on file with this Commission. The intrastate sales set forth in the table were gleaned from previous cases.

[5] If Hunt has any factual basis for taking a contrary view, it is incumbent upon them to file a motion to that effect within 30 days of the date of issuance of this order clearly setting forth their basis for any factual disagreement.

The Commission orders:

(A) The application for rehearing and reconsideration filed March 20, 1964, is denied.

(B) The motion for stay of the price moratorium provided in Paragraph (E) of the Order accompanying Opinion No. 412-A, as amended, is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

NEKOOSA-EDWARDS PAPER COMPANY, PROJECT NO. 2255

ORDER APPROVING REVISED PROJECT EXHIBITS

(Issued April 17, 1964)

On October 21, 1963, Nekoosa-Edwards Paper Company, licensee for Project No. 2255, filed revised Exhibit J and K drawings to indicate changes in the location of the transmission line right-of-way.

The licensee states that at the time its application for license was filed, it advised our staff that part of the transmission line shown on Exhibit K, Sheet 3 of 3 (FPC No. 2255-4) transversed a platted area designated for residential use and that sometime in the future the line would be re-routed so as not to interfere with the residential development as it progressed. The changes in the location of the line will not affect the operation of the project.

Pursuant to the licensee's request, our staff has revised Exhibits J and K approved by the Commission on September 1, 1959, to show the changes indicated on the Exhibits J and K drawings filed on October 21, 1963.

The Commission finds:

Exhibit J, Sheet 1 of 1 (FPC No. 2255-1) and Exhibit K, Sheet 3 of 3 (FPC No. 2255-4), on file with the Commission, revised in conformity with the Exhibit J and K drawings filed October 21, 1963, conform to the Commission's rules and regulations and as so revised should be approved as part of the license for the project.

The Commission orders:

The revised Exhibits J and K described in the above finding are hereby approved as part of the license for Project No. 2255.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

PLACER COUNTY WATER AGENCY, PROJECT NO. 2079

ORDER APPROVING REVISED PROJECT EXHIBITS

(Issued April 17, 1964)

On January 22, 1964, Placer County Water Agency, licensee for Project No. 2079, filed for Commission approval revised Exhibits J and L drawings for the French Meadows development of the project. The filings, which were made pursuant to Articles 2 and 3 of the license, provide for the elimination of the surge shaft near the downstream portal of the French Meadows-Hell Hole Tunnel.

Through studies made by Pacific Gas & Electric Company, contractor for the purchase of the project power output, PG&E developed definite criteria for the operation of French Meadows development. On the basis of such criteria, the Licensee concluded that the surge shaft is not necessary for the operation of the French Meadows plant and related facilities; that its elimination will not impair the safe operation of the unit or diminish the plant's or the project's capacity to produce electric energy; and that such elimination will result in an estimated reduction of $240,000 in the project's capital cost.

Commission staff have reviewed the submitted designs and surge calculations and conclude that the elimination of the surge shaft from the proposed French Meadows-Hell Hole Tunnel is not detrimental to project operation and in view of the use of a relief valve at the turbines, will not result in excessive positive or negative pressures under normal load acceptance and normal or emergency load rejection operating conditions. The licensee's reduction of $240,000 in the estimated capital cost of the project is reasonable.

The Commission finds:

(1) The following revised exhibits conform to the Commissions's rules and regulations and should be approved as part of the license for the project:

Exhibit J Sheet 1 revised January 13, 1964 (FPC No. 2079-184) entitled "General Project Map."

Exhibit L Sheet 8 revised January 13, 1964 (FPC No. 2079-185) entitled "French Meadows-Hell Hole Tunnel-Plan and Profile."

Exhibit L Sheet 9 revised January 13, 1964 (FPC No. 2079-186) entitled "French Meadows Power Plant and Penstock."

(2) The following described exhibits, now part of the license and which have been superseded are hereby eliminated from the license for the project:

Exhibit J Sheet 1 revised August 1, 1962 (FPC No. 2079-171) entitled "General Project Map."

Exhibit L Sheet 8 revised August 1, 1962 (FPC No. 2079-138) entitled "French Meadows-Hell Hole Tunnel-Plan and Profile."

Exhibit L Sheet 9 revised August 1, 1962 (FPC No. 2079-139) entitled "French Meadows Power Plant-Penstock and Surge Shaft."

The Commission orders:

The revised exhibits described in filing (1) above are hereby approved as part of the license for Project No. 2079, and the exhibits described in finding (2) above as being superseded are hereby eliminated from the license.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE, PROJECT NOS. 1893, 1913 AND 2140

ORDER DETERMINING NET CHANGES IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND ACCRUED DEPRECIATION, AND PRESCRIBING ACCOUNTING THEREFOR

(Issued April 17, 1964)

Public Service Company of New Hampshire, Licensee for project Nos. 1893, 1913 and 2140,[1] from time to time filed statements, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming, for the period from January 1, 1957, through December 31, 1961, net increases in the actual legitimate original cost of Project No. 1893 of $192,482.94, the actual legitimate original cost of Project No. 1913 of $58,539.47 and a net decrease in the actual legitimate original cost of Project No. 2140 of $4,773.48.[2]

---

[1] All three projects are located in the State of New Hampshire on the Merrimack River and when acquired by the Licensee were constructed developments, although [Footnote 1 continued on p. 950.]

Commission's staff conducted a field examination of the licensee's books and records for the three projects for the period from January 1, 1957, through December 31, 1961. As a result of the examination, staff proposed, subject to Commission's approval, certain adjustments agreed to by the licensee by letter dated December 6, 1962, as follows: (1) a reduction of $2,159.00 in the claimed actual legitimate original cost of Project No. 1893, as of December 31, 1961, due to retirement of project land; (2) a reduction of $137.20 in the claimed actual legitimate original cost of Project No. 1913, due to elimination of the cost of relocating existing fence.

The accounting disposition of the proposed adjustments is to be accomplished by the following composite journal entry:

Account No.	Title	Debit	Credit
271	Contributions in aid of construction	$2,159.00	
101	Electric plant in service Project No. 1893		$2,159.00
216	Unappropriated earned surplus	137.20	
101	Electric plant in service Project No. 1913		137.20

No adjustments were proposed for Project No. 2140.

The staff also examined net changes in the accrued depreciation for the period from January 1, 1957, through December 31, 1961, and accepted without any adjustments the net increase in the accrued depreciation as recorded by the licensee for each of the projects as hereinafter set forth.[3]

The New Hampshire Public Service Commission was advised by letter of this Commission dated February 7, 1963, of the proposed adjustments, and resulting project costs and accrued depreciation. By letter of February 12, 1963, it indicated no objection to the adjustments.

Project No. 1913 was substantially redeveloped upon Licensee's acquisition thereof. Project No. 1893 may be described as Licensee's Amoskeag Plant; Project No. 1913 may be described as Licensee's Hooksett Plant; and Project No. 2140 may be described as Licensee's Garvins Falls Plant. The respective licenses authorizing the operation and maintenance of the above projects, issued pursuant to Section 4(e) of the Federal Power Act, provide for the determination by the Commission of the actual legitimate original cost of and accrued depreciation on the projects. By their respective provisions, those licenses are for the following terms: Project Nos. 1893 and 1913 for a period effective January 1, 1938 and terminating June 30, 1970; and Project No. 2140 for a period effective January 1, 1938 and terminating December 31, 1975.

[2] The Commission, by order issued September 26, 1958 (20 FPC 425) determined, *inter alia*, the actual legitimate original costs as of December 31, 1956, in the amounts of $2,067,239.85 for Project No. 1893, $409,088.60 for Project No. 1913, and $1,000,182.08 for Project No. 2140.

[3] By order of June 30, 1961 (25 FPC 1314) the Commission determined the accrued depreciation as of December 31, 1956, to be: $278,225 for Project No. 1893, $101,050 for Project No. 1913, and $332,687 for Project No. 2140. That order also directed licensee to make provision for annual depreciation at increased depreciation rates, beginning January 1, 1960, to 2.383 (percent) for Project No. 1893, 1.801 (percent) for Project No. 1913, and 2.576 (percent) for Project No. 2140.

The Commission finds:

(1) Licensee, by its acceptance of the proposed adjustments, including the accounting dispositions and resulting project costs and project accrued depreciation, and the New Hampshire Public Service Commission, by its concurrence, have obviated the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The proposed adjustments, including the accounting dispositions, are reasonable and appropriate for the purposes of the Federal Power Act and, therefore, should be approved and directed as hereinafter provided.

(3) The net changes in the actual legitimate original cost of the three projects for the period from January 1, 1957, to December 31, 1961, are: net increases of $190,323.94 for Project No. 1893 and of $58,402.27 for Project No. 1913, respectively, and a net decrease of $4,773.48 for Project No. 2140, classified by primary plant accounts as shown in the attached Schedules I, II, and III, respectively.

(4) As of December 31, 1961, the actual legitimate original cost is $2,257,563.79 for Project No. 1893, $467,490.87 for Project No. 1913, and $995,408.60 for Project No. 2140, classified by primary plant accounts as shown on attached Schedules I, II and III, respectively.

(5) The net increases in the project accrued depreciation for the period from January 1, 1957, to December 31, 1961, are: $148,975 in the case of Project No. 1893, $14,049 in the case of Project No. 1913, and $22,970 in the case of Project No. 2140, classified by functions as shown on the attached Schedules I, II and III, respectively.

(6) As of December 31, 1961, the accrued depreciation balances are: Project No. 1893, $427,200, Project No. 1913, $115,099, and Project No. 2140, $355,657, all classified by functions on the attached Schedules I, II and III, respectively.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including accounting dispositions, proposed by the staff and agreed to by the Licensee, are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and subsidiary plant accounts for each of the projects, as of December 31, 1961, classified by primary plant accounts, as shown on attached Schedules, in the total amounts of $2,257,563.79 for Project No. 1893, $467,490.87 for Project No. 1913, and $995,408.60 for Project No. 2140.

(D) Licensee, to the extent that it has not already done so, shall establish and maintain for each project accrued depreciation accounts as of December 31, 1961, in the amounts and classified by functions, as shown in the attached Schedules, in the following amounts: $427,200 for Project No. 1893, $115,099 for Project No. 1913, and $355,657 for Project No. 2140.

(E) Licensee shall within 90 days from the issuance of this order file with the Commission three certified copies of the adjusting entries for each of the two affected projects, Nos. 1893 and 1913, showing compliance therewith.

PUBLIC UTILITY DISTRICT NO. 1 OF DOUGLAS COUNTY, WASHINGTON, PROJECT NO. 2149

ORDER APPROVING REVISED PROJECT EXHIBITS AND ADJUSTING AUTHORIZED INSTALLED CAPACITY AND ANNUAL CHARGES

(Issued April 17, 1964)

On August 1, 1963, Public Utility District No. 1 of Douglas County, Washington, filed for Commission approval revised Exhibits L drawings and Exhibit M for its proposed Wells Project No. 2149 located on the Columbia River, Washington. The exhibits were filed pursuant to Article 29 of the license for the project and supersede certain exhibits now part of the license.

The revised Exhibit L drawings and Exhibit M show the results of continuing studies made by the licensee of the Wells project in order to: (1) satisfy fishery requirements; (2) resolve complex hydraulic conditions resulting from combining in one structure a power plant, spillway and fish handling facilities comprising a so-called Hydro-Combine; (3) make structural changes due to rearrangement of the switching equipment to make it more readily serviced by the gantry cranes; and (4) to eliminate an impervious cutoff under the east embankment to bedrock, resulting from additional subsurface explorations.

The revised Exhibit L drawings and Exhibit M show also that as a result of model studies; a portion of the generator structures was modified, the elevation of the spillway apron was raised and its shape modified, the location of the draft tube gates were changed, the spillway gates were slightly modified to eliminate vibration, and the design of the switching structures and their arrangement were modified to occupy less space on the top deck of the Hydro-Combine, thereby increasing the ability of the gantry cranes to handle the various equipment and perform the various functions required.

Fish handling facilities are incorporated in the Hydro-Combine and are the result of extensive model studies and coordination between the licensee and State and Federal fish authorities. By letters dated October 14, 1963, October 15, 1963, and November 18, 1963, the Washington State Department of Game, the Washington State Department of Fisheries, and the Department of the Interior, have given their respective approval to the revised Exhibit L drawings insofar as the drawings pertain to the functional aspects of the fish handling facilities. Details relating to the design of the fish handling facilities are still under study by the licensee and the State and Federal agencies mentioned above, and Commission approval herein of the revised Exhibit L drawings is restricted to their functional aspects only.

The license for the project presently authorizes an initial capacity comprising seven generating units of 70,585 kilowatts each, for a total of 494,095 kilowatts, or 659,000 horsepower for annual charge purposes. The licensee now proposes to enlarge the generator and transformer ratings to take advantage of a presently guaranteed increased horsepower output of each turbine of 120,700 horsepower rather than the 112,000 horsepower output originally guaranteed by the manufacturers of the generating units. The new generator ratings will be 77,425 kilowatt each or a total of 541,975 kilowatts for an initial installation of seven units. Accordingly, the license should be modified to show the new authorized installed initial capacity for annual charge purposes as 723,000 horsepower.

The Chief of Engineers, Department of the Army, has advised that the plans of the project structures affecting navigation are satisfactory and the tracing has been approved in accordance with the provisions of Section 4(e) of the Federal Power Act insofar as the interests of navigation are concerned, and also indicated that the proposed location of the future navigation lock shown on the tracing might be changed but that any new proposal would consider compatibility with other project features.

The Commission finds:

(1) The following described revised Exhibit L drawings, and revised Exhibit M, (Revised July 1963) entitled "General Description of Equipment" except insofar as the latter relates to the design of the fish handling facilities, conform

to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit L-1	F.P.C. No.	Title
		WELLS HYDROELECTRIC PROJECT—COLUMBIA RIVER HYDRO—COMBINE

		WEST EMBANKMENTS
Sheet 17-A	2149-80	Plans and sections.
		EAST EMBANKMENTS
Sheet 17-B	2149-91	Plans and sections.

(2) Exhibit L, Sheets 1, 2 and 3 (FPC Nos. 2149-42, -43 and -44, respectively) and Exhibit M filed April 25, 1961, now parts of the license for the project and which have been superseded, should be eliminated from the license for the project.

(3) The presently authorized installed capacity of the project for the purpose of computing the capacity component of the administrative annual charge is by this order increased from 659,000 horsepower to 723,000 horsepower.

The Commission orders:

(A) The revised Exhibit L drawings and revised Exhibit M, except insofar as the latter relates to the design of the fish handling facilities, described in finding (1) above, are hereby approved as part of the license for the project, and the Exhibit L drawings and Exhibit M, described in finding (2) above, are hereby eliminated from the license for the project.

(B) Article 46(i) of the license for the project is hereby amended, effective as of January 1, 1963 to show 723,000 horsepower as the authorized installed horsepower capacity of the project for annual charge purposes.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64–96

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 17, 1964)

On October 25, 1963, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP64–96 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain pipeline facilities and the sale and delivery of an additional 53,663 Mcf of natural gas per day to certain existing customers, all as more fully set forth in the application.

The proposed construction consists of approximately 116 miles of 30 and 36-inch pipeline loops and 10,960 additional compressor horsepower in existing mainline compressor stations together with miscellaneous sales and appurtenant facilities. The total proposed additional service of 53,663 Mcf per day will consist of 43,845 Mcf per day of pipeline service, 8,818 Mcf per day of storage service and 1,000 Mcf per day of liquefied natural gas service.

Applicant states that the proposed construction and additional service are designed to meet the demand of Applicant's customers commencing with the 1964–65 heating season. The proposed facilities will increase Applicant's system capacity from 2,518,484 Mcf per day to 2,581,352 Mcf per day.

The estimated total cost of the proposed facilities is $24,422,000, which cost will be financed initially through short-term bank loans. Long-term financing will be accomplished as part of a financing program covering the proposed and other facilities.

Several petitions to intervene in support have been filed herein. In each case, the burden of such filings has been that the petitioners did not request formal hearing in this proceeding and did not object to the hearing and disposition of the subject application under the shortened procedure provided for by the Commission's Rules, but that each petitioner desired to preserve its rights to appear and participate fully in the event that this matter should be set for formal hearing. Inasmuch as the shortened procedure is being used herein, no further action on the various intervention petitions appears necessary.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 17, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sales

of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (2), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (2), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sales and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within nine months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

UTAH POWER & LIGHT COMPANY, DOCKET NO. E-7130

DECLARATORY ORDER

(Issued April 17, 1964)*

On October 11, 1963, the Utah Power & Light Company (Petitioner), a Maine corporation with principal offices in Salt Lake City, Utah, filed under Section 1.7(c) of the Rules of Practice and Procedure a petition, including a statement of facts, for a declaratory order removing uncertainty as to whether it needs a license under Part I of the Federal Power Act (16 U.S.C. 791–823) to continue to maintain and operate its Pioneer project works on the Ogden River at Ogden, Utah.

The petition shows that the Pioneer project's sole source of water power is the Pine View Dam. Water passes from the dam through a 5.5 mile wood-stave flowline to the head of Ogden Canyon. Here, the Ogden River Water Users' Association (Association) diverts part of the water into its irrigation system, and Petitioner diverts the remainder to its project works. The water used by Petitioner flows into a surge tank, passes through a 4800-foot steel penstock to the powerhouse, and empties through a half-mile ditch into the Ogden River. The installed capacity of Petitioner's project is 5,000 kilowatts.

---

*See 31 FPC 1537, vacating order, etc.

Petition to Review dismissed, *Utah Power & Light Co. v. F.P.C.*, 339 F. 2d 436 (CA10–1964).

The Bureau of Reclamation of the Department of the Interior built the Pine View Dam between 1934 and 1937. By authority of the Reclamation Act of June 17, 1902 (32 Stat. 388, 389), the Secretary of Interior has authorized the Association to operate and maintain the dam and reservoir. The wood-stave flowline is owned jointly by Petitioner, whose interest is about 45 percent, and the Association, holding the remainder. Petitioner wholly owns the powerhouse and appurtenant facilities.

Under subsection 23(b) of the Federal Power Act (16 U.S.C. 817), it is unlawful for Petitioner, which does not claim to hold a Federal permit predating the act's approval on June 10, 1920, "for purpose of developing electric power, to . . . utilize the surplus water or water power from any Government dam, except under and in accordance with the terms of . . . a license granted pursuant to this Act." The term "government dam" is defined "for purposes of this Act" in section 3(10) (16 U.S.C. 796): ". . . a dam or other work *constructed* or *owned* by the United States for Government purposes with or without contribution from others." [Emphasis supplied.]

The Pine View Dam and Reservoir are still owned by the United States. Moreover, since the dam was Federally constructed, it would be a "Government dam" as Congress defined the term for purposes of the Federal Power Act, even if the United States had disposed of it. Directly in point is the Commission's order in *Green Mountain Power Corp.*, Project No. 2090, 13 FPC 1211 and 1321 (1954). Petitioner is required by subsection 23(b) to apply for and obtain a license for the continued maintenance and operation of its Pioneer project.

The Commission finds:

(1) The Pine View Dam is owned by the United States;

(2) The Pine View Dam was constructed by the United States;

(3) Thus, the Pine View Dam is a "Government dam" as the word is defined in section 3(10) for purposes of the Federal Power Act;

(4) The Utah Power & Light Company's Pioneer project utilizes surplus water or water power from the Pine View Dam.

The Commission orders:

Utah Power & Light Company shall file, within ninety days from the date of issuance of this order, application for license pursuant to the provisions of the Federal Power Act and the Commission's Rules and Regulations thereunder for the continued maintenance and operation of its project works of its Pioneer project on the Ogden River at Ogden, Utah.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-184

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 20, 1964)

On February 19, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64-184 an application pursuant to Section 7(c) of the Natural Gas

Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas to certain existing customers for resale and distribution.

The facilities proposed to be constructed consist of five measuring and regulating stations and thirteen mainline taps to be operated for the purpose of accommodating the routine requests for natural gas received by Applicant from seven of its existing authorized resale customers, all as more fully set forth in the application on file with the Commission.

The customers to be served with natural gas, above-mentioned, are, The Tucson Gas, Electric Light and Power Company, Western Gas Service Company, Southern Union Gas Company, Arizona Public Service Company, California-Pacific Utilities Company, Northwest Natural Gas Company and Washington Natural Gas Company. The proposed delivery facilities will be located at various points through Applicant's extensive system.

Applicant estimates the total third year peak day and annual requirements under this application to be 4,071 Mcf and 675,853 Mcf, respectively.

The estimated total cost of the proposed facilities is $42,200 which is to be financed out of current working funds supplemented when necessary by short-term bank loans.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 17, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within twelve months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

LONE STAR GAS COMPANY, DOCKET NO. CP64-178

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 20, 1964)

On February 10, 1964, Lone Star Gas Company (Applicant) filed in Docket No. CP64-178 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in Denton County, Texas, and the transportation of natural gas in order to serve the City of Shady Shores and the Lake Shore Park Addition to said city, all as more fully set forth in the application

Applicant proposes to construct and operate the following facilities:

(1) Approximately 1,200 feet of 2-inch transmission Line F-15 from 16-inch Line F to a city gate measuring station to be installed near the City of Shady Shores, and

(2) Approximately 300 feet of 2-inch transmission Line F-14 from 16-inch Line F to a proposed regulator station and measurement facilities when warranted by the number of customers, to be installed for service to the Lake Shore Park Addition.

The total estimated third year peak day and annual requirements for the two communities are 234 Mcf and 13,519 Mcf (at 14.73 psia), respectively.

The cost of the proposed facilities is estimated to be $9,010, which cost will be financed out of funds on hand.

Applicant states that it will construct and operate the distribution system necessary for the proposed service.

It appears that Applicant has obtained the necessary franchise from Shady Shores.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 17, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the

meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 11, 1944, in Docket No. G-442 (4 FPC 565).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Lone Star Gas Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general trems and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

POWER AUTHORITY OF THE STATE OF NEW YORK, PROJECT NO. 2000

ORDER AMENDING ORDER REJECTING APPLICATION FOR REHEARING

(Issued April 20, 1964)

Power Authority of the State of New York (Authority) on March 20, 1964, petitioned this Commission to set aside or modify its Order Rejecting Application for Rehearing issued February 27, 1964, 31 FPC 467, in the above-entitled matter. By that order, we refused to grant the application for rehearing on two grounds—first, on the merits, and second, on the ground that it was not filed until after the 30-day period within which an application for rehearing is allowed by Section 313(a) of the Federal Power Act.

Petitioner does not ask that we reconsider the matter on the merits, but only that the rejection on the ground of untimely filing be eliminated from the order. If it cannot be established that the application was made within the time allowed by the statute, the courts will lack jurisdiction to review the determination of the Commission. *Dayton Power and Light Co.* v. *F.P.C.*, 251 F. 2d 875 (CADC, 1957).

The Authority presents, in support of its petition, an affidavit of an attorney that he mailed 14 copies of the application for rehearing to the Secretary of the Commission on February 11, 1964, in New York City, and at the same time mailed one copy to the Commission's staff attorney of record in this proceeding. The last day for making application for rehearing was February 12, 1964. The 14 copies mailed to the Secretary were stamped in the Commission's mailroom with February 13, 1964, as the date of receipt. There is no independent recollection by mail clerks or by personnel in the Secretary's office as to the actual date of receipt. The best recollection of the staff attorney to whom one copy was mailed is that he received that copy on February 13, 1964.

In the light of the new evidence submitted with the present petition, we now find that the application for rehearing was received by the Commission on February 12, 1964, and that the application was timely. There is a rebuttable presumption that the copies mailed on February 11 arrived on February 12, which was not a holiday in the District of Columbia. *Arkansas Motor Coaches* v. *C.I.R.*, 198 F. 2d 189 (CA8, 1952); *Central Paper Co.* v. *C.I.R.*, 199 F. 2d 902 (CA6, 1952); *Shultz* v. *United States*, 132 F. Supp. 953 (C. Cls. 1955); *Helman* v. *Fruit Growers Express Co.*, 200 F. Supp. 234 (D.N.J., 1961). This presumption is not rebutted by the stamped date of receipt under the present circumstances.[1]

The Commission finds:

The application for rehearing by Power Authority of the State of New York in the above-entitled matter was made on February 12, 1964, within 30 days of the issuance of the order as to which rehearing was sought.

The Commission orders:

The Order Rejecting Application for Rehearing issued February 27, 1964, in this proceeding is hereby amended to read as follows:

ORDER DENYING APPLICATION FOR REHEARING

On February 12, 1964, Power Authority of the State of New York (the Authority) made application for rehearing of the Commission's Opinion No. 415 and accompanying order issued January 13, 1964, in the above-entitled matter, in which the Commission denied the Authority's applications for exemption from annual charges in accordance with Section 10(e) of the Federal Power Act for the period from July 17, 1958, through December 31, 1961, except for partial exemptions totaling $9,621.70.

The application for rehearing presents no new argument or citation of authority beyond that which was presented, and carefully considered by the Commission, prior to the aforesaid order of January 13, 1964. Upon full reconsideration, we believe the aforesaid order was correct, and should be adhered to, for the reasons stated in Opinion No. 415.

---

[1] The presumption would not prevail against a clerk's positive recollection of out-of-time receipt. *Shultz* v. *United States*, 132 F. Supp. 953, 955 (C. Cls., 1955).

The Commission finds:

No new facts or principles of law have been presented by the Applicant in its application for rehearing which either were not fully considered by the Commission prior to its order herein or, having been now considered, warrant further hearing, modification, or revocation of said order.

The Commission orders:

The Application for Rehearing filed herein by Power Authority of the State of New York be and the same hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

WISCONSIN PUBLIC SERVICE CORPORATION, PROJECT NOS. 1940, 1957, 1966, 1968, 1979, 1989, 1999

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL PROJECT COSTS, NET CHANGES THEREIN, ACCRUED DEPRECIATION, NET CHANGE IN ACCRUED DEPRECIATION AND PRESCRIBING ACCOUNTING THEREFOR

(Issued April 20, 1964)

Wisconsin Public Service Corporation, Licensee for Project Nos. 1940 (Tomahawk), 1957 (Otter Rapids), 1966 (Grandfather Falls), 1968 (Hat Rapids), 1979 (Alexander), 1989 (Merrill), and 1999 (Wausau),[1] filed initial statements, pursuant to Section 4.20 of the Commission Regulations under the Federal Power Act claiming actual legitimate original project cost and applicable project accrued depreciation in the amounts indicated below for Project Nos. 1940 and 1966 as of December 31, 1938 and for the five other projects as of January 1, 1938:

---

[1] The licenses, all issued pursuant to Section 4(e) of the Federal Power Act, were issued or authorized on the dates and for the periods as follows:

Project No.	Date order or license issued	Effective	Terminates
1940	Sept. 29, 1948	Jan. 1, 1937	Dec. 31, 1986
1957	Jan. 25, 1951	Jan. 1, 1938	June 30, 1970
1966	Feb. 20, 1951	Jan. 1, 1938	Dec. 31, 1987
1968	Nov. 4, 1949	Jan. 1, 1938	June 30, 1970
1979	Apr. 25, 1950	Jan. 1, 1938	June 30, 1974
1989	Aug. 8, 1951	Jan. 1, 1938	June 30, 1970
1999	May 10, 1955	Jan. 1, 1938	June 30, 1970

The projects are all located on the Wisconsin River within the State of Wisconsin.

Project No.	Claimed cost as of—		Claimed depreciation as of—	
1940 [1]	$607,114.28	Dec. 31, 1938	$2,667.23	Dec. 31, 1938
1957	151,557.36	Jan. 1, 1938	21,567.35	Jan. 1, 1938
1966 [2]	2,196,094.52	Dec. 31, 1938	59,016.95	Jan. 1, 1938
1968	331,884.90	Jan. 1, 1938	66,705.60	Jan. 1, 1938
1979	758,768.09	Jan. 1, 1938	65,776.33	Jan. 1, 1938
1989	331,245.17	Jan. 1, 1938	31,775.60	Jan. 1, 1938
1999	1,347,966.12	Jan. 1, 1938	115,461.91	Jan. 1, 1938

[1] The license for Project No. 1940 is effective as of Jan. 1, 1937. All constructed facilities in existence at that date were subsequently removed and new project facilities were constructed thereafter being placed in commercial operation on Jan. 15, 1938.

[2] As of Jan. 1, 1938, the effective date of the license in Project No. 1966, the only facilities or property existence or included in the license were a concrete and stone masonry dam about 36 feet high, with a spillway equipped with taintor gates, a powerhouse integral with the dam (now converted to a warehouse) in which turbines, generators and accessory and miscellaneous power plant equipment were installed, and the necessary project lands. The generating facilities were excluded from the license. This development is known as the "upper development." In February of 1938, construction of the "lower development" was begun and the project became operational on Dec. 20, 1938.

In addition thereto, Licensee has recorded changes in cost and accrued depreciation through December 31, 1952, for Project No. 1966 and through December 31, 1955 for the remaining Projects as follows:

Project No.	Recorded net changes in cost	Recorded changes in accrued depreciation	Period
1940	$31,036.30	$185,337.97	1939-55
1957	12,986.75	35,067.20	1938-55
1966	11,356.73	323,722.52	1938-52
1968	68,175.86	95,545.02	1938-55
1979	9,107.75	184,176.62	1938-55
1989	29,367.66	78,584.01	1938-55
1999	44,766.45	186,393.66	1938-55

The resulting amounts of total claimed or recorded project cost, and total claimed project accrued depreciation, of the various projects as of the dates shown are as follows:[3]

Project No.	Total claimed or recorded cost	Total claimed and recorded accrued depreciation	To period ending Dec. 1931
1940	$638,150.58	$188,005.20	1955
1957	164,544.11	56,634.55	1955
1966	2,207,451.25	382,739.47	1952
1968	400,020.76	162,250.62	1955
1979	767,875.84	249,952.95	1955
1989	360,612.83	110,359.61	1955
1999	1,392,732.57	301,855.50	1955

Licensee filed a statement of claimed actual legitimate original costs for Project No. 1966 as of December 31, 1938. By letter dated August 23, 1963, Licensee concurred in a staff recommendation for an adjusted project cost of $382,890.54 as the project initial cost as of January 1, 1938 (the effective date of the license) and the adjusted cost of the project in the amount of $2,085,001.01 as of December 31, 1952.

---

[3] Section 4(b) of the Federal Power Act and the various terms of the respective licenses for Project Nos. 1940, 1957, 1966, 1968, 1979, 1989, and 1999 provide for Commission determination of the actual legitimate original project costs, accrued depreciation applicable to the several projects and net investments of licensee therein, all in accordance with the Act and the Rules and Regulations of the Commission thereunder.

Actual legitimate original cost for Project No. 1940 is determined hereinafter as of December 31, 1938 because all constructed facilities in place on the effective date of the license were removed shortly after that date and new facilities constructed which were placed in operation on January 15, 1938.

The Commission staff conducted field studies of the books and records of Licensee and other data for the purpose of ascertaining the correctness of the claimed project costs as of the dates referred to above, cost changes, accrued depreciation, changes in accrued depreciation and resulting project costs and accrued depreciation for Project No. 1966 as of December 31, 1952 and for all other Projects as of December 31, 1955.

Following those studies, a tentative agreement, subject to Commission approval, was reached between the staff and Licensee's representatives with respect to certain proposed adjustments involving: (1) The reclassification of certain items within project plant accounts; (2) the elimination of certain items from project plant by transfer to nonproject plant accounts; (3) eliminations of other amounts from claimed or recorded project costs; and (4) the accounting dispositions of all amounts involved in the proposed adjustments.

The results of the staff examination, concurred in by the Licensee by letters of February 17, 1958,[3] February 27, 1958, October 19, 1961, August 23, 1963[4] and April 26, 1963, are summarized in the accompanying schedule 1 and detailed for each project in the accompanying schedules 2 through 15 which are appended hereto.[5]

In summary, the results of the staff's proposed adjustments effect a reduction in recorded project plant costs for all projects in the aggregate amount of $559,695.33 as follows:

Reduction in initial claimed cost	$(601, 165. 12)
Net adjustments from dates of claimed initial cost to terminal dates covered	50, 510. 11
Net adjustment to claimed cost	(550, 655, 01)
Reconciliation of booked costs to claimed costs for cost in project plant accounts not claimed	(9, 040. 32)
Total Adjustments to be recorded	(559, 695. 33)

This is all as more specifically shown in the Schedules appended hereto together with the accounting disposition of all amounts involved in the proposed adjustments by the several projects and by the project and balance sheet accounts affected. In summary, the accounting dispositions of all amounts involved in the proposed adjustments are shown by the following composite journal entry:

---

[3] By this letter, License also submitted revised statements of initial claimed accrued depreciation as of January 1, 1938, for Project Nos. 1957, 1968, 1979, 1989 and 1999.

[4] By this letter Licensee also submitted its revised statement of initial project accrued depreciation as of January 1, 1938 for Project No. 1966.

[5] [Omitted in printing.]

[1] Accounting references are to account numbers and titles prescribed in the Commission's revised Uniform System of Accounts for Public Utilities and Licensees effective January 1, 1961, except for Schedules 1 through 15 which employ the account numbers and titles effective prior to January 1, 1961. This reflects the fact that the project costs herein are recorded in Licensee's plant accounts as of dates prior to January 1, 1961. In some of these schedules the new account numbers appear parenthetically.

The Wisconsin Public Service Commission was advised by letter of this Commission dated October 2, 1963 of the proposed adjustments and accounting dispositions, and by letter dated October 16, 1963 that Commission expressed concurrence therewith.

The Commission finds:

(1) Licensee by its acceptance of the proposed adjustments including the accounting dispositions and resulting respective project costs, project reserves for depreciation and project net investments, and the Wisconsin Public Service Commission by its concurrence in the staff recommendations herein have obviated the necessity for the notice and opportunity to protest, provided by Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments and accounting dispositions are reasonable and appropriate for the purposes of the Federal Power Act and therefore should be approved and directed as hereinafter provided.

(3) The actual legitimate original cost, accrued depreciation and net investment in Project Nos. 1940, 1957, 1966, 1968, 1979, 1989, 1999 as of the effective dates of the licenses therefor (except for Project No. 1940, which was entirely reconstructed after the effective date of the license and for which the claimed initial project cost date (12/31/38), is used) are hereby determined to be as follows:

Project No	Date	Original cost	Accrued depreciation	Net investment
1940	Dec. 31, 1938	$608,151.81	$2,667.23	$605,484.58
1957	Jan. 1, 1938	132,464.26	21,567.35	110,896.91
1966	Jan. 1, 1938	382,890.54	59,016.95	323,873.59
1968	Jan. 1, 1938	320,384.80	66,705.60	253,679.20
1979	Jan. 1, 1938	740,563.39	65,776.33	674,787.06
1989	Jan. 1, 1938	217,154.91	31,775.60	185,379.31
1999	Jan. 1, 1938	1,122,004.30	115,461.91	1,006,542.39

(4) The net changes in the cost of the aforementioned several projects in the periods shown and the respective resulting actual legitimate original costs of those projects as of the dates set forth below are hereby determined to be:

Project No.	Period	Net changes of cost	Original cost	
			As of—	Amount
1940	Jan. 1, 1939–Dec. 31, 1955	$24,706.80	Dec. 31, 1955	$632,858.61
1957	Jan. 1, 1938–Dec. 31, 1955	14,377.09	Dec. 31, 1955	146,841.35
1966	Jan. 1, 1938–Dec. 31, 1952	1,702,110.47	Dec. 31, 1952	2,085,001.01
1968	Jan. 1, 1938–Dec. 31, 1955	63,817.72	Dec. 31, 1955	384,202.52

1999	Jan. 1, 1938–Dec. 31, 1955	18,595.04	Dec. 31, 1955	1,140,599.34

(5) The net changes in project accrued depreciation for the aforementioned several projects in the periods shown and the resulting balances of accrued depreciation as of the respective dates shown are hereby determined to be the credit amounts as follows:

Project No.	Period	Net change	Balance of accrued depreciation	
			As of—	Amount
1940	Jan. 1, 1939–Dec. 31, 1955	$185,337.97	Dec. 31, 1955	$188,005.20
1957	Jan. 1, 1938–Dec. 31, 1955	35,067.20	Dec. 31, 1955	56,634.55
1966	Jan. 1, 1938–Dec. 31, 1952	323,722.52	Dec. 31, 1952	382,739.47
1968	Jan. 1, 1938–Dec. 31, 1955	94,370.89	Dec. 31, 1955	161,076.49
1979	Jan. 1, 1938–Dec. 31, 1955	183,073.77	Dec. 31, 1955	248,850.10
1989	Jan. 1, 1938–Dec. 31, 1955	78,584.01	Dec. 31, 1955	110,359.61
1999	Jan. 1, 1938–Dec. 31, 1955	185,272.67	Dec. 31, 1955	300,734.58

The Commission orders:

(A) The provisions of Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The adjustments and accounting dispositions proposed by the staff and agreed to by the Licensee are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project plant accounts, for Project Nos. 1957, 1966, 1968, 1979, 1989, and 1999 showing the initial debit balances for the named projects as of the effective date of the licenses and for Project No. 1940 as of December 31, 1938; showing accrued depreciation as of those dates; showing net increase or change in the actual legitimate original cost of the respective projects for the periods indicated above; the total debit balances; the net change in accrued depreciation and the total credit balance of accrued depreciation as of the dates indicated; all as determined above and shown more specifically in the attached Schedules 1 through 15.

(D) Licensee shall, within 90 days from the issuance of the Commission's order, file with the Commission three certified copies of Licensee's FPC Form No. 7 and adjusting journal entries showing compliance with this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. Charles R. Ross, Harold C. Woodward, and David S. Black.

ORANGE AND ROCKLAND UTILITIES, INC., DOCKET NO. E–7157

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued April 21, 1964)

Orange and Rockland Utilities, Inc. (Applicant), a corporation organized under the laws of the State of New York and qualified to do business in the State of New York with its principal business office at Nyack, New York, filed an application on March 12, 1964, for authority pursuant to Section 204 of the Federal Power Act to issue unsecured Promissory Notes in the maximum principal amount of $24,150,000 outstanding at any one time.

According to the application the Promissory Notes proposed to be issued by the Applicant consist of notes of a maturity of one year or less from the date of issuance but in any event to mature not later than June 30, 1965. Applicant states that none of the Notes proposed to be issued will be resold to the general public and no finder's fee or other fee, commission or remuneration is to be paid in connection therewith to any third person for negotiating the transaction. Applicant states that the notes will bear an interest rate not over one quarter of one per cent in excess of the New York City prime rate. Applicant anticipates that the notes will be issued to banks located in the territory served by the Applicant and to New York and Boston banks.

According to the Application, $23,000,000 of the proceeds will be utilized for the Applicant's construction program estimated at $18,382,900 in 1964 and $16,724,900 in 1965. The major items of Applicant's 1964 and 1965 construction programs are the addition of the 170,000 kw generating unit at Lovett Plant and construction of 138 kv transmission facilities to serve load centers at Hillburn and West Nyack from the new unit. According to the application, estimated expenditures for the Lovett Steam Unit #4 will be $9,445,000 in 1964 and $8,194,000 in 1965. Expenditures for Coal handling equipment at the Lovett Plant are estimated at $355,000. Total transmission expenditures including the 138 kv facilities mentioned above are estimated at $2,220,000 for 1964 and $1,714,000 for 1965; total expenditures for distribution facilities are estimated at $3,416,000 for 1964 and $3,658,000 for 1965 and Gas Department expenditures $2,947,000 for 1964 and $3,159,000 for 1965. Of the $24,150,000 proceeds, $1,150,000 will be utilized to refund $1,150,000 principal amount of First Mortgage Bonds 3% series due June 1, 1965 issued by The Orange and Rockland Electric Co., a predecessor company.

Subject to obtaining authorization from the Public Service Commission of New York, the Applicant plans to pay off the notes no later than June 30, 1965 through the application of funds derived from the sale of long-term debt and/or equity securities and from retained earnings.

Written notice of the application has been given to the Public Service Commission of the State of New York, and the Board of Public Utility Commissioners of the State of New Jersey and the Governors of those States. Notice of the application was also published in the Federal Register on March 25, 1964 (29 F.R. 3719), stating that any person desiring to be heard or to make any protest with reference to the application should on or before April 7, 1964, file protests or petitions with the Federal Power Commission, Washington, D.C., 20426. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore determined and set forth in the Commission's order issued August 13, 1958 in the matters of *Orange and Rockland Utilities, Inc.* and *Rockland Electric Company*, in Docket No. E-6827.

(2) The proposed issuance of Promissory Notes in the maximum principal amount of $24,150,000 outstanding at any one time, all as described above, constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the maximum principal amount of $24,150,000, all as described above, will be in excess of 5 per cent of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not now organized and operating in a State, under the laws of which the security issue herein involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a(a)(2) thereof.

(6) The proposed issuance of Promissory Notes as hereinafter authorized will be for a lawful object within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(7) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance by Applicant of Promissory Notes in the maximum principal amount of $24,150,000, outstanding at any one time, upon the terms and conditions and for the purposes set forth in the application as amended, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of all Notes to be issued pursuant hereto, being not later than June 30, 1965.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

GAS-PURCHASE FACILITIES—BUDGET-TYPE APPLICATIONS—PIPELINE COMPANIES—WAIVER OF COST REQUIREMENTS, DOCKET NO. R-259

ORDER NO. 281

AMENDING §§ 2.58 AND 157.7 OF THE COMMISSION'S REGULATIONS

(Issued April 21, 1964)

The Commission, in this order, is amending §§ 2.58 and 157.7 of its Rules and Regulations to clarify the obligations of applicants seeking authority to secure budget-type certificates where the application does not meet the prescribed limitations of such rules.

Section 2.58 of the Commission's General Rules and Regulations, entitled "Budget-type certificate applications—gas-purchase facilities" is being amended by adding a new paragraph which provides that any application proposing the construction of facilities having an estimated total cost in excess of the amounts specified herein shall be accompanied by a request for waiver of the provisions of such paragraph and will be granted only for good cause shown. A similar amendment is being made to § 157.7 of the Commission's Regulations under the Natural Gas Act, relating to "Abbreviated applications."

These amendments do not impose any new requirement upon pipeline applicants for budget-type certificates in connection with gas-purchase facilities since provisions for seeking waiver of a Commission regulation is already set out in § 1.7 of the Commission's Rules of Practice and Procedure. However, reference to these requirements in §§ 2.58 and 157.7 should help insure that applicants will be aware of and will comply with the existing requirements.

Notice of rulemaking pursuant to section 4(a) of the Administrative Procedure Act and § 1.19 of our Rules of Practice and Procedure is unnecessary here since the amendments relax existing procedural requirements. For the same reason it is appropriate to make the amendments effective immediately.

The Commission finds:

(1) The adoption of these amendments are necessary and appropriate to the administration of the Natural Gas Act.

(2) Since these amendments involve matters of Commission practice and procedure and impose no new requirement, the notice, hearing and effective date requirements of section 4 of the Administrative Procedure Act are not applicable.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 7 and 16 thereof (52 Stat. 825, 830; 56 Stat. 83; 15 U.S.C. 717f, 717o) *orders:*

(A) Parts 2 and 157 of the Commission's Rules and Regulations, Chapter I of Title 18 of the Code of Federal Regulations, are amended in the following respects:

1. In Part 2 amend § 2.58 by redesignating paragraph (a) as (a)(1), redesignating paragraph (b) as (2) and adding a new paragraph (b). As so amended paragraphs (a) and (b) will read as follows:

§ 2.58 Budget-type certificate applications—gas-purchase facilities.

* * * * *

(a) (1) The total estimated cost of the facilities to be installed in a given twelve-month period does not exceed 1½ percent of the applicant company's plant account or $5,000,000, whichever is the lesser.

(2) The total cost of any single project facilities to be installed during the authorization period does not exceed 25 percent of the total budget amount or $500,000, whichever is the lesser.

(b) Any application proposing the construction of facilities having an estimated total cost in excess of the amounts specified in paragraph (a) hereof shall be accompanied by a request for waiver of the provisions of such paragraph and will be granted only for good cause shown.

[Secs. 7, 16, 52 Stat. 825, 830, 56 Stat. 83; 15 U.S.C. 717f, 717o.]

2. In Part 157 amend paragraph (b) of § 157.7, as prescribed in Order No. 280, by redesignating subparagraph (1) as (1) (i), redesignating subparagraph (2) as (ii) and adding a new paragraph (2). As so amended subparagraphs (1) and (2) will read as follows:

§ 157.7 Abbreviated applications.

* * * * * *

(b) *Gas-purchase facilities—budget-type applications.* An abbreviated application requesting a budget-type certificate authorizing the construction of gas-purchase facilities during a given twelve-month period and operation thereafter may be filed when:

(1) (i) The total estimated cost of the gas-purchase facilities proposed in the application does not exceed 1½ percent of the applicant's gas plant (Account 101, Uniform System of Accounts Prescribed for Natural Gas Companies) or $5,000,000, whichever is the lesser.

(ii) The total cost of gas-purchase facilities for any single project to be installed during the authorized construction period does not exceed 25 percent of the total budget amount or $500,000, whichever is the lesser.

(2) Any application proposing the construction of facilities having an estimated total cost in excess of the amounts specified in subparagraph (1) hereof shall be accompanied by a request for waiver of the provisions of such paragraph and will be granted only for good cause shown.

[Secs. 7, 16, 52 Stat. 825, 830, 56 Stat. 83; 15 U.S.C. 717f, 717o.]

(B) These amendments shall be effective upon the issuance of this order.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

RATE SCHEDULES OF PUBLIC UTILITIES, DOCKET NO. R-260

ORDER NO. 282

STATEMENT OF POLICY

(Issued April 21, 1964)

§ 2.5 *Filing of rate schedules by Public Utilities.*

The Commission has received a number of inquiries from public utilities who are presently engaged in reviewing the status of their wholesale power sales, in the light of the recent Supreme Court decision in the *Colton* case, *Federal Power Commission* v. *Southern California Edison Company*, 376 U.S. 205, 11 L. ed. 2d 638, decided March 2, 1964, as to the manner in which the Commission would expect to treat filings made with it of existing wholesale sales which had not previously been filed with this Commission. In response to such inquiries the Commission believes it appropriate to advise all public utilities that, while it of course cannot prejudge the possible rights of interested third parties, its primary objective is in insuring that the rate schedules for all jurisdictional sales are promptly filed with this agency, as required by law, and that where such rate schedules are filed with this agency by August 1, 1964, it does not intend on its own motion to initiate any inquiry into past failures to file such schedules.

In accordance with this policy the Commission, in the absence of valid objection by any interested party, will permit all existing rate schedules to be filed as initial rate schedules pursuant to the provisions of Section 35.1(b) of its Regulations under the Federal Power Act and will give favorable consideration to requests pursuant to the provisions of Section 35.11 of these Regulations to make such schedules effective as of the date of filing or such earlier date as the public utility may show is consistent with the public interest, if such filings are made on or before August 1, 1964. Moreover, while the Commission will carefully review all such filings to insure that they are consistent with the statutory standards, it is contemplated that any Commission action resulting from such review would normally be taken pursuant to the provisions of Section 206 of the Federal Power Act.

It is recognized that despite the Supreme Court's latest reiteration of the broad scope of this agency's jurisdiction over wholesale sales of public utilities, there may remain some special situations in which a company engaged in the wholesale sale of electric energy, although it is interconnected with systems in other states directly or indirectly, will wish to contest its jurisdictional status as a public utility or the status of particular sales. However, the Commission's existing procedures provide full protection for such companies since they are free to file their wholesale rates with a reservation of the question of jurisdiction, which could then be adjudicated in an orderly way.

[Secs. 205, 309, 49 Stat. 851, 825h; 16 U.S.C. 824d, 825h]

OPINION NO. 425

SOUTHEASTERN PUBLIC SERVICE COMPANY, DOCKET NO. RI63-361

OPINION AND ORDER DISMISSING RATE INCREASE

(Issued April 21, 1964)*

Syllabus

1. It is not necessary here to fix specific rate at which producer should make this sale in the future; such determination should be made in current area rate proceeding for South Louisiana. P. 974.
2. Sole purpose in setting instant case for hearing was to provide producer-respondent early opportunity to justify increase so prices would not escalate if increase could not be justified—no departure from announced policy in fixing producer rates generally in area proceeding rather than on basis of individual costs was intended. P. 975.
3. There is no need to rule on propriety of proposed adjustments to original cost or appropriateness of use of acquisition costs, because even on basis of acquisition costs—which is most Commission could allow—producer has not justified proposed increase. Pp. 975, 976.

---

*Initial decision appears on p. 978. Rehearing and stay denied, 31 FPC 1553.

4. Since no specific rate is fixed here it is unnecessary to compute a precise cost of service for sale. P. 977.
5. Commission *disallows* and *dismisses* rate increase and *requires* refunds, in proceeding initiated under Section 4(e) of the Natural Gas Act. P. 977.

Commissioner O'Connor *concurring in result only.*

George B. Mickum, III, Richard E. Rubenstein and *Charles F. Dugan* for Southeastern Public Service Company.

Robert W. Perdue and *James D. Annett* for Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SWIDLER, *Chairman:*

This proceeding arises from a rate filing by Southeastern Public Service Company (Southeastern) proposing to increase its rate for a sale of natural gas from the South Section 28 field in St. Martins Parish, Louisiana, from 23.25¢ per Mcf to 25.25¢ per Mcf. By Commission order issued March 7, 1963, we suspended the proposed rate increase and ordered an immediate hearing to determine whether Southeastern could justify such a rate, which would be higher than any jurisdictional rate currently effective in South Louisiana.

Hearings before the Presiding Examiner were concluded on November 1, 1963. At the hearings Southeastern submitted its cost of service in purported justification of the increase and the Commission staff rebutted this evidence with its own cost of service and contended for a rate decrease. The only intervenor in the proceeding was the purchaser, Southern Natural Gas Company, and Southern did not enter an appearance at the hearing, nor did it file any pleadings other than its intervention petition.

On the basis of the evidence submitted by Southeastern and the Staff, the Examiner on January 29, 1964, issued his initial decision in which he found that a reasonable cost of service for this sale was 22.18¢ per Mcf and on this basis ordered the rate increase dismissed with refunds of all monies collected above 23.25¢. In addition he ordered that Southeastern should reduce its presently effective rate to 22.18¢.

Exceptions were filed by both Southeastern and Staff. Southeastern argues that the Examiner improperly determined its original cost, workover costs, allocation of liquid revenues and rate of return, and that it is entitled to the claimed rate. Southeastern contends also that even if the Examiner found the rate increase not to be justified he could not in this proceeding prescribe for the future some rate other than the previously effective rate.

Staff in its exceptions contends that the Examiner allowed excessive amounts for working capital, rate base, workover costs, rate of return and rate case expenses. Staff also contends that the Examiner should have ordered refunds down to the 22.18¢ level.

On the basis of all evidence of record, the parties' briefs, the Examiner's decision and the exceptions thereto we are of the opinion that Southeastern has not justified the rate increase and that such increase should be disallowed. We are also of the opinion that it is not necessary in this proceeding to fix a specific rate at which Southeastern should make this sale in the future but rather that that determination should be made in the area rate proceeding for South Louisiana now in progress (AR61-2).

In our order of March 7, 1963, setting this case for hearing we made the following statements:

> Under Section 4(a) of the Natural Gas Act all rates which are not just and reasonable are declared unlawful. If after a hearing the Commission

finds the proposed increase rate unjust and unreasonable it must be disallowed.

The rate proposed by Southeastern is higher than any presently effective rate in South Louisiana and is greatly in excess of the applicable price level set forth in the Commission's Statement of General Policy No. 61-1, as amended. Since it may serve as a basis not only for price redeterminations at a higher rate under other gas purchase contracts in the area but also for triggering favored-nation increases, there is need to suspend the effectiveness of the proposed rate and to order an expeditious hearing thereon. At such a hearing the burden is on the respondent to prove that the increased rate is just and reasonable.

The Commission's order of March 7 thus makes it clear that in setting this case for hearing our sole purpose was to provide Southeastern an early opportunity to justify this rate increase so that prices in the area would not escalate to a higher level if the rate increase could not be justified. We did not intend to depart from our announced policy of fixing producer rates generally in area proceedings rather than on the basis of individual costs.

It is imperative that we promptly dispose of rate filings which threaten to trigger additional increases through the operation of indefinite escalation clauses in other contracts for otherwise an unjustified rate increase may set off a chain of increases before the case is completed. This is not to say that the Commission would not fix a just and reasonable rate below the level of the underlying rate if the evidence clearly supported such a finding and it could be made promptly. However, the Commission will not delay the rejection of a triggering increase to pursue a detailed analysis of the precise level of a rate which can best be fixed on an area basis.

In this proceeding staff conceded that on the basis of its direct presentation Southeastern had made a *prima facie* showing on a cost basis to justify the proposed rate. Staff therefore introduced evidence indicating that certain adjustments should be made in Southeastern's figures, which, if all were accepted, would reduce the *prima facie* cost for this one sale to a level below the underlying rate. This case can be disposed of without reaching the controversial refinements of an individual producer's cost. We will dismiss the increase and leave the determination of a final just and reasonable rate to the area proceeding in Docket No. AR61-2.[1]

In attempting to justify its rate increase, Southeastern submitted a general company-wide cost of service, a cost of service with an allocation and assignment of costs to the South Section 28 field, and an abbreviated acquisition cost of service.

Southeastern obtained the South Section 28 field by purchase from the Aluminum Company of America (Alcoa) in 1962 at an acquisition price of $5,120,602. In our order setting the case for hearing we directed Southeastern to make a showing of the original cost of the field to Alcoa. It was on this basis that the Examiner determined the rate base, rather than on the acquisition cost to Southeastern. On the basis of the original cost to Alcoa the Examiner determined that the acquisition cost exceeded the depreciated original cost by about $850,000. In its exceptions Southeastern contends that the Examiner should have used its acquisition cost, or in the alternative that the original cost to Alcoa should be adjusted to include the dry-hole cost of developing the field and interest and overhead during construction. Inclusion of these additional costs to Alcoa would increase the original cost above the acquisition cost. We find that there is no need to rule upon the propriety of these proposed adjustments or on the question of whether the use of the acquisition cost is appropriate because even on the basis of its acquisition cost, which is the most we could allow, Southeastern has not justified the rate increase it has proposed.

---

[1] *Cf. Slade, Inc. (Operator), et al.*, 29 FPC 11.

Southeastern's cost of service for this sale on the basis of its acquisition cost, which we are not in any way endorsing but merely using as the basis most favorable to the company for testing whether its rate increase is justified, is set forth in its exhibit 3 attached hereto as Appendix A. As the use of this cost presentation eliminates the need to discuss Southeastern's contentions with regard to the adjustments to Alcoa's original cost, the item of $152,139 should be eliminated from this cost exhibit. Southeastern concedes that if it is allowed acquisition costs the amortization of Alcoa's development dry holes should be eliminated.

The only cost item in exhibit 3 over which there is controversy is the $460,390 of operating expenses. This figure includes an allowance by Southeastern of $174,682 per year for workover costs. Staff contended that $25,000 per year was a reasonable amount. A large part of the Examiner's decision was devoted to a review of the voluminous evidence and arguments on this point. His final conclusion that $70,000 a year is a reasonable allowance for workover costs appears to be amply supported in the record and we can find no reasoning in the exceptions of either Southeastern or the Staff which would convince us that the Examiner's allowance should be changed. In testing Southeastern's increase we shall, therefore, include the Examiner's allowance of $70,000 per year for workover costs. Thus the figure of $460,390 should be adjusted to $355,708.

The one revenue item in the exhibit, in the amount of $177,049, does not include royalty revenues which staff contends should be a part of a purported showing of total revenues from this sale because the royalties were already included as a cost in the expenses. We agree with staff that in testing the justification for this out-of-line rate it is appropriate to measure all of the revenues against all of the costs. The "Other gas revenues" figure should therefore be increased to $208,848.

The sale of the 4,469,702 Mcf of gas in the test year at the underlying rate of 23.25¢ would add revenues of $1,039,206. Thus the total revenue from the sales from this field equals $1,248,054. The total adjusted costs, without return, come to $1,098,983. This leaves the amount of $149,071 available as return on Southeastern's investment.

In determining whether such an amount would produce an adequate return it is necessary to examine Southeastern's acquisition cost. The interest item in its cost exhibit is particularly significant. It results from the part of Southeastern's investment which is represented by notes and production payments. In purchasing the field Southeastern paid the $5,120,602 by pledging $3,900,000 in production payments carrying an interest rate of 5⅝ percent. There were also given two notes for the remaining $1,220,602. One has been paid and one is due in 1966. Thus according to the calculations in the staff brief Southeastern has only 12.6 percent of the acquisition cost in common equity and the remaining 87.4 percent in a loan and future production payments on which all interest costs have already been allowed in the cost of service.

As set forth in Southeastern's brief the acquisition cost for the test year as adjusted for plant additions and depreciation and depletion gives a rate base of $4,983,678. 12.6 percent of this amount is $627,943. Earnings of about $150,000 on an equity investment of $628,000, a return of 24 percent, could hardly be considered an inadequate return. If the interest is included as a part of the over-all return, the amount, available for return on the acquisition rate base is $385,296, which gives an over-all return of 7.73 percent.

The conclusion that Southeastern's return is not unreasonable is strengthened by the evidence that Southeastern engages in almost no exploration but only purchases fully developed properties. Since this field is being fully developed there should be little occasion for additional investment by Southeastern, and as its equity increases through loan repayments and production payments the rate base will be decreasing almost correspondingly.

The foregoing adequately disposes of the Exceptions of Southeastern. Since we are not fixing a specific rate but merely dismissing the application for a rate increase, it is not necessary to rule on the additional exceptions by our Staff (all of which would reduce the cost further) or to compute a precise cost of service for this sale. The rate in effect prior to this increase is already in issue in AR61-2 and it will be redetermined in that proceeding.

The Commission orders:

(A) No part of the proposed rate increase filed by Southeastern Public Service Company has been justified on this record and such rate increase is therefore disallowed and dismissed.

(B) Within 45 days of the issuance of this opinion and order Southeastern shall refund to Southern Natural Gas Company all amounts collected in excess of the rate in effect prior to the filing of this increase with 7 percent interest thereon and shall within 15 days after making such refunds file with the Commission in writing and under oath its calculations on which such refunds were based together with a copy of a release from Southern Natural respecting such refunds.

(C) Within 30 days from the issuance of this order Southeastern shall file a notice of change in its FPC Gas Rate Schedule No. 2, providing for a reduction in rate to that in effect prior to this increase.

(D) Upon compliance by Southeastern with the provisions of the paragraphs (B) and (C) above, this proceeding shall be terminated.

Commissioner O'Connor *concurring* in the result only.

APPENDIX A

SOUTHEASTERN PUBLIC SERVICE COMPANY, SEPSCO DIVISION
SUMMARY OF COSTS BASED ON ACQUISITION COST

SOUTH SECTION 28 FIELD, ST. MARTIN PARISH, LOUISIANA

For the 12 months ended Sept. 30, 1962

Line No.	*Column (1)* *Particulars*	*(2)* *Amount*
1	Operating expenses	$460,390
2	Administrative and general expenses	68,860
3	Depletion and depreciation	328,870
4	Amortization of exploration and development costs	152,139
5	Other taxes	109,410
6	Interest	236,135
7	Other gas revenues	(177,049)
8		1,178,755
9	Annual production in Mcf	4,469,702
10	Cost per Mcf	26.37¢

NOTE: This summary of cost does *not* include a return on investment and is based on the cost of properties in the hands of Southeastern.

APPENDIX B

ADJUSTED COSTS BASED ON ACQUISITION COSTS

Costs	
Operating expenses	$355,708
Administrative and general expenses	68,860
Depreciation and depletion	328,870
Other taxes	109,410
Interest	236,135
Total cost	1,098,983
Revenues	
4,469,702 Mcf @ 23.25¢/Mcf	$1,039,206
Other gas revenues	208,848
Total revenues	1,248,054
Return (not including interest on debt)	149,071
Rate base (Acquisition cost plus additions)	5,312,548
Less depreciation and depletion	328,870
	4,983,678

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON NOTICE TO MAKE INCREASED RATE EFFECTIVE

(Issued January 29, 1964)

PURDUE, *Presiding Examiner:* In this proceeding, respondent Southeastern Public Service Co. proposes an increase in its rate for the sale of gas to Southern Natural Gas Co. from the existing rate, 23.25¢ per Mcf, to 25.25¢ per Mcf.[1] These figures include a tax reimbursement to the seller of 1.75¢ per Mcf. The proposed increase would result in an annual dollar increase for such sale of about $89,062. On March 16, 1957, Alunminum Co. of America, predecessor of respondent, as "Seller," and Southern Natural, as "Buyer," entered into a contract for the sale and purchase, in the field, of natural gas produced by the seller in "South Section 28 Field," St. Martin Parish, Louisiana. This contract is now in effect as a rate schedule; and the proposed change in rate is a periodic rate increase called for by the provisions thereof.

On February 5, 1963, respondent, under Section 4(d) of the Natural Gas Act, filed a notice of rate change, designated Supplement No. 3 to its FPC Gas Rate Schedule No. 2. On March 7, 1963, the Commission instituted this proceeding, pursuant to Section 4(e) of the Act, by the issuance of an order providing for a hearing concerning the lawfulness of the proposed increased rate, and suspending the operation of such rate supplement "until August 8, 1963, and thereafter until such further time as it is made effective in the manner prescribed by the Natural Gas Act."

The proceeding came on for hearing before the undersigned Examiner on April 30, 1963, continued intermittently over a period of 29 hearing days, and concluded on November 1, 1963. The Commission staff challenge the validity of the rate increase, and contend for a rate decrease. At the hearing, evidence both oral and documentary was introduced by respondent and the staff; and cross-examination of witnesses was conducted by each participant. On November 15,

---

[1] All volumes of natural gas referred to herein are at a pressure base of 15.025 psia.

1963, respondent filed a motion to make the proposed change in rate effective, subject to refund, under an agreement and undertaking (Notice of Effectiveness issued January 23, 1964). After the conclusion of the hearing, the participants filed briefs and thereby the proceeding was submitted for consideration and decision.

STATEMENT OF PRELIMINARY FACTS

Prior to January 1, 1962, respondent's predecessor, Alcoa, was the owner of oil and gas leases here involved in South Section 28 Field in the Louisiana Gulf Coast area. During the period 1955 to 1957, inclusive, Alcoa had explored and developed the field by a total of 22 wells, of which 12 were successful and 10 are now producing. Of the wells now producing, two are single completions; five are dual completions; and three are triple completions. The multiple completions (dual and triple) are wells where parallel strings of tubing (two in the case of a dual completion and three in the case of a triple completion) are run inside the casing, each string ending in a different producing zone. Above each producing zone in the well a packer is placed—an apparatus the purpose of which is to isolate the production from the other zones in the well and allow the production to come up through the tubing. At the time the triple completions were drilled, they marked a new technique, the first of the three being the world's first triple completion. The wells are completed in one or more of ten different sand zones, the deepest of which is the Hackberry Sands. The deepest well, a single completion, is 13,800 feet; the other wells range in depth from 10,750 feet to 12,400 feet. There are a number of reservoirs in the field, resulting from fault blocks. The field produces gas and liquid condensates, the condensates being extracted by a dry frac unit.

In the contract between Alcoa and Southern Natural, Seller committed itself to sell to Buyer all gas produced in the field that Seller should have the right to market; and Buyer agreed to purchase a minimum annual take geared to Seller's reserves and deliverability. At present deliverability, the minimum delivery, on an annual basis, is 12,200 Mcf per day. Under a "200% swing provision" in the contract, Southern Natural may at any time take "a quantity of gas equal to 200% of the minimum take as in effect from time to time." The contract is to continue for a primary term of 20 years, and from year to year thereafter unless terminated upon notice. Deliveries under the contract commenced December 1, 1958.

As of January 1, 1962, Alcoa sold the leases, equipment, gathering system, and other property to respondent for a price of $5,120,602, and respondent succeeded to the rights and obligations of Alcoa under the Southern Natural contract. Alcoa continued to operate the properties, as respondent's agent, for the first five months of 1962; and respondent then took over the active operation. Respondent is a diversified company, engaged (partly through subsidiary companies) in the manufacture and sale of ice, retail sale of liquified petroleum gas, distribution of agricultural and industrial chemicals, production and sale of oil and natural gas, and transmission of natural gas. Its oil and gas production and sale constitute approximately 15% of its total business. In addition to its production operations in the South Section 28 Field, Southeastern, partly through its subsidiaries, engages in oil and gas production operations in Texas, New Mexico, West Virginia, Ohio, and Kentucky.

A special importance attaching to this case appears from a recital in the order of March 7, 1963:

> The rate proposed by Southeastern is higher than any presently effective rate in South Louisiana and is greatly in excess of the applicable price level set forth in the Commission's Statement of General Policy No. 61-1, as

amended. Since it may serve as a basis not only for price redeterminations at a higher rate under other gas purchase contracts in the area but also for triggering favored-nation increases, there is need to suspend the effectiveness of the proposed rate and to order an expeditious hearing thereon.

Respondent presented a case in chief; and, following the staff's case in opposition, presented a case in rebuttal, in which it advanced certain claims not contended for in its case in chief.

DISCUSSION

Burden of Proof

Respondent has the burden of proving that the increased rate is just and reasonable. That is to say, respondent must "satisfy our minds" of such fact. Natural Gas Act, Sec. 4(e); *Transcontinental Gas Pipe Line Corp.*, 11 FPC 94, 96–97, citing *Advances in Rates—Western Case*, 20 I.C.C. 307.

Test Year

The year consisting of the twelve months ending September 30, 1962 was the latest year for which figures were readily available. The participants utilized this period as the test year, and agree that it was proper to do so. The Examiner shares this view.

Differences between Respondent and Staff

Both respondent and the staff in their presentations employed the utility cost rate-base method.

In its showing, respondent adopted two approaches. In its Exhibit 1, it presented a cost of service on a company-wide gas operation basis with an allocation and assignment of costs to the South Section 28 Field. Under this approach, most of the costs shown are claimed direct costs incurred in such field. In its Exhibit 2, respondent presented simply a company-wide gas operation cost of service, including therein all the amounts which it claims as costs incurred in the South Section 28 Field. In Exhibit 1, respondent shows for the South Section 28 Field a unit cost per Mcf of 30.26¢; and in its Exhibit 2, a company-wide unit cost per Mcf of 25.72¢. Respondent's apparent position is that either basis justifies the proposed increase in rate to 25.25¢ per Mcf for the sale from the South Section 28 Field.

The staff based its case on the first of these two approaches, and thereby derived a unit cost of service of 20.10¢ per Mcf (as adjusted in a relatively minor amount by a concession made in their brief).

The Examiner is of the opinion that the rate for the sale in question should be fixed by adopting the first of the two approaches. On this basis, the differences between respondent and the staff are set out in a tabulation, Appendix 1 hereto. It will be seen from Appendix 1 that the differences between respondent, in its case in chief, and the staff consist of five items; *viz*, Operating Expenses, $149,682; Depreciation, Depletion, and Amortization Expense, $26,557; Exploration and Development Expense, $137,866; Other Gas Revenues (Credit), $31,220; and Return, $108,747. These differences, all of which involve costs pertaining to the South Section 28 Field, will be discussed *seriatim*.

Operating Expenses—Workover Expense

The sole controversy between respondent and the staff respecting a proper allowance for operating expenses pertains to the workover expense. A workover, as defined by an engineer witness, is "any work undertaken on a well to repair or correct a condition or to make any necessary change in that well to affect its behavior in the manner you want it to perform." In the South Section 28 Field, the principal trouble experienced has been communication between the sand zones.

Respondent claims for workover expense an annual allowance of $174,682; the staff maintain that $25,000 per annum is a reasonable amount. Most of the testimony adduced at the hearing and 100 pages of the briefs concern this question. There is evidence that, considered to the exclusion of other evidence, would support either of these two extremes; and there is evidence that would afford a basis for settling on almost any figure in between.

The Examiner is of the considered opinion that $174,682 is far too large an amount, and that $25,000 is far too small. Relative to the former figure, respondent in effect contends that, over the remaining 16 years of the gas sales contract with Southern Natural, it will pay out a total of $2,794,912 for workovers. This cost is so out of line as to indicate on its face that the claim is exhorbitant.

Moreover, at the time respondent purchased the properties, Alcoa had incurred most of the workover expense upon which respondent relies as historical experience to justify the allowance that it seeks. This expense had been so heavy that Alcoa had made very little, if any, profit on its sale of gas to Southern Natural. Respondent purchased the properties with full knowledge of the past expense, and also required that Alcoa agree to perform certain additional major workovers before respondent would enter into the contract of purchase, which workovers are also now relied upon as justification for the allowance claimed. It seems doubtful that respondent would have bought the properties had it believed that the great workover expense which it now says will take place, will in fact be necessitated. Furthermore, interest and bias enter into testimony on behalf of respondent.

On the other hand, respondent's claim is based on an average of the actual expense for the years 1958–1961, inclusive, in the performance of seven workovers; and it is not reasonable to say that that expense is going to drop down to an average of $25,000 per annum.

The staff contend that the great burden of the workover costs over the four-year 1958–61 period is nonrecurring; that both the frequency of workovers and the average cost per worker will not continue. The question presented is: To what extent does the evidence establish that these costs are recurring costs? In other words, to what extent are we justified in projecting the past experience into the future?

The evidence shows that a large portion of the workovers has been necessitated by "mechanical failures" or, to use a synonymous term, "equipment failures"; and that such workovers stand to be nonrecurring. A mechanical failure, in the sense used in the testimony, is the failure of a piece of equipment to perform its function when there is no cause for the failure other than the structure of the equipment itself or the manner of its installation or utilization.

Alcoa's manager of oil and gas operations, a witness on behalf of respondent, testified that in the South Section 28 Field, Alcoa was "pioneering in multiple completions," and that "some of the equipment failed in that it did not operate as we had planned it to do"—in other words, there were mechanical failures. Respondent's general manager, in the case in chief, testified that "much of the equipment used . . . was unproven at that time"; that "Consequently, there were workovers which were caused principally by equipment failures"; but that "As wells are reworked, either due to mechanical failure or excessive water production or any of the other reasons motivating workovers, newer and more modern equipment is being rerun in the wells," including hydraulic-type packers which are "better equipment." There is other testimony by respondent's own witnesses showing that Alcoa and respondent on working over the wells changed equipment for "improved equipment" that had become available.

The staff presentation was made by two engineer witnesses. They submitted a study, Exhibit 16, which shows, and the Examiner finds, that in the period from 1956 to the early part of 1962, Alcoa (and in the latter part of 1962, respondent) performed 18 workovers on 11 wells. One of the wells, after it was worked over, being unusable for production, was converted to a salt-water disposal well; another of the wells was abandoned. The total cost of 15 of these workovers, as set out in Exhibit 16, was $1,214,216, the staff witnesses having obtained the figures from respondent's books and records. (A corresponding figure derived from an exhibit introduced by respondent is lesser by $73,875.) The costs of the other three workovers are not shown, but were relatively small amounts. In 1957, there was only one workover, costing $65,628; and in 1958, one workover, costing $35,450. Exhibit 16 also sets out the staff witnesses' conclusions as to the causes of the workovers, based upon a review by them of well records and files of respondent, which included the well data during Alcoa's ownership of the properties. According to Exhibit 16, coupled with explanatory testimony of the staff witnesses, the unproved equipment and mechanical failures necessitated most of the workovers. The testimony of respondent's general manager above quoted supports the staff position in measure. For it has been noted that equipment or mechanical failure and excessive water production were the two reasons which he specified "motivated" workovers. On cross-examination, when asked as to what other reasons besides equipment failures caused the workovers, he merely said, "Well, there were instances in which excessive water production caused wells to be worked over." Later, however, he specified "corrosion," "plus the fact that we have had to attempt to increase deliverability," as causes of workovers; and further said, "there have been many and varied reasons for these workovers." Plainly, mechanical failures were a major reason for the workovers.

Unfortunate incidents, of a nonrecurring nature, augmented or occasioned certain of the workovers. Workover No. 1 on the Olivier well cost $62,628. Most of this expenditure was necessitated by acid corrosion, resulting from acid, which employees had used to cleanse the productive formation during the completion of the well, being permitted to remain in the tubing.

Other unfortunate happenings, nonrecurring in nature, consisted in the running of an exceptionally large number of packers in the Potier well, and the undue frequency of packer failures in such well. Just four days after the Potier well had been worked over for failure of the top packer, the top packer failed again. In all, Alcoa ran packers in the hole of the Potier well 25 times, the packers either being pulled and redressed or else replaced.

In deciding what is a reasonable and justifiable estimate of future workover expense, there is an exhibit of controlling significance, the De Laat report. The time when, and circumstances under which, the report was prepared, make manifest its importance. Respondent employed an independent engineer consultant, Mr. Bart De Laat, and his staff, to prepare the report for the use of the Chemical Bank New York Trust Co. in order to obtain a loan of a portion of the purchase price of the properties. The report is dated October 1, 1961. At that time, most of the workovers upon which respondent predicates its claim for an annual allowance of $174,682 had already been performed; and substantially all of the remainder were in the contemplation of Mr. De Laat as being required of Alcoa as a prerequisite to respondent's purchase of the properties. Mr. De Laat testified that when he prepared the report he was "fully aware of the past workover cost," and had gone "through all the detailed production and well completion history and performance history of each well." Of equal significance, the report was prepared a year and a half before the institution of this rate proceeding; and manifestly was not prepared in contemplation of a rate proceeding. The fact that the report was made for submission to a New York bank in obtaining a purchase loan is an indicum of its trustworthiness and reliability. The engineer, himself, said, "This report is made for sophisticated people who understand some of the problems in connection with the property"—for an "experienced financial institution who have capable oil men at the head of their oil departments." The conclusion is justified that the engineer knew beforehand that unless his report was reasonably reliable, the Chemical Bank New York Trust Co. would likely not long rely upon it or him; nor would other financial institutions in the future stand to accord his reports that acceptance which is essential to his services being of value to clients seeking to obtain bank loans. In the light of these considerations, the Examiner feels warranted in according predominant weight to the De Laat report in reaching a determination as to the probable number of workover operations in the field over the period of the next several years.

Fortified with all his knowledge of the past workovers, Mr. De Laat estimated in the report that in the 9¼-year period consisting of the last three months in 1961 and the years 1962 to 1970, inclusive, there would only be seven major workovers. According to his estimate, two of these would be in the last three months of 1961: and one in each of the years 1963, 1964, 1966, 1968, and 1970. He also estimated that there would be one "minor workover" because a completion was "sanded up"; but apparently this job developed into a major workover thereafter performed. In addition, the report estimates "several workovers" "over the next four to five years" from the date of the report "to exploit nonperforated intervals of presently producing sands." As to these, the witness said, "The only thing we were pointing out here was that in our opinion some of the reservoirs were inadequately exploited and should have additional perforations"; that they might or might not be the expensive type of workovers, and might or might not be included in the major workovers already estimated; that "if it was a simple addition of perforations, the expense would be very nominal."

Mr. De Laat, in the report, estimated only the capital cost—*i.e.*, cost of materials—of the expensive workovers, at a median figure of $25,000 each; and made no provision for the total dollars to be spent on these workovers. The reasons that the witness assigned for the omission of the total dollars were that,

> Comprehensive life experience with tubing was not known, corrosion experience was not known and in any case hazards attributable to these elements as well as mechanical failures cannot be estimated unless there is a thorough and complete history over a long period of time . . . we show in the report what past cost history there was. This showed very large expenditures for workovers. We assume that a sophisticated prospective purchaser of properties will take that into account in making up their own minds.

The experience subsequent to the time of the report indicates that the projection of workovers therein is too low; but there has been no such increase in the number above those estimated as to establish a trend. In the last quarter of 1961 and continuing on into early 1962, three workovers were performed instead of the two that Mr. De Laat estimated in the report. And in 1962, three workovers were performed in one well. But the total cost of these three workovers was only $62,146. As to 1963, in May 1963, respondent introduced an exhibit which shows only an expenditure of $8,000 in January 1963, which amount was apparently incurred in completing the last of the three 1962 workovers. In view of the broad scope of the evidence which respondent introduced in its rebuttal case, down to the very conclusion of the hearing on November 1, 1963, it is safe to conclude that had there been any significant workovers up to that time in 1963, respondent would have offered evidence thereof. The Examiner increases the estimate of seven major workovers in the report by the four additional major workovers that have since been performed, and includes still two other workovers for good measure. The Examiner thus arrives at a total of 13 major workovers in the period beginning with the last quarter of 1961 and continuing through 1970, six of which have been performed. The seven that, under the Examiner's estimate, remain to be performed in the seven-year period 1964 through 1970 thus average one a year. In addition, there are to be taken into account the "several" workers to exploit nonperforated intervals.

At the hearing, Mr. De Laat did advance opinions as to the cost of future workovers. He said on direct examination that for the workover of a triple completion well, "$80,000 to $100,000 . . . is not an abnormal amount of money." On cross-examination, he said concerning the cost of workovers, "The figures I have referred to which I believe on the initial number of workovers set out would be somewhere around $90,000 to $100,000 a year, ..." The record does not show to what "figures" the witness had reference. By the "initial number of workovers," he apparently meant the seven major workovers that he projected over the 9¼ years from October 1961 covered in the report. At $90,000 per year, the cost per workover would come to $118,928; and at $100,000 per year, to $132,143.[8] These last figures conflict with his testimony on direct examination; apparently the witness, as can easily happen on cross-examination, made a mental miscalculation.

Mr. De Laat, in the attempt to support respondent's position, further gave the opinion on cross-examination that the future annual workover expense would "probably" be $150,000 to $175,000, "taking into account the higher incidence rate" of workovers. The opinion thus expressed lacks sufficient basis, and has not been justified. The Examiner cannot accord to it the reliance that he places upon the De Laat report made for the use of the bank.

The staff witnesses consider a reasonable estimate of average major workover cost to be $15,000 (actually $14,285) per workover.[9] The Examiner is of the view that this estimate is too low, but it is helpful in reaching a judgment decision as to a proper allowance.

A witness on behalf of respondent, Mr. J. Kelly Elliott, a petroleum engineer, now with Brown Oil Tools, was from 1953 to 1962 in the employ of Humble Oil & Refining Co. For the last several years of such period, his position was District Reservoir Engineer in a district in the upper Gulf Coast Texas area where Humble had 800 oil and gas wells; and he was responsible, among other matters, for individual well studies for workovers. The evidence shows that this district is geologically very similar to the Louisiana Gulf Coast. The witness said that he did not consider the past workover costs in the South Section 28 Field as out of line with the experience of others in the same area, and that the average cost per workover was normal for the conditions. The witness had reference to the staff Exhibit 16, wherein the average cost per workover, for 15 workovers, is $80,948. Respecting the three other workovers listed in the report the cost of which is not given, the nature of the work done was such that the cost was relatively little, so that the average for the 18 workovers is substantially less than $80,948. In the light of the entire record, the Examiner cannot accept Mr. Elliott's opinion as justification for inferring that the future average cost per workover in the field will be as great as the average cost in the past.

---

[8] $90,000×9¼ (yrs.)÷7 (workovers) equals $118,928. $100,000×9¼ (yrs.)÷7 (workovers) equals $132,143.

[9] $100,000÷7 (workovers) in 1958–61 period equals $14,285.

But Mr. Elliott went on to state:

> Based on the multiply completed wells which we had at depths and pressures comparable to the South Section 28 Field, I would expect an average workover cost to exceed $50,000 per workover attempt.

On cross-examination, the witness said that he could not see how an average workover cost for a dual or triple completion under the depths and pressures in the South Section 28 Field would be less than $50,000, "and it would be somewheres upward of $50,000 per workover on an average per job basis." He further said:

> * * * let's say over a period of 10 or 12 workovers you would expect that some of your workovers you might have of the more simple variety for $25,000, which you would estimate you could and would do them for that. Maybe the first two you do would be estimated at $25,000. But maybe that third or fourth well, it might be $150,000 or $200,000 because of unforeseen difficulties that will occur. And you can bet on the fact that they will occur over a number of these activities. You cannot predict which well it will be or what will be the behavior or problem. That is why it is so difficult to have accurate budgets on workovers.

Mr. Elliott's testimony that the average cost per workover would be "somewheres upward of $50,000," the much lesser figure of the staff witnesses, the fact that two of respondent's wells are single completions entailing lesser workover cost, and evidence as to extraordinary expense attendant upon past workovers in the field, warrant a finding that an average allowance for the future of $55,000 per major workover is justified and liberal. The Examiner so finds and concludes.

Therefore the Examiner makes a yearly allowance of $55,000 for his estimated average of one major workover per year in the period 1964 through 1970. The Examiner considers that an additional $15,000 per year is an ample allowance for the workovers to exploit nonperforated intervals. He grants such additional allowance, thus bringing the total yearly allowance for workover expense to $70,000. The Examiner finds and concludes that such total yearly allowance is reasonable and justified.

A number of other points made in the briefs will now be specifically dealt with.

(1) Respondent seeks to make something of the fact that the workover expense in the test year was $273,382, despite the fact that respondent, itself, adjusted this figure downward to reflect the average of four years. The reason for this large expenditure between September 1961 and September 1962 was respondent's requirement that Alcoa perform certain workovers as a condition to respondent's purchasing the properties.

(2) Respondent argues that the 200% swing provision of its gas purchase contract with Southern Natural increases the workover expense substantially above that which would otherwise be required. Respondent cites testimony of its general manager that wells had been reworked in order to maintain the seller's capability to meet this obligation, and that except for such obligation many of the workovers could have been deferred until other ones also required attention. The evidence justifies the conclusion that the swing provision will increase the necessity for workovers but little, if any. Prior to October 4, 1960, the minimum take under the Southern Natural contract had been a volume in excess of 16,000

Mcf per day. But on such date, Alcoa and Southern Natural made a redetermination of the gas reserves, which resulted in a substantial reduction in the amount of the reserves. As a consequence the minimum take obligation was adjusted downward to 12,200 Mcf per day, and the maximum take (200% of the minimum take) was lessened. Respondent has more than enough capacity to meet the adjusted maximum take; during the period in 1963 when respondent was delivering 200% of the minimum quantity, respondent did not produce from all of the formations. Also the De Laat report takes the 200% swing provision into account in its estimate of workovers.

(3) Respondent avers that "the record demonstrates through witnesses well-qualified by wide Gulf Coast and Southern Louisiana experience, that the frequency of workovers in the past was not exceptional. . . . "; and cites the testimony of three witnesses in support of this statement. The first of these witnesses testified on direct examination:

> Q. How does the frequency of workovers found to be required in South Section 28 compare with your experience generally in the Gulf Coast area- A. Our experience is that the frequency is the same.

But on cross-examination, he testified:

> * * * these questions and answers were under duress in meeting a time schedule on this thing. The frequency of workover—it is practically—it has no meaning to relate workovers in one field to another field in my opinion.

The second witness, Mr. C. C. Brown, president of Brown Oil Tools, testified that the workover experience of Alcoa in the field was not excessive, as evidenced "by other workover situations." He then proceeded to refer to two situations in other fields; *viz*,

> [1] There are a number of wells in highly faulted areas similar to South Section 28 where the faults are shifting and very frequently these wells have to be worked over simply because the faults have shifted and cut the casing off.
>
> [2] "Again, referring to the Gulf Coast area in one specific occasion I have in mind, a well went out of control and cratered."

There is no claim here that a situation of either of these kinds has necessitated a single workover in the South Section 28 Field.

There were also general statements by this witness on cross-examination that "a lot" of companies in South Louisiana are having trouble with packers. Such testimony does not establish the frequency of the packer trouble. The exceptional nature of the number of packers run in the Potier well appears from the testimony of Mr. Brown on cross-examination:

> Q. Of any of those people you know that are having trouble in South Louisiana, and by people I mean companies, do you know anyone that has had to install 25 new or redressed packers in any well in less than a four year period? A. Twenty-five in any one well? Aren't you a little high on your numbers, sir?
>
> Q. No. I just asked if you knew of any. A. No, not 25, and I don't think you can show it on that record either, 25 in any one well. . . .

The third witness gave the following testimony on direct examination:

> Q. * * * In your experience in the oil and gas property management, is the workover of wells particularly in Southern Louisiana a regular occurrence? A. It is regular occurrence. Statistically in the Gulf Coast area we find that from 10% to 15% of the total number of wells will require some remedial work each year.

On cross-examination, he explained this reference to statistics in the Gulf Coast area:

> This is just on over-all quote of our experience and the general experience of others, and the higher figure there, the 15 percent, which means about one well out of six has to be worked over every year, is usually in relation to salt domes, where you have a different condition.

Again, this witness testified on direct examination:

> Q. In your opinion is the frequency of workover as shown by the past history of this field exceptional? A. No, and it would not be unusual in this area for the future requirements here to equal or exceed the previous experience.

On cross-examination, in reference to the foregoing question and answer, he testified:

> Q. * * *In your experience, isn't it also possible for a field to have a frequency less than this? A. Oh, yes. There are fields that are less than this.
>
> Q. Quite a bit less, in fact? A. Oh, certainly. . . .

The testimony of these witnesses fails to "satisfy our mind" that the frequency of workovers in the South Section 28 Field was not exceptional for a field of its geological characteristics.

(4) In rebuttal, an Alcoa engineer who had been in charge of the drilling of the South Section 28 Field and of the workover operations conducted by Alcoa, sponsored an exhibit which set out a classification by him of workovers as to cause. He attributed to mechanical failures only 13.77% of the expense of the workovers. He specified the other causes, and the proportionate expense attributable to each as follows: corrosion, 49.53%; aromatic hydrocarbons (referred to in the testimony by a coined word, "aromatics"), 18.31%; cement failures, 15.05%; and reservoir depletion, 3.33%.

(a) As to corrosion, the evidence shows, and the Examiner finds, that the corrosion problem in the field is not severe; indeed, during most of the period of Alcoa's operation of the properties, the corrosion was so little and so localized that Alcoa did only a meager amount of "corrective control." The evidence shows that by late 1961 corrosion had increased; on the other hand, respondent now has a good corrosion control program. It appears that a good corrosion preventive program while very effective in overcoming the trouble, is not "completely successful"; but neither does the Examiner completely disallow respondent's claim for workover expense.

(b) As to aromatic hydrocarbons, the Alcoa engineer testified that a number of packer failures were due to aromatic hydrocarbons deteriorating the rubber-like seal of packers. It is questionable, on the basis of the record, if aromatic hydrocarbons have had this or any other adverse effect on equipment in the South Section 28 Field. In the case in chief, respondent's general manager did not even mention them as a reason why workovers became necessary. It is true that the evidence shows that the rubber sealing of some of the packers removed from the wells had deteriorated to the point where they would not hold; also tests reveal that some aromatic hydrocarbons are present in some of the gas produced in the field. Mr. Brown testified that on one or two occasions he saw packers in this condition that had been removed from one of the wells; and that "I think it was aromatics." He frankly states, however, that "heat will help do the same thing."

Also, the evidence shows that certain types of aromatic hydrocarbons are present in nearly all gas, but that the types harmful to equipment are "very unusual." Mr. Brown testified concerning a conversation he had had with his chemist following a test of fluid from one of the wells:

> Q. He told you, is it not true, sir, that the packer had been exposed to aromatics, but did he tell you that as a result of his tests he definitely concluded that aromatics caused the failure of the rubber? A. He did not say that and he couldn't say that because he didn't know. Neither did I.
>
> Q. Because he didn't know the content of the aromatics? A. He didn't know the contents of the fluids or the gases. He did know it had been attacked by some aromatics, that is all he knew.
>
> Q. He just knew there was aromatics present? A. That is right.

Furthermore, the evidence shows that even if deleterious aromatic hydrocarbons exist in some of the reservoirs in the field, they are no longer a serious problem. Mr. Brown testified:

> Q. How did you solve the aromatic problem? A. We developed lead rings which would protect the packaging element. This was found to work well and experience has shown that the sealing element is holding with this protection.

On redirect examination, some qualification of this testimony was attempted, but the import of it remains substantially the same; and in any event the Examiner places greater weight on the original testimony, above quoted.

Mr. De Laat's testimony is to the same effect:

> Q. Are you stating that if they had an aromatics problem that it should be cured today? A. Sure. We have got equipment to cure it today, sure.

Respondent adverts to testimony that there are objectionable features to the lead shielded packer. Other witnesses, however, testified that the new-type packer is better equipment; and their testimony is fortified by the fact that producers have been, and are, installing it in their wells.

Respondent also notes that there are 12 of the old-type packers still in 7 wells in the field. There is no evidence that aromatic hydrocarbons of any type are present in liquid samples coming from any of the sands from which 2 of these 7 wells produce. Moreover, the record shows that the 3 triple completion wells now contain the lead shielded packers; and that approximately 60% of the workover expenditures were in these 3 wells.

Finally, respondent points to an assertion of respondent's general manager, given in the rebuttal case, on cross-examination, on the last day that testimony was adduced in this lengthy hearing: "We have two wellheads that are leaking because of the effect of aromatics." This belated averment is not persuasive.

(c) Respecting cement failures, according to respondent's claim only three cement failures have taken place in just two wells. These failures occurred in 1959 and 1960. The Alcoa engineer, himself, testified that the primary cement jobs done on the well holes in the field were highly and unusually successful; that "the techniques employed" exhibited "an unusually high percentage of success." Mr. De Laat, of course, was well aware of these cement failures when he made his estimate of future workovers in his report.

(d) The evidence shows that respondent's claim of reservoir depletion having caused workover expense is unfounded. Respondent attributes two workovers in the Olivier well to depletion of a reservoir; but the evidence establishes that there has been only small production from the reservoir, and that the reservoir is not depleted. Apparently the trouble was cement failure causing water encroachment, the expense of one of the workovers being aggravated by the incident already considered of employees having left acid in the tubing. The expense of the two workovers, other than that caused by the acid, was small—$35,950.

(5) Respondent's general manager in rebuttal sponsored an exhibit which sets out the results of studies made by the witness to determine the future workover costs in the field. According to this exhibit, respondent's general manager predicts, in the 10-year period 1963 to 1972, inclusive, 20 workover jobs, varying in number and cost in particular years, totaling $1,709,500—an average cost per workover of $85,475, and an average annual cost of $170,950. He predicts during the ensuing 10 years, estimated by him to be the remaining life of the field, 10 more workovers, totaling $700,000. This evidence is not persuasive for the following reasons: (1) The study marks a departure from the case in chief, where respondent relied solely upon a showing of historical experience. (2) The study is an afterthought—the witness did not prepare it until August 1963, after the staff had presented their case, and after the Examiner had fixed September 23, 1963 for presentation of the evidence in rebuttal; nor had respondent or its general manager made any such analysis prior to that time. (3) The presentation is contrary to the De Laat report and other evidence in the case which the Examiner considers to be more reliable.

(6) In its reply brief, respondent for the first time claims that "even assuming that all past workovers were of a nonrecurring nature because of the 'experimental' nature of equipment used, . . . those workover costs must be capitalized and amortized over the life of the field." The reason assigned is that under the "assumption" of nonrecurring nature, the workovers were incurred in order to place the wells in condition to deliver gas to Southern Natural. Respondent then proceeds to set out different depreciation, depletion and amortization and return figures from those contained in its exhibits. The Examiner rejects this contention for the following reasons: (1) Respondent did not advance such theory either in its case in chief or in its rebuttal case; it assigns a new and different ground for a rate increase from those that the staff was accorded an opportunity of meeting. (2) Abandoned experiments which do not manifest themselves in property useful in the public service should not be included in the rate base. (3) Reaccounting for these expenditures should not be permitted. (4) Respondent did not pay Alcoa any of the purchase price of the properties as recompense for the workover expenses that Alcoa had incurred; and to permit respondent to profit by an allowance in its rates for the expenses incurred by Alcoa would be unjust enrichment. As to grounds (3) and (4), the same or similar reasons for rejecting another claim of respondent are spelled out more particularly under the subhead "Exploration and Development Expense," *infra*, pp. 990, 991, 992.

In the foregoing treatment, the Examiner has not dealt with every single argument made in the 100 pages in the briefs of the participants treating of workovers. What in our opinion are the major points have been covered. ". . . there is no requirement in law that every contention or even most of the contentions advanced by the . . . parties respecting the numerous issues . . . , be ruled on *seriatim* and specific findings made on each." *Tennessee Gas Transmission Co.*, 17 FPC 406, 415. The Examiner, however, has considered all points made in the briefs, all the evidence in the proceeding, and the demeanor of witnesses on the stand as well.

Depreciation, Depletion and Amortization Expense

It will be seen from Appendix 1 that respondent claims as Depreciation, Depletion and Amortization Expense, $286,755; whereas the staff say that the figure should be $260,198—a difference of $26,557. The difference is attributable both to the staff's reduction of respondent's claimed original cost and to the staff's figures in the calculation of the depreciation, depletion and amortization annual expense shown on Appendix 4 hereto. In revising this calculation, the staff would apply the developed percentage (6.09%) of the Mcf produced during the test period to the net depletable plant at September 30, 1962, to arrive at $260,198 as the test period expense.

It is hereinafter found, under the subhead "Rate Base," that the reduction by the staff of respondent's original cost figure is justified. Also, the staff's calculation of the annual expense for depreciation, depletion and amortization is proper. Hence, $260,198 is the correct test period expense for this item in the cost of service.

Exploration and Development Expense

Respondent makes a claim of $152,139 for what it terms "Amortization of exploration and development." Respondent arrives at the amount by amortizing on the unit-of-production method a dry-hole cost of $2,979,775 incurred by its predecessor, Alcoa, prior to August 1957, in defining the limits of the productive acreage in the South Section 28 Field. If this amortization were permitted, the consumer, over the 16-year projected remaining life of the field, would thereby be required to pay respondent in rates $2,346,492, nearly one-half of the amount that respondent paid for the properties. Respondent's claim is in lieu of the usual annual allowance for exploration and development expense, the reasons assigned by respondent's accounting witness being:

> First, it is a readily ascertainable figure. Second, this company has only recently begun to expand its operations and has no truly representative exploration history * * * At this time it is impossible to determine what the dry hole experience is going to be.

This position is without precedent and without justification. The Commission uniformly bases an allowance for exploration and development expense on the recent historical experience of the applicant for a rate increase, taking into account in a proper case a concrete drilling program for the future. *Southern Natural Gas Co.*, 29 FPC 323, 330; *Phillips Petroleum Co.*, 24 FPC 537, 550–51; *City of Cleveland* v. *Hope Natural Gas Co.*, 3 FPC 150, 178. Alcoa's dry-hole experience cannot be substituted for respondent's dry-hole experience as a measure of future exploratory activity, because respondent, not Alcoa, now owns and operates the property.

Respondent in its brief in effect concedes, as it must, the validity of such position, but goes on to say: "This in no way negates the claim made by Sepsco that the dry-hole expense attributable to this specific property is properly a part of the original cost to be recovered out of the revenues from that property, * * *" Respondent thus advances a separate and different ground for claiming that the $2,346,492 (the unamortized balance at the end of the test year of the $2,979,775) is a proper charge against the consumers of the South Section 28 gas that it sells. In developing the point at the hearing, respondent's accountant witness recognized that Alcoa had expensed the $2,979,775 and that no portion of the sum was a part of the depreciated original cost of the property; but asserted that "if a proportionate allowance is not given to [respondent] equal to the unrecovered dry-hole costs, the consumers of the gas will never have to pay for the cost of developing the South Section 28 Field."

Such ground for claiming proportionate allowances of the $2,346,492 in the annual costs of service is without merit. In the first place, reaccounting for these expenditures should not be permitted. In a rate case, *Hunt Oil Co.*, 28 FPC 623, where the company kept its accounts on the "venture accounting" basis, whereby dry-hole costs were charged to expense in the year in which the costs were incurred, and Hunt sought to capitalize these expenditures, Chief Examiner Marsh said at page 654:

> From an accounting standpoint the method of capitalizing such expenditures as part of the cost of property is distinguished by the fact that it results in expenditures being retained in capital asset accounts which have proved to be of no value. Support for the practice would be based on the theory that the cost of property which had proved productive is the sum of the expenditures incurred to find oil and gas. The prevailing view, and the preferred method, is to charge such expenditures to profit and loss as they are incurred.

And at page 655:

> * * * to establish a precedent * * * which would permit the regulated company the choice of a method which would best serve its interest would open the door to abuse and possible injustice. It is concluded then, that where in the past venture accounting has been employed, the use of asset accounting for rate making purposes cannot be permitted.

While the Commission did not pass upon the question whether asset accounting was justifiable in ascertaining Hunt's cost of service (28 FPC at p. 625), it is submitted that the views expressed by the Chief Examiner are sound and should be adopted.

In the second place, respondent failed to meet the burden of proof upon it to establish that Alcoa had not recovered the $2,979,775. Clearly, at the time Alcoa sold the properties to respondent, Alcoa had recovered a large portion of these expenses; and likely it had recovered all of them. The portion which we know that the company recovered was the benefits realized from federal income tax deductions. As to the remainder, the record shows that Alcoa explored and developed the South Section 28 properties in 1955, 1956, and 1957; that in these years, for the purpose primarily of furnishing gas for its own operations, Alcoa budgeted sizeable sums for exploratory wells—over $6,500,000 in each of the years 1955 and 1956, and more than $4,000,000 in 1957. In exploratory operations of this magnitude, there is a likelihood that Alcoa's ratio of successes in drilling was such that it recovered all of its dry hole costs. ". . . wildcatting today is done increasingly by big companies covering wide areas, able to average their dry holes and production holes . . . ." *Natural Gas Investigation, Docket No. G-580, Report of Commissioners Olds and Draper* (1948), p. 129; *cf., H. L. Hunt*, 28 FPC 897, 906. Respondent has not attempted to show or demonstrate that Alcoa experienced a poor or unprofitable success ratio. The language of the Supreme Court in *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U.S. 575, 591, is apt: "We cannot say that the Commission has deprived the companies of their property by refusing to permit them to earn for the future a fair return and amortization on the costs of maintenance of initial excess capacity—costs which the companies fail to show have not already been recouped . . . ." The Court of Appeals, District of Columbia Circuit, has specifically held that amounts already recovered by investors are properly excluded from the rate base. *Pennsylvania Water & Power Co.* v. *Federal Power Commission* (App. D.C.), 193 F. 2d 230, 244. Likewise, amounts already recovered by investors are not to be amortized as a charge against the consumer.

Lastly, there is no showing that respondent paid Alcoa any of the purchase price as recompense for these dry-hole costs, or made any allowance in such price for unrecovered exploration costs; and on the contrary, the record establishes that respondent did not do so. At the hearing, respondent conceded that it was unable to make such showing. Instead, the record discloses, and the Examiner finds, that respondent paid nothing as an allowance for the dry-hole costs. The purchase price exceeded the depreciated original cost by only $849,019.

Surely, none of the purchase price up to the amount of the depreciated original cost was a reimbursement for dry holes. As to the excess of the acquisition price over the depreciated original cost, the Examiner at the hearing addressed the following inquiry to respondent's counsel: "Do you propose to introduce any evidence . . . that the acquisition costs took into consideration an allowance for unrecovered exploration costs?" In response, respondent's counsel made the considered statement, "Southeastern as such did not earmark those dollars in that manner, ..." For respondent to profit by the consumer "reimbursing" it for these expenses incurred not by it, but by Alcoa, would be unjust enrichment. For this reason, also, the amortization item is rejected.

Only a small amount can be allowed respondent as exploration and development expense. Respondent's accountant witness, himself, said that respondent "by its own history has not been engaged in the exploration and development of oil and gas reserves." Generally, instead of exploring for new wells, respondent purchases properties having proved reserves—a practice indicated by its purchase of the properties in the South Section 28 Field and subsequent purchase of production properties in Wharton County, Texas. In the 16-year period from 1947 to 1963, respondent did not drill a single dry hole. In the 18-month period intervening between respondent's acquisition of the South Section 28 properties and the date that the staff accountant witness testified, respondent did expend, on a company-wide basis, $51,270 for exploration and development. The staff witness normalized this expense, on a 12-month period, at $34,146. Of such sum, the witness, on the basis of the Btu content of the gas produced by respondent in various fields allowed $14,273 in the cost of service for exploration in the South Section 28 Field. The Examiner is of the view that the method followed and the result reached by the staff accountant are reasonable and justified.

There is evidence on the part of respondent that in 1969 it plans to drill a deep exploratory well to test the Hackberry Sands at an estimated cost of $500,000. No allowance will be made in this proceeding for such proposal five years hence. When 1969 nears, if respondent has a firm proposal to drill such exploratory well in that year, and believes that an allowance in its rate for such purpose is required, it can seek appropriate relief. ". . . the doors of the Commission are open for increased allowances. This is not an order for all time." *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U.S. 591, 615.

There is also evidence that in 1968 respondent plans to drill a development well in proved acreage at a cost of $215,000. Respondent voices concern at the "possibility" that the well "could be dry." While the prospective drilling of this well is, also, too remote to enter into the rate here fixed, it should be pointed out that the 13.17% return on equity capital herein allowed (*infra*, p. 1000) is predicated upon there being some risk associated with respondent's business.

Respondent says that *Sinclair Oil & Gas Co. (Successor in Interest to Southern Production Co., Inc.)*, 22 FPC 53, "supports the amortization of dry hole costs claimed by Sepsco." A review of that case negates respondent's assertion. There, Southern Production had purchased fully developed gas properties from Danciger Oil & Refining Co. In determining the cost of service to Southern Production for the sale of gas from the field, the Examiner allowed as an item in the cost of service an allocated portion of Southern Production's company-wide exploration and development expense during the test year, just as here the Examiner allows as an item in respondent's cost of service, an allocated portion of respondent's company-wide exploration and development expense. The staff there argued that the item should not be allowed because "presumably" the purchase price included the exploration and development expenses incurred by Danciger. The Examiner rejected this argument because, *inter alia*, there was no evidence that the purchase price included Danciger's exploration and development expenses. In affirming, the Commission said, "We do not, however, decide at this time whether [the allowance of an allocated portion of Southern Production's exploration costs] would be proper where there is evidence to show that all exporation and development costs are included in the purchase price of fully developed reserves." In making this observation, the Commission was dealing with a situation where, the properties having been "purchased" by Southern Production "prior to June 7, 1954," the Commission had held that it would not "inquire into acquisition costs." (22 FPC at p. 59.) Nor did the Commission have before it either the question whether the seller of the properties had recovered the exploratory costs prior to the sale, or the question whether the purchaser made an allowance in the purchase price for unrecovered exploration costs.

Other Gas Revenues (Credit)

In its case in chief, "in order to avoid the application of complicated allocation formulae," respondent elected to credit to the cost of service the revenue it received from the sale of liquid condensates. According to its computation, the cost of service was thereby reduced by $177,049. The staff pointed out an error in the computation; and, in accord with respondent's election, increased the credit by $31,220, to the correct amount, $208,269.

Return

Rate Base

Respondent contends for an average net plant investment rate base, for use in determining future rates in the South Section 28 Field, in the amount of $4,519,848. The staff contend that year-end balances of plant and reserve, resulting in a year-end net investment, are proper. Originally, the staff computed the year-end investment, together with the working capital allowance, to be $3,982,216. Later, the staff revised this rate base to $4,038,099. The difference in amounts between respondent and the staff is attributable to the difference in net investment, difference in working capital allowance, and different methods employed in computing the rate base.

Net Investment. In formulating its average net investment for the test year, respondent used beginning and end-of-test-period balances of booked plant and reserve, arriving at an average net investment of $4,440,015.

The staff arrived at a year-end net investment of $3,956,459. As shown by staff Exhibit 15, schedule 5, the staff made adjustments to plant of $293,312 for workover expense capitalized by Alcoa prior to the acquisition by respondent of the South Section 28 properties. This reduced respondent's claimed original cost from $5,313,665 to $5,020,353. The staff made further adjustments totaling $249,498, consisting of reducing respondent's plant additions to this property during the test period. These adjustments were in connection with workover expense capitalized, $191,946; and acquisition costs capitalized, $57,552. The exhibit also shows the staff's compilation of the accumulated depreciation, depletion, and amortization reserves at the beginning and end of the test year, which were in lesser amount than those claimed by respondent in its Exhibit 1, schedule 4. The staff now agree that an item of $70,926 which they had eliminated, relating to the Potier well, should be added back to the rate base.

As to the other items, respondent's objection is without merit. In the first place, respondent at the hearing "elected," in the words of its accountant witness, "not to adjust the Staff's presentation" respecting the amounts for plant and reserve comprising the net investment (except the $70,926) ; and respondent is bound by that election. The reasons assigned for, and the unqualified nature of, the election appear from the following testimony of the witness:

> Well, the effect—I mean to eliminate the argument, Mr. Examiner and Mr. Annett, is the effect on the cost of service is first not significant to argue the items. Secondly, when we re-examined these items, even though they were originally capitalized by Alcoa, it could be argued that they were workover costs, even though they were major workovers which Alcoa deemed to be completion costs and therefore capitalized them, rather than to get involved in argumentative measures in that we elected not to take exception to the Staff's position.
>
> By Mr. Annett:
>
> Q. In other words, when both Southeastern and staff makes a final adjusted cost of service, we will not consider these items we have been discussing as relevant to the case. A. That was our reasoning, yes, sir.

Respondent having taken this position at the hearing, it is now precluded from challenging the correctness of the adjustments in question.

In the second place, upon review of the adjustments made by the staff, the Examiner considers the $293,312 (less $70,926) of workover expense that Alcoa capitalized, and the $57,552 of acquisition costs capitalized, to be part of the acquisition cost to respondent (chargeable to the acquisition adjustment account), and therefore not part of the original cost of the property upon which rates are here predicated. The items of workover expense, totaling $191,946, capitalized by respondent during the test year, should have been expensed. In arriving at his decision herein, particularly in the allowance for workover expense, the Examiner has given consideration to these items as expenses during the test period. The staff's adjusted net plant amounts are acceptable to the Examiner and are used in arriving at the average net investment for the test period, as shown in Appendix 4 hereto.

Working Capital. Net working capital of $79,833 claimed by respondent as part of its rate base represents only the cash working capital, determined by taking one-eighth of a total of $638,660 comprised of operating expenses, administrative expenses, and other taxes. Respondent makes no claim for working capital spent for materials and supplies or prepayments. The staff's allowance for working capital of $25,757 is based on taking one-eighth of operating expenses, administrative expenses, and exploration and development expenses, as applicable to the South Section 28 Field. Neither respondent nor the staff have allocated company-wide materials and supplies and prepayments to the South Section 28 Field working capital allowance.

The Examiner has computed a working capital allowance of $98,824 for the South Section 28 Field rate base. The amount so computed represents an allocation, based on net plant investment, of company-wide expenses, materials and supplies, and prepayments. The Commission has traditionally included these items in the working capital allowance. A company-wide computation seems appropriate here since all the working capital of the company is normally available for use in whatever area it is needed.

Average vs. Year-End Rate Base. The Examiner is of the opinion that the use of the average net investment rate base for the test year is proper. Utilization of such a rate base is the accepted, standard practice of the Commission, except in certain independent producer rate cases where the reasons for use of year-end balances do not here apply. See the *Phillips* case, *supra*, 24 FPC at page 565.

As ground for the contention that year-end balances instead of average balances are warranted here, the staff point out that there have been only relatively minor additions to the plant in service during the year—an increase of $44,000 in the company-wide plant in service, and of $1,000 in the South Section 28 plant in service. The staff argue for the same treatment accorded in *Phillips*. They also argue that besides allowing the test year depreciation, depletion, and amortization expense, it is not fair to allow a return on one-half of this amount. In other words, the staff position is that respondent should not be permitted to collect the full year's depreciation expense, and also to collect a return on one-half of such expense in the process of using the averaging method in determining the rate base.

The Examiner does not subscribe to this view. The depreciation expense and the return are separate items. Respondent is entitled in the cost of service to the full allowance of depreciation, depletion, and amortization expense as computed in relation to plant for the test year. Respondent is also entitled to a return on a fairly evaluated rate base for the test year. In order to arrive at a fair evaluation of over-all plant investment, it appears proper under the circumstances here presented to use the average of beginning and end-of-year balances of plant and accumulated reserves, mainly *because* there were only minor changes in the plant account throughout the test year, both company-wide and in the South Section 28 Field.

The foregoing conclusion is consonant with the position taken by Mr. Kenneth L. Smith, until recently Assistant Chief of the Bureau of Rates & Gas Certificates of the Federal Power Commission, in charge of field investigations. Treating of the question as to how the plant in service should be averaged and also the broader question of choosing the particular method, *i.e.*, using year-end net plant investment or averaging the net plant investment for rate-base purposes, Mr. Smith said:

> The average of thirteen monthly balances is the safest average to employ where plant investment for a given test year is to be used. This is particularly true if there were significant changes in net plant which did not occur more or less uniformly during the test period. Again there will be other situations in which the average of beginning and year-end balances will suffice, either because there has been *little if any change in plant in service during the year* or because the net changes occurred uniformly throughout the test year.
>
> There could be situations in which the net plant balance at the end of the test period (plus working capital) would be the logical basis for computing the return to be allowed in determining the rate to be fixed. This type of treatment may at least have to be considered *if the plant in service has changed significantly at or near the end of the test period* because of a major construction program. The ending plant balance could not be used in the rate base, however, unless sales volumes and expenses used in determining the rate are adjusted to reflect volumes to be attained from the use of such incremented plant facilities. [The Rate Base: Its Determination and Relation to Cost of Service," Lecture No. 7, p. 5, *U.S. Federal Power Commission, Bureau of Rates & Gas Certificates, Course in Ratemaking* (1958-59), on file in F.P.C. Library; italics added.]

Rate of Return—Federal Income Tax

In establishing a rate for an independent producer under the utility cost rate-base method, "It is the duty of the Commission to fix a rate that represents the cost of service and a reasonable return on the investment, including compensation for consumption of the gas and an increment for incentive, . . ." *El Paso*

Natural Gas Co. v. *Federal Power Commission*, 281 F. 2d 567, 570, 573, certiorari denied 366 U.S. 912. Respecting a reasonable return on the investment,

> The goal of our inquiry is stated in *F.P.C.* v. *Hope Natural Gas Co.*, 320 U.S. 591, 603, where it is said that there must "be enough revenue not only for operating expenses but also for the capital costs of the business" including "service on the debt and dividends on the stock." The return to the equity owner must be "commensurate with returns on investment in other enterprises having corresponding risks" and "sufficient to assure confidence in the financial integrity of the enterprise so as to maintain its credit and to attract capital." [*Phillips* case *supra*, 24 FPC at p. 567.]

In the case presented by respondent, there is insufficiency of evidence to fix a rate of return. Respondent made no rate of return study, and did not even introduce evidence as to the capitalization of the company. Respondent argues that since the Commission allowed Phillips a rate of return of 11% (24 FPC at p. 574), it should allow respondent at least 10%. This conclusion is a *non sequitur*. In fixing a rate of return in rate cases involving electric companies, natural-gas pipeline companies, and natural-gas producer companies as well, the Commission has uniformly analyzed the capital structure of the Company in question; in no other way can the Commission ascertain the capital costs resulting from the three general types of securities—debt, preferred stock and common equity. In the *Phillips* case, the proportion of common equity was relatively high—88.4%; and at the 11% rate of return that the Commission allowed, the return on equity was approximately 12.0% (24 FPC at p. 574).

Respondent contends that the rate of return should include an allowance for a federal income tax component without regard to the effect of the statutory tax benefits available to a producer; and points to the *Phillips* case, where the Commission "[added] $45,000 to the cost of service to provide an allowance for Federal income tax." Respondent misconceives the Commission's action in that case. Contrary to respondent's implied contention, the Commission ruled that, in view of the *El Paso* case, *supra*, "tax incentives will not be included in the cost of service." The $45,000 represented the approximate amount of actual taxes that Phillips would be required to pay as a result of its producing operations. This amount was arrived at upon the basis of the allowed return of 11%, minus a credit to working capital. The approximate amount of the tax was so small that the Commission did not see fit to set up a separate tax calculation. Respondent cannot be heard to argue that the Commission's practical treatment of the item constituted a holding in any way, shape, or form that an independent producer should have an allowance in the rate of return for federal income tax benefits.

In the instant case, no federal income tax allowance is properly to be made, either as a separate item or as an element in the rate of return. Respondent has failed to establish that any portion of whatever tax respondent would pay as a result of all its integrated operations, was properly allocable to the South Section 28 production. Likewise, respondent has failed to establish that even on the basis of the 10% rate of return which it seeks, it would be required to pay a federal income tax by reason of its operations in such field in the test year, let alone the amount of such tax. Indeed, respondent did not claim a provision for federal income tax. And respondent's accountant witness, referring to the South Section 28 properties testified. ". . . I doubt if they produced much taxable income; chances are they produced some taxable income, but not much." In its brief, respondent concedes that it "is not claiming that it pays income tax on S. S. 28 operations."

The only evidence that affords a basis for fixing a rate of return is that adduced by the staff. The staff presentation gives effect to a *pro forma* consolidated capitalization of respondent as of February 28, 1963, which reflects "all commitments for long-term financing even those not fully consummated" on April 29, 1963. According to the evidence, respondent's long-term debt is 48.39% of such capitalization, with an interest cost of 5.74%; preferred stock, 8.96% of the capitalization with a dividend cost of 5.50%; accumulated deferred federal income taxes, 1.18% of the capitalization (to which item the staff rate-of-return witness assigned an allowance of 1.5%); and the common equity, 41.4% of the capitalization.

The staff recommendation respecting a proper allowance for the common equity was based on data in an exhibit showing the "return on invested capital" of the 500 largest industrial corporations in the United States. The staff took the data from a study made by the staff of the magazine *Fortune* in the issue of July 1962. The "return on invested capital" consists of earnings on the book value of the common stock (common stock plus surplus and retained earnings), and dividends on preferred stock. In the exhibit the corporations are separated into 16 groups, for the years 1957, 1958, and 1959; and into 21 groups for the years 1960 and 1961. *Fortune* had made like studies annually for a number of years.

Commercial lists of this general nature are admissible in evidence as an exception to the hearsay rule. Among the reasons assigned are that "the author knows beforehand that his work will have no commercial or professional market unless it is found to have usual accuracy"; and "the habitual use of the work by the trade or profession has tested its usual and practical accuracy and has sanctioned its trustworthiness." *Wigmore on Evidence* (3d Ed.), Vol. VI, sec. 1702. Respondent did not object to the admissibility of the exhibit. The staff's showing would have been stronger had they adduced explicit evidence respecting the extent to which the *Fortune* studies are made use of by business men and are relied on in the market place. The staff witness, formerly associated with a member firm of the New York Stock Exchange as a registered representative, did testify that *Fortune* is a reputable magazine; that the studies are "much publicized"; and that "I know of no one who has been able to show that they are invalid, that they are not accurately done, and that the staff of *Fortune* is incompetent. That is pretty well recognized." The staff say in their brief that "Just as do the publishers of [*Standard & Poor's* and *Moody's*], *Fortune* publishes all of the data underlying the summary figures used, and obtains such data from the companies' books and records." This averment is without support in the record. It is a matter of common knowledge, however, that *Fortune* is one of the leading business magazines, and that many of its readers are men engaged in financial fields and in business and industry, including top management. The Examiner is justified in inferring that the *Fortune* studies of return on invested capital are accepted and utilized to some extent by business men as a guide in their affairs; and to some extent by stockbrokers, security analysts, and the investing public in the sale and purchase of securities. The Examiner is of the view that the staff exhibit is some evidence—amounting to substantial evidence—of what it purports to show.

In the five-year period 1957 to 1961, inclusive, the exhibit lists 25 petroleum producing companies, classified as "Petroleum refining." Two of the companies are publicly owned, independent, nonintegrated oil and gas producers; and the remainder are integrated oil companies. According to the exhibit and accompanying testimony, for the five-year period, the annual median returns or rates of profit on "invested capital" for the petroleum refining group, after payment of taxes, averaged 8.88%. The testimony shows that the preferred stock issued by this group of companies and outstanding is, in the language of the staff witness, "very insignificant." The Examiner finds that the 8.88% represents the approximate average of the median rates of profit on the book value of the common stock of the 25 companies over the five-year period.

The staff take the position that this average, 8.88%, is a guide as to the return to the equity owner which should be allowed in fixing respondent's rate of return. The use of a percentage of earnings on book value is more favorable to respondent than employment of earnings-price ratios; but the book value percentage is tempered by using the median figure. Also, it would appear that use of the median earnings on book value makes sufficient allowance for the fact that respondent is a relatively small company.

The staff witness testified that when an investor "invests his money he invests . . . in the whole corporation. So in looking at the rate of return for this company, I have looked at the entire company." It is to be remembered that petroleum production is only 15% of respondent's business; and that respondent is engaged in the retail sale of liquefied petroleum gas, in the distribution of agricultural and industrial chemicals, in the transmission of natural gas, and in the manufacture and sale of ice. The staff witness said that respondent "is integrated as far as being diversified into different fields," but that he did not consider it to be "an integrated petroleum company in the sense . . . that it has production, refining and marketing"; hence that he found it "difficult" to put respondent on a comparable basis with the "Petroleum refining" group of companies. He further said, however, that the companies which *Fortune* lists in this category are the "largest" and the "most profitable," and are "representative" of the companies engaged in petroleum production; "so I am comparing [respondent] with [them]. I think that is a fair comparison."

The staff witness testified that in his opinion a rate of return of 8.5% for respondent is fair and reasonable. He pointed out that this rate would result in a return of 12.56% on common equity; and that "Recognizing the fact that the 1.5% allowance on deferred taxes is not a paid cost, but is in reality a return to common equity, the actual return on common equity at 8.5% overall is 12.61%."

Consideration of the returns shown by the *Fortune* study on "invested capital" of companies whose activities are comparable to a particular activity of respondent other than petroleum production, further supports the fairness of a 12.56% allowance on common equity. That leg of respondent's business consisting of the sale of liquefied petroleum gas falls, in the *Fortune* classification, within the category of "Petroleum refining" companies, already treated. That leg of respondent's business consisting of distributing chemicals falls, in the *Fortune* classification, within a "Chemicals" group. The staff study shows that over the period 1957–1961, the average of the median returns on "invested capital" for this group of companies, after taxes, was 11.64%—less than the staff recommended allowance on common equity for respondent. Apparently neither of those parts of respondent's business consisting of transmitting natural gas and manufacturing and selling ice, falls within any of the 21 groups listed in the *Fortune* study. As to the transmission-of-natural-gas activity, it would seem in order to be guided by the numerical median of the percentage allowances for common equity that the Commission made in the electric and natural-gas pipeline company cases hereinafter considered, which percentage is 11%. As to the activity of manufacturing and selling ice, we are relegated to a consideration of the *Fortune* study as a whole. The study appears to give a fair spectrum over the five-year period of the range of the median rates of profit of 16 and 21 major industries, after payment of taxes, as represented by the 500 companies. The median rates of profit range from a high of 15.8% for "Soaps, cosmetics" in 1960, and "Pharmaceuticals" in 1961, to a low of 5.3% for "Metal products" in 1961; and the average of the median rates of profit is 9.68%. The staff witness testified that the amount of preferred stock issued by the 500 companies is "very insignificant." It seems probable, therefore, that the median rates of profit, and the average of such rates, over the five-year period, for common equity of companies whose business consists of the manufacture and sale of ice were below the staff recommended allowance of 12.56%. Since "the whole is the sum of all its parts," it would seem that an allowance of 12.56% is a return to the equity owner of respondent which is at least "commensurate with returns on investment in other enterprises having corresponding risks," and is amply "sufficient to attract capital" to respondent.

In the *Phillips* case, treating of the question of rate of return, the Commission said, ". . . we are regulating not all of the integrated operations but only the results of producing operations so that some additional weight should be given to such operations." The Commission went on to say:

> In our opinion . . . statistical methods do not provide a complete basis for determining a rate of return for an independent producer of gas. It is clear that the risks of this business are greater than those of an electric utility or natural gas pipeline. . . . we . . . think that an allowance for common equity for a producer should be comparable to or greater than that for a pipeline company or an electric company.

The Commission then proceeded to list seven electric and natural-gas pipeline company cases wherein it had made allowances for common equity of 8.64%; 10.5%; 10.3%; 14.4%; 12.85%; 10.18%; and 10.12% (24 FPC at pp. 571–72.) Compared with these allowances, the allowance to respondent of a return on common equity of 12.56% is liberal. It also is to be noted that, by virtue of its contract with Southern Natural, respondent has an assured market for its entire production from the South Section 28 Field for what is virtually tantamount to the life of the field.

In its brief, respondent says that under the approach taken by the staff, "the question is how much money must be earned or generated by S.S. 28 in order to enable the over-all complex of companies to pay an actual effective 44.92% federal income tax and thereafter retain an over-all 8½% rate of return. This argument is wholly without merit. ". . . we are regulating not all of the integrated operations but only the results of producing operations . . . ." *Phillips* case, 24 FPC at pp. 571–72.

Respondent says, "Allowing Sepsco a 12.56% rate of return on equity before taxes (or without providing a tax component) as recommended by [the staff] would give Sepsco an actual return on equity of about half the recommended rate." This assertion is based on an incorrect premise. The staff recommendation is for the allowance of a 12.56% rate of return on equity after taxes. The record heretofore considered (*supra*, p. 996) justifies the conclusion, and the Examiner finds, that respondent would not be required to pay a federal income tax by reason of the operations in the South Section 28 Field, or at most only a minimal amount. This is true whether the tax be calculated on the basis of the income from the field for the test year, or whether the tax is arrived at by an allocation of a proper portion of the over-all tax to the South Section 28 production.

Reverting to the *El Paso* case, *supra*, page 995, in its reference to including in the rate, "compensation for consumption of the gas," this factor is adequately taken into account by the allowance for depletion herein made.

In the light of the facts and the cases above cited, the Examiner is of the view that 8.5%, plus an allowance as "an increment for incentive," is a fair and reasonable rate of return for respondent.

The staff say that they are opposed to "any arbitrary incentive allowance because a fair rate of return has a built-in or implied incentive in that return." Whatever be the merit of this position as a general proposition, we are here dealing with a special situation. On the basis of the historical experience of respondent, the Examiner made only a limited allowance for exploration and development expense. It seems fair that something more as an incentive to explore for gas should be allowed in the rate of return. It must, however, be recognized that where, as here, a producer has had the practice of purchasing developed properties instead of exploring and developing, the original cost of the properties, and consequently the net investment rate base, are higher than if the producer had acquired undeveloped properties. Under the circumstances, the Examiner is of the opinion that increasing the rate of return by .25% is adequate as an additional incentive to explore and develop.

The resulting overall rate of return of 8.75% represents an allowance for equity of 13.17%. The Examiner finds and concludes that such rate of return is fair and reasonable, and fixes it at 8.75%.

Miscellaneous—Acquisition Cost

In its brief respondent argues that as an alternative to an original cost basis for determining its rate, it should be allowed a rate predicated on the cost to it of acquiring the production properties. It has been noted that the acquisition cost exceeds the depreciated original cost by $849,019.

It would appear that the claim for a rate increase on the basis of the acquisition cost comes too late. Respondent either elected, or else under a mistaken construction of the Commission order of March 7, 1963, thought that it was obligated, to base its case in chief solely on the original cost. Respondent introduced "Cost of Service" exhibits based on original cost and supported these exhibits by the testimony it adduced. One of these exhibits included a statement of respondent's acquisition cost "for informational purposes." Respondent also introduced a one-sheet exhibit entitled "Summary of Costs Based on Acquisition Cost." This exhibit did not even include a return on investment; and was without any supporting schedules, except that some of the items were the same as those in supporting schedules of the original cost exhibits. Nor was an acquisition cost developed by the testimony of its witnesses. The staff in reliance upon the position assumed by respondent, presented evidence only in refutation of an original cost case.

As late as October 1, 1963, during the presentation of its case in rebuttal, respondent conceded that in its case in chief it had made no claim for an acquisition cost:

> PRESIDING EXAMINER. It is true, isn't it, that Southeastern makes no claim in its case in chief for an acquisition cost? Mr. MICKUM. No, sir. We were ordered not to.

And the next day its accountant witness testified, ". . . of course, we have not presented our case at this point on acquisition costs."

Regardless of these considerations, the claim of a rate based on acquisition cost is wholly without merit. From consideration of the record, the Examiner finds that the difference between the original cost and the acquisition cost represents a payment for intangibles—the prospect for high earnings and a long-term contract for the sale of the entire production to Southern Natural. ". . . if a new owner buys utility property devoted to public service and pays for such intangibles as going concern value, monopoly value and superior earning power in the price paid for the property over and above its original cost, he may not include this excess in his rate base with the expectation of creating an additional cost to be borne by customers." Kenneth L. Smith, Lecture No. 7, p. 9, Course in Ratemaking, *supra*. There are no extenuating circumstances such as special benefits resulting to the consumer which might justify departure from this rule. *United Gas Pipe Line Co.*, 25 FPC 26, 30, 50-51. The acquisition cost claim must be disallowed.

Result of Case in Chief

The foregoing findings respecting the claims made in respondent's case in chief result in a total cost of service for the sale to Southern Natural of $971,249 based on operations for the test year ending September 30, 1962; and in a unit cost per Mcf of 21.73¢, all as more particularly set out in Appendix 2 hereto, column (5). The Examiner finds and concludes that this unit cost is insufficient to justify the rate increase that respondent seeks, or any increase in its rate for the sale of gas to Southern Natural.

Staff Contention for Rate Reduction

The staff contend that respondent's existing rate of 23.25¢ should be reduced to an amount corresponding to the cost of service. Respondent contends (1) that in a section 4(e) proceeding, the rate cannot or at least should not be reduced; and (2) that the actual cost of service is such that no decrease in the rate is warranted.

Authority under Section 4(e)

The law is clear that the Commission possesses the authority, in a Section 4(e) proceeding, to order a decrease in an existing rate. The section contains the provision: ". . . after full hearings, either completed before or after the rate . . . goes into effect, the Commission may make such orders with reference [to the new proposed rate] as would be proper in a proceeding initiated after it had become effective."

The legislative history of the Natural Gas Act shows that Section 4(e) is essentially the same as Section 205(e) of the Federal Power Act, and that both, including the foregoing provision, were derived from Section 15(7) of the Interstate Commerce Act. Hearings, House Committee on Interstate and Foreign Commerce, on H.R. 5423, 74th Cong., 2d sess., pp. 392, 2170; Hearings, House Committee on Interstate and Foreign Commerce, on H.R. 11662, 74th Cong., 2d sess., pp. 10, 46. See Mann-Elkins Act of June 18, 1910, sec. 12, 36 Stat. 539, 551; Transportation Act of 1920, sec. 418, 41 Stat. 486-87, amending Interstate Commerce Act; sec. 15(7), Act March 4, 1927, 44 Stat. Part 2, pp. 1447-48, 49 U.S.C.A. Sec. 15(7).

Prior to 1935 and 1938, the times of adoption of the Federal Power Act and the Natural Gas Act, the Interstate Commerce Commission had repeatedly and uniformly construed the corresponding provision of the Interstate Commerce Act (since 1920 embodied in Section 15(7)) as giving authority to that Commission to reduce or otherwise modify an existing rate. *Advances in Rates—Western Case, supra*, 20 I.C.C. 307, 314; *Lignite Coal from N. Dakota*, 126 I.C.C. 243, 244-45 and cases cited.

In *Hope Natural Gas Co. v. Federal Power Commission*, 196 F. 2d 803, 807, the Court of Appeals, Fourth Circuit, treating of another provision of Section 4(e) of the Natural Gas Act, spoke of, "the settled construction by the Interstate Commerce Commission of the suspension provision of the Interstate Commerce Act"; and held:

> The rule applies, therefore, that where provisions of one statute have been adopted by another, the interpretation which has been authoritatively placed upon the former applies to the latter also.

In 1949, the Supreme Court held that the Interstate Commerce Commission's construction of the provision of Section 15(7) of the Interstate Commerce Act corresponding to the provision here in question was correct. The Court quoted the provision of Section 15(7); to-wit "after full hearing, whether completed before or after the rate . . . goes into effect, the commission may make such order with reference thereto as would be proper in a proceeding initiated after it had become effective"; and declared, "It seems too plain for argument that such broad authority is ample for the modification of either proposed or existing rates or both." *Ayrshire Collieries Corp.* v. *United States*, 335 U.S. 573, 582. Also see *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*, 350 U.S. 332, 340–41.

The Federal Power Commission has interpreted Section 4(e) of the Natural Gas Act in conformity with the foregoing decisions, both impliedly (*Delhi-Taylor Oil Corp.*, 18 FPC 704, 706) and expressly (*Humble Oil & Refining Co.*, 25 FPC 1173).

Respondent, in contending that the Commission lacks the power under Section 4(e) to reduce an existing rate, cites two analyses in House Committee reports. The first analysis concerns Section 4(e) of H.R. 12680, a predecessor bill to the Natural Gas Act (H. Rep. No. 12680, 74th Cong., 2d Sess., p. 4); and the second concerns Section 4(e) of H.R. 6586, the bill that became the Natural Gas Act (H. Rep. No. 709, 75th Cong., 1st Sess.). These analyses are of no assistance; neither treats of, or even mentions, the provision of Section 4(e) with which we are here concerned.

Respondent next notes that the Interstate Commerce Act is dissimilar to the Natural Gas Act in that it requires that a carrier's rates to all shippers be uniform. This distinction makes no material difference here.

Respondent argues that assuming the Commission has the power to order a rate reduction under Section 4(e), it is not obligated to do so. To be sure, the language of Section 4(e) is permissive—"the Commission *may* make such orders," etc. For good reason, the section imposes no mandate upon the Commission to modify an existing rate in case an increase is not granted. There may be insufficiency of evidence in the record in a particular proceeding to enable the Commission to make a finding as to the lawfulness of the existing rate, or to determine what rate would be just and reasonable. But where the record is sufficient for the Commission to make such determinations, it should do so. "All rates . . . received by any natural-gas company . . . shall be just and reasonable, . . ." Natural Gas Act, Sec. 4(a).

Respondent avers that it is "the Commission's consistent practice" to allow "the pre-existing rate to stand when an increase is denied," but does not cite a single case that supports its assertion. There is no such practice so far as the Examiner is aware. Want of time prevents the necessary research by the Examiner, but he knows of no Section 4(e) case where the facts, in the Commission's view, showed that the established rate should be decreased; and the question of a rate reduction under the applicable provision of such section having been raised, the Commission allowed the existing rate to stand. In the typical section 4(e) case throughout the years, either the Commission has found that at least some increase in rates is called for, or else the evidence has not been sufficient to permit the Commission to determine the lawfulness of the existing rate.

Respondent next asserts that if existing rates are to be reduced in Section 4(e) cases, they would become "*in terrorem* proceedings." In response, it is sufficient to quote from the *Western* case, *supra*, where, as early as 1911, the Interstate Commerce Commission said: " . . . the duty having been laid upon the carriers to fix reasonable rates, it was neither harsh nor oppressive to require them to make justification when such rates were to be increased." 20 I.C.C. at p. 314.

Lastly respondent argues that at a prehearing conference on April 23, 1963, staff counsel did not apprise respondent that the staff was to contend for a rate reduction; hence, that an order reducing the rate would be a denial of due process. This argument scarcely deserves serious consideration. It is true that the Examiner called the prehearing conference *inter alia* "for the purpose of considering . . . a delineation of the issues . . . ."; that at the conference no mention was made that the hearing would or might involve the question whether the rate should be reduced; and also, that in response to the Examiner's inquiries seeking to delineate the issues, the statements of staff counsel indicate to the Examiner that the staff did not then contemplate seeking a reduction in the rate. But these facts, in our opinion, are immaterial. At the time of the conference, the staff field investigation had not even been commenced. Counsel made a good faith attempt to specify the issues. The Examiner does not think that a prehearing conference has such finality that statements there made respecting issues are irrevocably binding under all circumstances. Section 1.18 of the Rules of Practice and Procedure merely provides that at a prehearing conference "there may be *considered* . . . the *possibility* of . . . (1) the simplification of the issues." Also, staff counsel could not abrogate the provisions of Section 4(e), or preclude the Commission from taking such action in accordance therewith as the evidence warrants.

Furthermore, respondent suffered no denial of due process or other prejudice as a result of the prehearing conference. Prior to the conference, respondent had of course already filed for a rate increase; and in so doing was chargeable with knowledge that its action, in the event of a hearing, could lead to a rate decrease. *Tagg Bros. & Moorehead* v. *United States*, 280 U.S. 420, 439–40. And on July 22, 1963, at the very first session of the hearing for cross-examination of the staff witnesses on their prepared testimony, written following the field examination, staff counsel announced that the staff was seeking a rate reduction.

Respondent's Claims in Rebuttal

Respondent offered evidence in rebuttal embodying several claims not covered in its case in chief. The Examiner received a portion of this evidence. The portion received was not admitted, however, for the purpose of enabling respondent to make out a new case in chief or to advance additional items justifying a rate increase. It was received solely for the purposes of rebutting staff claims and of contradicting the staff's affirmative plea that a rate reduction should be ordered. The items in the rebuttal case that purportedly offset a rate reduction are three; *viz*, Rate Case Expense; upward adjustment in Depreciation, Depletion and Amortization Expense; and decrease in Other Gas Revenues (Credit).

Rate Case Expense. This is a $10,648 item that represents one-fourth of the allocated portion of estimated rate case expense incurred in connection with the instant proceeding. The undisputed evidence establishes that the estimate is reasonable. It is proper that the item offset the rate reduction *pro tanto*.

Upward Adjustment in Depreciation, Depletion and Amortization Expense. In its case in chief, respondent computed the allowance for Depreciation, Depletion and Amortization Expense on the basis of the "unrecovered reserves" in the field. The staff used the same basis. But in its rebuttal case, respondent computed the allowance by utilizing the proved developed reserves instead of the aggregate proved developed and undeveloped reserves. Adoption of such computation would result in an upward adjustment, in the amount of $52,543,[4] in the staff allowance for such expense. Respondent's accountant witness said that the adjustment was required "since the staff insists on using the year-end rate base and on ignoring the necessity for future drilling and other investment in this property." In view of the fact that the Examiner has rejected the staff proposal of a year-end rate base, and agrees with respondent that the average net investment should be employed in arriving at the rate base, much of the reason that respondent's witness assigned for having changed his method of computing the depreciation and depletion allowance no longer obtains. However, in a footnote in its brief, respondent "submits that even if the average test year rate base is used, only proved developed reserves should be used to calculate depreciation and depletion." We do not agree. The record shows that the major cost of recovering the "proved undeveloped" reserves has already been incurred, and is now included in the net plant investment. Also, the net plant investment now includes the existing equipment, gathering system, and improvements on the lands subject to the leases. Further, the Examiner has already allowed, as workover expense, the cost "to exploit nonperforated intervals of presently producing sands." The Examiner rejects respondent's upward adjustment in the Depreciation, Depletion and Amortization Expense.

Decrease in Other Gas Revenues (Credit). In its rebuttal presentation, respondent determined to make an allocation of the cost of production between gas and condensates. Employing the Btu method of allocation respondent allocated $171,471 of costs to liquids, thereby reducing the credit item in the staff exhibit, Other Gas Revenues, by $36,798. It was proper for respondent to make an allocation of these costs, but respondent did not use the proper method. Where, as here, it is not possible, for want of a factual basis, to use the relative cost method, the gross revenues method is to be followed in making this allocation. *Continental Oil Co.*, 27 FPC 96, 104. The Examiner has accordingly allocated the over-all cost of service, $1,190,166 between gas and liquids on the basis of the gross revenues from gas and the gross revenues from liquids for the test period, as shown in Exhibit 15, schedules 9 and 11. The amount thereby allocated to gas is $991,408; and that allocated to liquids is $198,758. The Examiner finds that $198,758 is the proper amount to apply in the reduction of the over-all cost of service.

As a result of these determinations, the total cost of service for the sale of gas to Southern Natural becomes $991,408; and the unit cost per Mcf, 22.18¢, as more particularly set out in Appendix 2, column (4). The Examiner finds that these amounts represent, respectively, the total cost of such service (including a fair return) and the unit cost per Mcf, based upon respondent's operations in the South Section 28 Field during the test year ending September 30, 1962. The Examiner further finds that the company-wide unit cost for respondent is 22.31¢ per Mcf, based upon its operations during such test year, as shown in Appendix 2, column (3).

The Examiner finds and concludes that the existing rate for such sale of gas, from the South Section 28 Field, 23.25¢ per Mcf, is unjust, unreasonable, excessive, and violative of the provisions of the Natural Gas Act; and that it should be reduced to 22.18¢ per Mcf.

---

[4] $56,910, if adjusted to reflect the increase in plant of $70,926 relating to the Potier well.

The staff contend that refunds should be made from November 15, 1963 (the date that the proposed increased rate became effective under the undertaking to assure refund of excess charges), not only of the excess collected above the existing rate, 23.25¢ per Mcf, but also the difference between such rate and 22.18¢ per Mcf, the rate herein determined to be just and reasonable. The Examiner disagrees; and is of the view that a refund can only lawfully be ordered of the amount collected above 23.25¢ per Mcf. The staff finds support for their position in the provision of Section 4(e) that where increased rates are made effective pending the decision, the Commission "upon completion of the hearing and decision, to order such natural-gas company to refund, with interest, the portion of such increased rates or charges by its decision found not justified." The governing provision of Section 4(e), in our opinion, is that, heretofore cited, conferring power on the Commission to make such orders with reference to the new proposed rate "as would be proper in a proceeding initiated after it had become effective." Under the settled construction of the Act, an order made in a proceeding initiated to determine the reasonableness of an effective rate can have only prospective application. The Supreme Court in the *Hope* case, *supra*, 320 U.S. 591, 618, said: "It is conceded that under the Act the Commission has no power to make reparation orders. And its power to fix rates admittedly is limited to those 'to be thereafter observed and in force.' § 5(a)."

FINDINGS AND CONCLUSIONS

Upon consideration of the evidence adduced and the briefs of counsel, it is further found and concluded that:

(1) The evidence establishes that the proposed increased rate of 25.25¢ per Mcf for the sale of gas by Southeastern Public Service Company to Southern Natural Gas Company (contained in Supplement No. 3 to Southeastern's FPC Gas Rate Schedule No. 2), on the date of the suspension was, is now, and in the future will be, unjust and unreasonable, and therefore unlawful.

(2) There is insufficiency of evidence to sustain a finding that the proposed increased rate, or any portion thereof, was, is now, or will be, just and reasonable, and therefore lawful.

(3) Southeastern has failed to sustain the statutory burden of proof upon it to show that the proposed increased rate is just and reasonable.

(4) No portion of the increase sought by Southeastern is justified.

(5) For the reasons stated in paragraphs (1), (2), (3), and (4), the proposed rate of Southeastern should be disallowed and denied.

(6) Southeastern should refund to Southern Natural all amounts charged and collected, on and after November 15, 1963, above 23.25¢ per Mcf, together with interest at the rate of 7% per annum as hereinafter ordered.

(7) Southeastern's existing rate of 23.25¢ per Mcf for Southeastern's sales of gas to Southern Natural from South Section 28 Field, St. Martin Parish, Louisiana, is unjust and unreasonable; the just and reasonable rate to be charged for such sale is 22.18¢ per Mcf; and the existing rate should be reduced accordingly.

ORDER

Wherefore, it is ordered, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) The proposed increased rate specified in Supplement No. 3 to Southeastern Public Service Company FPC Gas Rate Schedule No. 2, be and the same is hereby disallowed and denied.

(B) Within 30 days from the date of issuance of this order, Southeastern shall refund to Southern Natural Gas Company all amounts charged and collected, on and after November 15, 1963, in excess of 23.25¢ per Mcf, together with interest at the rate of 7% per annum, from the respective dates of receipt of such excess amounts to the date of refund.

(C) Within 30 days from the date of issuance of this order, Southeastern shall file a notice of change in its FPC Gas Rate Schedule No. 2 providing for a rate of 22.18¢ per Mcf, which new rate shall be effective 30 days from the date of issuance of this order.

(D) Within 60 days from the date of issuance of this order, Southeastern shall report to the Commission, in writing and under oath, the details of its calculations resulting in the refund ordered by paragraph (B) hereof, together with a copy of a release from Southern Natural respecting such refund.

(E) Upon compliance by Southeastern with the provisions of paragraphs (B), (C), and (D) hereof, this proceeding be terminated.

HOWELL PURDUE,
Presiding Examiner.

APPENDIX 1

SOUTHEASTERN PUBLIC SERVICE CO.

COST OF SERVICE—SOUTH SECTION 28 FIELD

COMPARATIVE SUMMARY OF SOUTHEASTERN CASE IN CHIEF AND STAFF CASE (ADJUSTED) FOR THE 12 MONTHS ENDED SEPT. 30, 1962

Particulars	Southeastern		Staff (adjusted)	
	Total cost	Unit cost (cents)	Total cost	Unit cost (cents)
(1)	(2)	(3)	(4)	(5)
Operating expenses	$460,390	10.30	$310,708	6.95

SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NO. 2175

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued April 21, 1964)

Southern California Edison Company, Licensee for Project No. 2175[1] on March 24, 1960, filed its initial statement, pursuant to Section 4.20 of the Commission's Regulations under the Federal Power Act claiming as of March 1, 1959, the effective date of the license, an actual legitimate original cost of the project in the amount of $29,234,816.15.[2]

Commission's staff conducted a field examination of Licensee's books and records relating to the claimed initial cost of the project. As a result of that examination, staff has proposed, subject to Commission approval, certain adjustments, agreed to by the Licensee, effecting a net reduction of $12,470.55 in claimed cost as of March 1, 1959, as follows: (1) A reduction of $4,634.25 in Land and Land Rights, (2) an increase of $3,122.75 in Nonproject Plant, (3) a reduction of $485.38 in Unrecorded Retirement and (4) a reduction of $10,473.67 in transmission land Rights-of-Way.

In addition to the net credit adjustment of $12,470.55, to the claimed initial cost the staff proposed reclassifications in the gross amount of $406,422.93, to the recorded cost which effect no net change in over-all projects costs; and further net debit adjustments of $4,513,481.99 to project actual legitimate original costs to conform such recorded costs to the project actual legitimate original cost claimed by Licensee. The resulting net adjustment to actual legitimate original cost is the debit amount of $4,501,011.44. The adjustment of project accounts as of March 1, 1959, and the accounting disposition thereof are to be accomplished by the following composite journal entry:

---

[1] The project may be referred to as the "Big Creek No. 1 and No. 2 Project. "It is located on Big Creek, tributary to the San Joaquin River, in Fresno, Tulare, and Kern Counties, California. The license, authorizing the operation and maintenance of the constructed project was issued pursuant to Section 4(e) of the Federal Power Act for a period of 50 years, effective as of March 1, 1959 (21 FPC 419, 422–423).

[2] Article 22 of the license provides for Commission determination of the actual legitimate original cost of the project as of the effective date of the license, and changes therein.

---

[1] Account references in parentheses are to account numbers prescribed in the Commission's Uniform System of Accounts for Public Utilities and Licensees effective prior to Jan. 1, 1961.

The staff did not undertake an examination of the adequacy of the claimed accrued depreciation of the project as of March 1, 1959, and proposes that this matter be deferred for later determination by the Commission.

By letter dated March 8, 1963, the Licensee confirmed its agreement with the adjustments proposed by the staff and resulting project costs, as set forth above.

The California Public Utilities Commission was advised by letter of this Commission dated March 19, 1963 as to the proposed staff adjustments and resulting project cost. By letter dated March 25, 1963, the California Commission indicated no objection thereto.

The Commission finds:

(1) Licensee, by its acceptance of the proposed adjustments including the accounting dispositions and resulting project costs, and the California Public Utilities Commission by its lack of objection thereto, have obviated the necessity for notice and opportunity to protest provided in Sections 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act.

(2) The proposed adjustments, including the accounting dispositions are reasonable and appropriate for the purposes of the Federal Power Act and, therefore, should be approved and directed as hereinafter provided.

(3) As of the effective date of the license, March 1, 1959, the actual legitimate original cost of Project No. 2175 is $29,222,345.60, classified by plants and primary accounts as shown in attached Schedule I.

(4) It is necessary and appropriate for the purposes of the Federal Power Act that the determination of the accrued depreciation applicable to in-service project properties of Project No. 2175 as of March 1, 1959 be reserved for future Commission consideration.

The Commission orders:

(A) The provisions of Sections 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including accounting dispositions, proposed by the staff and agreed to by the Licensee, are hereby approved and directed to be made by the Licensee as shown in the attached Schedule II.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and subsidiary project plant accounts showing the amount of $29,222,345.60 as the actual legitimate original cost of the project as of March 1, 1959, classified by plants and primary accounts as shown in the attached Schedule I.

(D) The matter of the Commission's determination of the amount of accrued depreciation applicable to in-service project properties of Project No. 2175 as of May 1, 1959, is hereby reserved for future Commission consideration and determination.

(E) Licensee shall within 90 days from the issuance of this order file with the Commission three certified copies of FPC Form No. 7 as of March 1, 1959, showing compliance therewith, and shall submit two further copies thereof to the Regional Accountant, Federal Power Commission, San Francisco, California.

AMERADA PETROLEUM CORPORATION, DOCKET NO. G-18346

DECLARATORY ORDER

(Issued April 22, 1964)

On January 30, 1964, Amerada Petroleum Corporation (Amerada) filed a letter with the Secretary requesting the Commission's informal opinion as to the effect of our order of October 29, 1963, conditionally approving Amerada's settlement of Docket No. G-18346,[1] on the future administration of Amerada's FPC Gas Rate Schedule No. 82, particularly in regard to prepayments and subsequent make-ups.

On February 10, 1964, Florida Gas Transmission Company (Florida Gas), the pipeline purchaser under Amerada's Rate Schedule No. 82 filed a letter with the Commission concerning the same matter. Florida Gas and Amerada agree as to the facts stated below, but disagree as to what our opinion should be as to Florida Gas' make-up rights.

Although both parties to the dispute have agreed to abide by our informal decision on the basis of their letters, we are of the view that this matter would more properly be handled in a formal Commission order. Accordingly, we shall treat Amerada's letter, *supra*, as a petition for a declaratory order under Section 1.7(c) of the Rules of Practice and Procedure and Florida Gas' letter as an answer to such petition under Section 1.9 thereof.

The facts are as follows:[2]

(1) Under Article V, Section 2, of the contract, as amended, the purchaser was required to begin receiving gas not later than July 1, 1962. If it did not do so, it was required to pay the seller each month thereafter and until deliveries commenced for a quantity of gas equal to the daily contract quantity times the number of days in each month at the prices provided in the contract (21.5¢ per Mcf exclusive of tax reimbursement), as if the gas were actually delivered, provided the seller's facilities were installed and the gas was available.

(2) Article V, Section 2 also provided that the buyer shall have a right to make up such prepaid-for gas in accordance with paragraph 8 of Article VII of the contract. That paragraph provides that the make-up period is two years (now extended to four years) and that ". . . . [a]ny payment which buyer has previously made for gas not received and which is being made up shall be credited against payment due hereunder for such make-up gas at the time of actual deliveries thereof."

(3) The purchaser, Florida Gas, did not begin taking deliveries until November 12, 1962, and accordingly paid Amerada for daily contract quantities totalling 402,000 Mcf, as contemplated by Article V, Section 2 of the contract.

(4) Amerada contends that Florida Gas is entitled to make up 402,000 Mcf of gas while Florida Gas contends that, since it paid for 402,000 Mcf of gas at the rate of 21.25¢ per Mcf inclusive of tax reimbursement (conditioned in the temporary certificate from the 21.5¢ plus tax reimbursement contract price) and the rate in effect during the rate settlement moratorium period (April 1, 1963, through March 31, 1968) is 20.625¢ per Mcf, Florida Gas should be allowed

---

[1] *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.* 30 FPC 1130.

[2] The facts and controversy are practically identical to the facts and controversy considered in our declaratory order issued this date in Phillips Petroleum Company, Docket No. G-18375.

to recoup such prepaid-for gas during the moratorium period at the moratorium period price of 20.625¢ per Mcf.

The Amerada-Florida Gas contract, the pertinent terms of the Amerada settlement proposal and the pertinent terms of our order approving the Amerada settlement proposal are for all practical purposes identical to the comparable documents and terms described in detail in our declaratory order in Docket No. G–18375, *supra*, so we shall not repeat such description here.

Upon consideration of the facts and arguments presented by Amerada and Florida Gas and for the same reasons expressed in our declaratory order in Docket No. G–18375, we conclude that Florida Gas is entitled to make-up during the make-up period for gas paid for but not taken prior to April 1, 1963, the same amounts of gas which it stored with Amerada under the take-or-pay and make-up provisions of the contract.

The Commission finds:

Under the terms of the contract dated March 23, 1959, between Amerada Petroleum Corporation and Coastal Transmission Corporation (predecessor of Florida Gas Transmission Company), as amended by the settlement proposal filed by Amerada Petroleum Corporation on August 5, 1963, and conditionally approved by the Commission on October 29, 1963, Florida Gas Transmission Company is entitled to receive during the four year make-up period as make-up gas for gas paid for prior to April 1, 1963, but not received, a quantity of gas which, when multiplied by 21.25¢ per Mcf, will equal the amount of money paid by Florida Gas Transmission Company and its predecessor under Article V, Section 2 of such contract, as amended, for gas not taken.

The Commission orders:

It is hereby declared and ordered that, under the terms of the contract, dated March 23, 1959, between Amerada Petroleum Corporation and Coastal Transmission Corporation (predecessor of Florida Gas Transmission Company), as amended by the settlement proposal filed by Amerada Petroleum Corporation on August 5, 1963, and conditionally approved by the Commission on October 29, 1963, Florida Gas Transmission Company is entitled to receive during the four year make-up period as make-up gas for gas paid for prior to April 1, 1963, but not received, a quantity of gas which, when multiplied by 21.25¢ per Mcf, will equal the amount of money paid by Florida Gas Transmission Company and its predecessor under Article V, Section 2 of such contract, as amended, for gas not taken.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

MIDHURST OIL CORPORATION (OPERATOR), ET AL., DOCKET NO. RI60-468

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING REFUNDS, AND TERMINATING PROCEEDING

(Issued April 22, 1964)

On March 9, 1964, Midhurst Oil Corporation (Operator), *et al.* (Midhurst) submitted an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves a proposed increased rate for a sale of natural gas made to Tennessee Gas Transmission Company (TGT) by Midhurst. The offer relates to a sale made under Supplement No. 6 to Midhurst's FPC Gas Rate Schedule No. 7 in Jim Wells County, Texas (Texas R.R. Com. District #4). The proposed increased rate was suspended by order of the Commission for the statutory period, and was made effective by Midhurst on December 10, 1960. The increased rate was charged and collected, subject to refund from December 10, 1960, to March 1, 1962, on which date Graridge Corporation succeeded to Midhurst's interest. On August 1, 1963, this Commission accepted an offer of settlement filed by Graridge for sales made by it as successor to Midhurst.[1]

Midhurst, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in excess of the settlement rate of 14.6¢ per Mcf, which is the rate accepted in the Graridge settlement. The estimated total dollars to be refunded approximates $8,600, exclusive of interest. No protests or objections have been filed to the offer.

We have in the past granted the predecessor the same settlement rate as the successor where the predecessor and successor filed a joint offer. While the failure of a predecessor to join in the offer of a successor might preclude our approval of a similar offer subsequently filed by the predecessor, it appears that in the instant case the predecessor, Midhurst, was not aware of the successor's offer. Accordingly, there is justification for Midhurst's failure to join in Graridge's offer. We therefore find it appropriate to approve the subject settlement proposal.

The proposed settlement is consistent with the provisions of the Second Amendment to the *Commission's Statement of General Policy No. 61–1*, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Midhurst on March 9, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Midhurst on March 9, 1964, is hereby approved in accordance with the provisions of this order.

(B) Midhurst shall refund to TGT to March 1, 1962, the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate with simple interest at 7% computed to the date of refund, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination, together with a release from TGT.

(C) Upon notification by the Secretary of the Commission that Midhurst has complied with the terms and conditions of the order, the above designated proceeding shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64–2 without further order of the Commission.

(D) The acceptance by the Commission of Midhurst's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Midhurst, including area rate or other similar proceedings.

PHILLIPS PETROLEUM COMPANY, DOCKET NO. G-18375

DECLARATORY ORDER

(Issued April 22, 1964)

On March 2, 1964, Phillips Petroleum Company (Phillips) filed a petition for declaratory order in Docket No. G-18375 requesting that the Commission, after hearing, issue an order providing that the quantity of gas which Florida Gas Transmission Company (Florida Gas) is entitled to receive as make-up gas because of payments made by Florida Gas prior to April 1, 1963, is, under Phillips' Rate Schedule No. 372, limited to a quantity of gas which, when multiplied by 21.25¢ per Mcf,[1] will equal the amount of money heretofore paid by Florida Gas for gas not taken.

Phillips states that subsequent to the Commission's approval of a settlement of the matters in Docket No. G-18375[2] a controversy has arisen between it and Florida Gas, the latter contending that Florida Gas is entitled to receive as make-up of volumes of gas previously paid for but not taken that quantity of gas which, when multiplied by the rate of 20.625¢ per Mcf, will equal the amount of money previously paid by Florida Gas for gas not taken.

Florida Gas does not dispute Phillips' statement of facts and controversy.[3] The facts are as follows:

(1) Under Article V, Section 2, of the contract as amended (Phillips F.P.C. Gas Rate Schedule No. 372) the purchaser was required to begin receiving gas not later than July 1, 1962. If it did not do so, it was required to pay the seller each month thereafter and until deliveries commenced for a quantity of gas equal to the daily contract quantity times the number of days in each month at the prices provided in the contract (21.5¢ per Mcf exclusive of tax reimbursement), as if the gas were actually delivered, provided the seller's facilities were installed and the gas was available.

(2) Article V, Section 2 also provided that the buyer shall have a right to make up such prepaid-for gas in accordance with paragraph 8 of Article VII of the contract. That paragraph provides that the make-up period is two years (now extended to four years) and that ". . . [a]ny payment which buyer has previously made for gas not received and which is being made up shall be credited against payment due hereunder for such make-up gas at the time of actual deliveries thereof."

(3) The purchaser, Florida Gas, did not begin taking deliveries until November 12, 1962, and accordingly paid Phillips for daily contract quantities totalling 904,500 Mcf, as contemplated by Article V, Section 2 of the contract.

---

[1] Unless otherwise stated, all rates expressed inclusive of tax reimbursement and all volumes expressed at 15.025 psia.

[2] See order issued November 29, 1963, in *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, 30 FPC 1381.

[3] Florida Gas' answer, filed on April 6, 1964, after the time allowed for filing had elapsed, so states.

(4) Phillips contends that Florida Gas is entitled to make up 904,500 Mcf of gas while Florida Gas contends that, since it paid for the 904,500 Mcf of Gas at the rate of 21.25¢ per Mcf (conditioned in the temporary certificate from the 21.5¢ plus tax reimbursement contract price) and the rate in effect during the rate settlement moratorium period (April 1, 1963, through March 31, 1968) is 20.625¢ per Mcf, Florida Gas should be allow to recoup such prepaid-for gas during the moratorium period at the moratorium period price of 20.625¢ per Mcf.

Although Phillips requests that a hearing be held on these matters, we are of the view that a hearing is neither required nor desirable. The facts, all of which are in the Commission's files, are undisputed. Our function here is to interpret the contract, the settlement proposal and our order conditionally approving the settlement proposal.

It is the Commission's opinion that the quantity of gas which Florida Gas is entitled to receive as make-up gas because of payments by Florida Gas prior to April 1, 1963, is, under Phillips' Rate Schedule No. 372, limited to a quantity of gas which, when multipled by 21.25¢ per Mcf, will equal the amount of money heretofore paid by Florida Gas for gas not taken.

Insofar as relevant to the issue here in question, the settlement proposal drafted and submitted by Phillips and conditionally approved by the Commission provided:

> 1. That from April 1, 1963, through March 31, 1968 (the "moratorium period"), the total amount per Mcf paid by the respective pipeline purchasers for natural gas delivered pursuant to . . . Phillips' FPC Gas Rate Schedule * * * 372 shall be 20.625 cents per Mcf, inclusive of reimbursement for Louisiana State taxes. [Footnote omitted.]
>
> * * * * * * *
>
> 4. Upon the issuance of an order by the Commission approving this Settlement Proposal, * * *. Phillips agrees to file promptly as supplements to its Rate Schedules * * *. 372 true copies of this Settlement Proposal, together with the order of the Commission approving same. Upon the acceptance for filing of such supplements and issuance of permanent certificates of public convenience and necessity by the Commission to * * *. Phillips as herein provided, according to the original applications as modified by the terms of this Settlement Proposal, the terms of the original rate schedules of * * *. Phillips as they may have been heretofore amended or supplemented shall be amended only to the extent that the terms and provisions of this Settlement Proposal are inconsistent with the terms and provisions of the original rate schedules as heretofore amended or supplemented. In all other respects the terms and provisions of the original rate schedules, as heretofore amended or supplemented, and the rights and obligations of the parties hereto shall be unaffected by this Proposal, and nothing contained herein shall be deemed to amend the respective contracts.

The Commission's order of November 29, *supra*, stated (p. 1382):

> The temporary authorizations under which the * * * Phillips sales are presently being made do not contain express refund conditions and, except as noted above, * * * Phillips * * * [does] not propose to make refunds of any amounts collected prior to April 1, 1963, the effective date of the proposed rate reductions.

The order further specifically provided (p. 1382):

> In the context of the proposal, we interpret the term "delivered" as used in paragraph 1 of the proposal to include gas required to be taken

during the moratorium period but paid for and not taken and our approval is conditioned upon such interpretation.

Although neither the settlement proposal nor the Commission's order conditionally approving the proposal expressly state what effect they have on the existing prepayment account, the settlement proposal and the Commission's order conditionally approving the same certainly indicate no intent to adjust the prepayment account. The proposal is prospective, from April 1, 1963.

The settlement proposal states that the total amount per Mcf paid by the respective purchasers for natural gas "delivered" during the moratorium period shall be 20.625¢ per Mcf. To include gas paid for prior to April 1, 1963, not taken at the time paid for but which is physically delivered during the moratorium period, would mean that the purchaser would receive more gas than it would have been entitled to receive had it actually taken such gas prior to April 1, 1963, as required by the contract. Such a view would impose the greatest risks upon the producers whose contracts provide the broadest make-up privileges. The make-up provision is a device designed to alleviate the burden of take-or-pay-for requirements and is the subject of bargaining by the purchasers. While the extension of this provision was the subject of our approval of the settlement proposal, it was not our intention to condition the provision to require that the seller subject himself completely to the actions of the purchaser who would otherwise have been required to take gas. Were we to interpret the settlement as Florida Gas would desire here, we would require that it pay less for gas which it was under a contractual obligation to take prior to the settlement than it would have paid had it actually taken the gas. We think that under the provision quoted above "delivered" will mean in the future that the purchaser pay only 20.625¢ per Mcf for gas which it will pay for during the moratorium period, but will not take at that time. Whenever the purchaser does take that gas it will pay no more than the 20.625¢ price.

In summary, we are of the view that under the original contract, the settlement proposal, and our order conditionally approving the settlement proposal, Florida Gas is entitled to make-up during the make-up period for gas paid for but not taken prior to April 1, 1963 the same amounts of gas it stored with Phillips under take-or-pay and make-up provisions of the contract.

In its petition for declaratory order, Phillips states that because of the dispute discussed above, Florida Gas has refused to sign the release which is required to be filed by Phillips by ordering paragraphs (E) and (F) of our order of November 29, 1963, *supra*. Phillips requested that we order and declare that Phillips has complied with such ordering paragraphs.

Since the controversy between Florida Gas and Phillips is resolved by this order, there is no reason to expect that Florida Gas will continue to refuse to sign the release tendered by Phillips. Thus, Phillips will be able to comply with paragraphs (E) and (F) of the aforementioned order. Therefore, Phillips' request in this regard will be denied.

The Commission finds:

Under the terms of the contract dated March 23, 1959, between Phillips Petroleum Company and Coastal Transmission Corporation (predecessor to Florida Gas Transmission Company), as amended by the settlement proposal filed by Phillips Petroleum Company on July 25, 1963, and conditionally approved by the Commission on November 29, 1963, Florida Gas Transmission Company is entitled to receive during the four year make-up period as make-up gas for gas paid for prior to April 1, 1963, but not received, a quantity of gas which, when multiplied by 21.25¢ per Mcf, will equal the amount of money paid by Florida Gas

Transmission Company and its predecessor under Article V, Section 2 of such contract, as amended, for gas not taken.

The Commission orders:

(A) It is hereby declared and ordered that, under the terms of the contract, dated March 23, 1959, between Phillips Petroleum Company and Coastal Transmission Corporation (predecessor of Florida Gas Transmission Company), as amended by the settlement proposal filed by Phillips Petroleum Company on July 25, 1963, and conditionally approved by the Commission on November 29, 1963, Florida Gas Transmission Company is entitled to receive during the four year make-up period as make-up gas for gas paid for prior to April 1, 1963, but not received, a quantity of gas which, when multiplied by 21.25¢ per Mcf, will equal the amount of money paid by Florida Gas Transmission Company and its predecessor under Article V, Section 2 of such contract, as amended, for gas not taken.

(B) The petition for declaratory order filed by Phillips Petroleum Company in Docket No. G-18375 on March 2, 1964, is hereby denied except insofar as it is granted hereinabove.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TOWN OF ROXIE, MISSISSIPPI, DOCKET NO. G-20260

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING SERVICE AGREEMENT FOR FILING

(Issued April 22, 1964)

Southern Natural Gas Company (Southern Natural) filed on February 24, 1964, in Docket No. G-20260, an application to amend the order of the Commission issued April 7, 1960, which directed Southern Natural to establish physical connection of its facilities with the facilities of the Town of Roxie, Mississippi, and to sell and deliver up to 232 Mcf of natural gas daily to the Town of Roxie for distribution and resale in the Town of Roxie and environs (for service only to residential and commercial customers). The application to amend seeks removal of the volumetric limitation in the Commission's order so as to permit the Town of Roxie to serve Southern Pine Superior Stud Corporation natural gas for wood processing purposes, all as more fully set forth in the application on file with the Commission.

Southern Natural and the Town of Roxie have entered into a new service agreement dated February 10, 1964, and filed with the Commission on February 17, 1964, providing for gas service under Southern Natural's Rate Schedule CD-1, which agreement supersedes the present service agreement dated September 12, 1963, providing for gas service under Southern Natural's Rate Schedule G-1.

On March 2, 1964, the Town of Roxie filed an answer in support of Southern Natural's motion to amend.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on March 19, 1964 (29 F.R. 3551). No protest or petition to intervene concerning the aforesaid application to amend has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order, issued April 7, 1960, in Docket No. G-20260 be amended as hereinafter ordered.

The Commission orders:

(A) The order of the Commission issued April 7, 1960, in Docket No. G-20260, directing Southern Natural to establish physical connection of its facilities with the facilities of the Town of Roxie and to sell and deliver natural gas to said Town be and is hereby amended so as to remove the volumetric limitation of 232 Mcf of natural gas daily imposed by said order upon Southern Natural.

(B) The service agreement between Southern Natural and the Town of Roxie dated February 10, 1964, and filed with the Commission on February 17, 1964, is hereby accepted for filing, to be effective on the date of the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ORDER ON APPLICATION FOR REHEARING FURTHER CONSOLIDATING PROCEEDINGS

(Issued April 23, 1964)

Cree Drilling Company, Inc., by application filed March 30, 1964, has applied for rehearing and reconsideration of our order issued March 4, 1964, in Docket No. G-19013, *et al.*, in which we granted producer applications for certificates but denied certain others including Cree in Docket No. CI61-193, where it was not shown that the pipeline receiving the gas, Transwestern Pipeline Company, had permanent certificates for all of the necessary facilities. We thereupon consolidated these dockets, including CI61-193, with Transwestern's Docket No. G-20464, *et al.*

Cree now contends that its interest in leases in Roberts County, Texas, which are involved here, is shared with Phillips Petroleum Company (which has a temporary certificate in Docket No. G-18201), A. G. Hill (who has a temporary certificate in Docket No. CI61-497) and Shell Oil Company, which it points out has a permanent certificate issued November 19, 1962, in Docket No. CI61-737, and that the gas from all of these owners, including Cree, is sold to Transwestern and passes through the same facilities. Cree asks the Commission for a permanent certificate or in the alternative that the temporary certificate previously granted to Cree remain outstanding and that the Commission consolidate its application with those of A. G. Hill and Phillips.

While we granted Shell a permanent certificate, this reflected a rate settlement, *Shell Oil Company, et al.*, Docket No. G-9446, *et al.*, 28 FPC 257. We do not believe it proper to grant a permanent certificate to Cree for the reasons stated in our order of March 4, 1964. We will, however, grant Cree's alternative request and consolidate the applications of A. G. Hill and Phillips with Docket No. G-20464 for consideration therein along with Cree's application. The temporary certificate issued to Cree in Docket No. CI61-193 will, of course, remain outstanding.

The Commission orders:

The proceedings in Phillips Petroleum Company, Docket No. G-18201, and A. G. Hill, Docket No. CI61-497, are hereby consolidated with those in Docket No. G-20464, *et al.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

DELEGATION OF AUTHORITY, ACCEPTANCE OR REJECTION OF JOURNAL ENTRY FILINGS, DOCKET NO. R-261

ORDER NO. 283

AMENDING SECTION 3.5 OF THE COMMISSION'S GENERAL RULES

(Issued April 23, 1964)

The Commission has delegated to the Chief Accountant the authority to accept or reject certain journal entry filings relating to the purchase or sale of electric or gas plant tendered by public utilities, licensees, or natural gas companies. This delegation of final authority should be reflected in the description of the Commission's organization as required by section 3 of the Administrative Procedure Act.

The Commission finds:

(1) The amendment to the Commission's General Rules herein adopted is necessary and appropriate to carry out the provisions of the Federal Power Act and the Natural Gas Act.

(2) Since the amendment herein adopted involves matters of Commission organization and procedures, the notice, hearing and effective date provisions of section 4 of the Administrative Procedure Act are not applicable.

(3) The amendment herein adopted will effect economies, conserve manpower, and expedite the processing of journal entry filings, and should be made effective forthwith.

The Commission, acting pursuant to authority granted by the Federal Power Act, particularly section 309 thereof (49 Stat. 858, 16 U.S.C. 825h), and the Natural Gas Act, particularly section 16 thereof (52 Stat. 830, 15 U.S.C. 717o), and in accordance with section 3 of the Administrative Procedure Act (60 Stat. 238, 5 U.S.C. 1002), *orders:*

(A) Paragraph (b) of § 3.5 of Part 3, Organization, Subchapter A, General Rules, Chapter I of Title 18 of the Code of Federal Regulations, is amended to read as follows:

§ 3.5 *Delegations of final authority.* The Commission has authorized:

* * * * * * *

(b) The Chief Accountant, or in his absence, the Acting Chief, to:

(1) Issue interpretations of the Uniform Systems of Accounts for Public Utilities, Licensees, and Natural Gas Companies.

(2) Accept for filing proposed journal entries relating to the purchase or sale of electric or gas plant tendered by a public utility, licensee, or natural gas company which he determines to be consistent with applicable statutory requirements and the Commission's rules, regulations or orders thereunder, including the Commission's Uniform Systems of Accounts for Public Utilities, Licensees, and Natural Gas Companies, or to reject any such proposed journal entries which do not conform therewith; provided that, where the proposed journal entries involve unusually large transactions or unique or controversial features, the Chief Accountant shall present same to the Commission for consideration.

[Sec. 309, 49 Stat. 858, U.S.C. 825h; Sec. 16, 52 Stat. 830, 15 U.S.C. 717o; Sec. 3, 60 Stat. 238, 5 U.S.C. 1002.]

(B) The amendment herein adopted shall become effective upon the issuance of this order.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COASTAL STATES GAS PRODUCING COMPANY, DOCKET NOS. CI64–237 AND CI64–269

FINDINGS AND ORDER GRANTING MOTION FOR WAIVER OF INTERMEDIATE DECISION PROCEDURE, GRANTING MOTION FOR LEAVE TO WITHDRAW INTERVENTION AND PERMITTING ABANDONMENT

(Issued April 24, 1964)

On August 21, 1963, Coastal States Gas Producing Company (Coastal) filed in Docket Nos. CI64–237 and CI64–269, applications for permission and approval to abandon, pursuant to Section 7(b) of the Natural Gas Act, its sales of gas to Trunkline Gas Company (Trunkline) as heretofore authorized in Docket Nos. G–14329, G–16542, G–16935 and G–18838, from reserves of gas located in Bee County and San Patricio County, Texas.

Notice of both applications was issued by the Commission and was published in the Federal Register.[1]

---

[1] 28 F.R. 9830, September 7, 1963.

On September 23, 1963, United Gas Pipe Line Company (United) filed a petition to intervene in both dockets, and an order was issued by the Commission March 12, 1964, permitting said intervention.

On February 20, 1964, these proceedings were consolidated and the matters were set for hearing to commence on April 14, 1964.

On March 23, 1964, Commission Staff filed a motion for a pre-hearing conference, which motion was granted by the Presiding Examiner on March 31, 1964.

On March 30, 1964, United filed a letter indicating its intention to withdraw its petition to intervene in both dockets.

On April 7, 1964, a pre-hearing conference was held, at which time Coastal and the Commission Staff agreed and stipulated as follows:

1. That in the language of Section 7(b) of the Natural Gas Act the present or future public convenience or necessity permits the abandonment of the sales as requested in Docket Nos. CI64–237 and CI64–269.

2. That this consolidated proceeding should be disposed of pursuant to the Commission's shortened procedure as set forth in Section 1.32 of the Commission's Rules of Practice and Procedure.

3. That each agrees to waive a formal hearing in the consolidated proceedings.

4. All participants request that the intermediate decision procedure be omitted and that the Commission render the final decision herein, and for that purpose all participants waive their opportunity for presenting oral argument of filing briefs before the Presiding Officer or Commission; waive their opportunity for presenting findings and conclusions with supporting reasons therefor; and the parties reserve only their rights to apply to the Commission for rehearing and to petition for judicial review of the Commission's decision or orders as may be provided for by the statute under which the proceeding was initiated and conducted.

5. That no participant objects to United Gas Pipe Line Company withdrawing from this case.

On April 8, 1964, United filed a motion for leave to withdraw its petition to intervene in both dockets.

The abandonment of service to Trunkline is requested because the well pressures in the areas from which Coastal purchases the gas have declined to the extent that Coastal finds it infeasible to continue to deliver the gas. Coastal cannot provide the necessary compression economically to take the gas.

Dedicated acreage has been depleted to the extent that reserves total only approximately 7.5 million Mcf.

To assure Trunkline a continued supply, Coastal has entered into a contract for the sale of gas from the Hayes Field, Calcasieu and Jefferson Davis Parishes, Louisiana. Certificate authorization to make this sale was granted in Docket No. CI64–133 on September 6, 1963, at a rate of 15.0 cents per Mcf. This rate compares favorably with the rate at which Coastal sold gas from the acreage being abandoned. The rate covering the sales of gas authorized in Docket No. G–14329 was 14.750 cents per Mcf and in Docket No. G–16542, G–16935 and G–18838 was 13.3748 cents per Mcf. Since the Louisiana Gas (Docket No. CI64–133) is located 300 miles closer to Trunkline markets than these reserves located in Texas, Trunkline will save, by accepting the substitution, approximately 4.5 cents per Mcf in transportation costs.

The Commission finds:

(1) These proceedings should be disposed of pursuant to Section 1.32 of the Commission's Rules of Practice and Procedure. (18 C.F.R. 1.32).

(2) Coastal States Gas Producing Company is a "natural-gas" company within the meaning of the Natural Gas Act, subject to the jurisdiction of the Commission.

(3) The present and future convenience and necessity permit the abandonment of the sales by Coastal to Trunkline authorized in Docket Nos. G-14329, G-16542, G-16935 and G-18838, and the cancellation of related rate schedules.

The Commission orders:

(A) The request for the omission of the intermediate decision procedure is hereby granted.

(B) The motion of United Gas Pipe Line Company for leave to withdraw its petition to intervene in these proceedings is hereby granted.

(C) Coastal States Gas Producing Company is hereby permitted to abandon the sales authorized in Docket Nos. G-14329, G-16542, G-16935 and G-18838, all as more fully set forth in its applications.

(D) The certificates heretofore issued in Docket Nos. G-14329, G-16542, G-16935 and G-18838 are hereby terminated.

(E) All FPC Gas Rate Schedules relating to the abandonment of service permitted and approved in this order are cancelled and the notices of cancellation thereof are accepted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

A. S. GENECOV, TRUSTEE, ET AL., DOCKET NO. G-19862

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUESTING CONTRACT AMENDMENT, CANCELLING BOND, AND TERMINATING PROCEEDING

(Issued April 24, 1964)

On March 23, 1964, A. S. Genecov, Trustee, *et al.*, (Genevoc) submitted an Offer of Settlement in the above-designated proceeding, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, covering his jurisdictional sale of natural gas to Tennessee Gas Transmission Company (Tennessee) from properties in Panola County, Texas Railroad Commission District No. 6. The pertinent details are as follows:

Rate schedule	Supplement No.	Effective date	Approved rate	Suspended rate	Settlement rate
1	3	May 1, 1960	12.62¢	14.4248¢	14.4248¢

Under the terms of the offer, Genecov proposes to delete the favored-nation and price redetermination provisions from the rate schedule, and to adjust his periodic escalations in conformity with Second Amendment[1] to the Commission's *Statement of General Policy No. 61-1*,[2] in return for a settlement rate of 14.4248¢

---

[1] Issued December 20, 1960, 24 FPC 1107; amended by Order No. 264, in Docket No. R-234, issued March 27, 1963, 29 FPC 589.

[2] Issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.55).

per Mcf at 14.65 psia, inclusive of tax reimbursement. In his offer, future escalations would be limited to 1.0¢ per Mcf on the first day of November 1964, 1969 and 1974 with a provision for three-fourth reimbursement of any future tax increases. No refunds would be required as the settlement rate is at the same rate level as the suspended rate. Tennessee has concurred in the subject offer and no protest has been filed.

Since the proposed settlement rate is acceptable under the provisions of the aforementioned Second Amendment for jurisdictional sales of natural gas in Texas Railroad Commission District No. 6, it is believed that the public interest will best be served by accepting Genecov's proposed settlement as hereinafter set forth. The proposed settlement rate should be made effective as of the date of issuance of this order.

We desire to make it clear that acceptance of the Offer of Settlement shall not be construed as approval of any future increased rates proposed by Genecov under the periodic escalation provisions and tax reimbursement provision contained in the instant rate schedule, and is without prejudice to any findings or orders of the Commission in any future proceedings, including area rate or similar proceedings involving Genecov's rate and rate schedule.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the Offer of Settlement filed by Genecov with the Commission on March 23, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Genecov with the Commission on March 23, 1964, is hereby approved in accordance with the provisions of this order.

(B) Genecov shall file, within 30 days from the date of issuance of this order a contractual amendment to his FPC Gas Rate Schedule No. 1, which Genecov shall execute with Tennessee in conformity with Genecov's Offer of Settlement in all respects. The contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Upon notification by the Secretary of the Commission that Genecov has complied with the terms and conditions of this order, the rate and charge of 14.4248¢ per Mcf, including present tax reimbursement, specified in the Offer of Settlement, shall be effective as of the date of issuance of this order, the bonded refund obligation shall be cancelled, and the above-designated proceeding shall be deemed terminated.

(D) The Acceptance of this Offer of Settlement is without prejudice to any finding or determinations that may be made in any proceeding now pending or hereafter instituted by or against Genecov, including area rate and other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-71 (PHASE II)*

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 24, 1964)

On September 23, 1963, as amended and supplemented on October 18, 1963, and February 20 and 27, 1964, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP64-71 (Phase II) an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction, acquisition and operation of certain facilities in order to enable Applicant to purchase and receive from Humble Oil & Refining Company (Humble) and Pan American Petroleum Corporation (Pan American) [1] natural gas produced from the Sal del Ray, La Coma, Cerda and Willamar Fields in Hidalgo and Willacy Counties, Texas, all as more fully set forth in the application, as amended and supplemented (Phase II).

Specifically, Applicant proposes the following in Phase II:

1. To construct and operate 18.9 miles of 16-inch pipeline in Kenedy and Brooks Counties, Texas;
2. To construct and operate 31.5 miles of 12-inch pipeline in Willacy and Kenedy Counties, Texas;
3. To acquire from Humble and operate 14.19 miles of 10-inch pipeline in Hidalgo and Kenedy Counties, Texas, and,
4. To construct and operate metering and miscellaneous appurtenant facilities.

The application indicates the total estimated cost of Applicant's Phase II proposals to be approximately $2,139,000. Of this amount, approximately $269,000 is applicable to the acquisition cost of the Humble facilities. Applicant will finance the cost of Phase II facilities by short term borrowing pending permanent financing.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 24, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplements, amendments and exhibits (Phase II), submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

---

*The application in this docket is divided into two Phases. This order pertains exclusively to Phase II of said application. By Commission order issued December 24, 1963, in Phase I hereof, Applicant was authorized to construct and operate certain facilities in order to receive gas produced by Texaco Inc. from the Kelsey and Encinitas Fields, Brooks County, Texas.

[1] Humble in Docket Nos. CI64-297 and CI64-299 and Pan American in Docket No. CI64-377 were granted unconditioned temporary certificates by letters dated April 17, 1964, to make the related sales of natural gas to Applicant.

(2) The facilities proposed to be constructed, acquired and operated by Applicant, as hereinbefore described and as more fully described in the application, as supplemented and amended, in this proceeding (Phase II), are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction, acquisition and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction, acquisition and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter to Applicant and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct, acquire and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as amended and supplemented, in this proceeding (Phase II), upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the acquisition hereby authorized shall be consummated and operation begun by Applicant, all as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EASTERN SHORE NATURAL GAS COMPANY, DOCKET NO. CP64–172

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 28, 1964)

On January 31, 1964, Eastern Shore Natural Gas Company (Applicant) filed in Docket No. CP64–172 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing an increase in deliveries of firm gas from 100 Mcf per day to 250 Mcf per day by Applicant to the City of Dover, Delaware, McKee Run Electric Generating Plant, all as more fully set forth in the application.

Applicant states that the proposed increased volumes of gas will be used for the same purpose as the presently authorized 100 Mcf per day, namely, in the City of Dover boilers for pilot and main flame stabilization purposes during hours of minimum electric load and will serve as an added safety factor. Applicant states that no new facilities will be required to render the proposed increased service. Applicant has sufficient gas supply to support the proposal.

Applicant and the City of Dover have entered into an amendatory agreement, dated October 22, 1963, providing for the increased service at present rates.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 24, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Eastern Shore Natural Gas Company, a Delaware corporation, having its principal place of business in Salisbury, Maryland, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued November 29, 1957, in Docket No. G-12200 (18 FPC 710).

(2) The proposed increased transportation and delivery of natural gas by Applicant hereinbefore described, as more fully described in the application in this proceeding, will be in interstate commerce, subject to the jurisdiction of the Commission, and such proposed increased transportation and delivery are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed increased transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Eastern Shore Natural Gas Company, to transport and deliver a total maximum of 250 Mcf of natural gas per day, on a firm basis, as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The increased transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within two months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62-265

FINDINGS AND ORDER FURTHER AMENDING ORDER ISSUED MAY 16, 1963

(Issued April 28, 1964)

On February 24, 1964, El Paso Natural Gas Company (Applicant) filed an application to amend further the Commission's order Adopting Initial Decision of Presiding Examiner, issued May 16, 1963, 29 FPC 984, as amended, in Docket No. CP62-265 by deleting therefrom authorization to install 320 compressor horsepower at Applicant's proposed Portland Station, all as more fully set forth in the application to amend.

The order of May 16, 1963, as amended, authorized Applicant to construct and operate, among other facilities, three (3) 1,440 horsepower compressor units (for a total of 4,320 horsepower) at a new compressor station to be known as the Portland Compressor Station and to sell and deliver natural gas to California-Pacific Utilities Company for resale and distribution by the latter in southwestern Oregon.

Applicant states that upon re-evaluation it has been determined that a total of 4,000 horsepower at said Portland Station will be capable of handling the designed volumes, and, therefore, two (2) 2,000 horsepower units have been installed in lieu of the three (3) 1,440 horsepower units hereinbefore authorized.

Therefore, Applicant requests that the order of May 16, 1963, as amended, be further amended accordingly.

Due notice of the filing of the application to amend and opportunity for hearing hereon has been given by publication in the Federal Register on March 26, 1964 (29 F.R. 3790). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued May 16, 1963, in Docket No. CP62-265, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued May 16, 1963, in Docket No. CP62-265, as amended, be and the same is hereby further amended by deleting therefrom authorization to install 320 compressor horsepower at Applicant's proposed Portland Compressor Station, all as hereinbefore described and as set forth in the February 24, 1964, application to amend.

(B) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

INTERSTATE POWER COMPANY, DOCKET NO. E-7159

ORDER AUTHORIZING THE ISSUANCE OF PROMISSORY NOTES

(Issued April 28, 1964)

Interstate Power Company (Applicant), a corporation organized under the laws of the State of Delaware and domesticated in the States of Illinois, Iowa, Minnesota and South Dakota, with its principal place of business at Dubuque, Iowa, filed an application on March 23, 1964, for authorization pursuant to Section 204 of the Federal Power Act, to issue unsecured, short-term Promissory Notes in a principal amount not exceeding $8,800,000.

In accordance with a Loan Agreement dated March 12, 1964, Applicant proposes to issue $1,800,000 in notes to two Minnesota banks and seven Iowa banks. An additional $7 million in Promissory Notes is proposed to be issued pursuant to a Loan Agreement of March 13, 1964, with The Chase Manhattan Bank and Manufacturers Hanover Trust Company, both New York banks. Under both Loan Agreements, notes are proposed to be issued to mature one year from the date of respective issuance but not later than September 30, 1965, and each note is to bear interest at the prime commercial rate of The Chase Manhattan Bank for unsecured borrowings prevailing five business days prior to the date of each such note. The application indicates that none of the notes proposed to be issued will be resold to the general public, and that no finders fee or other fee, commission or remuneration is to be paid in connection with the issuance of the notes to any third person for negotiating the transactions.

Although the Loan Agreements described above permit the Applicant to borrow up to $8,800,000, the Applicant anticipates that not more than $7,000,000 notes will be outstanding at any one time. According to the Applicant, the larger credit authority has been requested to provide the company more "maneuverability" in the event that this should be desirable or necessary because of conditions which may prevail in the securities market in the Spring of 1965 which is when Applicant presently anticipates it will do its next permanent financing.

Applicant states that the net proceeds to be received by the company from the issuance of notes evidencing bank loans, together with depreciation accruals, cash on hand and retained earnings, will be used to carry out the company's 1964 construction program estimated at $11,996,000.

Included in the 1964 construction budget is the Clinton Beaver Channel Plant Unit No. 2 rated at 154,000 kilowatts. The total cost of this unit is estimated at $19,078,000 of which $2,220,000 will be expended in 1964.

For the Applicant's portion (55 miles) of the Twin City-St. Louis 345 kv line, Applicant has budgeted $250,000 in 1964 and $500,000 in 1965. Total estimated cost for this line, which will be in service in 1967, is $2,750,000. Raising voltage on transmission ties in the Dubuque area from 69 kv to 161 kv and the start of a 69 kv loop around Dubuque will require $1,250,000 in 1964 and $125,000 in 1965. Expenditures in 1964 to raise voltage on the Illinois 69 kv transmission lines to 161 kv and make additions to the Savannah and Galena substations are estimated at $346,000 and $215,000 is budgeted for additions to the Clinton Beaver 161 kv substation. New construction and rebuilding a portion of the 69 kv transmission grid will require $1,095,000 in 1964 and $300,000 in 1965. Expenditures in 1964 for electric distribution facilities are estimated at $3,984,000 and for gas and hot water heat distribution and general facilities are estimated at $1,125,000.

Written notice of the application has been given to the Commerce Commission of Illinois, the Minnesota Railroad and Warehouse Commission, the South Dakota Public Utilities Commission, and the State Commerce Commission of Iowa. Notice has also been given by publication in the Federal Register on April 4, 1964 (29 F.R. 4840), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before April 15, 1964, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission order, issued May 12, 1959, *In the Matter of Interstate Power Company*, Docket No. E-6877 (21 FPC 678).

(2) The proposed issuance of Promissory Notes in the principal amount not exceeding $8,800,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $8,800,000 outstanding at any one time, all as described above will be in excess of 5 percent of the par value of the other securities of Applicant, and therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(2) thereof.

(6) The proposed issuance of securities, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

(7) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $8,800,000 upon the terms and conditions and for the purposes set forth in the application, as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of all notes to be issued pursuant thereto, being not later than September 30, 1965.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission or any other Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any security to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-153

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued April 28, 1964)

On January 3, 1964, as supplemented and amended on February 10, 1964, Northern Natural Gas Company (Applicant) filed in Docket No. CP64-153 an application pursuant to Section 7 of the Natural Gas Act for authority to abandon three 1,350 horsepower compressor units at its Spraberry Compressor Station, Midland County, Texas, and for a certificate of public convenience and necessity authorizing the relocation and installation of the said compressor units at three gathering stations located in the Hugoton Field, Morton and Steven Counties, Kansas, all as more fully set forth in the application, as supplemented and amended.

Applicant states that the volumes of low pressure gas delivered to it by Phillips Petroleum Company at the Spraberry Station have declined and will continue to decline in future years; therefore, the available horsepower at said station is greater than required. Furthermore, Applicant states that due to the fracturing of wells, deliverability has been increased and additional horsepower is needed in the Kansas Hugoton Field. Applicant proposes to relocate and install the three 1,350 horsepower units at its Stevens County Nos. 1 and 2 gathering stations and its Morton County No. 1 gathering station, all in the Hugoton Field.

The total estimated cost of the proposed project is $855,330, which total costs include $398,294 for material and supplies transferred from the Spraberry Station. The estimated cost will be financed from cash-on-hand, reserve accruals and retained earnings.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented and amended, has been filed.

At a hearing held on April 24, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and amendment, and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented and amended, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the relocation, installation and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The relocation, installation and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The facilities to be abandoned, as heretofore described, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) Such abandonment by Applicant, as heretofore described, is permitted by the public convenience and necessity, and an order authorizing and approving same should be issued as hereinafter ordered.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to relocate, install and operate the proposed facilities, as hereinbefore described, all as more fully described in the application, as supplemented and amended, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be relocated, installed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application, as supplemented and amended, in this proceeding, be and the same is hereby granted.

(E) Applicant shall advise the Commission of the date of the abandonment within ten days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64–185

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 28, 1964)

On February 20, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64–185 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas to Hillside Gas Company, Inc. (Hillside) for resale and distribution by the latter in the communities of Garrison, Nacogdoches County, Texas, and Joaquin, Shelby County, Texas, all as more fully set forth in the application.

Specifically, Applicant proposes to construct and operate the following facilities:

(a) Approximately 50 feet of 2-inch pipeline, positive meter and regulator station and appurtenant facilities, on its Acme Brick Company lateral, Nacogdoches County, Texas, and

(b) Approximately 60 feet of 2-inch pipeline, positive meter and regulator station and appurtenant facilities, on its 10-inch Joaquin Field Lateral, Shelby County, Texas.

The total third-year peak day and annual natural gas requirements for the two communities to be served are estimated to be 700 Mcf and 79,835 Mcf, respectively.

The total estimated cost of the proposed facilities is $16,594, which cost will be financed out of current working funds.

By letter dated March 6, 1964, Applicant was issued a temporary certificate authorizing the subject proposals.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 24, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1962, in Docket No. G-216 (3 FPC 3).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64–186

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 28, 1964)

On February 24, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64–186 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 1.06 miles of 4-inch pipeline in Jones County, Mississippi, looping an existing 2-inch line, together with appurtenant equipment, all as more fully described in the application.

Applicant states that the proposed facilities will be used for the sale and delivery of additional quantities of natural gas to United Gas Corporation for resale by it in the Town of Ellisville, Mississippi, to meet the increased requirements of that community.

The estimated total cost of the proposed facilities is $25,200, to be financed from funds on hand.

The maximum daily capacity of the existing 2-inch pipeline is 1735 Mcf of gas, which is not sufficient to meet the increasing peak day demand. The capacity of the looped lines will be 9620 Mcf per day.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 24, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate facilities and to deliver natural gas in interstate commerce as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

AMERADA PETROLEUM CORPORATION, ET AL., DOCKET NO. CI62-1544, ET AL.

ORDER PARTIALLY GRANTING REHEARING FOR FURTHER CONSIDERATION, DISPOSAL OF MOTIONS TO DEFER, AND DEFERRING ACTION ON MOTIONS FOR EVIDENTIARY HEARING

(Issued April 30, 1964)

On March 23, 1964, 31 FPC 623, the Commission issued its Opinion No. 422 in the above-entitled proceedings. A number of the parties, as listed below, have submitted applications for rehearing or reconsideration of our decision, the first application being filed April 1.[1] In addition, various motions for leave to reopen the proceedings for the introduction of further evidence or for stay of certain actions required in the order accompanying Opinion No. 422 also have been submitted.[2] Since the statutory period under Section 19(a) of the Natural Gas Act is insufficient to permit a timely and proper disposition of these pleadings, it is necessary and appropriate to grant rehearing for the purpose of enabling further consideration of the arguments and allegations adduced.

---

[1] On April 1 jointly by Long Island Lighting Co., Philadelphia Electric Co. and The United Gas Improvement Co.; on April 8 by the Public Service Commission of the State of New York; on April 13 jointly by Texaco Inc., Humble Oil & Refining Co., Gulf Oil Corp., Sohio Petroleum Co., Union Producing Co., Jake L. Hamon, George H. Coates, Edwin L. Cox, Sunray DX Co. and Lamar Hunt; on April 13 by Amerada Petroleum Corp.; on April 16 by Standard Oil Co. of Texas; on April 20 severally by The Brooklyn Union Gas Co. and Clark Fuel Producing Co.; and on April 22 by Sun Oil Co.

[2] Texaco Inc., *et al.;* Clark Fuel Producing Co.; Sun Oil Co.; Texaco Inc., *et al.*, Motion For Evidentiary Hearing; Sun Oil Co., Motion to Reopen Proceedings, etc.

Although the limited rehearing herein granted will, during its pendency, have the effect of extending the time limitation set out in Ordering Paragraphs (C),[3] (D), (E) and (F), we do not believe that the period specified in Paragraph (G) for the filing of briefs on the issue of whether refunds should be ordered in those dockets where the prices charged under non-refund conditioned temporary authorizations were in excess of the in-line price should be indefinitely extended. Clark Fuel, in particular, has moved to defer the filing of briefs on this issue, or alternatively to reopen the proceedings for the presentation of evidence on the equities involved in the refund question, on the ground that the Court of Appeals for the District of Columbia has stayed its remand in *P.S.C.* v. *F.P.C.*[4] (Skelly) pending the filing by the producers of a petition for certiorari in the Supreme Court. Our requirement for briefs on this issue in these proceedings is a procedural determination. As brought out in the Opinion, no decision has yet been made as to whether refunds should or should not be required from the producers here. The "equitable considerations" detailed in the briefs will assist us in deciding the issue and, also, whether it is necessary to reopen the proceedings to permit the introduction of further evidence bearing thereon. The fact that a petition for a writ of certiorari has been filed[5] seeking higher appellate review of the threshold questions regarding the legalities involved or that, based thereon, the mandate of the Circuit Court on Opinion No. 362 has been stayed does not, we believe, constitute adequate basis to delay this preliminary step in this proceeding. If the petition is denied by the Supreme Court, or review accepted and the decision upheld,[6] we will be in a position to proceed in this case without unnecessary delay. Accordingly, this order will not serve to stay the provisions of the aforementioned Paragraph (G). Action on the motions for an immediate evidentiary hearing on the refund issue will be deferred pending consideration of the briefs and replies thereto, and the disposition by the Supreme Court of the petition for certiorari. Although the original 30-day period expired April 22, 1964, an extension of time to and including May 7, 1964, for the filing of briefs, with replies due on or before May 18, 1964, was granted by the Secretary.[7] In our opinion such extension was warranted and should be adequate for preparation of the desired filings. The requests for indefinite extension are denied.

The Commission orders:

(A) Rehearing in this proceeding is hereby granted for the sole purpose of further consideration of the said pending applications and motions.

(B) The rehearing herein granted does not stay the provision for the submission of briefs pursuant to Paragraph (G) of the order accompanying Opinion No. 422. The extension of time granted by the Secretary is confirmed. Action on the motions for evidentiary hearing is deferred until further order of the Commission.

---

[3] By Notice issued April 16, 1964, the time for compliance with Paragraph (C) was extended to and including May 22, 1964.

[4] No. 17582, *et al.*, decided January 23, 1964; stay issued February 27, 1964.

[5] *Prado Oil & Gas Co.* v. *F.P.C., et al.*, Oct. Term 1963, No. 987.

[6] In the event the petition is granted by the Supreme Court, further consideration of the issue in this case will be suspended.

[7] Notice of extension of time issued April 20, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CHICAGO DISTRICT PIPELINE COMPANY, DOCKET NO. RP64-5

ORDER APPROVING SETTLEMENT AGREEMENT AND TERMINATING PROCEEDING

(Issued April 30, 1964)

Chicago District Pipeline Company (CDP) on September 9, 1963, pursuant to the provisions of Section 4 of the Natural Gas Act, tendered for filing its FPC Gas Tariff, Fourth Revised Volume No. 1, proposing to change its rate form from a cost-of-service rate to a demand-commodity rate with a two-block commodity charge. By order issued October 31, 1963, the tendered tariff was suspended until April 1, 1964, and until such further time as it is made effective in the manner prescribed by the Natural Gas Act. CDP has not moved to place the suspended tariff in effect.

CDP, its customers, and Commission staff have participated in two formal prehearing conferences pursuant to orders of the Commission and Presiding Examiner. CDP, two of its three customers, and the Staff have filed their direct testimony and exhibits in this proceeding. Additionally, the parties held informal conferences looking toward a settlement of the issues in this proceeding. As a result thereof, CDP, on April 9, 1964, filed a Settlement Agreement and a motion to terminate this proceeding, which was agreed to by all parties, except staff. On April 14, 1964, staff filed objections to the Settlement Agreement and the motion to terminate. Subsequent thereto, the Staff and CDP held an additional conference seeking to settle their differences. As a result of this conference, CDP filed on April 24, 1964 an amendment to its Settlement Agreement with the Commission. The Staff has interposed no objection to the proposed settlement as amended.

The Settlement Agreement, as amended, provides that CDP will compute its rates on a monthly cost-of-service basis. The rates so computed will be collected under a demand-commodity form of rate with a two-block commodity charge. In computing its monthly cost of service, CDP will use a depreciation rate of 3.1 percent on its transmission plant. CDP, also, requests the Commission to waive the notice provision of our Regulations to permit the settlement rates to become effective as of May 1, 1964, and to terminate this proceeding.

The Commission finds:

(1) The settlement of this proceeding on the basis of the aforementioned agreement, as amended, is reasonable, proper and in the public interest in carrying out the provisions of the Natural Gas Act, and such agreement should be approved and made effective as hereinafter ordered, and this proceeding should be terminated.

(2) Good cause has been shown that the 30-day notice provision of our Regulations be waived with respect to the filing of the revised tariff by CDP and that it be permitted to become effective as hereinafter ordered.

The Commission orders:

(A) The settlement of this proceeding as proposed by the agreement filed herein on April 9, 1964, and amended on April 24, 1964, is approved in accordance with the terms and conditions of this order.

(B) Within 30 days after the date of issuance of this order, CDP shall file a revised tariff, satisfactory to the Commission, giving effect to the terms of the Settlement Agreement, as amended, to be effective as of May 1, 1964. Unless CDP is notified to the contrary within 15 days from the date that the revised tariff is filed with the Commission, the revised tariff shall be deemed accepted by the Commission.

(C) The notice provision of our Regulations is hereby waived with respect to the revised tariff required to be filed by Paragraph (B) hereof, and such revised tariff is hereby permitted to take effect as of May 1, 1964.

(D) Upon full compliance by CDP of all the terms and conditions of this order and acceptance by the Commission of the revised tariff required by paragraph (B) hereof, the proceeding in Docket No. RP64–5 shall be deemed terminated.

(E) This order is without prejudice to any findings or orders which have been, or may hereafter be made by the Commission, and is without prejudice to any claims or contention which may be made by the Commission, CDP, or any affected party herein in any proceeding now pending or hereafter instituted by or against CDP or any other company or person.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COLUMBIA RIVER BASIN, HEADWATER BENEFIT INVESTIGATION, DOCKET NO. E–6384

FINDINGS AND ORDER

(Issued April 30, 1964)

This order, under subsection 10(f) of the Federal Power Act (16 U.S.C. 803(f), determines payments to the United States for benefits provided by its headwater improvements to certain non-Federal projects in the Columbia River basin between January 1, 1949, and December 31, 1956. We previously issued several orders concerning headwater benefits payments in this basin. First, we found that no headwater benefits had accrued before 1949.[1] Second, we made interim determinations of payments for headwater benefits received at one project during part of the period now under consideration.[2] Third, we determined payments for benefits received from Federal headwater improvements and approved settlements for benefits provided by licensed projects to non-Federal projects between September 1, 1961, and August 31, 1963, the period of the first and second Pacific Northwest Coordination Agreements.[3] Determination of payments for headwater benefits received between January 1, 1957, and August 31, 1961, has yet to be made.

This order is based upon investigations which we initiated in 1950.[4] The staff tendered its first proposed report, including recommendations for payments, in September 1960. The staff's 1960 report was served upon the interested parties and their comments were solicited.

The non-Federal parties on May 19, 1961, responded with their own proposal for determining payments. Although they used a different method of computation, they estimated a total payment to the United States in an amount approximately seven-tenths of a percent less than the staff's estimate of the payment due. The Corps of Engineers advised on July 18, 1961, that it had no objection to the payments recommended by either the staff or the non-Federal parties, provided that the procedures followed in the reports would not be used as precedent. The Department of the Interior responded to the staff's 1960 report on March 16, 1962. The interested parties answered the Department of the Interior's comments by August 15, 1962.

---

[1] Order of February 25, 1952, in Docket No. E–6404.

[2] Orders of December 27, 1956, December 31, 1957, and December 11, 1958, in Docket No. E–6384 required the Puget Sound Power & Light Company and Public Utility District No. 1 of Chelan County, Washington, to pay the Montana Power Company, Washington Water Power Company, and the United States for headwater benefits received at the jointly-owned Rock Island Project, Project No. 943, between January 1, 1949, and December 31, 1955.

[3] Order of February 6, 1963, in Docket No. E–6384.

[4] Order of June 28, 1950, in Docket No. E–6404. Investigations in Docket No. E–6384 were conducted under orders of February 4, 1952, December 5, 1952, and January 16, 1956.

The staff prepared its second proposed report in October 1963 for the 1949–1956 period. The non-Federal parties and the Department of the Interior submitted comments upon this report on February 14, 1964. The Corps of Engineers advised on April 2, 1964, that it had no objection to the staff's recommended payments to the United States for headwater benefits.

The Department of the Interior maintains that during 1949 through 1956 the United States gave to the non-Federal parties the assurance—even in the absence of an agreement—of full storage releases from its headwater improvements in the event of a recurrence of critical water conditions.

This assurance, it says, was given principally by statutory and administrative directives that it operate the Federal projects as an integrated system—a mode of operation which coincidentally would assure water releases to the non-Federal parties during a recurrence of a critical water year. The assurance, according to the Department, also was provided by its having to make water releases during adverse streamflow conditions in order to produce enough power at its downstream projects to fulfill contractual obligations to its customers. The Department adduces various contracts and documents to show that it both gave assurance of water release and that the non-Federal parties relied upon the assurance.

The Department's position is that this assurance was immensely valuable to the non-Federal parties because it assured them of achieving maximum power benefits under minimum streamflow conditions. The Department accordingly proposes a method of determining payment for coordinated operation benefits similar to that in the first Pacific Northwest Coordination Agreement, which governed river operations for the period of September 1, 1961, through August 31, 1962.

The non-Federal parties deny that the United States gave assurance of scheduled water release until such assurance was provided in the first Pacific Northwest Coordination Agreement in 1961. They note that this agreement recites that the parties thereto, of which the United States was one, "have in the past voluntarily cooperated in the coordinated operation of their facilities" and that "the coordination of the facilities of all parties under a formal firm contract will result in . . . substantial additional firm power resources." They observe that if the Department of the Interior could collect, without a formal agreement, full payment for firm power provided by its headwater improvements, the Department would not have had such a strong incentive to enter into one.[5]

---

[5] A similar statement was made by the Department of the Interior on August 27, 1962, in commenting on the Staff headwater benefit report for the period September 1, 1961, through August 31, 1962, which was the one-year period covered by the first coordination agreement:

> The present one-year agreement is, in effect, a pilot coordination effort which looks forward to a long-term contract. The great advantage offered by coordination is in the creation of firm power, and since Federal system firm power is marketable only if available for a long period of time, the Department is devoting intensive efforts to working out a long-term coordination agreement. If the Commission gives no weight to any agreement by the parties on Section 10(f) payments, and instead makes a separate and independent calculation of these payments each year, then the parties may well be unable to reach a long-term coordination agreement.

The Department, they conclude, operated the Federal projects for the benefit of the United States without obligation to release water to the non-Federal project owners.

Having carefully considered the several submissions of the various interested parties, we conclude that non-Federal parties were not given assurance of scheduled water releases from Federal reservoirs and did not have assurance of full storage releases in the event of a recurrence of critical water conditions. In addition, the non-Federal parties were not in a position to require the release of water from upstream Federal reservoirs to meet their load requirements during the 1949–1956 period. Therefore, we approve the staff's recommended payments, based upon annual energy gains.

In their comments submitted on February 14, 1964, the non-Federal parties requested additional time to file for Commission approval under section 13.1 of the Regulations under the Federal Power Act a settlement among themselves involving headwater benefits accruing between January 1, 1949, and December 31, 1956. These parties may make such a filing within ninety days of the issuance of this order.

The Commission finds:

(1) The purpose of the present investigation is to determine what payments should be made to the United States in accordance with the provisions of subsection 10 (f) of the Federal Power Act, for headwater benefits received during the period of January 1, 1949, through December 31, 1956, from its headwater improvements in the Columbia River basin.

(2) The three Federal headwater improvement projects included in the present determination are Hungry Horse and Grand Coulee, operated by the Bureau of Reclamation, and Albeni Falls, operated by the Corps of Engineers.

(3) Each of the above-mentioned reservoir projects includes a hydroelectric plant which is benefited by at-site, and in some instances by upstream, storage. In addition, eight other power projects situated downstream from one or more of the three Federal headwater improvements, are affected by the release of water from one or more of the Federal reservoirs. Of the eight, three are owned by the United States and operated by the Corps of Engineers, and five belong to non-Federal entities. The names of downstream projects and their owners are shown in the tabulation below.

Federal		Non-Federal		
Owner	Project	Owner	Project	FPC Project No.
United States	Chief Joseph	The Montana Power Co.	Kerr	5
Do	McNary	do	Thompson Falls	1869
		The Washington Water Power Co.	Cabinet Gorge	2058
Do	Bonneville	Public Utility District No. 1 of Pend Oreille.	Box Canyon	2042
		Puget Sound Power & Light and Public Utility District No. 1 of Chelan County.	Rock Island[6]	943

(4) The dam and reservoir facilities at a headwater improvement project provide two power functions. The first is a regulatory or storage function, which is beneficial to the at-site power plant and each power plant downstream. The second is a head function, which is beneficial to the at-site power plant only. Therefore, in this study, the annual cost of interest, maintenance, and deprecia-

---

[6] Public Utility District No. 1 of Chelan County became the sole owner of this plant effective Jan. 6, 1956.

tion—subsection 10(f) costs—pertinent to the dam and reservoir of each headwater improvement project, to be borne by power both at site and downstream, is apportioned to storage and head functions. The cost subdivision is made annually by dividing the cost in proportion to the energy available from storage releases and the energy made available by the head at the storage site during the year being studied. Since, as previously noted, the head function provides only at-site benefits whereas the storage function provides both at-site and downstream benefits, the cost allocated to the storage function is the cost to be apportioned among the projects, at-site and downstream. This apportionment is made in direct proportion to the energy available at each plant from storage at the headwater improvement during the year being studied. The cost attributable to the storage function is determined by the following formula:

$$C_s = C_p \frac{E_s}{E_s + E_h},$$

In which C_s = annual 10(f) costs of the dam and reservoir to be apportioned to the storage function,
C_p = annual 10(f) costs of the dam and reservoir to be borne by power both at site and downstream,
E_s = energy at site and downstream from at-site storage, and
E_h = energy at site from natural flow and from at-site and upstream storage.

The annual subsection 10(f) costs of each headwater improvement thus apportioned to the storage function are distributed among the power plants at site and downstream in proportion to the energy each produced from the storage in the reservoir being considered. The annual costs thus apportioned to a downstream non-Federal plant represent the annual payment to be made by the owner of that plant for headwater benefits.

Deductions are made for interim payments ordered by the Commission to be made by the Puget Sound Power & Light Company and the Public Utility District No. 1 of Chelan County.

(5) The charges computed by the method described in section (4) of these findings to be payable to the United States by owners of non-Federal hydroelectric projects for the period between January 1, 1949, through December 31, 1956, under subsection 10(f) of the Federal Power Act, less interim payments[7] under previous orders of the Commission, are as follows:

The Montana Power Co.	$367,100
The Washington Water Power Co.	185,200
Public Utility District No. 1 of Pend Oreille County	27,600
Puget Sound Power & Light Co. and Public Utility District No. 1 of Chelan County	19,900
Public Utility District No. 1 of Chelan County	35,900
Total	635,700

(6) The charges assessed in this proceeding for benefits conferred by headwater improvements are equitable, based upon all of the facts and circumstances existing during the period of January 1, 1949, through December 31, 1956.

(7) Subsection 10(f) of the Federal Power Act requires that the owners of projects benefiting from headwater improvements shall pay to the United States the cost of making headwater benefits determinations as fixed by the Commission. All salaries and other expenses incurred in connection with this investigation

---

[7] Such payments total $90,400 which amount has been paid in full.

are estimated to be $43,300.[8] A reasonable and equitable apportionment of these costs is:

The Montana Power Co	$23,300
The Washington Water Power Co	12,400
Public Utility District No. 1 of Pend Oreille County	1,750
Puget Sound Power & Light Co. and Public Utility District No. 1 of Chelan County	2,100
Public Utility District No. 1 of Chelan County	3,750
Total	43,300

The Commission orders:

(A) The payments for headwater benefits to be made to the United States by the owners of the non-Federal hydroelectric projects for the period January 1, 1949, through December 31, 1956, less interim payments under previous orders of the Commission, are assessed under subsection 10(f) of the Federal Power Act as follows:

The Montana Power Co	$367,100
The Washington Water Power Co	185,200
Public Utility District No. 1 of Pend Oreille County	27,600
Puget Sound Power & Light Co. and Public Utility District No. 1 of Chelan County	19,900
Public Utility District No. 1 of Chelan County	35,900
Total	635,700

(B) The several parties shall pay to the Federal Power Commission, to defray the cost of making this determination, the sum of $43,300, to be divided as follows:

The Montana Power Co	$23,300
The Washington Water Power Co	12,400
Public Utility District No. 1 of Pend Oreille County	1,750
Puget Sound Power & Light Co. and Public Utility District No. 1 of Chelan County	2,100
Public Utility District No. 1 of Chelan County	3,750
Total	43,300

(C) The payments specified in paragraphs (A) and (B) shall be paid within sixty days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

DILLARD & WALTERMIRE DRILLING COMPANY, DOCKET NO. G-19455

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING REFUNDS, AND TERMINATING PROCEEDINGS

(Issued April 30, 1964)

On March 23, 1964, Dillard & Waltermire Drilling Company (D&W) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves a proposed increased rate for a sale of natural gas made to Tennessee Gas

---

[8] This figure does not include the $3,400 cost of interim investigations, which amount has been paid in full.

Transmission Company (TGT) by D&W. The offer relates to a sale made under Supplement No. 2 to D&W's FPC Gas Rate Schedule No. 1 in Willacy County, Texas (Texas R.R. Com. District #4). The proposed increased rate of 15.0952¢ was suspended by order of the Commission for the statutory period, and was made effective by D&W on April 1, 1960.

Under the terms of the offer, D&W proposes to establish a 14¢ per Mcf rate for the subject sale, and to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in excess of the settlement rate.[1] The estimated total dollars to be refunded approximates $1,500, exclusive of interest. No protests or objections have been filed to the offer.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, and its acceptance would serve the public interest.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by D&W on March 23, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by D&W March 23, 1964, is hereby approved in accordance with the provisions of this order.

(B) D&W shall refund to TGT to the date of issuance of this order the difference between the rate collected subject to refund under the rate schedule herein and the settlement rate, with simple interest at the applicable rate, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination, together with a release from TGT.

(C) Upon notification by the Secretary of the Commission that D&W has complied with the terms and conditions of this order the above designated proceeding shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

(D) The acceptance by the Commission of D&W's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against D&W, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

F. JULIUS FOHS (OPERATOR), ET AL., DOCKET NO. G-17123

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDING

(Issued April 30, 1964)

On March 17, 1964, F. Julius Fohs (Operator), *et al.* (Fohs) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the

---

[1] D&W recently filed an application, in Docket No. CI64-1121, for authorization to abandon the subject sale.

Commission's Rules of Practice and Procedure. The offer involves a proposed increased rate for a sale of natural gas made to Tennessee Gas Transmission Company (TGT) by Fohs. The offer relates to a sale made under Supplement No. 1 to Fohs' FPC Gas Rate Schedule No. 5 in LaVaca County, Texas (Texas R.R. Com. District #2). The proposed increased rate of 15.3333¢ was suspended by order of the Commission for the statutory period, and was made effective by Fohs on June 1, 1959.

Under the terms of the offer, Fohs proposes to eliminate the favored-nation, price redetermination and the periodic escalation provisions from the rate schedule and to establish a 15¢ per Mcf rate for the subject sale. Fohs' annual revenues will be decreased about $360 from the presently effective rate. No protests or objections have been filed to the offer.

Fohs, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in excess of the settlement rate.[1] The estimated total dollars to be refunded approximates $2,000, exclusive of interest.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Fohs' offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Fohs' rate and rate schedule.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Fohs on March 17, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Fohs on March 17, 1964, is hereby approved in accordance with the provisions of this order.

(B) Fohs shall file, within 30 days from the date of issuance of this order, notice of change in rate providing for the 15¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 5 eliminating the favored-nation, price redetermination, and the periodic escalation provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Fohs shall refund to TGT to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate, with simple interest at the applicable rate, making account for proper charges, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination, together with a release from TGT.

---

[1] Fohs' FPC Gas Rate Schedule No. 5 is subject to a dehydration charge by TGT, for which allowance must be made in computing the refund.

(D) Upon notification by the Secretary of the Commission that Fohs has complied with the terms and conditions of this order, the rate and charge of 15¢ per Mcf at 14.65 psia, specified in its offer of settlement, subject to any applicable contract deductions, shall be effective as of the date of issuance of this order, the above designated proceeding shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

(E) The acceptance by the Commission of Fohs' offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Fohs, including area rate or other similar proceedings.

OPINION NO. 418-A

PACIFIC NORTHWEST POWER COMPANY, PROJECT NO. 2243 AND WASHINGTON PUBLIC POWER SUPPLY SYSTEM, PROJECT NO. 2273

OPINION AND ORDER ON REHEARING AND DENYING MOTIONS FOR STAY AND TO STRIKE

(Issued April 30, 1964)*

Syllabus

1. Commission *reaffirms* conclusion that purpose of preliminary permit is to encourage development of nation's waterways by giving reasonable protection to party [whether private or public] investigating development of given reach of river. P. 1055.
2. Noting present move toward large scale generation and integration, Commission *observes* that priority provisions of Act will assume greater significance for municipal bodies as between themselves. P. 1055.
3. Commission *rejects* argument that its interpretation of priority may trigger race for preliminary permits for purpose of tying up all major undeveloped water resources of country. P. 1056.
4. Contention that decision on scope of permit would deprive Washington Public Power of statutory notice *rejected*. P. 1057.
5. Request for stay should be denied since, (1) postponement would be injurious to public interest; (2) issuance thereof would substantially harm Pacific Northwest; (3) Petitioner would not be irreparably injured and (4) Petitioner is unlikely to prevail on the merits. P. 1060.
6. Upon rehearing, Commission *reaffirms* prior order, as herein modified; *denies* applications for rehearing and stay.

Chairman Swidler and Commissioner Black *dissenting*.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

Ross, *Commissioner*:

Applications for rehearing and stay were filed on March 6, 1964 by the Department of the Interior, the Department of Conservation of the State of Washington, and the Washington Public Power Supply System (WPPSS) with respect to our Opinion and Order No. 418 issued February 5, 1964, 31 FPC 247. Pacific Northwest Power Company (PNPC) filed a motion to strike the applications of Interior and WPPSS on March 16, 1964. Thereafter on March 26, 1964, Interior filed a motion to strike or, in the alternative, to reopen the record. Responsive pleadings to the above applications and motions have also been filed.[1]

In our Opinion and Order we determined that the proposed hydroelectric project at the High Mountain Sheep Site is best adapted to a comprehensive plan for developing that reach of the Snake River above the mouth of the Salmon River, as opposed to the Nez Perce site below the mouth of the Salmon River. We also granted a license to the Pacific Northwest Power Company (PNPC) rather than to WPPSS, and refused to recommend federal development. We are of the opinion that the points raised have been largely covered by our original opinion, but will add the following comments to clarify our position.

Interior initially reargues that "there is no present regional need for the power to be generated by the High Mountain Sheep project which would balance the probable damage to the fish resource." In our original opinion we took cognizance of developments affecting the power generating capability of the Pacific Northwest which occurred since the close of the record. Specifically, we considered the power to be generated by Hanford, Wells and from Canadian Storage. On the basis of the record, including the recent developments, we found a regional need for the power HMS would generate by 1970–1971, and that PNPC particularly would need additional power by 1967–1968. While Interior disagrees with our conclusion, it alludes to no facts to support its position. We have nevertheless reexamined this issue and find that HMS power will be needed on a regional basis by 1970–1971 as we originally concluded, to which PNPC and WPPSS both agree.

Interior also argues that the Commission erred in not recommending federal development under Section 7(b) of the Federal Power Act. Section 7(b) provides that, "Whenever, in the judgment of the Commission, the development of any water resources for the public purposes should be undertaken by the United States itself, the Commission shall not approve any application for any project affecting such development." The Department interprets this section to mean that once there are Federal projects on a river, all projects possibly affecting them must be undertaken by the United States. The Department states that on the Columbia River system, the choice has been made for us by the Congress.[2] For the reasons stated in our original opinion, we disagree with this interpretation.

In addition, Interior argues that federal development is necessary to achieve that coordination necessary to obtain maximum use of HMS for flood control, navigation and power purposes. We disagree.

With respect to flood control, Article 51 requires PNPC to operate HMS in a manner consistent with optimum flood control purposes at no cost to the government for the loss of any power resulting from such operation.[3] The specific terms of the operation of HMS for flood control purposes are made subject to agreement between Corps of Engineers and the licensee in accordance with principles contained in the Article. This article is consistent with PNP's unqualified commitment to operate HMS in such manner.[4] Upon our own motion, we are eliminating the last sentence of Article 51 since it is ambiguous and adds nothing of substance to the Article.

---

[1] On April 4, 1964, the Chief of the Forest Service, Dept. of Agriculture, filed a letter in which he requested amendment of Article 53. While the propriety of this filing is open to question, we have duly considered it but believe the amendment he suggests is not appropriate.

[2] The Department states on p. 8: "Thus, as to the water resource through Asotin, the 'judgment' of the Commission has been replaced by the judgment of Congress."

[3] *Article No. 51.* In the interests of flood control downstream from the project, the Licensee shall operate the project in accordance with an agreement to be entered into by the Licensee and the United States Corps of Engineers for the purpose of determining detailed operating procedures for use during flood periods, in accordance with the following principles:

a. The total live storage space of about 2,250,000 acre-feet between elevation 1337

In addition, Article 52 requires PNPC to maintain a minimum flow of not less than 13,000 cfs when determined to be required—not by PNPC—but by the Corps of Engineers.[5] PNPC is not entitled to reimbursement for operating in this manner despite the fact that power benefits may accrue to the downstream federal plant. The minimum flow specified conforms precisely to that recommended by the Corps of Engineers. (FPC Ex. 37)

Article 14 constitutes the provision requiring the licensee to coordinate electrically and hydraulically for power purposes.[6] This Article presupposes, as does the coordination of any endeavor, the willingness to plan cooperatively in order to serve the region in the most effective and enlightened manner. Certainly, the object of providing the optimum firm load carrying ability and of producing

---

and elevation 1510 mean sea level will be made available for flood control use if and as required.

b. The reservoir level will be no higher than elevation 1475 by 1 March each year to provide about 600,000 acre-feet of storage space for flood control use at that time each year. Additional storage space will be made available between 1 March and the beginning of the flood period to insure the availability on 1 May of the total capacity needed for flood control as estimated by the Corps of Engineers.

c. The space made available as set forth above will be retained until capture of flood flows is requested by the Corps of Engineers, subject to involuntary storage as may be required due to excess of inflows over outlet capacity, or until refilling is authorized by the Corps of Engineers. In the event of involuntary storage during flood control operations, full storage capability will be regained as soon as possible.

d. During the flood storage period controlled outflows will be as warranted by the flood control requirements as determined by the Corps of Engineers with due regard to the requirements for the optimum multiple purpose operations of the project. When the Columbia River discharge at The Dalles is 600,000 cfs or higher the daily outflow may be reduced to a minimum of 10,000 acre-feet; except that during years of severe flood conditions the daily outflow may be reduced to a minimum of 4,000 acre-feet; below 600,000 cfs discharge at The Dalles, the outflow will be determined with due consideration given to all purposes of the project.

e. A discharge capacity of 65,000 cfs at minimum pool elevation 1382 is to be provided by the Licensee. This discharge capacity is based on the gated outlet capacity plus one half of the ultimate turbine hydraulic capacity.

The agreement will be subject to review from time to time as requested by the Licensee or the Corps of Engineers.

[4] We have said to you positively we will produce flood control storage from this project as requested by the Corps of Engineers, without compensation, at any time, with or without Canadian storage at any time, without reservation, we will do it. (Tr. 14,770–1)

[5] *Article 52.* In the interest of navigation the project shall be operated in accordance with the following requirements:

a. Minimum flow of not less than 13,000 cfs will be maintained at Lime Point, Idaho, during annual storage refill season when determined to be required by the Corps of Engineers in the interest of navigation. Flows of up to 16,500 cfs may be required at other times when determined by the Corps of Engineers to be necessary in the interest of navigation.

b. River fluctuations in the reach between Lewiston and Lime Point resulting from project operation shall not exceed a rate of one and a half feet per hour on the rising stage, and one foot per hour on the falling stage unless otherwise approved by the Corps of Engineers.

[6] *Article 14.* The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the Licensee as the Commission may order.

the maximum amount of usable secondary energy for the region could be frustrated by any participant, be he federal, public or private. However, it is beyond reasonable belief that any responsible agency, whether federal, public or private, would in the face of enlightened public opinion deliberately seek to sabotage the object of Article 14 which was designed to secure for the Northwest benefits heretofore recognized but, until recently, seldom obtainable for a mixed river basin system.

Interior for the first time in its application for rehearing, questions the adequacy of Article 14 which, until now, enjoyed the support of all the parties in the case. Interior's objective and purpose, namely, "to optimize regional power production consistent with other water resource development and purpose", is the same as ours. We, like Interior, recognize that "coordination may permit storage of water in one party's reservoir for the benefit of another. It may permit an exchange of winter energy from one system for summer energy of another thereby increasing the firm capabilities of both systems. It may reduce the requirement of reserve capacity to the benefit of both systems. It may permit the joint use of transmission facilities or the exchange of energy between systems so as to reduce transmission requirements."[7] In addition, coordination may include the planning of new generating resources and scheduled maintenance and the sharing of resources.

We believe that, in keeping with the spirit referred to above plus the legal effect of Article 14, we will achieve the notable results sought by us all. However, we do not believe that the Article proposed by Interior, insofar as it refuses to recognize an equitable sharing of benefits in the context of a mixed system of plants in a common basin, will result in the maximum economic benefit to the region.[8] Only by recognizing the contributions of each system in providing for an equitable sharing of benefits will the optimum development of our resources envisioned by the framers of the Water Power Act become a reality. This represents nothing novel to this region. As a matter of fact, this approach is entirely consistent with the principles underlying the Pacific Northwest Coordinating Agreement, an agreement to which Interior (BPA), PUD's and private power companies are parties.

We do agree with Interior that the licensee should be obliged to provide transmission facilities necessary to effectuate the desired coordination. It had been our understanding that this requirement was implicit in Article 14. In view of Interior's concern, it is apparent that this understanding is not shared by all interested parties. We will therefore amend the Article to expressly include this requirement in order to obviate any debate in the future. We are also modifying the Article to clarify our original idea that this Article is designed to maximize power production and other beneficial public uses.

Beyond the changes noted above, we are satisfied that Article 14 requires no further modification. We have described the general principles applicable thereto and do not consider it feasible to reduce them into concrete terms at this time. By the time HMS will be ready for operation, the factual situation and the consequent requirements may be substantially different from those prevailing at this time.

WPPSS's principal objection relates to our interpretation of the priority afforded by a permit. WPPSS misunderstands the significance of the preference and priority provisions of the Act. The priority provisions were not designed to counter-balance the preference rights of public bodies. To the contrary, the priority sections have independent significance and are not directed to the public-private power controversy. The purpose of the priority provisions is to encourage development of the nation's waterways by giving reasonable protection to a party investigating the development of a given reach of the river. Obviously, there would be little incentive to conduct costly and time-consuming studies of a particular reach if another party could, after the studies were completed, file a competitive application and have at least equal rights with the party making the investigation. The priority provisions were drawn to afford protection to one who makes such investigations, irrespective of whether the party involved is a private or public agency.

---

[7] Comments of Interior, March 13, 1964, p. 22–23, Project No. 1971.

[8] This is not to say, as Interior alleges, that Article 14 requires the federal government to pay for headwater benefits—a payment precluded by Section 10(f) of the Act. As we have earlier stated, Article 14 does not require 10(f) payments. *P.U.D. No. 1 of Douglas County, Project No. 2149*, 28 FPC 128.

During the present age which is witnessing a move toward large scale generation and integration, it is evident that the priority provisions of the Act will assume greater significance for municipal bodies as between themselves. No longer are such agencies restricted to a relatively small area. WPPSS, a Washington municipality, for example, is here applying for a project on the Idaho-Oregon boundary. Future cases will undoubtedly witness competitive license applications by local and distant municipal bodies. Needless to say, the question of priority could be decisive in such cases.

WPPSS argues that our decision disregards and completely reverses policies, interpretations and practices of the Commission, established and consistently followed for over forty years. Specifically, WPPSS charges that our finding that PNPC has priority under its preliminary permit is contrary to a General Counsel's opinion issued in 1923 (and not heard from again for all practical purposes until this case). As we stated initially, the General Counsel was issuing an opinion in response to the question whether priority could survive a three-year period if a license application were filed before the term of the permit expired. Our decision herein is consistent with this opinion.

The General Counsel's opinion does contain extraneous language. However, for us to rely, as a binding precedent, upon a gratuitous dictum remark of a General Counsel made years ago—untested by the sharp exchanges of learned opposing counsel whose clients have much at stake as in this case, is carrying the doctrine of reliance upon dicta to an extreme which twists a legal principle beyond recognition. Moreover, WPPSS has admitted that we are dealing with "a purely legal issue not heretofore decided by either the Commission or the Courts."[9]

On page 29 of its application WPPSS states its position with respect to the protection afforded by a permit. Because this position is identical to that we have adopted we cite it in full:

> "Reasonable security" under a permit is not insubstantial. It consists of:
>
> (a) Protection pending investigation against the acceptance for filing of license *applications* by others *affecting the same reach* (FPC Reg. § 4.30); [Application for Rehearing, p. 29; emphasis added.]

The regulation cited by WPPSS reads as follows:

> § 4.30. An application for license may be filed by any citizen, association of citizens, corporation, State, or municipality desirous of obtaining a license pursuant to the act: *Provided, however*, That if a preliminary permit has been issued, no action on applications by others than the permittee *covering in whole or in part the same reach* of stream or streams shall be taken that

---

[9] WPPSS application for stay, p. 3. The minority also agree that this is a case of first impression. Dissent, p. 19.

> might infringe on the rights of the permittee under sections 5 and 7 of the Federal Power Act. [Emphasis added.]

Both WPPSS and our regulations thus confirm our view that the scope of a permit extends beyond the incredibly narrow confines of mileage location, exact to the tenth of a mile, and project description including the height of the dam to the foot, as described therein. We are satisfied that permits provide a priority to the reach of the river encompassed by the project described in the permit.[10]

WPPSS argues that the result of our interpretation of priority may be to trigger a race for preliminary permits for the purpose of tying up all major undeveloped water resources of the country. This is reminiscent of the fears expressed during the hearings and debate on the Water Power Act by some members of Congress to the effect the private power companies would immediately file for all the good sites. The flood did not occur. The same is true regarding WPPSS's concern. Whatever the basis for WPPSS's insight, it seems unjustified. There has not been a single application for a preliminary permit filed since the time our original decision was released.

WPPSS also argues that a permittee must apply for an amendment if it desires to construct a project different from that described in the permit. Whether amended permits would be granted would depend, in WPPSS's view, upon undescribed "facts" and whether a preference agency filed a competitive application. Under this view, a permittee would have no flexibility to develop the best project on the reach involved. In effect, the permittee would have an assurance of protection exclusively for the project described in the permit, which is really no protection at all. As we stated in our decision, there has never been a project constructed exactly as initially described in a permit to our knowledge.

In this connection, it is interesting to note that the minority also rejects this view. Actually, the minority essentially agrees with our position on priority, with the sole exception noted below. This should not be surprising because the minority recognizes the obvious need "that an applicant be allowed flexibility and be encouraged to study all reasonable alternatives, including those not known at the time of an application for a permit." The minority suggests that "the way to obtain this flexibility, however, is by allowance of needed amendments."

The meaning of the minority approach can best be understood by the following examples. Municipality A after conducting studies under a two-year permit[11] covering a certain reach of the river X—Y discovers that a site one-tenth of a mile downstream would permit increased power generation at lesser costs and at the same time more fully develop the recreational, flood control, navigation and other uses of the river. Municipality A therefore files for an amendment to its permit describing the site. However, before the Commission acts on the application for amendment, Municipality B files for a permit describing the same project. If, for any reason, the minority would deny Municipality A's application for amendment to its permit, then the flexibility the minority concedes is required by permittees is not achieved.

Rather than assuming this position, it seems safe to conclude that the minority, having urged the filing of amendments, would grant them. Thus, the minority would grant A's application for amendment to its permit and deny B's application for permit. As Commissioner Black states: "An applicant would obviously be entitled to routine approval of an amendment to his permit. . . ."

---

[10] Throughout its application WPPSS attempts to inject an element of confusion as to exactly what reach is covered by PNPC's permit. The stipulation entered at the prehearing conference in this case resolves any alleged confusion on that score. See original decision, note 10, *Supra*, p. 254.

[11] The usual term of permits currently granted by the Commission is two years.

The full significance of this approach becomes apparent when A is not a municipality but a non-preference body such as a co-op. Again, we assume that Co-op A was granted a two-year permit, describing project 1 which would develop given reach of the river X—Y. Immediately after the grant, A conducts studies of X—Y and confers with the several interested federal and state agencies concerned with water development, as required by the specific terms of the permit. As a result, it becomes apparent one year later that site 2, 500 feet downstream, in addition to other engineering changes would best develop reach of the river X—Y. So, according to the Minority, Co-op A would file for an amendment. Before the Commission acts on A's application for amendment, Municipality B files an application for a permit, describing the same project as that identified by A in A's application for amendment. Thus, the Commission has two mutually exclusive applications before it.

Section 7(a) of the Power Act requires the Commission to give preference to municipalities in granting applications for permits. And here is the rub. Which application would the minority grant: A or B's? If, for *any* reason, the minority would not grant A's application, it would not give permittees the flexibility and encouragement it states is required. However, the only way the minority could grant A's application without violating the flat command of Section 7(a) is to hold that A's priority and consequently its flexibility derives from its original permit. But if A's flexibility derives from its initial permit, why all the fuss about filing for amendments?

Thus, the only difference between our position and that of the minority is that the latter would insist on paper filings of extremely dubious significance.

WPPSS also argues that our decision would deprive it of statutory notice so it would be unable to exercise its preference rights.[12] Since at least 1954, WPPSS and its predecessor in interest, the Northwest Public Power Association have actively participated in all of the proceedings involving this reach for the purpose of advocating the advantages of Nez Perce over alternative sites on the Snake. At the public hearings held in Lewiston, Idaho on the preliminary report in S.D. 51,[13] then proposing what is now High Mountain Sheep, Mr. Gus Norwood, Executive Secretary of the Northwest Public Power Association, filed a protest because High Mountain Sheep would pre-empt Nez Perce. He did the same thing when PNPC filed its application for preliminary permit, and intervened for the purpose of again urging Nez Perce during the previous hearing on the Mountain Sheep-Pleasant Valley license proceedings. As pointed out by the Examiner herein, the managing director of WPPSS testified:

> I am sure had [PNPC] * * * seen fit to make a filing on the Nez Perce project, in my opinion the public agencies wouldn't have made a filing on the Nez Perce project. (Tr. 4448)

WPPSS was never really misled or deprived of notice. To the contrary, WPPSS knew exactly what was going on but apparently had to change horses in midstream. Its early interest was directed to promoting the Nez Perce site, assuming all the while that Interior would undoubtedly want to construct the project or, at the very least, could be induced into it. When WPPSS realized that it would not be bailed out by Interior and that the grains of sand were running short, then it became necessary for WPPSS to change its strategy. It therefore entered a claim for Nez Perce. Only after that hearing concluded did WPPSS come to realize that the preservation of the fish runs on the Salmon River would unquestionably be the determining factor in the case and preclude construction of Nez Perce. Only at that late stage did WPPSS take its pride in hand and assert a claimed preference for the HMS site, distasteful as it must have been—and still is—to its concept of what is the proper development of this reach of the river. We have no sympathy for WPPSS's alleged deprival of notice.

---

[12] See also dissent, *Supra*, p. 298–299.

[13] Senate Document 51, June 14, 1955, comprises a report of the Corps of Engineers on its studies of the Middle Snake River, in which it recommends construction of a dam at the Mountain Sheep site in contrast with the Nez Perce site.

In addition, WPPSS criticizes our reliance upon the legislative history of the Water Power Act with respect to land withdrawals as explaining why FPC permits describe specific projects. WPPSS erroneously states that Congress was unconcerned with the extent of land withdrawals in its consideration of the Water Power Act.

The legislative history is to the contrary. Mr. Raker stated:

> The committee and those who appeared before the committee had this in view, that while we want to conserve the public domain and the public property for uses that might be made for the purpose of developing hydroelectric power in all its forms for ditches, houses, plants or reservoirs, it should be done, but at the same time we are beginning to realize that a reservation simply to mark imaginary lines around a large tract of land and saying that is conservation, but not using it, means nothing. It is absurd; it is ridiculous.[14]

Mr. Mondell criticized land withdrawals:

> We have a lot of lands withdrawn for water-power purposes. In the nature of things they could not have been withdrawn very intelligently, because they were withdrawn hurriedly. The best lands for the development of water power were not always withdrawn. That was not with intent; that was out of ignorance. Other lands were withdrawn simply because they lay along streams, and without much regard to the possibility of power development. The withdrawals were wise and otherwise—and largely otherwise.[15]

Still later, we read:

> I can see a man filing an application in my district covering a million acres under this law whereby every improvement on that land in the way of future homesteading, future desert-land entries, future mining entries, would be absolutely blocked until the land was released by the commission or by Congress. I can see myself working here for the next 40 years in getting homestead and desert-land claims and mining claims released from this kind of application for the good, honest citizens of this country who want to go there and live and develop it as they ought to.
>
> * * * * * * *
>
> (Mr. Johnson) The gentleman from California [Mr. Raker] is quite right. We have tied up too much.[16]

Congress was concerned with undue land withdrawals and clearly expressed its concern. In the light of this history, it is not surprising that the Commission historically has followed a policy of requiring the filing of applications for permits to describe a project with particularity. Since, under § 24 of the Act, a reservation is automatically effected by filing for a permit, the Commission's continuous practice in this regard represents a satisfactory compromise between the necessity to preserve valuable power sites and the need to make valuable land areas available for public entry.

[14] Cong. Rec.—House, August 20, 1914, Vol. 51, p. 14062.

[15] 65th Cong., 2nd Sess., Hearings, House Committee on Water Power, May 13, 1918, p. 624.

[16] Cong. Rec.—House, Sept. 5, 1918, Vol. 56, p. 10035.

WPPSS also quarrels with our findings as to the power requirements of WPPSS and PNPC. WPPSS does not contest our finding that PNPC will have a need for the power by the time HMS is constructed. To the contrary, WPPSS recognizes PNPC's deficiency and suggests that PNPC must find some manner of offsetting this deficiency during the period HMS is being constructed. We agree. However, we are confident that PNPC will find some satisfactory method of serving its customers in the interim period. In view of this situation and because our selection of PNPC is based on its priority, it is unnecessary to treat this matter further. It is sufficient for us to note that WPPSS has failed to show we made any material error in this area.[17]

WPPSS complains that we have ignored the difference between its proposal for HMS and that of PNPC. This is incorrect. However the differences between the two proposals are of such a technical engineering nature that they must await the submission of final plans. It is impossible at this point to determine the precise nature of the project which will eventually be constructed at HMS. We recognized this situation in our decision. On page 252, we stated that a complete geological study carried out by a more elaborate program of borings is required before construction can be authorized at any HMS site. On page 255 we noted that final plans may differ from what we characterized as the estimates submitted herein. We therefore specifically refused to find that the data submitted respecting these plans precisely represent the ultimate development of either plan. In order to assure that the complete potential of this reach of the river is fully developed by PNPC, *i.e.*, that development required by Section 10(a) of the Act, we specifically included Articles 39 through 44 in the license.

However, to avoid any possible ambiguity, we are modifying our order to describe the project works at the HMS site; which, on the basis of present information, we find to be best adapted to a comprehensive plan of development under the test set forth in Section 10(a) of the Act.

All three applicants for rehearing have requested a stay of our opinion and order granting a license to PNPC pending appeal. Under Section 313(a) of the Federal Power Act a stay does not result automatically from the filing of application for rehearing. *In Virginia Petroleum Jobbers* v. *F.P.C.*, 259 F. 2d 921 (CADC 1958) the court prescribed four tests which must be satisfied in order to justify a stay of an administrative order: (1) Petitioner must be likely to prevail on the merits; (2) Petitioner will be irreparably injured;[18] (3) Issuance of the stay will not substantially harm other interested parties; and (4) The public interest would not be adversely affected.[19]

---

[17] WPPSS currently notes that, on the basis of average energy resources during the winter control storage period, as shown by the record, with the addition of the Wells and Hanford projects, PNPC might not require all of the HMS energy until 1969–1970. WPPSS also points out correctly, contrary to our statement that it does not own or operate any electric facilities, that since the close of the record it has constructed the Packwood Project (No. 2244) with 26,000 KW of normal capacity and has under construction steam generating facilities associated with the Hanford nuclear project.

[18] As to this element, the court stated: "The key word in this consideration is irreparable. Mere injuries, however substantial, in terms of money, time and energy necessarily expended in the absence of a stay, are not enough. The possibility that adequate compensatory or other corrective relief will be available at a later date, in the ordinary course of litigation, weighs heavily against claim of irreparable harm." 259 F. 2d 925.

Treating these tests in reverse order, we have unanimously found that HMS power certainly will be required by the time construction is completed. Thus, any postponement would be injurious to the public interest. PNPC, particularly, has an urgent need for the power and our refusal to allow it to proceed with its plan to construct this economical project would clearly be to its economic disadvantage. On the other hand, WPPSS has singularly failed to allege *any* injury to it resulting from a refusal to stay, much less irreparable injury. Finally, for the reasons stated herein and in our original opinion, we believe that our decision will be affirmed if appealed.

In addition, it is significant that PNPC will not begin actual construction of HMS until completion of additional studies required by our order. Article 42, as amended, provides:

> The Licensee shall submit, in accordance with the Commission's rules and regulations, revised Exhibit L drawings and Exhibit M for the project structures and Licensee shall not begin construction of the project works until the Commission approves the exhibit.

These activities will not be completed before our order becomes subject to the jurisdiction of the court, and thus would not preclude the use of the site by another party. There is no reason to fear that a federal court would distort its judgment because of these investigative activities, particularly since PNPC would be proceeding at its own risk.

PNPC on March 16, 1964, filed a motion to strike the application for rehearing filed by WPPSS on the ground that it was not filed under oath in accordance with Section 1.34(a) of the Commission's rules, and filed a similar motion to strike the application of the Department of the Interior for this reason and for the further reason that under the Commission's order of December 14, 1962 the Secretary is a limited participant and was not authorized to file a petition for rehearing. Verifications for the two applications were filed on March 16, 1964, and, while this was not in strict conformity to our rules, our Secretary by accepting the applications for rehearing properly waived the failure to make the filings under oath in accordance with his authority delegated by Section 3.5 (9) of the Rules. In this connection, our order of December 14, 1962 was intended to permit the Department of the Interior to participate in the remaining procedural steps in this case. Accordingly, that order does not limit Interior in contesting the order adopted.

The Commission further finds:

The applications and motions hereinabove described present no new facts or principles of law which warrant any change in the order of February 5, 1964, except to the extent noted in ordering paragraph (A) below.

The Commission orders:

(A) The Commission's order entered in this matter on February 5, 1964 is modified in the following respects:

(i) Paragraph (A) (ii) is amended to read as follows:

All project works consisting of a concrete arch dam approximately 670 feet high, creating a reservoir extending about 58 miles upstream to Hells Canyon tailwater (Project No. 1971) on the Snake River and about 10 miles upstream on the Imnaha River with normal water surface area of about 17,300 acres and gross storage capacity of 3,600,000 acre-feet at normal water surface elevation 1510, of which 2,250,000 acre-feet would be usable with a draw down of 173 feet; a chute-type radial-gate controlled spillway located at the right abutment; low level intakes; an outdoor type powerhouse, immediately downstream of the dam, having an initial installation of six units with each turbine rate 321,000 horsepower at 550-foot head and each generator rated 200,000 kw (210,000 kva at 0.95 power factor); with provisions in the plans for the addition of four additional units, and appurtenant electrical and mechanical facilities; the location, nature, and character of which are subject to the Commission's approval under Article 42.

---

[19] "In litigation involving the administration of regulatory statutes designed to promote the public interest, this factor necessarily becomes crucial." *Ibid.*

(ii) Article 14 is amended to read as follows:

The licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner including the construction of additional transmission facilities as the Commission may direct in the interest of maximizing power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the licensee as the Commission may order.

(iii) Article 42 is amended to include "and Exhibit M" after the word drawings in the second line.

(iv) Article 51 is amended to eliminate the last sentence.

(v) Article 56 a. is amended by changing "1,166,700" to "1,600,000" in the fourth line.

(B) The applications for rehearing and for stay filed by WPPSS, the Secretary of the Interior, and the Department of Conservation of the State of Washington are hereby denied.

(C) The motions of PNPC to strike the applications for rehearing filed by the Secretary of the Interior and WPPSS are hereby denied, except to the extent heretofore described.

(D) In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of the issuance of this order.

Chairman Swidler and Commissioner Black *dissenting*.

Commissioner Black filed a *dissenting* statement.

BLACK, Commissioner, *dissenting:*

I dissent to the majority's order on rehearing for the reasons already stated in the dissenting opinion to the licensing decision of February 5, 1964.

The Commission's rather labored defense of its position presents nothing new and does not require any extended restatement of the views expressed by the Chairman in which I have concurred. The majority neglects for the most part even to discuss the competing applications with which we are concerned and the principles of law which apply to the facts before us. Instead, we are treated to a little fantasy in which hypothetical parties are engaged in a controversy unrelated to the case at issue. This Commission can strain with its A's and B's, its X's and Y's, its fictitious municipalities and co-ops, and move its fanciful projects 500 feet up and down stream until the Salmon and Snake Rivers both begin flowing uphill; for the fact situation posited by the majority completely misses the point. Here PNPC did not seek to change its Low Mountain Sheep-Pleasant Valley project as a result of site explorations. It applied for HMS, because the Commission rejected its license application for the LMS–PV project. An applicant would obviously be entitled to routine approval of an amendment to his permit, in appropriate cases, where his exploration at the project site indicated that changes in the project were desirable.

Try as they will by discussing cases which are not before us, my colleagues of the majority cannot change the facts that (a) the Commission had precisely defined the scope of PNPC's preliminary permit; (b) PNPC's license application within the scope of that permit was denied by the Commission; (c) only after the expiration of the preliminary permit originally issued in this docket did PNPC conduct the necessary investigations to support this new site; and (d) WPPSS is a preference entity under Section 7(a) of the Federal Power Act which provides that "the Commission shall give preference to applications therefor by States and municipalities, provided the plans for the same are deemed by the Commission equally well adapted, or shall within a reasonable time to be fixed by the Commission be made equally well adapted, to conserve and utilize in the public interest the water resources of the region."

These factors are dispositive of the case; but lest silence on the remaining aspects of this controversy might imply that the minority no longer adheres in toto to its position, it should be restated that (a) the effect of the preliminary permit issued PNPC terminated upon the Commission's denial of its original license application and (b) PNPC failed in any event to perfect its application for the High Mountain Sheep project within the three-year statutory limit. No useful purpose would be served by repeating here the arguments which support these positions already set forth at length in the Chairman's dissent to the February 5 order and opinion.

I also dissent to the Commission's refusal to grant a stay of the order pending appeal. As the Supreme Court has stated, the granting of stay "is an exercise of judicial discretion. The propriety of its issue is dependent upon the circumstances of the particular case."[1] The case cited by the majority, involving an issue of the right of competing fuel interests to intervene in certificate cases arising under the Natural Gas Act, is not in point. Further, it relates to the standards applicable to judicial stay of administrative actions which are not the same as the standards which administrative bodies must apply to their own decisions. At any rate, we should note the Court's observation that "injury held insufficient to justify a stay in one case may well be sufficient to justify it in another, where the applicant has demonstrated a higher probability of success on the merits."[2] Surely we can take into account the fact that difficult and closely controverted questions of law of the most far reaching significance are presented by and go to the very heart of this case.

To grant a stay does not constitute an admission of error—it only bespeaks a certain degree of caution and prudence which it might behoove this Commission to exercise. The majority implicitly acknowledges that the review process may not be completed before construction would normally commence and that a stay would delay construction. However, if the wrong party moves in and begins development of the site or otherwise incurs costs associated with such development our problems are greatly complicated in the event of a remand by the court. More importantly, by failing to stay the effect of the order, we are permitting and encouraging the expenditure of perhaps large sums of money

which will be reflected in the cost of service of those utility companies comprising PNPC. This result is hardly protective of the public interest. I feel strongly that we should do everything in our power to preserve the status quo until the strenuously contested legal issues in this case are properly disposed of by the courts. The damage to the parties and to the public interest which will result from premature construction activities, should this case be remanded to the Commission, in my opinion greatly outweighs the detrimental effect of delay pending judicial review.

Chairman Swidler joins in these views.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PUBLIC SERVICE COMPANY OF INDIANA, INC., DOCKET NO. E-7163

ORDER INITIATING INVESTIGATION AND HEARING

(Issued May 1, 1964)

Public Service Company of Indiana, Inc. (PSCI), a corporation organized under the laws of the State of Indiana, having its principal business office at Plainfield, Indiana, in prior orders of this Commission has been found to be a "public utility" within the meaning of that term as used in the Federal Power Act.[1]

From information presently available to the Commission it appears that PSCI owns and operates interconnected electric production and transmission facilities in the State of Indiana, which facilities also are interconnected with electric facilities of Louisville Gas & Electric Company in Kentucky and The Cincinnati Gas & Electric Company in Ohio. PSCI is also interconnected in Indiana with Indianapolis Power & Light Company, Northern Indiana Public Service Company, Southern Indiana Gas & Electric Co., and Indiana & Michigan Electric Company, all of whom own facilities which in turn are interconnected with electric utilities or facilities located outside of the State of Indiana. It also appears that PSCI regularly delivers to and receives electric power and energy from each of these utility systems. In addition, the PSCI system is interconnected with and sells power to a number of municipal and cooperatively-owned electric systems.

Rate Schedules Filed With The Commission

During the years 1942 to 1947, PSCI submitted to the Federal Power Commission contracts and rate schedules providing service to eleven municipalities in Indiana: Bainbridge, Covington, Ladoga, Middletown, Montezuma, Paragon, Pendleton, Rockville, Tipton, Veedersburg and Etna Green.[2] In submitting these contracts and schedules, PSCI sent a covering letter in each instance which stated that the schedules were "enclosed for [FPC's] information" and took the place of earlier schedules which had been "heretofore sent you at your request and . . . designated by you as [rate schedules.]" The Secretary of the Commission in each instance sent a letter to PSCI acknowledging receipt of the letter, contract and rate schedule from PSCI, stating that the rate schedule and contract had been designated as a PSCI Rate Schedule, and further stating the F.P.C. Number assigned to the rate schedule and contract.

---

[1] *Indiana & Michigan Electric Co.* and *Public Service Co. of Indiana, Inc.*, 9 FPC 617, 619 (1950); *Public Service Co. of Indiana, Inc.*, 10 FPC 1096, 1098(1951); *Public Service Co. of Indiana, Inc.* and *Madison Light and Power Company*, 10 FPC 1206, 1207 (1951); *Indiana & Michigan Electric Company* and *Public Service Co. of Indiana, Inc.*, 10 FPC 1315, 1316(1951). Section 201(e) states: "the term 'public utility' when used in this Part or in the Part next following means any person who owns or operates facilities subject to the jurisdiction of the Commission under this Part."

[2] Section 205(c) provides:

> Under such rules and regulations as the Commission may prescribe, every public utility shall file with the Commission, within such time and in such form as the Commission may designate, and shall keep open in convenient form and place for public inspection schedules showing all rates and charges for any transmission or sale subject to the jurisdiction of the Commission, and the classifications, practices, and regulations affecting such rates and charges, together with all contracts which in any manner affect or relate to such rates, charges, classifications and services.

These rate schedules for service to these eleven municipalities in Indiana are currently designated in the files of this Commission as follows:

PSCI Rate Schedule FPC No.:	*Purchaser*
27	Town of Middletown
29	Town of Rockville
30	Town of Veedersburg
31	City of Tipton
33	Town of Montezuma
34	Town of Bainbridge
36	Town of Paragon
37	Town of Etna Green [3]
38	Town of Ladoga
40	Town of Pendleton
41	City of Covington

[3] Etna Green reports, however, that it is currently served by Northern Indiana Public Service Company.

By the terms of these rate schedules, 60 cycle, alternating current was supplied to these municipalities for their own use and for resale to their customers.

Interconnection Agreements

PSCI also has a number of interconnection agreements on file with this Commission as rate schedules.

PSCI Rate Schedule FPC No. 35-A (including Supplement Nos. 1, 2, 3 and 4) is an interconnection agreement between PSCI and Indiana & Michigan Electric Company. The agreement by its terms states that the companies have been interconnected at numerous points and have interchanged electric power and energy for many years, and that such interchanges have resulted in mutual advantages and benefits to the parties and their consumers, such as: conservation of materials, economies in cost, and improvement to the continuity and quality of service. The agreement states that the parties desire to increase these benefits. Accordingly, the parties agree therein to continue the interconnections, maintain their systems in continuous synchronous operation, render mutual emergency and standby assistance, coordinate spinning and standby reserve capacity, coordinate maintenance schedules, and interchange economy energy and diversity capacity and energy. The agreement sets up a planning committee to coordinate the planning, expansion and development of the companies' generation and transmission systems in order to secure maximum mutual savings in investment and operating costs. The agreement also sets up an operating committee to fully coordinate the operations of the respective generation and transmission systems in order to secure the maximum mutual savings possible in operating costs.

Indiana & Michigan Electric Company is one of six operating subsidiaries of the American Electric Power System, which operates in seven states. Indiana & Michigan Electric Company operates in the States of Indiana and Michigan and regularly exchanges electric energy with companies in Ohio and Illinois.

Exhibit A of Rate Schedule 35-A contains a certificate of concurrence by PSCI in a four-party interconnection agreement between PSCI, Indiana & Michigan Electric Company, The Cincinnati Gas & Electric Company, and Louisville Gas & Electric Company. The four-party interconnection agreement is designated Exhibit A of Rate Schedule FPC No. 14–A filed by Indiana & Michigan Electric Company. It recognizes that the four companies together embrace a geographical area of operations in Indiana, Kentucky, and Ohio and are interconnected at various points in Indiana and at the Indiana-Ohio and Indiana-Kentucky borders. This four-party agreement states that numerous bi-party agreements exist between the companies having particular interconnections; that the four systems have operated in continuous synchronism for a number of years resulting in many advantages and benefits to themselves and their consumers, such as savings in capital and operating costs and improved continuity and quality of service; and that in order to continue the benefits from such coordinated operation of their respective interconnected systems, it is necessary to set up an operating committee for the four systems. This operating committee is to coordinate the operations of all four systems and the terms and conditions of the bi-party agreements. The operating committee is then established by the agreement.

PSCI Rate Schedule FPC No. 35–B is an interconnection agreement between Indiana & Michigan Electric Company, PSCI and Northern Indiana Public Service Company. The provisions of this agreement are similar to Rate Schedule No. 35–A.

PSCI Rate Schedule FPC No. 48 (including Exhibits I-VIII, and Supplement Nos. 1-4) is an interconnection agreement between PSCI and Indianapolis Power and Light Company, which is interconnected in turn with Indiana & Michigan Electric Company. This agreement is similar to Rate Schedule FPC Nos. 35–A and 35–B, and specifically seeks to realize, through interconnections, mutual benefits from firm power sales and purchases, emergency assistance, economy exchange, coordination of maintenance schedules of generating and transmission facilities, and seasonal diversities.

PSCI Rate Schedule FPC No. 46 is an interconnection agreement between PSCI and Louisville Gas and Electric Company, which owns and operates generation, transmission, and distribution facilities in Indiana and Kentucky. The interconnection point between the two parties is at Paddy's Run on the Indiana-Kentucky border. The parties agree to operate in parallel and to render emergency energy to each other. The agreement states "that in continuously interconnected operation of their respective systems energy being received by one party from another portion of its system or from another interconnected company, or energy being delivered by one party to another portion of its system or to another interconnected company, may flow by existing parallel lines over the transmission facilities of the other party as a natural result of the interconnected network of transmission lines", and the parties agree to permit such energy transfers over their respective transmission facilities. The agreement sets up an operating committee which is to meet "in order to obtain the greatest mutual benefits from the interconnection." The operating committee is to arrange for the following classes of interchange transactions: firm capacity and energy, emergency energy, economy energy, and unintentional energy.

PSCI Rate Schedule FPC No. 32, contains a certificate of concurrence by PSCI in the four-party interconnection agreement above-mentioned and in Cincinnati Gas and Electric Co. (CG&E) Rate Schedule FPC No. 10, which is an agreement between CG&E and PSCI.

This CG&E-PSCI agreement provides for maintenance of the interconnections between the two systems at the Ohio-Indiana border, for the coordination of the two systems, for the interchange of electric energy including emergency energy, and the sale of firm and surplus capacity by CG&E to PSCI. The agreement also sets up an operating and engineering committee to coordinate planning, expansion, and development of their respective generation and transmission systems to maximize savings in investment and operating costs and to arrange for emergency, economy, and diversity exchange of energy between the systems. The agreement further provides for operating reserve capacity to be carried by the party who can do so most cheaply.

PSCI's Annual Report to Stockholders

The Annual Report of PSCI for 1963 to its stockholders indicates that PSCI is engaged in a power pooling program which has enabled it to defer completing construction of a large generating unit until 1968, thereby allowing the building of a larger unit at that date than would have been practical at the time of the Report. The Annual Report states that "[t]he larger unit size will result both in lower capital costs per kilowatt of capacity and in lower operating cost due to increased efficiency. Without such pooling arrangements, additional capacity would be required at an earlier date". The Annual Report further states that "substantial progress has been made toward the formation of a regional power pool in which the Company will participate. The establishment of such a pooling arrangement is expected to achieve important financial and operating advantages for the participating companies by permitting the construction of larger generating units at lower capital costs per kilowatt; by lowering required reserve generating capacity margins; by realizing the lower operating costs of larger, more efficient generating units; and by taking maximum advantage of savings available through short-term exchanges of economy power."

F.P.C. Form Nos. 1 and 12

In addition to filing the Interconnection Agreements and its Annual Report, PSCI files annually with the Federal Power Commission certain information on FPC Form Nos. 1 and 12. This information shows that in the year 1962 PSCI received 290,635,000 kwh from and delivered 4,566,000 kwh to Cincinnati Gas & Electric Company; received 43,459,000 kwh from and delivered 128,703,000 kwh to Louisville Gas & Electric Company; received 108,364,000 kwh from and delivered 11,188,000 kwh to Southern Indiana Gas and Electric Company; and received 213,298,000 kwh from and delivered 528,568,200 kwh to Indiana & Michigan Electric Company.

It also appears that in the year 1962 the PSCI system, in addition to making the interchanges above, delivered 887,033,766 kwh to 31 Rural Electric Member Cooperatives, 358,113,076 kwh to 47 municipalities,[4] and 17,095,000 kwh to Southern Indiana Gas and Electric Company for which no rate schedules are on file with this Commission, except the rate schedules for the eleven municipalities listed above. For those eleven municipalities no subsequent filings have been made since 1947.

The information supplied by PSCI in its Form Nos. 1 and 12 also shows that in the year 1962 PSCI's net generation was 6,513,500,600 kwh and its net energy for load, 6,431,416,047 kwh. At the time of PSCI's system peak the combined net demand on PSCI's generating plants was 1,196,300 kilowatts; its system peak load, 1,171,400 kilowatts; and its system peak load responsibility,

---

[4] These municipalities and cooperatives are included in Exhibit A attached hereto.

1,185,300 kilowatts. PSCI's net assured system capacity for 1962 was reported as 1,467,000 kilowatts.

The foregoing circumstances indicate that whether or not PSCI's generating capacity is greater than its Indiana load, PSCI's total operations, including all of its wholesale sales, may be in interstate commerce.

Correspondence and Court Proceedings

On December 11, 1963, the Secretary of the Federal Power Commission sent a letter to PSCI,[5] stating that PSCI during the years 1942 to 1947 had filed with the Federal Power Commission rate schedules providing service to the municipalities of Bainbridge, Covington, Ladoga, Middleton, Montezuma, Paragon, Pendleton, Rockville, Tipton, Veedersburg and Etna Green; that PSCI had made no submittals of any rate schedules that superseded, supplemented, cancelled or otherwise changed any provisions of rate schedules applicable to service to these eleven municipalities; that according to the 1962 Form No. 1 Annual Report, filed by PSCI with the Federal Power Commission, wholesale electric service was provided to many other municipal and cooperative purchasers for which no rate schedules were on file with this Commission; and that PSCI was interchanging energy with other utilities. The letter concluded by suggesting that PSCI complete all appropriate rate schedule filings within a period of 30 days in the manner provided in Part 35 of the Federal Power Commission's Regulations under the Federal Power Act.

On January 10, 1964, PSCI responded to the Commission Secretary's letter of December 11, 1963, and refused to recognize the jurisdiction of the Federal Power Commission over the rates and contracts to the municipal and cooperative purchasers. PSCI asserted that it operates solely within Indiana, and produces all of the energy furnished to its customers, and that therefore these sales were wholly contracts for the sale of electric energy in intrastate commerce subject to jurisdiction by the Public Service Commission of Indiana. The letter further stated, "we feel that this matter should be straightened out in the federal courts."

On that same day, January 10, 1964, PSCI filed a complaint in the United States District Court, Southern District of Indiana, Indianapolis Division, seeking a declaratory judgment and an injunction against the Federal Power Commission. *Public Service Company of Indiana, Inc.*, v. *Federal Power Commission, et al.* Case No. IP 64–C–10. The Court over the objection of the Commission subsequently entered an order enjoining the Federal Power Commission and its agents "from taking any further action against [PSCI] because of the failure of [PSCI] to comply with the aforesaid letter of December 11, 1963".

In its findings of fact and conclusions of law filed with its injunction, the Court made clear that the basis for its action was its conclusion that the Commission could not lawfully authorize its Secretary or its staff to send the December 11, 1963 letter to PSCI, and that therefore any Commission action against PSCI because of the failure of PSCI to comply with the letter should be enjoined pending further order of the Court.

The Court also concluded, however, that PSCI "has not made a prima facie case for an injunction pending the litigation concerning the right of the Federal Power Commission to assume jurisdiction and determine such jurisdiction."[6]

---

[5] As we made clear in the minutes of our meeting of February 6, 1964, the Staff had the authority to prepare and the Secretary to sign and mail this letter.

The Commission finds:

In view of the foregoing circumstances, it is necessary and appropriate for the purposes of carrying out the provisions of the Federal Power Act, and particularly, but not in limitation of the foregoing, Sections 201, 205 and 206 thereof (16 U.S.C. §§ 824, 824d, 824e) that an investigation and hearing be initiated pursuant to Sections 301, 307, 308 and 309 (16 U.S.C. §§ 825, and 825f-h) to determine whether the sales at wholesale to the purchasers referred to in Exhibit A, attached hereto and made a part of this order, are sales at wholesale in interstate commerce subject to the jurisdiction of this Commission under the provisions of the Federal Power Act for which PSCI must file appropriate rate schedules in the manner provided in Part 35 of the Commission's Regulations under the Act.

The Commission orders:

(A) At a time and place and before a hearing examiner to be specified, a public hearing shall be held to find and determine:

(1) whether the sales by Public Service Company of Indiana, Inc. to the purchasers listed in Exhibit A attached hereto are sales at wholesale in interstate commerce, subject to the provisions of Sections 201, 205 and 206 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder;

(2) whether Public Service Company of Indiana, Inc. should be ordered to file rate schedules for service to the purchasers listed in Exhibit A attached hereto in accordance with the provisions and requirements of Section 205 of the Act and Part 35 of the Commission Regulations thereunder;

(3) whether other orders or other actions may be necessary and appropriate to bring about compliance with the Federal Power Act and the Commission's Regulations thereunder.

(B) In order that the foregoing issues may be properly determined, an investigation is hereby initiated and Public Service Company of Indiana, Inc., is hereby directed pursuant to the provisions of Section 301(b) of the Federal Power Act to grant to authorized members of the staff of the Federal Power Commission during regular business hours free access to its property and access to and the right to inspect and examine all of its accounts, records, and memoranda.

(C) Petitions to intervene and notices of intervention shall be filed on or before June 15, 1964, in accordance with the Commission's Rules of Practice and Procedure.

---

[6] The Commission has filed an appeal to the United States Court of Appeals for the Seventh Circuit from the injunction order. *Public Service Company of Indiana, Inc., plaintiff-appellee, v. Federal Power Commission, et al., defendants-appellant,* Case No. 14612. [Suit dismissed and injunction order vacated on November 18, 1964, upon order of Court of Appeals for the Seventh Circuit.]

CUMBERLAND AND ALLEGHENY GAS COMPANY, DOCKET NO. CP64-145

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 4, 1964)

On December 24, 1963, Cumberland and Allegheny Gas Company (Applicant) filed in Docket No. CP64-145 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 45 feet of 2-inch pipeline together with the necessary measuring and regulating equipment in order to render natural gas service to a new plant of Cumberland Charcoal Corporation (Cumberland) in the community of Beryl, Mineral County, West Virginia, all as more fully set forth in the application on file with the Commission.

The application shows that Cumberland will use natural gas in the manufacture of charcoal. Applicant states that Cumberland's requirements are estimated to be 150 Mcf per day and 48,000 Mcf annually. Applicant states further that deliveries to Cumberland, an industrial customer, are subject to curtailment, if necessary, in order to maintain service to domestic customers.

Cumberland and Applicant have entered into an industrial service agreement dated December 5, 1963, providing for the proposed service.

The total estimated cost of the proposed facilities is $3,369, which cost will be financed from funds on hand.

By letter of April 3, 1964, Applicant was issued a temporary certificate to construct and operate the proposed facilities for testing purposes only.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 1, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cumberland and Allegheny Gas Company, a West Virginia corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-387 (4 FPC 472).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cumberland and Allegheny Gas Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MICHIGAN GAS STORAGE COMPANY, DOCKET NO. CP64–128

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 4, 1964)

On December 4, 1963, Michigan Gas Storage Company (Applicant) filed in Docket No. CP64–128 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the operation of existing facilities and the transportation of natural gas in Michigan for and in behalf of Consumers Power Company (Consumers), all as more fully set forth in the application.

Specifically, Applicant proposes to transport for and in behalf of Consumers up to 200,000 Mcf of natural gas per day commencing April 1, 1964, and up to 225,000 Mcf per day commencing November 1, 1964.

In Docket No. CP63–221 Applicant was authorized to transport 200,000 Mcf of natural gas per day for Consumers commencing in the fall of 1964. Said gas was to be supplied by Trunkline Gas Company (Trunkline). Applicant states that Consumers and Trunkline have entered into a new agreement providing for the sale and delivery to Consumers of 200,000 Mcf per day commencing April 1, 1964, and 225,000 Mcf per day commencing November 1, 1964.[1] Accordingly, Applicant requests herein authorization to transport for Consumers these increased sales from Trunkline to Consumers.

Applicant states that the proposed increased transportation service will be provided without any additional facilities and that all costs arising from said service will be passed on to Consumers pursuant to Applicant's cost of service tariff.

---

[1] By Commission order issued March 20, 1964, 31 FPC 621, in Docket No. CP64–114 Trunkline was authorized to render the increased service to Consumers.

On December 20, 1963, the Michigan Public Service Commission filed a notice of intervention in support of the subject application, which notice requests that the subject application be heard and disposed of under the shortened procedure provided for by the Commission's Rules.

After due notice, no petition to intervene, other notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 1, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Michigan Gas Storage Company, a Michigan corporation having its principal place of business in Jackson, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 3, 1946, in Docket No. G–731 (5 FPC 965).

(2) The transportation and delivery of natural gas hereinbefore described, as more fully described in the application in this proceeding, are to be in interstate commerce, subject to the jurisdiction of the Commission, and such transportation and delivery by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Michigan Gas Storage Company, to transport and deliver natural gas for and in behalf of Consumers Power Company as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; GEORGE R. BROWN (OPERATOR), ET AL., CI63-523

ORDER GRANTING MOTION FOR SEVERANCE AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 4, 1964)

On February 24, 1964, George R. Brown (Operator), *et al.* (Brown or Applicant), filed a motion for severance of Docket No. CI63-523 from the consolidated proceeding Union Texas Petroleum, *et al.* Docket No. G-13221, *et al.* (the Union Texas Proceeding), and for the issuance of a certificate of public convenience and necessity in accordance with Brown's application in Docket No. CI63-523. Brown pointed out that the proposed total initial price in its contract (on file as its F.P.C. Gas Rate Schedule No. 12) is 20.625¢ per Mcf[1] and that there is no provision for escalation above the initial price. (The contract also provides for life-of-contract take-or-pay make-up and contains what could be described as a limited *downward* favored-nation clause.)[2] Brown contended that its application as originally filed is in the public interest, citing the numerous settlements which have provided for an initial price of 20.625¢ per Mcf for sales from South Louisiana with a 5-year moratorium on rate increase filings and extension of take-or-pay make-up periods to four years, and which have heretofore been approved by the Commission in the Union Texas Proceeding.

On March 20, 1964, the Pennsylvania Public Utility Commission (Pennsylvania) filed an answer in opposition to Brown's motion. However, on April 24, 1964, Pennsylvania withdrew its opposition to Brown's motion. Now other answers have been received.

By order issued December 26, 1963, we conditionally approved the settlement of Brown's Docket Nos. G-18131 and CI60-580.[3] The initial prices approved in that order were 20.625¢ per Mcf[4] and 20.25¢ per Mcf in Docket Nos. G-18131 and CI60-580 respectively. Other terms of the Brown settlement proposal, which was filed on November 8, 1963, included a 5-year moratorium or rate increase filings. (The contract involved in Docket No. G-18131 has a take-or-pay make-up period of 5 years and the contract involved in Docket No. CI60-580 does not contain a take-or-pay provision).

A comparison of the terms of the Brown settlement proposal in Docket Nos. G-18131 and CI60-580, which was conditionally approved by us, with the terms of the original contract in Docket No. CI63-523 makes it apparent that the latter sale should be certificated as proposed. It has generally been the practice in Union Texas Proceeding settlements to treat all sales of an applicant alike, without regard to the dates of contracts, insofar as it is practical to do so. Since we permitted settlement of the two other Brown sales which were consolidated in the Union Texas Proceeding, it seems fair to us that this additional sale by the same seller should be approved under substantially similar terms and that Brown should be granted a certificate in Docket No. CI63-523 at the contractual initial price of 20.625¢ per Mcf.[5]

---

[1] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[2] A temporary certificate was issued to Brown on November 16, 1962, authorizing this sale without price condition.

[3] *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, 30 FPC 1597.

[4] The initial price originally proposed in Docket No. G-18131 was 23.55¢ per Mcf.

In accordance with the above and since no party has objected we shall grant Brown's motion for severance and issue a certificate in Docket No. CI63-523.[6]

The Commission finds:

(1) Applicant is engaged in the sale and delivery of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sale of natural gas hereinbefore described, as more fully described in the application in this proceeding, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sale by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The sale of natural gas by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued, upon the terms and conditions of this order, authorizing the sale by Applicant herein of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as hereinbefore described and as more fully described in the application and exhibits in this proceeding.

(B) The certificate granted in paragraph (A) is not transferable and shall be effective only so long as Applicant continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The grant of the certificate issued in Paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicant, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sale of natural gas subject to said certificate.

---

[5] As noted above, this is also the maximum price over the life of the contract.

[6] The hearing in this proceeding concluded on July 25, 1963. The remaining contested matters are presently before the Commission on exceptions to the examiner's decision issued January 14, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

AMERICAN LOUISIANA PIPE LINE COMPANY, DOCKET NO. CP64-180

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 5, 1964)

On February 13, 1964, American Louisiana Pipe Line Company (Applicant) filed in Docket No. CP64-180 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12-month period following June 12, 1964, and the operation of gas purchase facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed $2,000,000 and no single project will exceed a cost of $500,000. The application states that the proposed facilities will be financed with cash generated from operations, and that it will not be necessary to undertake any new financing for this purpose.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 1, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, American Louisiana Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order accompanying Opinion No. 276 in Docket No. G-2306, *et al.*, issued October 1, 1954 (13 FPC 380).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's

compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period following June 12, 1964, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, American Louisiana Pipe Line Company, to construct during the 12-month period following June 12, 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58 (c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period following June 12, 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP64–197

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 5, 1964)

On March 6, 1964, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP64–197 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in Cimarron County, Oklahoma, and the sale and delivery of natural gas to the Town of Keyes, Oklahoma, for resale and distribution, all as more fully set forth in the application.

Applicant proposes to construct and operate a meter station on its main line in order to serve Keyes. Applicant proposes to sell and deliver a maximum of 400 Mcf of natural gas per day to Keyes under Applicant's FPC Gas Rate Schedule SG–1.

The cost of the proposed facilities is estimated to be $4,016, which cost will be financed from current working funds on hand.

Applicant states that it presently sells gas to Keyes from Applicant's gathering system in the Keyes Field. Applicant proposes herein to sell gas to Keyes from its main transmission line at the same rate as gas sold from the gathering system. However, the application shows that gas from the main line is of a higher Btu content than the gas which is presently available to Keyes from the gathering system in the Keyes Field. Hence, the proposed sale of the higher Btu gas, at no increase in price, will be to the benefit of the ultimate consumer.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 1, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G-294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado Interstate Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

OPINION NO. 426

CONTINENTAL OIL COMPANY, DOCKET NO. CI63-979

OPINION AND ORDER ON SHOW CAUSE ORDER

(Issued May 5, 1964)*

Syllabus

1. Cessation of gas purchases with concomitant non-use of jurisdictional facilities, where there is no present intent to renew such purchases, constitutes abandonment within scope of Section 7(b) of the Natural Gas Act. P. 1080.
2. Once jurisdictional facilities are placed in operation, justifiable public reliance attaches to their continued operation. P. 1081.
3. "Abandonment" can occur regardless of whether facilities have been salvaged and removed, left in place or merely altered beyond scope of Section 2.55(b) of Commission's General Policy and Interpretations. P. 1082.
4. Commission has regulatory responsibility to assure that gas once dedicated to interstate market will continue to be so available so long as public interest demands. P. 1082.
5. Non-use of facilities constitutes abandonment as effectively as if they had been disconnected and removed. P. 1083.
6. "Service" in Section 7(b) is not co-extensive with "sales" in Sections 7(c) and (e). P. 1083.
7. If Commission is to assure continued adequacy of reserves dedicated to interstate market, indefinite cessation of purchases from sources previously dedicated must be interpreted as an abandonment of service. P. 1084.
8. Since 1938 there has never been any question but that prior Commission approval was a prerequisite for abandonment of any jurisdictional facility or service rendered thereby. P. 1084.
9. If power to compel continuation of sales is not to be reduced to mere illusion, power to compel continuation of purchases must be its correlative. P. 1085.
10. In show cause proceeding, Commission *finds* pipeline in violation of Section 7(b) of the Natural Gas Act and *orders* renewal of operations of gas purchase facilities. P. 1086.

Commissioner Woodward *dissenting*.

*Initial decision appears on P. 1090. Order issued May 7, 1964, granting stay, *infra* p. 1132. Opinion No. 426-A, issued July 2, 1964, denied rehearing and stay, 32 FPC 8. Affirmed, *sub nom. United Gas Pipe Line Co. v. F.P.C.*, 350 F. 2d 689 (CA5-1965); 385 U.S. 83 (1966).

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

O'CONNOR, *Commissioner:*

The question presented in this case is whether the cessation of gas purchases with the concomitant non-use of jurisdictional gas purchasing facilities,[1] where there is no present intent to renew such purchases, constitutes an "abandonment" within the scope of Section 7(b) of the Natural Gas Act.[2] If it does, United's action of January 31, 1963, done without the prior approval of this Commission, was in violation of the Natural Gas Act. This is the only question properly before the Commission and the only one we herein decide.

The facts leading to this controversy are not disputed. On January 22, 1953, Continental Oil Company (Continental) and United Gas Pipe Line Company (United) executed a contract for the sale and purchase of gas from the Johnson Bayou Field in Cameron Parish, Louisiana. The contract provided for a primary term of 10 years, effective as of January 31, 1953. Article XIII gave either party the right to terminate the contract at the end of the 10-year term upon 90 days prior written notice to the other party. If neither party terminated at the end of this term, the contract was to continue in effect on an annual term basis until properly terminated. A price of 8.0973 cents per Mcf plus tax reimbursement at 15.025 psia was provided until January 31, 1958 at which time it was to escalate to 8.9970 cents per Mcf tax reimbursement. Continental filed this contract with the Commission on November 30, 1954 as its FPC Gas Rate Schedule No. 115, and on January 4, 1956 was issued a certificate of public convenience and necessity in Docket No. G–6949.

The Johnson Bayou Field is adjacent to United's 16-inch Mud Lake transmission line which extends westward from Southwest Louisiana into the Beaumont, Texas area. Continental agreed to deliver its Johnson Bayou Field gas to a central point located adjacent to this previously constructed line. In order to effectuate the delivery, Continental constructed 4,400 feet of 2½-inch line, 2 separators and several storage tanks. For the sole purpose of taking Continental's gas into its line, United constructed a separator, a meter station, 55 feet of 4-inch line and valves at a total cost of $6,884. Once in the line, the gas was transported to the Beaumont area where it was sold both directly to industrial customers and to distributors for resale.

On October 23, 1962 Continental advised United that it had elected to terminate the contract at the end of the primary term. On November 21, however, representatives of Continental met with representatives of United in an attempt by the former to execute a new 20-year contract. Its terms were to have included a base rate of 14 cents per Mcf at 15.025 psia plus a 1.75 cent tax reimbursement for the first five years with a periodic increase of 1 cent for each succeeding five year period. Continental was also to be allowed to increase its rate up to the just and reasonable rate to be set in AR61–2 in the event it exceeded that set by the contract.

On December 17, United rejected Continental's offer but agreed to support Continental in an abandonment proceeding. By letter of December 20, however, United agreed to continue purchases after the expiration of the primary term on a day-to-day basis at the then effective rate, and on December 26, proffered to Continental a contract which would have effectuated this post-term offer.

---

[1] The facilities constructed and operated by United for the sole purpose of receiving Continental's Johnson Bayou Field gas are concededly facilities used for the "transportation of natural gas in interstate commerce" within Section 1(b). Inasmuch as the scope of Section 7(b) has been held to be coextensive with that of Section 1(b), these facilities are likewise "subject to the jurisdiction of the Commission" within Section 7(b). *F.P.C. v. J. M. Huber Corp.*, 133 F. Supp. 479 (D.N.J. 1955); *Argo Oil Corp., et al.*, 15 FPC 601, 625 (1955).

[2] *Infra*, note 4.

On December 28, Continental acknowledged receipt of the December 26 offer, but notified United that it had elected to file for a rate increase. The same day, Continental filed a supplement to its FPC Gas Rate Schedule No. 115 providing for a unilateral increase in price to 14 cents per Mcf plus a 1.75 cent tax reimbursement and requested an effective date of January 31, 1963.[3]

Over United's objection of January 18, 1963, the Commission, on January 25, accepted Continental's filing as Supplement No. 7 to become effective on January 31. On January 28, United notified Continental that purchases from the Johnson Bayou Field would cease as of 7:00 a.m., January 31, 1963. On that date United ceased purchases, and has since refused to renew them.

Continental, on February 1, petitioned the Commission to direct United ". . . to show cause why it should not be required to continue to take deliveries of gas produced by Continental in the Johnson Bayou Field, . . ., at the currently filed and effective rate therein provided, and order United to take such gas pending action on the order to show cause." The Commission declined to issue this order but on May 1 directed United to appear and show cause ". . . why it should not be required to apply for and obtain the permission and approval of the Federal Power Commission before ceasing the operation of all or any portion of the facilities heretofore operated by United to purchase natural gas from Continental Oil Company from Johnson Bayou Field, Cameron Parish, Louisiana." Hearing was initiated June 3, 1963, and on October 28 an initial decision was rendered which dismissed and vacated the Commission's show cause order. On February 4, 1964, oral argument on the dismissal was heard by the Commission.

United argues first that there has been no abandonment of facilities within 7(b) because they have been neither removed nor disconnected; and second, that there has been no abandonment of service because sales to the ultimate consumer have not been interrupted.[4]

United's first argument overlooks the consequences of dedicating, and placing into operation, natural gas facilities for public use.[5] First, once facilities are placed into operation, justifiable public reliance attaches to their continued operation. Thus, it matters little to the consuming public that these facilities are physically unaltered if their operation has ceased. Secondly, natural gas companies which dedicate their facilities to the public use have the right to receive a fair return on their net investment from the consumer served by these facilities. Correspondingly, the consumer is entitled to the assurance that this Commission will exercise its statutory responsibilities to prevent abuses of this right. Such abuses would undoubtedly occur if natural gas companies, in the exercise of their own discretion, were allowed to cease to utilize fully depreciated facilities prior to the termination of their actual useful life, and subsequently enter into the construction of expensive new facilities. In short, a whole body of public rights and responsibilities arises upon the dedication of such facilities to the public use. These rights cannot be protected nor these responsibilities be acquitted by the individual natural gas companies. Congressional realization of this fact resulted in the enactment of Section 7(b) of the Natural Gas Act.

---

[3] It has been suggested that if a pipeline needs Commission authority to abandon purchase facilities at the end of the contract period, a producer would be able to file for and collect, subject to refund, a triggering rate until that rate was ultimately determined to be unjust and unreasonable. We do not believe this spectre is real, for in such a case the pipeline could be expected to file immediately for an abandonment and, even if the Section 4(e) proceeding could not be completed within the statutory suspension period, the abandonment proceeding would be completed.

[4] Section 7(b), written disjunctively, reads as follows: "No natural-gas company shall abandon all or any portion of its facilities subject to the jurisdiction of the Commission, *or* any service rendered by means of such facilities, without the permission and approval of the Commission first had and obtained, after due hearing, and a finding by the Commission that the available supply of natural gas is depleted to the extent that the continuance of service is unwarranted, or that the present or future public convenience and necessity permit such abandonment." 52 Stat. 824 (1938) (Emphasis added.)

[5] Although certification usually precedes dedication, it is indisputable that dedication does not depend upon certification. Thus, although United concedes that no certificate was ever applied for, or granted, for the Johnson Bayou Field purchase facilities (Record, Vol. 3, p. 161) these facilities are nevertheless dedicated to the public use and cannot be abandoned absent a showing under Section 7(b). *J. M. Huber* v. *F.P.C.*, 236 F. 2d 550 (3rd Cir. 1956) cert. denied 352 U.S. 971 (1957).

Commission precedent makes it abundantly clear that the applicability of this section has never depended upon the act of physical removal. On the contrary, the Commission has consistently held that "abandonment" can occur regardless of whether facilities have been salvaged and removed, left in place,[6] or merely altered beyond the scope of Section 2.55(b) of our General Policy and Interpretations.[7] Further, it is clear to us that the act of disconnection, like the act of removal, cannot be considered determinative of the applicability of Section 7(b), for to do so would limit its scope only to those cases of physical alteration. Our interest goes beyond this. We have a regulatory responsibility to assure that gas once dedicated to the interstate market will continue to be available to that market so long as the public interest demands,[8] and, as the instant proceeding unmistakably reveals, this responsibility cannot be adequately met if we are powerless to assure that facilities certificated to transport this gas will not continue to operate.

In cases where there has been no physical alteration in jurisdictional facilities, the applicability of Section 7(b) to these facilities must be determined by whether their use has been terminated. In the instant proceedings, United's action on January 31, when read in light of its letters of December 20 and January 28, as well as the oral argument by its counsel,[9] makes it abundantly clear that so long as Continental's Supplement No. 7 remains in effect, United will cease to purchase Continental's Johnson Bayou Field gas. There is no evidence which indicates that United has other than these intentions. The facts before us do not present a case of mere alteration of use, which pipelines, legitimately varying their purchase patterns, effect daily. What we are faced with is total cessation of use, and we are convinced that by rendering facilities dedicated for use operationally dormant for a period of indefinite duration, United has "abandoned" them within the meaning of Section 7(b) as effectively as if they had been altogether disconnected and removed. As expressly stated in *Willmut Gas & Oil Co.* v. *United Gas Pipe Line Co.*, abandonments can be accomplished by a manipulation of valves as well as by a severance of facilities.[10]

---

[6] *El Paso Natural Gas Co.*, 27 FPC 30 (1962) (2,118 feet of 3½-inch O.D. pipe); *Manufacturers Light & Heat Co.*, 25 FPC 775 (1961) (2.3 miles of 24-inch line); *Lone Star Gas Co.*, 24 FPC 1088 (1960) (1.95 miles of pipe remain in use as distribution facilities); *Ohio Fuel Gas Co.*, 23 FPC 698 (1960) (1 mile of 2⅜-inch O.D. line, 1.6 miles of 3½-inch O.D. pipe); *Ohio Fuel Gas Co.*, 22 FPC 643 (1959) 2.3 miles of 4½-inch O.D. pipe); *Manufacturers Light & Heat Co.*, 22 FPC 482 (1959) (1.03 miles of 8-inch transmission line); *Manufacturers Light & Heat Co.*, 20 FPC 120 (1958) (4.9 miles of 6 and 8-inch pipe); *Northern Natural Gas Co.*, 17 FPC 906 (1957) (2.3 miles of 2-inch line): *Northern Natural Gas Co.*, 17 FPC 479 (1957) (16.03 miles of 6⅝-inch O.D. pipe); *Ohio Fuel Gas Co.*, 16 FPC 1233 (1956) (2.2 miles of 3½-inch pipe); *Cities Service Gas Co.*, 6 FPC 747 (1947) (abandonment authority conditioned on in-place abandonment of intracity facilities).

[7] Section 2.55(b) excludes from the certification requirement of Section 7(c) facilities which are to replace existing facilities where no reduction in service will result. In instances where the act of replacing does not demand compliance with Section 7(c), *a fortiori* it does not demand compliance with Section 7(b).

[8] *Shell Oil Co.*, 25 FPC 1316, 1320 (1961).

[9] In response to a question from the bench, counsel for United admitted that he couldn't reasonably anticipate whether operation of the Johnson Bayou Field purchase facilities would be renewed. Record, Vol. 3, p. 207. Earlier he stated that ". . . if it gets cold enough and we need this gas we *probably* will [renew operations]." (Emphasis added.) Record, Vol. 3, p. 163. In view of this earlier emphasis on United's prepayment of $22,000,000 worth of South Louisiana gas, this need appears remote. Record, Vol. 3, p. 148.

In addition, we find United's second argument, that no abandonment of service has occurred because no sales to ultimate consumers have been diminished, to be legally insupportable. First, it attempts to read "service" in Section 7(b) as being co-extensive with "sales" in Sections 7(c) and (e), a reading which was specifically and repeatedly rejected by the Supreme Court in *Sunray Mid-Continent Oil Co.* v. *F.P.C.*[11] There the whole Court concurred that the "service" rendered by a pipeline includes far more than its sales to distributors.[12] It is clear to us that included in "service" are all the elements upon which these sales depend particularly the maintenance, in an unimpaired condition, of reserves previously dedicated to the interstate market and upon which the pipeline may have relied for certification. Were we to allow pipelines to make, unilaterally, the decision of whether particular gas sources should be abandoned for indeterminate periods, these reserves could not possibly be protected in a manner commensurate with our responsibility.[13] This follows from the fact that most production fields are shared by numerous producers. Thus, in all but the rarest cases, where one producer is shut-in, drainage results,[14] and the abandoned producer suffers irreparable harm. If the gas was previously dedicated by the pipeline to a particular jurisdictional customer, that customer also suffers irreparable harm by the steady erosion of reserves previously dedicated to his use. Even absent dedication to particular customers, if drainage is to the intrastate market, the interstate market, previously assured of these reserves, becomes permanently deprived of a valuable source. Although the immediate effect of any individual decision might be *de minimis*, the long-range effect of a policy of allowing pipelines to make them would be detrimental. Clearly it would be no answer to say that an abandonment of service occurred only at the time their cumulative effect had exhausted, or substantially endangered, a pipeline's gas supply, because then the Commission would be powerless to remedy it. If we are to assure the continued adequacy of reserves dedicated to the interstate market, the indefinite cessation of purchases from sources, previously dedicated to that market, must be interpreted as an abandonment of service within Section 7(b).

---

[10] 12 FPC 132 (1953).

[11] 364 U.S. 137 (1960).

[12] *Id.* at 149–51 (Brennan, J.), 162–65 (Harlan, J. dissenting).

[13] This should not be interpreted as tacit approval of a unilateral decision to "partially" abandon, *i.e.*, the unilateral reduction of a pipeline's takes below the minimum either as specified in contracts underlying the original certificate, or determined by applicable state rateable purchase statutes. *E.g.*, Tex. Stat. Ann., tit. 102, art. 6049a §§ 8, 8a; Okla. Stat. Ann., tit. 52, § 240; La. Rev. Stat., tit. 30, §§ 41–46. As we previously made clear in our discussion of facility abandonments, however, there would be no abandonment of service in the legitimate, temporary variation in purchase patterns.

[14] United presented evidence to show that Continental was the only producer in the Johnson Bayou Field. Presumably no drainage would be suffered, at present, from other producers, but this factual situation which is by no means typical, could change at any time. Even in the absence of drainage, producers abandoned under such circumstances could present a strong justification under Section 7(b) for allowing severance from their previous purchaser, thus freeing their gas from its interstate dedication.

United argues further that, even if its action could be characterized as an abandonment, we lack the power to compel pipelines to purchase gas after the termination of gas sales contracts. It relies upon the following Supreme Court language in *Sunray:*

> It is said that the petitioner will be in a position of inequality, because it must supply gas then to United without a corresponding obligation on United to take it.[15]

The Court's language does not support United's position. By prefacing with "[i]t is said," the Court obviously intended its statement to be read as a paraphrase of counsel's argument, and not as a holding thereon. Further, the Court subsequently made it clear that United, as well as the producer, had obligations under the Act. United's obligations were not specifically demarcated, inasmuch as the Court was primarily concerned with the obligations of producers, but there are no implications that the one reference was intended to be definitive.[16] Moreover, United ignores the thrust of Section 7(b). That section frames the relevant issue, not in terms of whether this Commission has the power to compel continued purchases, but whether the "public convenience and necessity" dictates that pipelines *cease* purchasing. The mandate is clear that absent satisfaction of this test, which cannot be met by mere showing of contract termination, the *status quo* is to continue.

The absence of power to compel initial purchases does not refute this conclusion, for as we recognized in *Argo Oil Corp., et al.*[17] there is a vast distinction between the power to compel initial actions and the power to compel the continuation of these actions. The reason is obvious: once sales and purchases of gas flowing in interstate commerce begin, the interests of numerous parties become dependent upon their continuation. Consequently it is not within the power of individual natural gas companies to say, absent our approval, when they are to cease. *Argo Oil Corp.* is but a reflection of Congressional recognition of the distinction between the need for regulation of initial acts, and regulation of the cessation of those acts. Regulation of all initial acts was not thought necessary, and thus Congress, upon the enactment of the original Section 7(c), exempted from certification the construction of facilities and the resulting sales where effected to serve previously unserved markets. It was not until 1942 that Section 7(c) was amended to its present form. Since 1938, however, there has never been any question but that our prior approval was a prerequisite for the abandonment of any jurisdictional facility or any service rendered by that facility.[18] Section 7(b) reads today as it did twenty-six years ago. Given this history, we would be most derelict in failing to accord it the strict enforcement for which it was written.

---

[15] 364 U.S. 137, 155 (1960).

[16] The particular obligation to which the Court referred ran to United's local distributors.

[17] 15 FPC 601 (1955).

[18] Congressional insistence upon this Commission having authority over every jurisdictional abandonment, regardless of how *de minimis,* was revealed in the hearing on H.R. 4008, in March of 1937, before the House Committee on Interstate and Foreign Commerce. The following amendment to Section 7(b) was then introduced:

> *Provided, however,* that facilities may be abandoned without obtaining such permission, approval, or finding, if service is not thereby impaired or if substitute facilities will be installed.

The amendment was rejected.

The recent cases of *United Gas Pipe Line Co.* v. *Mobile Gas Corp.*[19] and *Sunray Mid-Continent Oil Co.* v. *F.P.C.*[20] reinforce this conclusion. Both cases recognize that obligations between parties, arising out of contract, may be unilaterally altered upon the termination of the contract. Obligations to the public, however, arise out of dedication to public use, and consequently must remain fixed[21] unless changed in the manner provided for in the Natural Gas Act. The repeated rationale for the latter case is that regardless of contractual termination, there may be times when the public interest demands the continuation of gas sales to the interstate market. In the instant case, Continental was issued a permanent certificate,[22] and thus, under the holding of *Sunray*, could be compelled to continue sales to United even after the termination of their contract. If United's contention were correct, however, the Commission would find itself in the anomalous position of having the power to compel Continental to continue to sell, but not having the power to compel United to continue to purchase. To such paradoxical results we cannot subscribe. Thus, we conclude that if the power to compel the continuation of sales is not to be reduced to mere illusion, the power to compel the continuation of purchases must be its correlative.

Inasmuch as we conclude that United's action of ceasing to utilize jurisdictional purchase facilities for an indeterminate period of time constituted an "abandonment" within Section 7(b), we have no alternative but to order United to renew the use of these facilities. Such order is without prejudice to the institution by United of a formal abandonment proceeding. Pending the resolution of such proceeding, however, purchases must be made at Continental's currently effective filed rate, and in volumes consistent with the terms of the previously effective contract.

The minority's fear that our decision will force pipelines to purchase high-priced gas to the consumer's detriment underestimates our power to protect these interests. Thus, increases would always be subject to Commission approval in acquitting its responsibility to fix and maintain just and reasonable rates.

The Commission finds:

(1) United Gas Pipe Line Co. is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, 3 FPC 863 (1942).

(2) Continental Oil Company is a "natural-gas company" within the meaning of the Natural Gas Act, and its sales for resale from the Johnson Bayou Field were sales of natural gas in interstate commerce subject to the jurisdiction of this Commission.

(3) The facilities constructed by United for the purpose of purchasing and taking into its line Continental's Johnson Bayou Field gas are facilities used for the "transportation of natural gas in interstate commerce" within Section 1(b) and thus are "subject to the jurisdiction of the Commission" within Section 7(b).

---

[19] 350 U.S. 332 (1956).

[20] 364 U.S. 137 (1960).

[21] This same principle was announced in the earlier Commission case of *United Gas Pipe Line Co.*, 3 FPC 3 (1942).

[22] Initial decision, pp. 1092, 1093.

(4) United's act of January 31, 1963, resulting in the complete non-use of jurisdictional purchase facilities for an undetermined period of time constituted an abandonment of facilities within Section 7(b) of the Natural Gas Act, for which authorization, as required by that Section, was not granted by this Commission.

(5) United's act of January 31, 1963, in ceasing to draw upon gas reserves dedicated to the interstate market for an undetermined period of time, constituted an abandonment of service within Section 7(b) of the Natural Gas Act, for which authorization, as required by that Section was not granted by this Commission.

(6) As of January 31, 1963 Continental's effective filed rate tariff for sales to United from the Johnson Bayou Field is that schedule designated as Supplement No. 7 to their FPC Gas Rate Schedule No. 115.

The Commission orders:

Effective this date, United will renew operation of its Johnson Bayou Field facilities used to purchase gas from Continental. Purchases made by these facilities will be at the rate specified in Continental's Supplement No. 7 to its FPC Gas Rate Schedule No. 115, in volumes consistent with the terms of the previously executed contract.

Commissioner Woodward *dissenting.*

WOODWARD, Commissioner, *dissenting*:

The fundamental question in this proceeding is whether the Commission has the power to compel a pipeline company to continue to operate its facilities for the purpose of purchasing gas it does not currently need under terms and conditions unilaterally imposed by the producer-seller and in the absence of a contractual relationship between it and the seller.

The majority, answering this question in the affirmative, has achieved a unique result; by virtue of this order, the Federal Power Commission has substituted itself for Continental Oil Company (Continental) as the Company's bargaining agent for the sale of Continental's gas. The majority advances neither sound reasons nor adequate authority to show that the Natural Gas Act was intended to give a producer such an advantage over a pipeline company. For the reasons outlined below, I cannot subscribe to an order that accords lawfulness to duress.

Initially, it should be pointed out that the majority's opinion and order is not responsive to the show cause order issued in this proceeding. That order referred to the cessation of "operation" of facilities;[1] even a cursory reading of Section 7(b)[2] discloses that 7(b) requires approval only for abandonment of facilities or service and not, as we have here, for approval of "changes" in the operation of facilities which remain in place ready for use at any time. The word "operation" cannot be found in Section 7(b) of the statute.[3] In short, Section 7(b) is not applicable in the instant proceeding.

---

[1] In issuing this order, the Commission found: "We find it necessary and appropriate in carrying out the provisions of the Natural Gas Act, therefore, that United show cause, as hereinafter ordered, why it should not file with the Commission an application for abandonment authorization pursuant to Section 7(b) of the Natural Gas Act and the Commission's Rules and Regulations thereunder." The Commission ordered: "United Gas Pipe Line Company shall appear and show cause, if any there be, at the hearing directed in paragraph (B) hereof, why it should not be required to apply for and obtain the permission and approval of the Federal Power Commission before ceasing the operation of all or any portion of the facilities heretofore operated by United to purchase natural gas from Continental Oil Company from Johnson Bayou Field, Cameron Parish, Louisiana." As the examiner notes in his initial decision. "The Commission has not issued any substantive rules as to general policy and interpretations relating to abandonment under the Natural Gas Act." [*infra*. p. 1090 note 2]

No section of the Natural Gas Act should be construed to confer upon the Commission powers denied it by other sections of the Act. *Panhandle Eastern Pipe Line Company* v. *Federal Power Commission*, 204 F. 2d 675. Here, the Commission cannot construe the provisions of Section 7(b) relating to abandonment of facilities as empowering it to compel a purchase of gas in contravention of the express limitation imposed upon its jurisdiction by Section 1(b) of the Act. Thus, the majority errs in finding ". . . that by rendering facilities dedicated for use operationally dormant for a period of indefinite duration, United has 'abandoned' them within the meaning of Section 7(b) . . ."[4]

The term "abandonment", as it has been judicially construed, necessarily connotes an intention to *permanently discontinue* use[5] of facilities; mere cessation of operation is not sufficient to constitute abandonment. Staff counsel correctly recognized this vital distinction during oral argument in this case.[6]

> *Mr. Knight:* I would say in all cases, Mr. Chairman, whether or not there is an abandonment would have to be decided in the light of all facts and circumstances of the case.
>
> *Chairman Swidler:* If you say that, the mere cessation is not enough.
>
> *Mr. Knight:* That is right.
>
> *Chairman Swidler:* It requires more.
>
> *Mr. Knight:* You have to have more.
>
> *Chairman Swidler:* It requires intention.
>
> *Mr. Knight:* That is right.

The record is replete with evidence which establishes beyond doubt that United, at no time, has intended to abandon these facilities. During oral argument counsel for United stated, "We did offer them a contract and *the offer is still outstanding*."[7] Further, "If we in this bargaining process here with Continental, if it takes us a year to get this matter settled before we get back this gas at either 14¢ or 10¢ whatever it is, we haven't abandoned those facilities, they are still there, and if we need this gas tomorrow at Beaumont, United will take it."[8] In other words, the reserves are still in place and they are still available to United if United wishes to take them. All facilities remain in place and all customers of United are being adequately served.

The majority's findings, although couched in vagaries, simply boil down to this; a willingness to take gas at a price of 10¢ but not 14¢ amounts to total abandonment. There is no legal or factual support in the record for such a contention. United stands willing to continue the operation of the facilities and performance of the obligation it undertook initially to perform. Moreover, United has indicated that it will take Continental's gas, even if it must pay the higher price, if the gas should be needed to continue its service obligations to its customers. These facts are uncontradicted in the record.

---

[2] Section 7(b) provides: "No natural-gas company shall abandon all or any portion of its facilities subject to the jurisdiction of the Commission, or any service rendered by means of such facilities, without the permission and approval of the Commission first had and obtained, after due hearing, and a finding by the Commission that the available supply of natural gas is depleted to the extent that the continuance of service is unwarranted, or that the present or future public convenience and necessity permit such abandonment."

[3] Where Congress, in Section 7, intended regulation over the "operation" of facilities, it so stated with clarity and precision. *cf* subsections (c) and (e).

[4] *Supra*, p. 1083.

[5] Emphasis supplied throughout this statement unless otherwise indicated.

[6] *Tr.* P-194.

[7] *Tr.* P-203.

[8] *Tr.* P-205.

There is no authority under the Natural Gas Act to force United to buy gas under Continental's unilateral terms. The majority summarily holds that United must buy or abandon notwithstanding the fact that nowhere does the Natural Gas Act even remotely indicate that Congress intended to grant the Commission jurisdiction over the *purchase* of natural gas in interstate commerce. The Commission has uniformly so construed the Act by its action in granting sellers certificates of public convenience and necessity to initiate sales of gas without requiring any filing by the purchasers for certificates authorizing their purchases and by issuing countless orders permitting *sellers* to abandon certificated sales without requiring any filing by the *purchasers* for permission to abandon their purchases. Nothing in Section 7 of the Act holds that a certificate to sell carries with it a concurrent obligation for another party to buy. Stated simply, the Act does not guarantee any certificate holder a market.

Specifically, Section 7 authorizes issuance of certificates for the *operation*, *construction*, *extension*, or *acquisition* of facilities and the sales and service rendered thereby. This categorical listing of the areas where certificates are required and the pointed omission of purchasing or receiving permits no ground for argument that certificates are required for either purchasing or receiving delivery of gas. United's cessation of purchasing cannot be considered a violation of any certificate and the Commission's use of the words "ceasing the operation" of facilities heretofore "operated" by United, in its show cause order clearly confirms this fact. It is pure fallacy to hold that whatever statutory restrictions apply to abandonment of a sale must also apply to abandonment of purchase. United's action cannot constitute an abandonment under Section 7(b) of the Natural Gas Act.

The majority further errs in finding: "If we are to assure the continuing adequacy of reserves dedicated to the interstate market, the indefinite cessation of purchases from sources, previously dedicated to that market, must be interpreted as an abandonment of service within Section 7(b)."[9]

The record shows that United has not discontinued or abandoned any service to its customers and does not propose to do so. The reserves attached to United's system have not been abandoned, because they remain physically attached to that system to this day. No amount of verbage can obscure one essential fact; the only "service" involved in this proceeding is the "service" Continental has been authorized to render to United from the Johnson Bayou Field pursuant to a certificate of public convenience and necessity issued to Continental in Docket G-6949. The term "service", as used in Section 7(b) has always meant a *seller's service* to *the purchaser*. Any other interpretation does violence to the statute.

Although the majority alludes to the *Sunray* case[10] with an interpretation that transcends all bounds of reasonableness, they totally ignore the position taken by the Solicitor General on behalf of the Commission in the *Sunray* case. The Solicitor General's brief[11] summarily disposes of the majority's contention and reveals their fatal error. Defining the term "service" he states, "As that term is used in Section 7(e) when read together with Section 7(b) and other provisions of the Act—the *'service' is the continuous furnishing of the gas to the purchaser*." In short, "service" refers to fulfilling the demands of the purchaser of gas; the converse would be untenable and an impediment to effective regulation the Natural Gas Act was intended to achieve.

---

[9] *Supra*, p. 1084.

[10] *Sunray Mid-Continent Oil Company v. Federal Power Commission*, 364 U.S. 137.

The majority further errs in its analysis of the *Sunray* decision. Briefly stated, Sunray turned on the Commission's certificate authority, not on its authority to regulate abandonments under Section 7(b). The court held that the Commission's authority to control abandonments under Section 7(b) was co-extensive with the certificates it issues. If the Commission has not issued a certificate to purchase, it cannot control cessation of purchase under 7(b). This conclusion is inescapable for any other interpretation of the decision would render the Supreme Court's language meaningless.

Sunray created no new or preferential rights in the seller of natural gas to change rates under the Natural Gas Act. The court pointed out that a producer selling gas after its contract has expired would be free to file rate changes without the consent of the purchaser but, the court also cautioned that a producer availing himself of this right was obligated to continue gas deliveries *only at the buyer's request*. Referring to the contract, the court declared, "When it expires, the petitioner to be sure is under an obligation to deliver gas to United on United's request unless it can justify an abandonment before the Commission." This is the law; during the contract term, the producer has an obligation to sell, and the buyer an obligation to purchase, in accordance with the contract terms. After the expiration of the contract, a producer, absent abandonment authorization, has an obligation to continue to deliver gas to the purchaser but only on the purchaser's request not on producer's demand and not at the direction of this Commission. There is an equitable balance of bargaining strength—the producer has the right, in the absence of contract, to unilaterally raise its price, the pipeline has the right to accept the price and receive deliveries or to reject the offer of sale. Any other result would render the pipeline's bargaining position a nullity in fact and be prejudicial to the public interest.

It is inconceivable that continuity of service is being utilized here as a tool to force a pipeline to purchase gas. This decision, if allowed to stand, will inevitably result in an increase in the average price of gas and run directly contrary to the admonition forcefully expressed in CATCO[12] to "hold the line." If United has no control over what it must pay for its gas, it will certainly be in no position to maintain its markets; the ability to fairly meet competition will be stifled. Such a drastic result goes beyond the permissible limits of regulatory authority.

The decision of the presiding examiner should be affirmed and the order to show cause issued on May 1, 1963, directed to United Gas Pipe Line Company should be dismissed and vacated.

[12] *Atlantic Refining Co., et al., v. Public Service Commission of New York, et al.*, 360 U.S. 392.

INITIAL DECISION OF THE PRESIDING EXAMINER UPON ORDER TO SHOW CAUSE

(Issued October 28, 1963)

KURTZ, *Presiding Examiner:*

This proceeding involves an order directed to United Gas Pipe Line Company (United) to show cause as to whether it should first be required to obtain permission and approval for abandonment under Section 7(b) of the Natural Gas Act[1] before discontinuing a purchase of Johnson Bayou Field gas from Continental Oil Company (Continental). In issuing this order, the Commission found:

> We find it necessary and appropriate in carrying out the provisions of the Natural Gas Act, therefore, that United show cause, as hereinafter ordered, why it should not file with the Commission an application for abandonment authorization pursuant to Section 7(b) of the Natural Gas Act and the Commission's Rules and Regulations thereunder.[2]

and ordered:

> United Gas Pipe Line Company shall appear and show cause, if any there be, at the hearing directed in paragraph (B) hereof, why it should not be required to apply for and obtain the permission and approval of the Federal Power Commission before ceasing the operation of all or any portion of the facilities heretofore operated by United to purchase natural gas from Continental Oil Company from Johnson Bayou field, Cameron Parish, Louisiana.

The Commission Staff and Continental take the position that the discontinuance by United of the purchase of Continental's gas from the Johnson Bayou Field constitutes an abandonment under Section 7(b) of the Natural Gas Act. United and Texas Eastern Transmission Corporation (Texas Eastern), an intervener, take the position that an abandonment under this section has not occurred and that United is not required to purchase gas under terms and conditions imposed unilaterally by Continental.

Both United and Continental are natural-gas companies subject to the Commission's jurisdiction. United operates in the States of Texas, Louisiana, Mississippi, Alabama, and Florida, and Continental is an independent producer of natural gas.

On January 22, 1953, Continental and United entered into a contract covering the sale and purchase of gas produced by Continental in the Johnson Bayou Field in Cameron Parish, Louisiana. The contract price was 8.0973 cents per Mcf at 15.025 psia during the five-year period commencing January 31, 1953, when gas deliveries commenced; and on and after January 31, 1958, the price was 8.997 cents per Mcf at 15.025 psia, plus tax reimbursement amounting to 1.8 cents per Mcf. The contract was for a primary term of 10 years, and was to continue in effect after expiration of the primary term for successive periods of one-year each, unless either party terminated the contract at the end of the primary term, or any succeeding annual period, giving the other party 90 days' prior written notice. Under this contract, United, while having the right to purchase the gas, is not obligated to take all or any proportion of the gas produced, and in the event gas is not taken, Continental may terminate the contract. United did agree to take ratably in the same proportion as to other purchases that it was or might make in this field. The only purchases that United did make in this field were from Continental at the rate of one to one-and-ahalf million cubic feet per day.

---

[1] Section 7 (b) provides: "No natural-gas company shall abandon all or any portion of its facilities subject to the jurisdiction of the Commission, or any service rendered by means of such facilities, without the permission and approval of the Commission first had and obtained, after due hearing, and a finding by the Commission that the available supply of natural gas is depleted to the extent that the continuance of service is unwarranted, or that the present or future public convenience or necessity permit such abandonment."

[2] The Commission has not issued any substantive rules as to general policy and interpretations relating to abandonment under the Natural Gas Act.

The Johnson Bayou Field is located near United's 16-inch transmission line which extends westward from the area of the Mud Lake Field in southwest Louisiana into the Beaumont, Texas, area. This 16-inch line was already in place when United executed the contract with Continental in 1953, and Continental agreed to deliver the gas produced in the Johnson Bayou Field to a central point located adjacent to the line. In order to make the gas so received suitable for sufficient pipeline transmission, to meter it and to receive it into the 16-inch line, United constructed a separator, meter station, and 55 feet of 4-inch line at a total cost of $6,884. United has not removed these facilities and they remain in place and can be used at any time. Continental, in order to effectuate the sale and delivery of gas to United, constructed approximately 4,400 feet of 2½-inch line, two separators and storage tanks adjacent thereto. The title to the gas passed from Continental to United at the interconnection between the above facilities, and such gas was taken into United's system and transported by United to the vicinity of Beaumont, Texas, where it was sold for resale and to consumers for their own use.

The above contract was filed by Continental with the Commission on November 30, 1954, as its FPC Gas Rate Schedule No. 115. On October 23, 1962, Continental having become dissatisfied with the contract notified United that it elected to terminate the contract as of January 31, 1963, to which United raised no objection. Thereafter, in November 1962, Continental sought to obtain from United a new contract for a 20-year term at an increased price of 14 cents per Mcf, plus 1.75 cents tax reimbursement, for the first five years and thereafter with stated increases of one-cent for each five-year period provided that Continental could charge the applicable price as determined by the Commission in Area Rate Proceedings if that price should be higher than the contract price. United was not willing to pay the increased price demanded by Continental, nor did it need this particular gas to meet its customers' requirements. United in turn advised Continental it could and would support an application to the Commission for abandonment by Continental of this sale. United also offered to contractually agree to continue buying Johnson Bayou Field gas on a day-to-day basis at the existing contract rate. This was unacceptable to Continental.

On December 28, 1962, Continental filed with the Commission a unilateral change in its rate schedule to become effective as of January 31, 1963. This change included an increase in the rate to be charged for the Johnson Bayou Field gas to 15.75 cents per Mcf at 15.025 psia (14¢ plus tax reimbursement of 1.75¢ per Mcf). The filing referred to the cancellation of the contract, as follows:

> After unsuccessful efforts to renegotiate the contract with United, Continental advised United by written notice dated October 23, 1962, that Continental elected to terminate the contract at the end of the primary term, on January 31, 1963. United acknowledged this notice of termination.

The notice of termination and acknowledgment are attached as Exhibit "A" to this Change in Rate Schedule.

Pursuant to the certificate of public convenience and necessity issued to Continental by Commission order on January 4, 1956, and Continental's FPC Gas Rate Schedule No. 115, Continental proposes to continue the sale of gas to United from Johnson's Bayou Field covered under such certificate and rate schedule at the rate herewith filed by this Supplement No. 7 to said Rate Schedule.

It was necessary for Continental to cancel the contract as no provision was incorporated therein which would permit the increase here demanded by Continental. The effect of this filing was a substitution of a new schedule naming the rates and charges for gas proposed to be sold to United together with the terms and conditions of the sale in place of the previous contract entered into between United and Continental. The Commission allowed this new schedule to become effective as requested, over the protest of United. This action resulted in United not being under any contractual obligation to purchase the gas from Continental.[3] United, by letter dated January 28, 1963, notified Continental that it would discontinue the purchase of gas from Johnson Bayou Field on January 31, 1963. Since that date United has not purchased any gas from this field.

United's refusal to continue the purchase stems from Continental's letter of cancellation of the contract and the unilateral filing of the 15.75 cent rate. United does not need to purchase the Johnson Bayou Field gas to continue meeting the needs of its customers. United is currently paying for a large quantity of gas in south Louisiana which it cannot presently take into its system. These payments are substantial, amounting over a 2½ year period to approximately $15 million. Further, United believes that it can buy gas cheaper than the price of 15.75 cents named in Continental's unilateral filing. While United is not now seeking additional supplies, it has entered into gas purchase contracts at higher prices with certain producers in south Louisiana, who were faced with a loss of lease for non-production and a very extensive drainage problem. Such purchases have been limited to production from a single well.

On February 1, 1963, Continental filed a petition with the Commission wherein it requested an order directed to United to show cause why United "should not be required to continue taking gas from Continental in accordance with Continental's Rate Schedule 115, as supplemented, and further order that United take such gas pending action upon the order to show cause." It will be noted that the Commission did not order United to show cause as requested by Continental, but instead directed United to show cause as to why it should not be required to apply for and obtain Commission permission and approval before ceasing operations of the facilities used to purchase such gas.

In view of the arguments advanced by the parties, it is necessary to first place the issue here in its proper perspective. This proceeding is not a settlement of a contractual dispute between two parties, nor does it involve the terms and conditions of a sale of gas by Continental to United. Texas Eastern is apparently under a misapprehension as to the status of the certificate of public convenience and necessity issued by the Commission to Continental covering the above sale. In its brief Texas Eastern states that the certificate is limited to the particular contract. In *Sunray Mid-Continent Oil Co.* v. *Federal Power Commission*, 364 U.S. 137, 153, the Court, in holding that the Commission had the right to issue permanent certificates, pointed out that a distinction existed between the service in which the producer is engaged and the contract which regulates the relationship in performing the service. The certificate issued to Continental relating to the Johnson Bayou gas on January 4, 1956, under Docket No. G–6949, was without limitation, and is as follows:

---

[3] See also, Commission order denying application for rehearing issued March 18, 1963, *Continental Oil Company (Operator), et al.*, 29 FPC 525.

> (A) A certificate of public convenience and necessity be and is hereby issued, upon the terms and conditions of this order, authorizing the sale by Applicant of natural gas in interstate commerce for resale, together with the continued operation of any facilities, subject to the jurisdiction of the Commission, used for the sale of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application and exhibits in this proceeding.[4]

In *Sun Oil Company* v. *Federal Power Commission*, 364 U.S. 170, the Court, in interpreting identical language in a Commission order granting a certificate of public convenience and necessity, held that the certificate issued was a permanent one, not subject to the term set forth in the contract.

This brings us to the question raised by the show cause order as to whether or not the failure of United to purchase gas from Continental constitutes an abandonment under Section 7(b). This Examiner is of the opinion that it does not constitute such an abandonment.

Staff counsel's position stems from the fear of a gap occurring in the regulatory process as it is related to continuous service to consumers, if United is not required to secure Commission approval before ceasing to purchase gas from Continental. To bring United within Section 7(b), it is argued that the term "service" as used in this section includes the purchase of gas. This is not the position taken by the Solicitor General on behalf of the Commission in the above *Sunray* case. In the brief filed therein, the Solicitor General represented to the Supreme Court that the term "service" was the furnishing of gas to the purchaser. The Solicitor's statement is as follows (p. 23):

> As that term is used in Section 7(e)—when read together with Section 7(b) and other provisions of the Act—the "service" is the continuous furnishing of the gas to the purchaser.

There is no gap in the regulatory process by reason of the requirement that Continental must obtain approval under Section 7(b) before abandonment of service. The issues under such an application could properly include any that might be raised if United was required to file an application under Section 7(b). The principal issue being the need of this gas to meet the demands off United's system.

Continental, in support of its position claims that "United has undertaken to abandon summarily a part of its service to its customers and the public by abandoning the receipt and purchase of gas upon which the customers and public rely." This argument overlooks the position of United and Continental existing as of today. No service has been abandoned by United. Further, it can call upon Continental to deliver Johnson Bayou gas if and when such gas is needed to meet customer demands and Continental is obligated to make such deliveries.

The purpose of the Natural Gas Act is to protect the consumer, who is the "public" that the Act refers to. This was recognized in *Hope Natural Gas Company* v. *Federal Power Commission*, 320 U.S. 591, 610, wherein the Court stated that the primary aim of the act was to protect consumers against exploitation at the hands of natural-gas companies. To this end, Section 7(b) specifically prohibits abandonment of facilities and service rendered by means of such facilities except in accordance with the standards named therein. United's facilities are still in place and can be operated at any time. The service referred to in Section 7(b) in conjunction with the other provisions of the act refers to fulfilling the demands of the purchaser of gas, *i.e.*, the obligation on the part of the utility to satisfy the requirements of the consumer. The act is silent as to any requirement that the purchaser of gas secure a certificate. In *P. R. Rutherford, et al.* Docket No. G–10922, 23 FPC 357, 360, the Commission authorized Rutherford to abandon its sale to United Gas Pipe Line Company under similar circumstances as here presented in that United had ceased the purchases of gas. Commissioner Connole in his concurring opinion pointed out that the Commission cannot compel a pipeline to purchase gas and that the certificate holder cannot be required to sell its gas if the buyer is unwilling to buy.

---

[4] The terms and conditions mentioned in the certificate authorization do not refer to the contract.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the record and the briefs filed in this proceeding, it is further found and concluded:

(1) United Gas Pipe Line Company's supply of natural gas is adequate to meet the demands for service off its system, and it has not abandoned any facilities or service by means thereof, within the meaning of Section 7(b) of the Natural Gas Act.

(2) It has not been shown that permission and approval of the Commission is required by United Gas Pipe Line Company to cease the purchase of natural gas tendered by Continental from the Johnson Bayou Field, Cameron Parish, Louisiana.

ORDER

WHEREFORE, *It is Ordered*, subject to review by the Commission, that the above-mentioned Order to Show Cause, issued on May 1, 1963, directed to United Gas Pipe Line Company, be and it hereby is dismissed and vacated.

ALVIN A. KURTZ
Presiding Examiner

IDAHO POWER COMPANY, PROJECT NO. 1971

ORDER APPROVING REVISED PROJECT EXHIBITS AND EXTENDING TIME FOR COMPLETION OF CONSTRUCTION

(Issued May 5, 1964)

On April 24, 1963, Idaho Power Company, licensee for Project No. 1971, filed for Commission approval revised Exhibit L drawings showing certain proposed changes in the project structures and a revised Exhibit M giving a general description of the mechanical, electrical, and transmission equipment for the Hells Canyon development of the project. The licensee also seeks Commission approval of an extension of time for completing construction of the Hells Canyon development.

The proposed changes to the project structures consist essentially of: (1) moving the location of the dam upstream 500 feet to a more favorable site for a concrete gravity dam; (2) changing from a rock-fill type of dam to a concrete gravity dam resulting in a savings of cost; (3) raising the normal water surface elevation of the Hells Canyon reservoir from 1683 feet to 1688 feet; (4) changing the spillway from 8 radial gates each 39 feet wide by 36 feet high to 5 gates, of which 3 would be radial surface gates each 43 feet wide by 50 feet high and 2 would be submerged radial gates, with sill at elevation 1549 feet, each 23 feet wide by 23 feet high; and (5) increasing the initial installed capacity from 270 megawatts (5 units of 54 Mw each) to 370 megawatts (3 units of 123.3 Mw each) and the ultimate installed capacity from 406 megawatts (5 units of 54 Mw each, plus 2 units of 68 Mw each) to 493 megawatts (4 units of 123.3 Mw each).

The change in type of dam from rock-fill to concrete gravity was due to a lack of a sufficient amount of suitable core material in the vicinity of the dam and to indicated savings in costs resulting from elimination of retaining walls and the separate concrete gravity spillway section, and from other changes in facilities related to the dam. The geology of the new site is better suited to a concrete gravity dam and the foundation rock was found to be competent.

Raising the normal water surface elevation of the reservoir five feet will result in an economic increase in net power output since the gain in head at Hells Canyon will exceed the loss of head at the upstream Oxbow plant resulting from encroachment. The spillway now proposed will have a capacity equal to that contemplated in the license. The hydraulic performance of the spillway will be verified by means of model tests, prior to construction, in accordance with the provisions of Article 30 of the license for the project.

The increased installed capacity now proposed for the low Hells Canyon development will permit the use of substantially the same amount of water through that generating plant as is now being utilized through the Oxbow plant and will more efficiently utilize the gain in hydraulic head provided by the proposed five foot increase in the elevation of the Hells Canyon reservoir. The increased installed capacity will provide a more economical development.

While the overall changes proposed should result in cost savings in many items of construction, the proposed increase in the installed capacity of the Hells Canyon development is expected to cause a small increase in the total cost of the development. The licensee estimates that the cost of the original initial development would have been about $64.9 million (the earlier estimate of $45.8 million increased by a cost index to January 1963 costs) as compared with an estimated cost of about $65.3 million for the initial development as now proposed, an increase of about $400,000, while the increase in installed capacity is about 100 megawatts.

The concrete gravity structures of the Hells Canyon development have been checked by Commission staff against sliding and overturning for normal and flood water conditions, including the effect of earthquake and found to be stable, and the spillway capacity was found to be adequate.

By its order issued December 11, 1959, the Commission approved, among other things, a fuse plug spillway at the Oxbow development of the project, and ordered the licensee to submit for Commission approval a spillway gate operating procedure for the Hells Canyon development during any unscheduled operation of the Oxbow fuse plug, and to develop that procedure in collaboration with the District Engineer, Corps of Engineers, Walla Walla, Washington. The Chief of Engineers, as a result of such collaboration, has recommended for inclusion in the license a special condition covering the spillway gate operating procedure for the Hells Canyon development which we are herein including as an additional license article.

The Chief of Engineers, and the Secretary of the Army, have approved the plans of the project structures insofar as the interests of navigation are concerned.

The license for Project No. 1971, issued August 1, 1955, called for completion of construction of the Brownlee development by January, 1959, the Oxbow development by August 1, 1961, and the low Hells Canyon development by August 1, 1964. The time for completion of the Brownlee development was extended to February 15, 1959, by Commission order issued January 9, 1959, and the time for completion of Oxbow was extended to September 15, 1961, by Commission order issued January 28, 1960, and was further extended to December 31, 1961, by Commission order issued September 8, 1961. The Oxbow and Brownlee developments were completed and put into operation within the times specified by the Commission's orders. The licensee is now requesting that the time for completion of the Hells Canyon development be extended from August 1, 1964, to March 31, 1968, with the first generating unit to begin operation about November 1, 1967.

At the time revised Exhibit K for the access road to the Hells Canyon site was approved by Commission order issued August 24, 1961, the Commission required the licensee to redesign the structures of the low Hells Canyon development for maximum tailwater elevation of 1515 feet in lieu of elevation 1490 feet contemplated at the time the license was issued. This new elevation is compatible with the reservoir elevation of 1510 feet contemplated for the downstream High Mountain Sheep Project. To meet this requirement, it was necessary for the licensee to undertake extensive studies, including investigation of alternate sites. The revised Exhibit M and the revised Exhibit L drawings for the low Hells Canyon development, filed April 24, 1963, show the result of such studies. Article 29 of the license has prohibited the licensee from commencing construction of the project works for the low Hells Canyon unit until the Commission shall have approved the Exhibit L drawings relating to that unit, which we are doing here.

Furthermore, construction of the low Hells Canyon structures could not proceed until requirements for temporary fish handling facilities were resolved. The Commission order issued December 11, 1963, approved temporary fish facilities for the low Hells Canyon development and provided that determination of what permanent fish facilities should be installed at that development would be made on or before January 1, 1966.

In view of the foregoing, we find that the licensee has proceeded with construction of the project in good faith and with reasonable diligence and that under the circumstances it is not incompatible with the public interests to grant the requested extension of time for completing construction of the low Hells Canyon development.

The Commission further finds:

(1) Public notice of the application has been given as required by the Federal Power Act. No protests or petitions to intervene have been received.

(2) The following described Exhibit L drawings and Exhibit M conform to the Commission's rules and regulations and should be approved as part of the license for the project and the Exhibit M described in this finding as being superseded and which is now part of the license, should be eliminated from the license.

Exhibit L	*FPC No.*	*Hells Canyon H.E. Development*
Sheet 1 of 6	1971-201	General plan
Sheet 2 of 6	1971-196	Elevations and Sections
Sheet 3 of 6	1971-197	Plans and Section

Exhibit M (signed April 22, 1963) entitled "General Description and Specifications of Equipment," superseding the Exhibit M for Low Hells Canyon Development received in the Commission May 15, 1953.

The Commission orders:

(A) The exhibits described in finding (1) above as conforming to the Commission's rules and regulations are hereby approved as part of the license for Project No. 1971, and the exhibit described in the same finding as being superseded is hereby eliminated from the license for the project.

(B) Article 28(c) of the license which specifies the time for completion of construction of the Hells Canyon development is hereby amended to read as follows:

Article 28(c). Commence construction of the low Hells Canyon unit within six years of the effective date of this license, and shall thereafter in good faith and with due diligence prosecute such construction; and shall complete that unit not later than March 31, 1968.

(C) The following additional article is hereby included in the license for Project No. 1971.

Article 48. The Licensee shall install automatic gate operating devices and shall operate the spillway at the Hells Canyon development in accordance with the Reservoir Regulations Manual for Brownlee, Oxbow and Hells Canyon Projects and in accordance with the following conditions:

The maximum increase in discharge from the Hells Canyon spillway as a result of an unscheduled breach of the Oxbow fuse plug shall be controlled to not exceed 10,000 c.f.s. This increase in discharge shall be in addition to any discharge already being released from the spillway and powerhouse. In case of a load rejection at the Hells Canyon powerhouse, concurrently with an unscheduled breach of the Oxbow fuse plug, the discharge from the Hells Canyon spillway shall be increased so that the rate of discharge from the Hells Canyon Project is unaffected by the load rejection.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

LAKELAND PETROLEUM CORPORATION (OPERATOR), ET AL., DOCKET NO. RI64-363

ORDER DENYING MOTION FOR RECONSIDERATION AND SHORTENING SUSPENSION PERIOD

(Issued May 5, 1964)

On March 20, 1964, Lakeland Petroleum Corporation (Lakeland) filed a motion for reconsideration of the Commission's order issued December 4, 1963, in the above-designated proceeding, providing for hearings on and suspension of the proposed changes in rates designated as Supplement Nos. 3 and 5 to Lakeland Petroleum Corporation (Operator), *et al.*, FPC Gas Rate Schedule Nos. 2 and 3, respectively.[1]

In support of its motion Lakeland states that it was improper for the Commission to consider the minimum guarantee of 1.0¢ per Mcf for liquids as part of the increased rate for the sale of natural gas in interstate commerce; therefore, the Commission should modify its order of December 4, 1963, by permitting Lakeland to charge and collect the subject rates without such rates being subject to suspension.

In Opinion Nos. 390 (29 FPC 1175) and 390–A (30 FPC 479), *El Paso Natural Gas Company, et al.*, Docket No. G–17849, *et al.*, we held that a contractual provision providing for a minimum guarantee for liquids should properly be considered as a component of the rate for the jurisdictional sale of gas in determining whether the rate was in excess of the applicable ceiling. Dealing specifically with this question in Opinion No. 390–A, page 480, we referred to the Examiner's decision for the rationale of our determination. In this connection, see the Examiner's decision issued September 4, 1962, therein (29 FPC 1191 at 1207 and 1208). Consistent therewith, in the suspension order in Docket No. RI64–363, we treated the subject rate filings as seeking approval of 14.0¢ per Mcf rates, *i.e.*, 13.0¢ per Mcf plus 1.0¢ per Mcf minimum guarantee for liquids.

Lakeland in its motion points out that the 1.0¢ minimum guarantee provision in its contract is operative only a portion of the time. When the value of the extracted liquids exceeds 1.0¢ per Mcf of the wet gas stream, Lakeland is compensated pursuant to the liquid settlement tables in its contracts. Under these circumstances we think it appropriate to shorten the suspension period to the date of issuance of this order, as hereinafter provided.

The Commission finds:

The motion for reconsideration filed by Lakeland on March 20, 1964, in the proceeding in Docket No. RI64–363, sets forth no new facts or legal considerations which were not fully considered prior to the issuance of our order of December 4, 1963, or which now having been considered warrant any modification of the said order, except that we shall shorten the suspension period as hereinafter provided.

The Commission orders:

(A) The motion for reconsideration of the Commission's order of December 4, 1963, filed by Lakeland Petroleum Corporation on March 20, 1964, is hereby denied.

(B) The suspension periods for the proposed rates contained in Supplement Nos. 3 and 5 to Lakeland's FPC Gas Rate Schedule Nos. 2 and 3, respectively, are hereby shortened in Docket No. RI64–363 to the date of issuance of this order, and thereafter until made effective as prescribed by the Natural Gas Act: *Provided, however*, that the above supplements to the rate schedules filed by Respondent, shall become effective subject to refund on the date and in the manner herein prescribed if within 20 days from the date of the issuance of this order Respondent shall execute and file under the above-designated docket number with the Secretary of the Commission its agreement and undertaking to comply with the refunding and reporting procedure required by the Natural Gas Act and Section 154.102 of the Regulations thereunder, accompanied by a certificate showing service of copies thereof upon the purchaser under the rate schedules involved. Unless Respondent is advised to the contrary within 15 days after the filing of its agreement and undertaking, such agreement and undertaking shall be deemed to have been accepted.

---

[1] Also suspended in the above-designated proceeding were proposed increased rates designated as Supplement Nos. 5 to Lakeland Petroleum Corporation (Operator), *et al.*, FPC Gas Rate Schedules Nos. 7, 8 and 9. Lakeland's motion does not pertain to these rates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

LEFLORE GAS COMPANY, DOCKET NO. CP64-192

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued May 5, 1964)

On February 28, 1964, as supplemented on March 13, 1964, LeFlore Gas Company, formerly the LeFlore County Gas and Electric Company, (Applicant) filed in Docket No. CP64-192 an application pursuant to Section 7(b) of the Natural Gas Act for permission to abandon service of natural gas to Athletic Mining and Smelting Company (Athletic), a direct industrial customer of Applicant.

Applicant has been advised by letter from Athletic that due to the latter's discontinuance of its plant operations no more gas will be purchased from Applicant after March 17, 1964.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 1, 1964, the Commission on its own motion received and made part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, LeFlore Gas Company, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-304 (3 FPC 969).

(2) The transportation and delivery of natural gas hereinbefore described are subject to the jurisdiction of the Commission and abandonment of the same is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity, and should be permitted and approved as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, LeFlore Gas Company, of the transportation and delivery of natural gas to Athletic Mining and Smelting Company, as hereinbefore described, are hereby granted.

(B) LeFlore shall advise the Commission of the date of abandonment of the aforesaid service within 10 days of such abandonment.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-188

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued May 5, 1964)

On February 24, 1964, Northern Natural Gas Company (Applicant) filed in Docket No. CP64-188 an application pursuant to Sections 7(c) and (b) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of new 6-inch pipeline approximately 1.4 miles in length to enable it to continue to serve the City of Owatonna, Minnesota, which is now being served from two 4-inch lines which Applicant seeks permission to abandon and remove because these lines lie within the right of way of a highway for which construction is now underway or to be commenced, all as more fully set forth in the application.

The estimated cost of the proposed construction and removal of facilities is $41,000, which will be financed from funds on hand.

A temporary certificate to construct and operate the 6-inch pipeline was issued by the Commission March 20, 1964.

After due notice, no petition to intervene, notice of intervention or protest to the granting of application has been filed.

At a hearing held on May 1, 1964, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the application and exhibits submitted in support thereof, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The facilities proposed to be abandoned as hereinbefore described, all as more fully described in the application in this proceeding, are subject to

the jurisdiction of the Commission and the abandonment thereof by Applicant is subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(7) The abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate facilities and to deliver natural gas in interstate commerce as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) Permission for and approval of the abandonment by Applicant, Northern Natural Gas Company, of the facilities hereinbefore described, be and the same are hereby granted.

(D) Applicant shall advise the Commission of the date of removal of said facilities within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NOS. G-12193, ET AL.[1] AND G-12401

ORDER APPROVING RATE SETTLEMENT PROPOSAL, TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued May 5, 1964)

There is before us for consideration a Motion for Approval of Settlement Proposal and Termination of Proceedings filed on March 30, 1964, by Socony Mobil Oil Company, Inc. (Socony) encompassing the rates for 223 of Socony's currently effective FPC Gas Rate Schedules. Comments have been filed by some of the parties to these proceedings, all of which have been given due consideration. In summary, the settlement proposal as filed by Socony provides:

(1) Settlement rates, including tax reimbursement, equal to or less than the Commission's applicable area ceilings with four exceptions hereinafter discussed;

(2) Socony waives the right to file for contractually authorized increased rates until April 1, 1969, for Rate Schedule Nos. 24 and 69 and January 1, 1967, for the remainder of the rate schedules. Socony reserves the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels established by any order or rule of the Commission, or to file for any contractually authorized increase in tax reimbursement;

---

[1] The additional dockets involved herein are set forth in Appendices A, B, and C attached hereto.

(3) Socony would waive any favored nation and price redetermination clauses contained in Rate Schedule Nos. 8, 9, 10, 12, 13, 14, 21, 27, 28, 45, 47, 49, 53, 57, 73, 77, 78, 81, 83, 87, 96, 99, 118, 130, 136, 143, 178, 212, 213, 224, 225, 270, 271, 275, 285, and 296 and additionally would waive the periodic pricing provisions in Rate Schedule Nos. 65, 84, and 138.

(4) Refunds, with interest at the applicable rates, under rate schedules where collection was made subject to refund, of the difference between the revenues actually collected and those which would have been collected at the settlement rate, in each instance, commencing with December 1, 1962, to the date of issuance of this order for all of Socony's rate schedules, and in addition for the period April 1, 1960 to December 31, 1961, for Rate Schedule Nos. 275 to 306, inclusive, where collection was made subject to refund.

(5) Exclusion from the settlement proposal of all Permian Basin sales, fifteen sales related to previous offers of settlement accepted by the Commission; seven sales to other producers whose resale rates are under suspension; and those matters relating to Rate Schedule No. 16, together with its pending Section 4(e) rate increase dockets (G-12201 and G-17526).[2]

In support of its proposal, Socony states that the settlement rates, refunds, moratorium periods and other provisions thereof, not specifically noted herein, are in the public interest in that they are reasonable and will provide price stability for a long period of time for natural gas moving interstate commerce.

With respect to refunds, the parties to the settlement conferences utilized cost of service studies and revenues based on contract rates to determine Socony's revenue-cost relationship. These studies indicate that it is appropriate that we require that refunds should be computed for sales made on and after December 1, 1962. Socony proposes, as noted above, that such general refunds be made up to and including the date of issuance of this order. Additionally, studies made by the parties showed that as to Rate Schedule Nos. 275 to 306, inclusive, where collection was made subject to refund, we should require refunds from April 1, 1960 to December 31, 1961. Applicable interest shall be paid on all of the refunds through March 31, 1964. Such refunds will be approximately $12,000,000 inclusive of interest. Socony's future revenues will be decreased approximately $5,600,000 annually as a result of the settlement.

Settlement rates which are exceptions to the applicable area ceilings are proposed by Socony for two sales of natural gas made by it to United Gas Pipe Line Company (United) in South Louisiana and for two sales to Cities Service Gas Company (Cities) in the Oklahoma Panhandle and the State of Kansas.

The two sales to United are made under Socony's FPC Gas Rate Schedule Nos. 24 and 69 from the Iowa and Cameron Meadows fields, Louisiana. Prior to 1958, these sales were made under ten year contracts which were about to expire. On May 26, 1958, Socony and United renegotiated and amended the contracts to provide for twenty-year terms, and Socony dedicated substantial additional reserves, which resulted in increased annual deliveries to United under these contracts.[3] The current rates for gas sold under the renegotiated contracts are 20.55¢ per Mcf under Rate Schedule No. 24 and 20.25¢ per Mcf under Rate Schedule No. 69. The proposed settlement rate under each rate schedule is 17.0¢ per Mcf. The proposed settlement rates, therefore, exceed the increased rate ceiling, but are below the initial rate ceiling. In view of the above circumstances surrounding these sales, we find the settlement rates of 17.0¢ per Mcf to be proper and approve the same.[4]

---

[2] Socony does not propose a settlement of the Section 4(e) proceedings involving Rate Schedule No. 16, or the termination of any refund obligation thereunder but will supersede the existing rate of 23.55¢ per Mcf with a rate of 17.0¢ per Mcf to be effective April 1, 1964, subject, however, to the Section 4(e) rate proceedings.

[3] United was represented and actively participated in the settlement negotiations herein.

The other two exceptions to the applicable area ceiling involve two sales to Cities in the Oklahoma Hugoton Field (Rate Schedule No. 283) and the Kansas Hugoton Field (Rate Schedule No. 3) from shallow horizons in each of said fields. The presently effective rates under Rate Schedule Nos. 3 and 283 are 14¢ and 15¢ per Mcf respectively. Subsequent to the negotiation of the contracts for the sales of gas from the shallow horizons, deeper productive horizons were discovered in each field. When the currently effective rates under Rate Schedule Nos. 3 and 283 were renegotiated, Socony committed, by separate contracts, the deep gas reserves which had been discovered under a substantial amount of the acreage covered by the original rate schedules. The commitment of the deep horizons in the Kansas Hugoton was approximately 100,000 acres (Rate Schedule No. 262) and approximately 58,000 acres in the Oklahoma Hugoton (Rate Schedule No. 304). The currently effective rates under Rate Schedule Nos. 262 and 304 are 16¢ and 17¢ per Mcf, respectively. Consideration of all the circumstances surrounding these sales, and the interdependence of the currently effective rates for the shallow gas with the dedication of the deep gas reserves, causes us to believe them similar to others where we have considered such a unique situation to warrant exceptions to the applicable area ceiling, *Cities Service Production Company, et al.*, Docket No. G-9510, *et al.*, 28 FPC 1114, order issued December 26, 1962. Therefore, we find the proposed settlement rates of 13.0¢ per Mcf to be proper for these four sales and approve the same.

As set forth above, Socony proposes to waive the favored nation, price redetermination and periodic price provisions in certain of its rate schedules and proposes settlement rates for said rate schedules in accordance with the Second Amendment to the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, and the Seventh Amendment thereto, issued November 27, 1963, 30 FPC 1370. However, said amendments each specifically provide for the elimination of such provisions except for those instances where specified period price provisions are substituted by amendment. Therefore, we hereby require Socony to comply with said amendments by eliminating the favored nation, price redetermination and periodic price provisions from those rate schedules where it merely proposes waiver.[5]

The settlement proposal also includes rates for which issuance of related permanent certificates is pending; some of which are for deliveries presently being made under temporary authority.[6] The certificate applications in Docket Nos. G-17777, CI61-271, CI62-603 and CI62-998 involve upward Btu price provisions, and are presently consolidated for hearing in the proceedings in *Sunray DX Oil Company, et al.*, Docket No. G-4281, *et al.*, relating to the Btu adjustment provisions. Accordingly, the matter of the issuance of permanent certificates should be determined in such proceedings, and not through the abridged hearing procedure.

---

[4] See: *Shell Oil Co., et al.*, Docket No. G-9446, *et al.*, 28 FPC 257; *Gulf Oil Corp., et al.*, Docket No. G-9520, *et al.*, 29 FPC 837; and *Sinclair Oil & Gas Co.*, Docket No. G-9291, *et al.*, 30 FPC 5, order issued July 1, 1963, for similar circumstances where exceptions to the applicable area ceiling were granted.

[5] In its Exhibit A to the appendix to its proposal, Socony states that it proposes to "delete" such provisions from the subject rate schedules rather than to merely "waive" the right to file under such provisions.

[6] See Appendix B attached hereto.

We propose to set the remaining pending certificate applications for abridged statutory hearing in accordance with Section 7 of the Natural Gas Act, indicating that the settlement rates, as provided for herein, shall be the initial price. Certain of such applications also contain Btu adjustment provisions and are presently consolidated with the proceedings in *Pan American Petroleum Company, et al.*, Docket No. G–19417, *et al.*[7] We shall condition the certificates to be issued in those proceedings so that the initial price, including tax reimbursement, shall not exceed 17¢ per Mcf at 14.65 psia for Docket No. CI61–1281 (insofar as it covers acreage in the Oklahoma Panhandle) and 15.0¢ per Mcf at 14.65 psia for the remainder of the dockets; the allowances for take-or-pay provisions in the related rate schedules are subject to the ultimate disposition with respect to such provisions in the rule-making proceeding in Docket No. R–199; however, Socony will not be required to file take-or-pay provisions for less than 80 percent of the annual quantity dedicated under each rate schedule; the allowance for any BTU adjustment provision in the related rate schedules shall be subject to the ultimate disposition with respect to such provision in the rule-making proceeding in Docket No. R–200; and in Docket No. CI61–1024 the BTU adjustment provision shall operate above or below 1,000 BTU per cubic foot as specified in the temporary certificate issued July 1, 1961, as modified by the Commission's letters of September 14, 1961 and November 17, 1961.

Two other rate schedules among such pending applications also contain BTU adjustment provisions[8] and are not consolidated in either the *Sunray DX* or the *Pan American* proceedings. The certificates issued in those proceedings shall be conditioned to make such BTU adjustment provisions subject to the ultimate disposition in the rule-making proceeding in Docket No. R–200.

On April 29, 1964, The Public Service Commission of the State of New York (PSC) filed its opposition to the settlement proposal. PSC notes Socony's statement that our approval of the settlement will result in an annual reduction in Socony's rates of approximately $5.6 million and in refunds of approximately $12.0 million, but, PSC states that a meaningful evaluation of the amounts cannot be made without knowledge of the amount of monies collected subject to refund and retained under the settlement, and the annual amount of rate increases which will be effected under the settlement. Further, PSC states that its past acquiescence in rate settlements "is necessarily premised upon our reliance on the scrutiny which such settlements receive from the Commission and its staff", and that it believes such scrutiny should not be hampered by the lack of the information it cites.[9]

The principles underlying the present settlement are consistent with those utilized in previous major independent producer rates settlements. The rates herein agreed upon are consistent with the guideline prices set forth in our Statement of General Policy No. 61–1, as amended. Refund dates are determined by utilizing cost of service studies prepared in accordance with prior Commission decisions, with full refunds above the settlement rates required from the date on which the conferees fix as that upon which the producer's unit revenues exceed the unit costs so determined. On this basis Socony's proposed refund of $12,000,000 will constitute approximately 45% of amounts collected above the settlement rates, subject to refund, and the reduced rates of $5,600,000 annually will constitute disallowance of approximately 55% of the increased rates currently being collected in Section 4(e) proceedings.

---

[7] See Appendix C hereto.

[8] Amendments to certificates in Docket Nos. G–12480 and G–14223.

[9] In its response to the settlement proposal filed by PSC in *Texaco Inc., et al.*, Docket No. G–8969, *et al.*, *PSC* stated that it had never been a signatory or joined in any settlement agreement or proposal but rather was a "silent bystander". Consistent with that position PSC was not represented in the settlement conferences which resulted in the proposal filed by Socony herein. However, all relevant information, including that referred to in PSC's motion, is made available to the conferees and will be made available upon request of any party to the proceedings whether it attends the conferences or not.

In addition to these matters, we consider the fact that a reduction in rates is required in connection with a sale not subject to a Section 4 proceeding (Socony's Rate Schedule No. 164) and that Socony has assured a period of rate stability through a moratorium on above ceiling increased rate filings until at least January 1, 1967.

Our action herein should not be construed as constituting approval of any future rate increases, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in future proceedings, including area rate or similar proceedings, involving Socony's rates and rate schedules.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the Settlement Proposal filed on March 30, 1964, is in the public interest, and it is appropriate in carrying out the provisions of the Natural Gas Act, that it be approved and made effective as hereinafter ordered, and good cause exists for approving the settlement rates, for severing and terminating certain proceedings and providing for refunds.

The Commission orders:

(A) The settlement of these proceedings on the basis of the settlement proposal, filed by Socony on March 30, 1964, is approved and made effective subject to the terms and conditions herein.

(B) The applicable settlement rates set out in Appendix A hereto are approved, and such rates shall be effective as of May 1, 1964.

(C) The settlement rates approved herein shall be applicable during the moratorium period herein provided for to all sales of natural gas from all acreage dedicated as of the date of issuance of this order under each of the rate schedules currently on file with the Commission whether such sales are made by Socony, its successors or assigns.

(D) The pending certificate proceedings set out in Appendix B hereto shall not be terminated on the basis of the approval of the settlement proposal, but shall be determined after hearing in accordance with Section 7 of the Natural Gas Act and the terms and conditions of this order.

(E) Within 60 days from the date of this order, Socony shall make such filings under its rate schedules as are required to make effective the terms of the settlement proposal.

(F) Within 60 days from the date of this order, Socony shall (1) refund with interest as specified in each docket computed to March 31, 1964, the difference between the rates collected subject to refund and the related settlement rates, on and after December 1, 1962 to the date of this order for all of such of Socony's Rate Schedules, and for the period between April 1, 1960 and December 31, 1961 for Rate Schedules Nos. 275 to 306 inclusive where the rates were collected subject to refund, and (2) report to the Commission, in writing, the amount of refunds made to each of its purchasers showing separately the amount of principal and interest so paid, and the bases used for such determination, together with releases from its purchasers showing receipt of the refunds in conformity with the settlement proposal as approved herein.

(G) Upon full compliance by Socony with all the terms and provisions of this order, the Section 4(e) proceedings, except those related to Rate Schedule No. 16 listed in Appendix A hereto, and the Section 5(a) proceedings in Docket No. G-12401, shall terminate.

(H) Upon termination of the Section 4(e) proceedings listed in Appendix C hereto, in accordance with Paragraph (G) above, said proceedings shall be severed from the consolidated proceedings in Docket Nos. AR61-2, AR64-1 and AR64-2, respectively.

(I) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Socony, the Commission staff, or any affected party hereto, in any proceedings now pending, including area rate or similar proceedings, or hereafter instituted by or against Socony or any other companies, person or parties affected by this order.

FOOTNOTES RELATING TO CERTIFICATED RATE SCHEDULES AND/OR 4(e) DOCKETS

[a] Unless otherwise indicated, all rates are expressed in cents per Mcf at a pressure base of 14.65 psia, except in Louisiana, Colorado, New Mexico, Mississippi, Wyoming and Utah, where the rates are expressed in cents per Mcf at a pressure base of 15.025 psia. All rates include applicable tax reimbursement, and certain rates (including some of the settlement rates) are subject to BTU adjustment.

[b] Rate is at a pressure base of 16.7 psia.

[c] Socony will eliminate the favored nation, price redetermination and future periodic escalation provisions to qualify for rate not to exceed 15.0¢ per Mcf.

[d] Socony will eliminate the favored nation and price redetermination provisions in contract to qualify for contract rate not to exceed 14.6¢ per Mcf.

[e] Rate increase to 15.25¢ per Mcf at 16.7 psia (13.72¢ per Mcf at 15.025 psia) accepted by Commission on 3-6-64 to be effective 4-26-64.

[f] Socony will eliminate the favored nation and price redetermination provisions to qualify for rate not to exceed 11.6¢ per Mcf.

[g] Settlement rate subject to a contractual deduction of 1.25¢ per Mcf for dehydration and gathering.

[h] Settlement rate subject to a contractual deduction of .25¢ per Mcf for dehydration.

[i] This Docket covers sales both from the Oklahoma Panhandle and the Kansas areas.

[j] 4(e) Docket relates to suspended rate of 7.86624¢ per Mcf which was collected under undertaking from 12-12-60 through 10-31-62. Present rate of 11.0¢ per Mcf was accepted on 11-1-62. Rate increase to 12.54¢ per Mcf suspended in Docket RI 64-410.

[k] Settlement rate and rate in effect includes 2¢ per Mcf contractual service charge for gathering and delivery.

[l] Rate in effect includes 3¢ per Mcf contractual service charge for gathering and compression.

[m] Rate is at a pressure base of 16.4 psia.

[n] Socony will eliminate the future price escalation provisions in contract to qualify for rate of 15.0256¢ per Mcf.

[o] Rate increase to 15.6¢ per Mcf suspended in Docket RI 64-226.

[p] Rate increase to 15.25¢ per Mcf suspended in Docket RI 64-324.

[q] Rate increase to 21.1¢ per Mcf suspended in Docket RI 64-209.

[r] Rate increase to 17.9¢ per Mcf suspended in Docket RI 64-324.

[s] Rate increase to 15.9¢ per Mcf suspended in Docket RI 64-313.

[t] Rate increase to 13.175¢ per Mcf suspended in Docket RI 64-609.

[u] Rate increase to 17.0¢ per Mcf suspended in Docket RI 64-410.

[v] Rate increase to 13.5¢ per Mcf suspended in Docket RI 64-410.

[w] Low Pressure gas rate not subject to 4(e) proceeding.

[x] High Pressure gas rate subject to 4(e) Dockets. Rate increase to 14.0505¢ per Mcf suspended in Docket RI 64-486.

[y] Rate increase to 14.2343¢ per Mcf suspended in Docket RI 64-496.

[z] Rate increase to 13.175¢ per Mcf suspended in Docket RI 64-608.

[aa] Rate increase to 14.0¢ per Mcf suspended in Docket RI 64-528.

[bb] Rate increase to 16.8¢ per Mcf suspended in Docket RI 60-141. Contract amended effective 7-25-63 to provide lower delivery pressure and rate of 8¢ per Mcf and which was increased to 9¢ per Mcf effective 1-1-64. Rate increase to 12.35¢ per Mcf filed on 1-3-64 and suspended in Docket RI 64-555.

[cc] Rate increase to 17.9¢ per Mcf suspended in Docket RI 64-543.

[dd] Rate increase to 15.384¢ per Mcf filed on 1-27-64. Socony proposes to delete favored nation provisions to qualify for rate of 13.6154¢ per Mcf.

[ee] Socony did not propose a settlement rate for this Rate Schedule or the termination of any refund obligation under the pending Section 4(e) proceedings thereunder. Socony proposes to file for a rate of 17.0¢ per Mcf to be effective 4-1-64 and which rate will be subject to a Section 4(e) rate proceeding.

[ff] The parties agreed on a rate of 17.0¢ per Mcf plus contract BTU adjustment. However, under the arrangement between Socony and others and Buyer, a gas products plant was constructed on the main line field lateral of Michigan-Wisconsin with the plant owners compensating Michigan-Wisconsin for the reduction in BTU and gas volume due to processing. The arrangement here is that the net cost to Michigan-Wisconsin at the discharge of the plant cannot exceed 17.0¢ per Mcf.

[gg] The settlement rate consists of 11.0¢ per Mcf for price of gas plus service charge of 2.0¢ per Mcf for gathering and compression.

[hh] Rates are subject to 0.21931¢ deduction for dehydration.

[ii] Settlement rate includes 0.5¢ at 16.7 psia (0.4386¢ at 14.65 psia) additional compensation for gathering by Seller as provided in the contract.

[jj] Base rate is 16.5¢ plus tax reimbursement of 1.75¢ for high pressure gas and 0.875¢ for low pressure gas.

[kk] Rates are subject to 0.5¢ deduction for gas requiring compression by purchaser.

[ll] Rates are subject to 0.75¢ deduction for dehydration.

[mm] Base rate is 17.5¢ plus 1¢ for gas delivered at 860 psig.

[nn] Base rate is 8.1857¢ at 16.7 psia, low pressure gas subject to deduction of .5¢.

[oo] Rate is 13.0¢ for sweet gas and 10.0¢ for sour gas.

[pp] Rate subject to applicable contract deduction for compression.

*Rate subject to upward BTU adjustment.

FOOTNOTES RELATING TO PENDING CERTIFICATE APPLICATIONS

[a] Unless otherwise indicated, all rates are expressed in cents per Mcf at a pressure base of 14.65 psia, except in Louisiana, Colorado, New Mexico, Mississippi and Wyoming, where the rates are expressed in cents per Mcf at a pressure base of 15.025 psia. All rates include applicable tax reimbursement, and certain rates (including some of the settlement rates) are subject to BTU adjustment.

[b] Rate increase to 15.384¢ per Mcf filed on 1-27-64. Socony will eliminate the favored nations provisions to qualify for rate of 13.6154¢ per Mcf.

[c] Set for hearing in Sunray DX Oil Company, et al., proceedings in Docket No. G-4281, et al.

[d] Initial rate includes contractual gathering and delivery charge of 2.0¢ per Mcf for associated gas and contractual gathering and delivery charge of 1.0¢ per Mcf for non-associated gas.

[e] Set for hearing in Pan American Petroleum Corporation, et al., proceedings in Docket No. G-19417, et al.

[f] Initial rate includes contractual service charge of 3.0¢ per Mcf for gathering and compression on casinghead gas produced from oil wells and for gas produced from gas wells connected to Socony's gathering system.

[g] Settlement rate consists of 11.0¢ per Mcf for price of gas plus service charge of 2.0¢ per Mcf for gathering and delivering associated gas and service charge of 1.0¢ per Mcf for gathering and delivering non-associated gas.

[h] Settlement rate consists of 11.0¢ per Mcf for price of gas plus service charge of 2.0¢ per Mcf for gathering and compression.

[i] The parties agreed on a rate of 17.0¢ per Mcf plus contract BTU adjustment. However, under the arrangement between Socony and others and Buyer, a gas products plant was constructed on the main line field lateral of Michigan Wisconsin with the plant owners compensating Michigan Wisconsin for the reduction in BTU and gas volume due to processing. The arrangement here is that the net cost to Michigan Wisconsin at the discharge of the plant cannot exceed 17.0¢ per Mcf.

[j] Socony did not propose a settlement rate for this Rate Schedule. Socony proposes to file for a rate of 17.0¢ per Mcf to be effective 4-1-64 and which rate will be subject to a refund condition.

[k] Base rate is 16.5¢ plus tax reimbursement of 1.75¢ for high pressure gas and 0.875¢ for low pressure gas.

*Rate subject to upward BTU adjustment.

TRUNKLINE GAS COMPANY, DOCKET NO. CP64-114

ORDER DENYING PETITION FOR REHEARING

(Issued May 5, 1964)

On April 6, 1964, The Superior Oil Company (Superior) filed a "Petition for Rehearing" of the Commission's order issued March 19, 1964, denying Superior's petition to intervene in the above-entitled proceeding. Superior alleges that the Commission erroneously denied its petition to intervene and urges the Commission to reverse its prior decision and permit Superior to intervene in Docket No. CP64-114. Since the Commission has already granted the expansion application of Trunkline Gas Company (Trunkline) in Docket No. CP64-114 by order issued March 20, 1964, Superior requests that the order issuing Trunkline a certificate of public convenience and necessity be set aside and that Trunkline's application be scheduled for a full and formal hearing at which Superior would be permitted to raise the issues and arguments which it has heretofore set forth in its petition to intervene as well as in the petition for rehearing which is now before us for consideration. We believe the Commission's earlier rulings in this proceeding have fully protected the interests of Superior and that its further contentions are groundless.

Superior alleges that we overlook some of the arguments which it had claimed were justification for its being permitted to intervene in Docket No. CP64–114. On the contrary, our order denying Superior's petition to intervene specifically considered all of Superior's substantial allegations and concluded:

> * * * All the matters raised by Superior are either irrelevant to the issues to be considered in Docket No. CP64–114 or are already the subject of decisions which have been made or which should be made in other proceedings as hereinbefore described.

The foregoing conclusion is equally applicable to the contentions raised by Superior's petition for rehearing, but in order to demonstrate that we have overlooked none of Superior's arguments, we shall discuss all four of its alleged grounds.

(1) Superior alleges that it was made an involuntary creditor by Trunkline's failure to pay the prices in effect subject to refund for Superior's deliveries of gas to Trunkline under the former's FPC Gas Rate Schedules Nos. 1 and 3. This failure of Trunkline to pay the effective prices has resulted in Trunkline's owing Superior a sum of about $2,000,000 and has raised the question of whether Trunkline can finance the proposed expansion in Docket No. CP64–114 from funds on hand without resort to public financing. Superior further alleges in this connection that our order issued March 9, 1964, in *Trunkline Gas Co.* v. *The Superior Oil Co.*, Docket No. RI64–273, *et al.*, 31 FPC 506, does not dispose of its interest in Trunkline's financial responsibility and thereafter Superior incorporates herein by reference its Motion for Clarification and Petition for Rehearing filed March 16, 1964, in Docket No. RI64–273, *et al.*

(2) Superior alleges that Trunkline's gas purchase contracts with Pan American Petroleum Company (Pan Am) and Union Oil Company of California (Union) have the effect of restraining commerce in that they require Trunkline to purchase gas from Pan Am and Union on a 1 Mcf to 8,000 Mcf basis to the extent that the reserves underlying their leasehold interests in Blocks 14, 15, and 26 Offshore Vermilion Parish, Louisiana, are sufficient to meet Trunkline's additional gas requirements. Superior contends that its failure to file a petition to intervene in the dockets wherein Pan Am and Union sought certificates authorizing their sales to Trunkline does not preclude it from raising the issue of "restraint on commerce" in Docket No. CP64–114. Superior further argues that it was improper for us to characterize the nature of the contractual provisions between Pan Am, Union, and Trunkline when the interpretation of those contracts was a dispute in controversy regarding which Superior is entitled to be heard, as well as to have the opportunity to present evidence and file briefs. Finally, Superior alleges that its proposed sale to American Louisiana Pipe Line Company in Docket No. G–6067, even if approved by the Commission, will not commit all of its reserves in Block 14 Offshore Vermilion Parish, Louisiana, to American Louisiana.

(3) Superior next contends that the Commission ignored the gas-supply issue raised in its petition to intervene. Superior points out that Trunkline's claim of having a 13-year gas deliverability is subject to question because of Trunkline's breach of its gas purchase contracts (Superior's FPC Gas Rate Schedules Nos. 1 and 3) with Superior. Superior states that Trunkline's action as to these contracts would justify Superior's cancellation of the contracts, subject only to regulatory approval. Since Trunkline has relied upon the gas

reserves committed under these contracts as a part of its total gas supply supporting its expansion proposal, at least a substantial portion of Trunkline's gas supply is in danger of being lost. According to Superior, the Commission's refusal to grant Superior's petition to intervene has left unanswered the question of how long Superior's gas will be available to Trunkline.

(4) The last issue raised by Superior is that Trunkline was willfully and deliberately refusing to abide by valid and effective Commission orders at the time its application in Docket No. CP64–114 was filed. Superior contends that since a finding that an applicant is willing and able to conform to the provisions of the Natural Gas Act and to the Commission's regulations thereunder is a necessary element to be considered by the Commission prior to the issuance of a certificate, it is essential that the Commission make such determinations without mere reliance upon allegations made by Trunkline in support of the granting of its application.

As to the first issue raised by Superior, that is, the question of Trunkline's ability to meet its financial obligations, particularly its ability to pay Superior the amount of $2,000,000 which Trunkline allegedly owes for gas delivered by Superior under its Rate Schedules Nos. 1 and 3, it is obvious that Trunkline's financial integrity is in no danger of being impaired as a result of the $9,000,000 expansion proposed in Docket No. CP64–114. In our order issued March 30, 1964, in *Trunkline Gas Co.*, Docket No. RP64–19, 31 FPC 743, we approved Trunkline's proposal to reduce its jurisdictional rates in the sum of approximately $8,600,000 by reason of the reduction in unit costs of operations and a $2,000,000 reduction in cost of gas purchased from Pan Am and Union. We further observed that (31 FPC 744):

> Trunkline's rate reduction proposal has resulted from conferences with the Commission staff. These conferences were initiated by letter of the Executive Director to Trunkline on September 6, 1963, as a consequence of the staff's continuing supervision of natural gas companies and the periodic review of the reports filed with the Commission by such companies.

Our staff's continual review of the financial condition of the companies subject to the Commission's jurisdiction is certainly adequate basis for providing us with knowledge from which to conclude that there is no merit to Superior's allegations that Trunkline's financial responsibility will be seriously impaired merely because it has sought to embark upon an expansion program at a cost of approximately $9,000,000.

Superior's second contention to the effect that Trunkline's contracts with Pan Am and Union result in restraint of commerce is not a matter properly to be considered in this case. We have already indicated that we do not consider the reserve redetermination clauses in these contracts to be unusual or in restraint of trade any more than the many other gas sales contracts which provide that the purchasers will agree within limits to buy gas from newly added wells or acreage before they seek other sources of supply. But in any event this question relates to the sales to Trunkline which have already been certificated without protest by Superior and this final order cannot be collaterally attacked in the pipeline expansion proceedings.

Superior's third contention is that some of Trunkline's gas reserves are in danger of being lost because of Superior's asserted legal right to cancel the contracts which Trunkline has allegedly breached. But even assuming Superior has a contractual right to cancel its contracts with Trunkline, it cannot terminate service under the Natural Gas Act without first seeking abandonment authority from the Commission pursuant to Section 7(b) of the Act. If such abandonment would jeopardize Trunkline's ability to serve its customers' requirements, it clearly would not be consistent with the public convenience and necessity.

Superior's fourth and final ground for being permitted to intervene in Docket No. CP64–114 is based upon the allegation that Trunkline's refusal to pay Superior the full prices in effect subject to refund under the latter's Rate Schedules Nos. 1 and 3 prior to our determination of its duty to do so demonstrated its incapacity or unwillingness to comply with the Natural Gas Act and the Regulations of the Commission adopted pursuant thereto. When we issued our order of March 9, 1964, in Docket No. RI64–273, *et al.*, we ordered Trunkline to pay Superior the prices in effect subject to refund. Since Trunkline filed on March 31, 1964, a report of refunds in compliance with our order issued March 9, 1964, and since this is the only situation, to our knowledge, where it has been alleged that Trunkline has failed to comply with the Act or the Commission's Regulations, it does not appear that the Commission erred in finding in the order issued March 20, 1964, in Docket No. CP64–114 that Trunkline was able and willing to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the petition for rehearing filed by Superior set forth no new facts or principles of law which were not fully considered by the Commission when it adopted its order issued herein on March 19, 1964, or which having now been considered warrant any change or modification in said order.

The Commission orders:

The "Petition for Rehearing" of The Superior Oil Company filed April 6, 1964, in Docket No. CP64–114 is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP64–160; KANSAS-COLORADO UTILITIES, INC., DOCKET NO. CP-64-137

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 6, 1964)

On January 13, 1964, as amended on March 2, 1964, and on December 11, 1963, as amended on February 24, 1964, Colorado Interstate Gas Company (Colorado Interstate) and Kansas-Colorado Utilities, Inc., (Kansas-Colorado) hereinafter referred to as (Applicants) filed in Docket Nos. CP64–160 and CP64–137, respectively, applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas as hereinafter described, all as more fully described in the applications on file herein.

Colorado Interstate seeks authorization for metering facilities necessary to enable it to sell and deliver natural gas to Kansas-Colorado from its system in New Mexico. The estimated cost of such facilities is $7,057 which costs are to be financed from funds on hand. The sale of natural gas will be made on an interruptible basis by Colorado Interstate under its Rate Schedule IS-2 (21.5 cents per Mcf).

Kansas-Colorado proposes to construct and operate 3.15 miles of 6⅝-inch transmission pipeline extending from a point of connection with Colorado Interstate's facilities in Union County, New Mexico, to a point of connection with Felt Water Development Company (Felt Water) in Cimarron County, Oklahoma, together with a measuring and regulating station at this point. The estimated cost of such facilities is $36,080, to be financed from current working funds.

The volume of gas which Kansas-Colorado proposes to purchase from Colorado Interstate for resale to Felt Water for irrigation and other purposes is 173,465 Mcf per annum (third year estimate) on an interruptible basis under its proposed Rate Schedule I-1 (24.5 cents per Mcf).

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 1, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, as amended, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G-294 (4 FPC 936).

(2) Applicant, Kansas-Colorado Utilities, Inc., is a Kansas corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" as heretofore found by the Commission in its order of December 8, 1958, in Docket No. G-15991 (20 FPC 793).

(3) The facilities heretofore described, as more fully described in the applications, as amended, in these proceedings, are to be used for the transportation, sale and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Colorado Interstate and Kansas-Colorado, respectively, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Colorado Interstate's and Kansas-Colorado's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Applicant, Colorado Interstate Gas Company and

Applicant, Kansas-Colorado Utilities, Inc., to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the respective applications, as amended, in Docket Nos. CP64-160 and CP64-137, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Colorado Interstate's and Kansas-Colorado's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in operation, as provided by paragraph (b) of Section 157.20 above mentioned, within six months from the date on which this order issues.

LETTER-ORDER REJECTING RATE FILING

MAY 6, 1964*

WILLIAM HERBERT HUNT TRUST ESTATE,
700 Mercantile Bank Building,
Dallas 1, Texas.

Attention: Donald K. Young, Attorney.

GENTLEMEN: This is with reference to your letter dated April 3, 1964, transmitting for filing a purported notice of change in rate, also dated April 3, 1964, as a supplement to your FPC Gas Rate Schedule No. 11.

Since the instant notice does not change the 18.0¢ rate presently being collected, it does not constitute a change in rate within the meaning of Section 4(d) of the Natural Gas Act and the filing is hereby rejected pursuant to Section 154.100 of the Commission's Regulations under the Natural Gas Act. All available copies are returned herewith.

By direction of the Commission.

JOHNSON RANCHO COUNTY WATER DISTRICT, PROJECT NO. 2240; YUBA COUNTY WATER AGENCY, PROJECT NO. 2246

ORDER DISMISSING APPLICATIONS FOR PRELIMINARY PERMIT

(Issued May 6, 1964)

On December 16, 1957, L. Cedric Macabee of Palo Alto, California, succeeded by Johnson Rancho County Water District, Wheatland, California, filed an application for preliminary permit for a proposed hydroelectric development, Project No. 2240, on the Yuba River and tributaries in Sierra, Nevada, and Yuba Counties, California.

On May 19, 1958, Yuba County, succeeded by Yuba County Water Agency, filed an application for preliminary permit for a proposed hydroelectric development, Project No. 2256, on the Yuba River and tributaries in Sierra, Nevada, and Yuba Counties, California.

The Commission having by order of May 16, 1963, 29 FPC 1002, as modified by order of December 27, 1963, 30 FPC 1610, issued a license to Yuba County Water Agency for Project 2246 after due notice and hearing, and said license having been accepted by the licensee on February 3, 1964, the above-entitled applications for preliminary permit, both of which contemplated project works in the same stretch of the Yuba River for which a license has now been issued, are hereby dismissed as moot.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP64–94; TEXACO INC., CI64–475

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 6, 1964)

On October 18, 1963, Texas Gas Transmission Corporation (Texas Gas) filed, in Docket No. CP64–94, an application for a certificate of public convenience and necessity, pursuant to Section 7 of the Natural Gas Act, for authority to construct and operate approximately 13.5 miles of 26-inch pipeline and one meter station to connect a new gas supply to its system from Texaco Inc. (Texaco) from reserves located in offshore Vermilion Parish, Louisiana.

On October 22, 1963, Texaco filed, in Docket No. CI64–475, an application for a certificate of public convenience and necessity, pursuant to Section 7 of the Act, for authority to sell one trillion cubic feet of natural gas to Texas Gas from specifically dedicated reserves in the Tiger Shoal, Lighthouse Point and Mound Point Fields, offshore Vermilion Parish, Louisiana, under the terms of a contract dated October 10, 1963.

Notice of both applications was issued by the Commission and published in the Federal Register.[1]

Petitions to intervene and notices of intervention were filed by:

Public Service Commission of New York
Long Island Lighting Company
Memphis Light, Gas and Water Division of the City of Memphis, Tennessee
Texas Gas Transmission Corporation
Philadelphia Gas Works Division of the United Gas Improvement Company

An offer of settlement was submitted by Texaco on February 27, 1964, and supplemented March 17, 1964.

No party has indicated opposition to the issuance of certificates of public convenience and necessity as proposed in the applications and supplemented by the final offer of settlement.

Docket No. CI64–475

A portion of the dedicated reserves herein is located in the Offshore Federal Domain (Zone 2) and a portion is located in the South Louisiana Area (Zone 1) within the taxing jurisdiction of the State of Louisiana.

---

[1] Notice of the application in Docket No. CI64–475 was issued October 29, 1963 (28 F.R. 11752) and notice of the application in Docket No. CP64–94 was issued March 20, 1964 (29 F.R. 3790).

Under the terms of the application as supplemented by the final offer of settlement, the proposed initial price is 20.625 cents per Mcf for that portion of the gas produced from the South Louisiana Area and 19.0 cents per Mcf for the gas produced from the Offshore Federal Domain. These prices include present taxes, but Texaco would be entitled to file for reimbursement of 50 percent of any new or additional taxes. The initial price shall be effective until January 1, 1972, with a 1.0 cent per Mcf periodic increase each five years thereafter for the duration of the 25-year contract.

Delivery is to be made at the outlet of Texaco's processing plant to be located in the Erath Field, Vermilion Parish, Louisiana.

The contract specifically provides, among other things, that no more than 17 percent of the total annual volumes shall be from the South Louisiana Area, and gas in excess of one trillion cubic feet of reserves located in the South Louisiana Area and/or volumes of "Economically Recoverable Reserves" located in the South Louisiana Area in excess of 17 percent of the total "Economically Recoverable Reserves" dedicated are considered surplus reserves and are exempted from the contract.

At any time during the first ten contract years, seller may propose, subject to buyer's acceptance, a reserve substitution of an equal volume of gas from some other reservoir or reservoirs. This period may be extended for whatever time necessary, for at least three years following the date of final demarcation between the State of Louisiana and the Offshore Federal Domain.

The contract contains a downward Btu adjustment provision, but no provision for upward Btu adjustment.

The following daily contract quantities will be available to Texas Gas:

Contract year ending	Contract quantity (Mcf)	Minimum quantity (Mcf)
11-1-65	35,714	25,000
11-1-66	71,429	50,000
11-1-67	107,143	75,000
11-1-68	142,857	100,000
Thereafter	178,571	125,000

During the first five contract years, buyer must take or pay for the total sum of the daily minimum quantities determined at the end of the five year period, with no future make-up period. After November 1, 1969, buyer must take or pay for a yearly volume equal to the minimum quantity times the number of days in the year, with a make-up period of five years.

Buyer may request and seller agrees to deliver 125 percent of the daily contract quantity, if available, but not in excess of regulatory allowables. If seller is unable to deliver the contract quantity, the contract and minimum quantities may be redetermined.

Docket No. CP64–94

Texas Gas is seeking a certificate authorizing the construction and operation of facilities necessary to connect the new gas supply to its general system.

The acquisition of these reserves is not contingent upon any expansion program of Texas Gas and will not create any obligation to pay for gas not taken under any gas purchase contract. The cost of the facilities is estimated to be $1,552,700 and will be financed from cash on hand.

The new supply is expected to increase the deliverability life of Texas Gas from 10 years to 12 years.

At a meeting held on May 1, 1964, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications, amendments and exhibits thereto, submitted in support of the respective authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Texaco Inc. and Texas Gas Transmission Corporation are "natural-gas" companies within the meaning of the Natural Gas Act, subject to the jurisdiction of the Commission.

(2) The proposed sale of natural gas by Texaco Inc. is subject to the jurisdiction of the Commission and such sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Texaco Inc. is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sale proposed by Texaco Inc., together with the construction and operation of any facilities, subject to the jurisdiction of the Commission and necessary therefor, are required by the public interest upon the conditions set forth below, and a certificate should be issued as ordered below.

(5) The facilities described above and more fully described in the application of Texas Gas Transmission Corporation in Docket CP64–94 will be used for the transportation of gas in interstate commerce as integral parts of the pipeline system of Texas Gas and their construction and operation are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(6) Texas Gas is able and willing to do the acts and perform the services proposed and to conform to the provisions of the Natural Gas Act and the rules and regulations thereunder.

(7) The proposed construction and operation of facilities and transportation proposed by Texas Gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to Texas Gas Transmission Corporation to construct and operate the facilities described above and more fully described in the application in Docket No. CP64–94 to connect a new gas supply to its system from Texaco Inc. from reserves located in offshore Vermilion Parish, Louisiana.

(B) A certificate of public convenience and necessity is hereby issued to Texaco Inc. in Docket No. CI64–475 for the sale of natural gas in interstate commerce for resale as proposed in its application and specifically modified by the offer of settlement as supplemented (which we shall treat as an amendment to such application) and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in Texaco's application and the settlement offer submitted herein. The certificate issued by this paragraph is not transferable and shall be effective only so long as Texaco continues the acts or operations

hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission and shall be accepted in writing and under oath within thirty days after the issuance of this order.

(C) At such time as Texaco shall deliver volumes of gas from a reservoir other than those specifically referred to herein, it shall report to the Commission the name and location of such gas supply.

(D) The general terms and conditions set forth in paragraphs (a), (b), (c) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, shall attach to the issuance of the certificate granted in paragraph (A) hereof and to the exercise of the rights granted thereunder.

(E) The time within which the facilities hereby authorized in Paragraph (A) shall be constructed and placed in actual operation as provided in paragraph (b) of Section 157.20 of the Commission's Regulations is hereby fixed at 12 months from the date on which this order issues.

(F) The certificate issued by paragraph (A) to Texas Gas is conditioned upon Texaco accepting the certificate issued to them within thirty days after the date of this order as provided in paragraph (B) herein.

(G) The certificate issued by paragraph (B) above is granted upon the express condition that Texaco comply fully with the terms of this order and the settlement offer as supplemented and filed herein, which supplemented settlement is expressly approved under the conditions of this order.

(H) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Commission's Rules and Regulations thereunder, requiring the filing of rate schedules for the services herein authorized, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the respective applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objection relating to the operation of any price or related provisions in the gas purchase contract herein involved.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TURLOCK IRRIGATION DISTRICT AND MODESTO IRRIGATION DISTRICT, PROJECT NO. 2299

ORDER MODIFYING OPINION NO. 420 AND DENYING APPLICATIONS FOR REHEARING

(Issued May 6, 1964)

Applications for rehearing of the Commission's Opinion No. 420 and accompanying order issued in this proceeding on March 10, 1964, 31 FPC 510, have been filed by the applicants, Turlock and Modesto, by the California Department of Fish and Game, and by the Secretary of the Interior.

The applicants do not object to the issuance of the license, but they do seek clarification of what they consider to be certain ambiguities in Opinion No. 420, and the correction of several minor errors in the wording of Article 38 of the license. The applicants are correct in stating that we have not made any adjudication that water for fish is to be assured ahead of water needed to satisfy rights to water for irrigation and municipal uses. No such adjudication was made because, in our judgment, there will be adequate water in the

Tuolumne River to satisfy the essential requirements of all interested parties for a period of 20 years, at the end of which we shall hold further hearings to determine the amount of water which the applicants should be required to release downstream for maintenance of the fishery. Opinion No. 420 clearly states that the releases which the applicants are now required to make will be subject to modification at the end of the 20-year period to assure the continuing feasibility of the New Don Pedro project; there is no assurance, however, that the applicants and San Francisco will thereafter be free to use the waters of the river for irrigation and municipal purposes without limit. For the reasons spelled out in Opinion No. 420, the allocation of river waters which will best serve the public interest within the limits permissible under law appropriately should and will be made when and if the need for such allocation arises.

We do not anticipate conflicting demands for the Tuolumne waters during the first 20 years of the license, insofar as irrigation, municipal, and fish uses are concerned, if the project is operated to maximize the water available for these purposes. The applicants challenge this, and have submitted as an appendix to their application for rehearing a table similar to Exhibit No. 207, but using the fish releases required in Opinion No. 420. This table, they contend, shows that the fish releases required will cause an impairment of their basic irrigation requirements in several years during the 20-year period. The applicants' calculations are based on the reservoir draft schedules set out in Exhibit No. 99 and the proposed reservoir operation contained in Exhibit No. 100. Under the applicants' Schedule A (Exhibit No. 99), provision is made for releases of 1,420,000 acre feet, of which 1,200,000 acre feet is for irrigation and 220,000 acre feet is for other purposes (power). Under Schedule B (Exhibit No. 99), provision is made for releases of 1,105,000 acre feet, of which 62,000 acre feet could be used for purposes other than irrigation. If the additional water which is provided for or permitted to be used for purposes other than irrigation under Schedules A and B were put to use for fish releases, either for current use or the unused portion stored for use in subsequent years, there will be sufficient water to make the fish releases required and to meet the applicants' irrigation needs under the reservoir operation set forth in Exhibit No. 100. Moreover, the applicants' present irrigation needs are about 1,000,000 acre feet a year and not the 1,200,000 acre feet provided for in Schedule A; and these needs should continue at about 1,000,000 acre feet a year for the foreseeable future, *i.e.* until additional lands are put to use for irrigation.

The water studies in this case are based on a given hydrologic cycle of 39 years. It is always possible that there could be unusually dry years which would cause a critical water condition, and that a conflict between the basic needs of the applicants and San Francisco for irrigation and municipal purposes and the requirement of Opinion No. 420 for fish releases could arise. Article 28 of the license provides for a proportional reduction of fish releases in dry years; but if this reduction is not sufficient to satisfy the applicants' needs, the applicants would have to seek a modification of the license requirements to meet the emergency. We do not expect this situation to arise, but if it should we would consider such modification of the license to the extent shown to be necessary in the public interest.

The applicants question their ability to fill the reservoir under certain circumstances. Opinion No. 420 makes no provision for filling the reservoir; however, should the applicants encounter trouble, they can always ask for temporary relief from the fish release requirements during the filling period. In a good water year the applicants should have no problem.

The applicants point to certain errors in Article 38 of the license. The following corrections should be made:

(1) Article 38(a): Insert the words "at least" before "4,500 cfs."

(2) Article 38(b)(2): Change the figure "4" to "10" in the phrase "in excess of 4 inches provided in paragraph (b)(1)."

The California Department of Fish and Game and the Secretary of the Interior object to Opinion No. 420 and accompanying order on several grounds. They argue first that the Commission has given the applicants a license without any real restriction insofar as protection of salmon runs is concerned. There is no substance in this argument. The applicants are required to make fish releases for 20 years as specified, and in so doing they are giving up considerable value in terms of power benefits which would otherwise be realized, as well as in the unrestricted use of the water for irrigation. Moreover, at the end of the 20-year period the applicants will be required to make such further releases for fish purposes as the Commission finds to be necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the Act.

California and the Secretary contend that burden of proving the need for further releases at the end of the 20-year period has been put on them, whereas the burden should be on the applicants to show that further releases are not required. We did not put any burden of proof on any party, but if a further hearing is had, all parties will have a burden to bear with respect to coming forward with relevant evidence to aid our determination. It is not unreasonable that this should be so, since this is not a case where the licensing of the project will create a fish problem. As Opinion No. 420 makes clear, this project will greatly relieve an existing situation in which the fish would soon be destroyed if the project were not built. Even without the prescribed fish releases, the construction of the new project would be beneficial to the salmon runs; and with the required releases, there will be a maximum use of the river for the benefit of all interests. Under these circumstances, and as provided in Opinion No. 420, the fish interests will have the primary obligation for showing the need for continuing releases from New Don Pedro at the end of the 20-year period if such releases are to be ordered. The applicants, however, will have to show, *inter alia*, the water required to maintain the economic feasibility of their project; the water available at New Don Pedro for irrigation, power, and conservation purposes; the availability of any alternative sources of water for such purposes or other alternative solutions to the fish problem as it may then exist; and their then existing and expected future needs for water for irrigation purposes. San Francisco will also be required to make a showing of its then existing and expected future needs for water for municipal purposes, and to demonstrate the interrelation of New Don Pedro with the operation of its Hetch Hetchy municipal water supply and power system.

California and the Secretary also question the burden put on them of finding and financing future solutions to the fish problem. With respect to the interim studies of alternative methods of preserving the fish, it is in the interest of all of the parties to cooperate in finding a mutually agreeable solution. Our order cannot bind California or the Secretary of the Interior to undertake such studies or to contribute to their cost. We do, however, expect that these parties will cooperate with the applicants in the interest of conservation. Article 39 directs the applicants to make such studies with the cooperation of California and the Secretary. It is also our expectation that the cost of such studies will be shared. In order that a plan or program for such studies will be forthcoming, we shall amend Article 39 to require the applicants to develop such a plan or program in cooperation with California and the Secretary, and to file it with the Commission for approval within one year from the effective date of the license. The plan should outline the studies to be undertaken and the responsibility to be assumed by each of the parties in carrying it forward. In response to a question of the applicants' financial obligation with respect to the construction, maintenance, and operation of fish facilities which may be found to be required, we refer the parties to Article 10 of the license.

Both California and the Secretary renew the arguments made in their briefs and exceptions that the record should be reopened for evidence of San Francisco's upstream power benefits, and that San Francisco should be required to become an applicant for a license. Ordinarily we do not require a party to join as an applicant for a license unless the party has a proprietary interest in the project works. San Francisco has no such interest here. It is contracting for water storage for municipal purposes and Raker Act releases in much the same way as the Federal government, through the Corps of Engineers, contracts for flood control storage. San Francisco has no interest whatsoever in the power to be developed at New Don Pedro, and any upstream benefits which it may realize will be only incidental to the main purpose of its participation, which is to acquire additional municipal water storage. Moreover, as we have found, there is no reasonable basis for believing that any substantial upstream benefits will be realized. The interveners have not shown sufficient cause to justify reopening the case at this time.

The Commission further finds:

Except as found above, the assignments of error and grounds for rehearing set forth in the applications for rehearing present no new facts or principles of law which were not fully considered by the Commission when it adopted Opinion No. 420 and accompanying order, issued March 10, 1964, or which having now been considered warrant any change or modification of said opinion or order.

The Commission orders:

(A) Article 38(a) of the license issued to the applicants by Opinion No. 420 and accompanying order is hereby amended by inserting the words "at least" before "4,500 cfs."

(B) Article 38(b)(2) is hereby amended by substituting the figure "10" for the figure "4" in the phrase "in excess of 4 inches provided in paragraph (b)(1)."

(C) Article 39 is hereby amended by substituting the following:

Article 39. The Licensees in cooperation with the California Department of Fish and Game and the Department of the Interior shall make necessary studies aimed at assuring continuation and maintenance of the fishery of the Tuolumne River in the most economical and feasible manner. Such studies shall be completed prior to the end of the 20-year period for which minimum stream flows have been provided in Article 37. The Licensees shall develop in cooperation with the California Department of Fish and Game and the Department of the Interior a program for the making of such studies and for financing their cost. The program shall be submitted for Commission approval within one year from the effective date of this license.

(D) In acknowledgement of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward. and David S. Black.

CONTINENTAL OIL COMPANY, DOCKET NO. CI63-979

ORDER GRANTING STAY

(Issued May 7, 1964)

By telegram filed May 5, 1964 and supplemented May 6, 1964, United Gas Pipe Line Company has requested a stay of our Opinion and Order No. 426 issued May 5, 1964, *supra*, p. 1079. There we determined that United's action in ceasing to utilize certain jurisdictional purchase facilities in the Johnson Bayou Field constituted an abandonment within Section 7(b) of the Natural Gas Act; we ordered United to renew operation of the facilities; and we required that purchases will be made at the rate specified in Continental's Supplement No. 7 to its FPC Gas Rate Schedule No. 115. By telegram filed May 6, 1964, Continental Oil Company has answered United's telegraphic request.

Because this is a case of first impression, because United states that it will file an application for rehearing, and because it appears that United might be irreparably injured if our order should be modified, we shall grant the stay requested.

The Commission orders:

United's request for a stay of the Commission's Opinion No. 426 and Order issued May 5, 1964, is granted until issuance of the Commission's order upon United's application for rehearing.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R Ross, and David S. Black.

CROW DRILLING COMPANY, INC., DOCKET NOS. G-6622 AND G-8510; JAMES D. MADOLE, ET AL., DOCKET NO. G-20196; DAVID CROW, TRUSTEE, DOCKET NO. G-20188; DAVID CROW, AGENT, DOCKET NO. G-20189.

ORDER APPROVING RATE SETTLEMENT PROPOSAL, TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued May 7, 1964)

On November 12, 1963, James D. Madole, *et al.*, David Crow, Trustee and David Crow, Agent (Madole), successors to Crow Drilling Company, Inc., (Crow), submitted an offer of settlement in the above-entitled proceedings, the details of which are set forth in Appendix A hereof.[1] The rates involved here relate to sales from the Maxie Pistol Ridge Area of Mississippi to United Gas Pipe Line Company.

---

[1] Except for sales under David Crow, Trustee FPC Gas Rate Schedule No. 3, which relates to sales to Transcontinental Gas Pipe Line Corporation from the Kinder Field in Allen Parish, South Louisiana involved in Docket No. G-20088, the proposal covers all of the rate proceedings in which Madole is involved. Madole states that due to certain administrative problems it is not possible at the present time to dispose of Docket No. G-20088.

In summary, the settlement proposal submitted by Madole provides;

(1) The rate increases under James D. Madole, *et al.*, Rate Schedule No. 1 (G-20196), David Crow, Trustee Rate Schedule Nos. 4 and 5 (G-20188) and David Crow. Agent Rate Schedule No. 7 (G-20189) will be withdrawn.

(2) The effective rate under each of the rate schedules in (1) above will be 20¢ per Mcf, the initially certificated rate under all of the above rate schedules except for Madole's Rate Schedule No. 1.

(3) There will be a 30 month moratorium on the filing of future rate increases from June 1, 1963 through November 30, 1965.

(4) Rate increases may be filed if contractually authorized to the extent of any adjustment in area rate levels through hearing or amendment of the Commission's Statement of General Policy No. 61-1.

(5) Refunds with applicable interest under each rate schedule of the difference between the revenues collected subject to refund and those which would have been collected at the settlement rate for the entire refund period.

No protests or objections have been filed to the offer. The estimated total dollars to be refunded approximates $62,395, exclusive of interest. The estimated annual reduction in rates is approximately $17,107.

With the exception of the 20¢ rate proposed under Madole's FPC Gas Rate Schedule No. 1,[2] which was certificated at an initial rate of 15.0¢ per Mcf, the terms advanced in Madole's offer are consistent with the recent rate settlements accepted by the Commission. There are, moreover, certain extenuating circumstances which justify acceptance of the proposed settlement rate for the lone exception above. The original contract entered into between Crow, Madole's predecessor, and United for this sale provided for an initial rate of 20.0¢ per Mcf. However, the parties therein agreed to an interim rate of 15¢ per Mcf for a period of 7 months to allow United to recoup a portion of its construction costs in the field. Gulf Oil Corporation also entered into a similar arrangement with United. In granting Gulf a 20¢ per Mcf rate for its sale,[3] we stated:

> The rate agreed upon by the parties is below the applicable area initial ceiling (21.5¢ for Mississippi). We have considered all of the circumstances surrounding this sale and find them to be similar to others where we have in such circumstances regarded the increased rate to be in the nature of the initial rate . . . Therefore, we find the settlement rate of 20¢ per Mcf to be proper and approve the same.

Because of the similarity between the Gulf situation and the situation here, we conclude that a settlement rate of 20¢ for this sale by Madole is appropriate.

We believe the instant settlement proposal meets the criteria previously set forth in other of our recent settlement orders and accordingly we find it to be in the public interest and should be approved as hereinafter provided.

Our action herein should not be construed, nor may it be, as constituting approval of any future rate increase that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Madole's rates and rate schedules.

---

[2] Prior to the transfer to Madole, the subject sale was made pursuant to Crow's FPC Gas Rate Schedule No. 2 at an increased rate of 20¢ which was involved in Docket Nos. G-6622 and G-8510. Madole proposes to also dispose of Crow's proceedings herein.

[3] See order issued April 25, 1963, in Gulf Oil Corporation, *et al.*, Docket No. G-9520, *et al.*

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Madole on November 12, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Madole November 12, 1963, is hereby approved in accordance with the provisions of this order.

(B) Madole shall, within 30 days from the date of issuance of this order, make such filings under its rate schedules as are required to make effective the terms of its settlement proposal.

(C) Madole shall refund to United with interest as specified in each docket computed to the date of actual refund the difference between the rates collected subject to refund under the rate schedules herein and the settlement rates, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases for determination, together with a copy of a release from United with respect to such refunds.

(D) Upon notification by the Secretary of the Commission that Madole has complied with the terms and conditions of the order, the settlement rates specified in Madole's offer of settlement as set forth in Appendix A hereto shall be effective as of the date of issuance of this order, and the above designated proceedings shall be deemed terminated.

(E) The acceptance by the Commission of Madole's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Madole including area rate or other similar proceedings.

APPENDIX A

Producer	Rate schedule No.	Section 4(e) docket No.	Present rate [1] (cents)	Effective date	Settlement rate (cents)	Last clean rate (cents)
Crow Drilling Co.	2	G-6622, G-8510	20.0	4/15/55	20.0	15.0
James D. Madole, *et al.*	[2] 1	G-20196	24.0	4/26/60	20.0	15.0
David Crow, Trustee	4	G-20188	24.0	4/26/60	20.0	20.0
David Crow, Trustee	5	G-20188	24.0	4/26/60	20.0	20.0
David Crow, Agent	7	G-20189	24.0	4/26/60	20.0	20.0

[1] At 15.025 psia and includes tax reimbursement.

[2] Madole succeeded to Crow's interest in the sale made under Crow's FPC Gas Rate Schedule No. 2.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

GEORGIA POWER COMPANY, PROJECT NO. 2354

ORDER ISSUING LICENSE (MAJOR)

(Issued May 7, 1964)

Application was filed on March 18, 1963 by Georgia Power Company (Applicant) of Atlanta, Georgia, for a license under the Federal Power Act (Act) for constructed Project No. 2354, known as the North Georgia Development, located on Tallulah and Tugalo Rivers, in Rabun, Habersham, and Stephens Counties, Georgia, and Oconee County, South Carolina.

The project consists of six developments as follows: Burton, Nacoochee, Mathis-Terrora, and Tallulah Developments on the Tallulah River, and Tugalo and Yonah Developments on the Tugalo River. A predecessor company of Applicant commenced construction of the Tallulah Development in 1911 and the first of the original five generating units at Tallulah went into operation in September, 1913. The sixth unit at Tallulah was installed in 1920. Mathis storage reservoir was completed in 1915 and the Terrora powerhouse addition thereto was built in 1925. Burton dam and reservoir were completed in 1919, and power installation was made in 1927. Tugalo Development began operating in 1923, Yonah in 1925, Nacoochee in 1926, and Burton in 1927. An earth dyke was built at Mathis in 1956 to replace the original concrete dyke structure. The total power capacity of the project is 166,420 kilowatts.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 and Order issuing license to Public Service Company of New Hampshire for Project No. 2288 (27 FPC 830), the license herein granted shall have an effective date of January 1, 1956 and a termination date of December 31, 1993.

The Tallulah and Tugalo Rivers form parts of the headwaters of the Savannah River. The uppermost plant of the integrated series of power developments comprising Project No. 2354 is Burton on the Tallulah River at river mile 369, and the lowermost plant, Yonah, is situated on the Tugalo River at river mile 340, less than one mile upstream from the confluence of Panther Creek with the Tugalo River. According to available records the Tugalo River has been navigated by pole boats 70 to 80 feet long and 7½ feet wide from its confluence with the Savannah River as far upstream as the mouth of Panther Creek at mile 339.6. The uppermost reservoir, Burton Lake, contains 87,000 acre-feet of usable storage in the 50 feet of drawdown. The lowermost Yonah Development on the Tugalo immediately upstream from Panther Creek, when peaking and in participation with the series of upstream developments, will sharply fluctuate the stage and flow of the Tugalo River in its navigable reach.

The Secretary of the Army and the U.S. Corps of Engineers have reported that the plans of the project structures affecting navigation are satisfactory, and the plans were approved pursuant to the provisions of Section 4(e) of the Act.

The Department of the Interior recommended for inclusion in any license issued for the project certain conditions in the interests of the Department.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) The Tallulah and Tugalo Rivers are streams over which Congress has jurisdiction under its authority to regulate interstate and foreign commerce.

(3) Applicant is a corporation organized under the laws of the State of Georgia, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license.

(4) Public notice of the application has been given as required by the Act. No protests have been received. No conflicting application is before the Commission.

(5) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(6) The project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(7) The step-up substations, generator leads and appurtenant facilities, included in the application for license, and described in paragraph (B) below, are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(8) The following described transmission lines which were not included in the application for license are parts of the "project" as defined in Section 3(11) of the Act and should be included in the license as hereinafter provided:

Lines	Kv	Approximate length (miles)
1. Burton-Nacoochee	38	3.8
2. Nacoochee-Terrora (2)	38	6.0
3. Terrora-Dillard	38	14.0
4. Terrora-Tallulah Lodge	110	2.3
5. Tallulah Falls-Tallulah Lodge (2)	110	2.0
6. Tugalo-Tallulah Lodge	110	5.0
7. Tugalo-Commerce	110	35.0
8. Yonah-Commerce	110	29.0
9. Yonah-Commerce to Tallulah Lodge (tap)	110	7.0
10. Tallulah Lodge-Elberton	110	58.0
11. Tallulah Lodge-Gainesville	110	34.0
12. Cornelia-Clarksville	38	7.0

(9) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 221,900 horsepower, and the electric energy generated by the project is used in Applicant's public utility system.

(10) The amount of annual charges to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(11) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license, to the extent thereinafter indicated.

The Commission orders:

(A) This license is hereby issued to Georgia Power Company (Licensee) of Atlanta, Georgia, under Section 4(e) of the Federal Power Act (Act) for a period effective as of January 1, 1956 and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2354 on the Tallulah and Tugalo Rivers, Georgia and South Carolina, and affecting navigable waters of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2354 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interests therein are owned or held by the applicant or by the United States; such project area and project boundary being more generally shown and described by an exhibit which formed part of the application for license and which is designated and described as follows:

Exhibit J: (FPC No. 2354–1) General Map of Projects

(ii) Project works consisting of dams, reservoirs and powerhouses listed in order, moving downstream:

Burton Development: A concrete gravity dam on the Tallulah River at mile 369, about 135 feet in maximum height and 1,043 feet long including 197 feet of gated spillway. The reservoir at full pond elevation 1,866.6 feet m.s.l. has a surface area of 2,775 acres. Active storage is 87,000 acre-feet. The powerhouse at the toe of the dam has two vertical type Francis turbines, each directly connected to a generator with nameplate capacity of 3,060 kw for a total installed capacity of 6,120 kv.

Nacoochee Development: A concrete gravity dam on the Tallulah River about 90 feet in maximum height and 490 feet long, including 140 feet of ungated spillway. The reservoir at full pond elevation 1,725.5 feet m.s.l. has an area of 240 acres, and no seasonal storage. The powerhouse at the toe of the dam has two vertical shaft propeller type turbines, each directly connected to a generator with nameplate capacity of 2,400 kw for a total installed capacity of 4,800 kw.

Mathis-Terrora Development: A concrete slab and buttress dam on Tallulah River about 125 feet in maximum height and about 597 feet long including 285 feet of gated spillway. There is also an earthfill saddle dike about 370 feet long. The project reservoir has an area of 834 acres at full pond elevation 1,689.6 feet m.s.l. A power tunnel 5,295 feet long conveys water to the powerhouse on Tallulah River which has two vertical units with a total nameplate capacity of 16,000 kw.

Tallulah Development: A concrete gravity arch dam on Tallulah River about 140 feet in maximum height and 426 feet long including gated spillway section, and a reservoir with an area of 63 acres at normal pool elevation of 1,500 feet m.s.l. A 6,665-foot long power tunnel conveys water to the powerhouse on Tallulah River which contains six vertical units with total nameplate capacity of 72,000 kw.

Tugalo Development: A concrete gravity dam on Tugalo River about 170 feet high and 850 feet long, including 357 feet of gated spillway. The reservoir at normal full pond elevation of 891.5 feet m.s.l. has an area of 597 acres. The powerhouse at the toe of the dam houses four vertical shaft units with a total nameplate capacity of 45,000 kw.
